1
2
3 We have been providing evidence to Congressional offices for quite some time. We have, again,
4 told them that we seek written confirmation that they have received, and are acting on, this issue.

5 We have demanded that our whistle-blower and investigation damages, fees and offsets be paid
6 promptly by Government agencies but we have run-up against a rather large cover-up and stone-walling
7 effort. The White House and senior government officials had command-and-control, financing authority
8 and operated the crimes and harms listed herein. The financial and communications records of all parties
9 prove this.

10
11 We swear, warrant and certify, from first-hand experience, that this organized crime Cartel
12 'Enterprise' that abuses Democracy, society and the legal process is still on-going.

13
14 We, and our peers, have filed countless lawsuits and supported huge numbers of Congressional
15 investigations, but the matter continues to be unresolved. Nearly a billion citizens are aware of this data. It
16 makes government officials look really bad because it keeps getting stonewalled, delayed, deferred,
17 obfuscated and covered-up. It has now been reported by every major news outlet in the world and it can no
18 longer be considered anything that can be '*covered-up*'.

19 As whistle-blowers and government employee/contractors, we appreciate any help you can provide
20 to this matter by calling top law enforcement officials and Congressional Committee leaders to ask them
21 '*What they are doing about this matter?*'. If you work for **our** government, it is your duty to resolve this to
22 **our** satisfaction on behalf of ourselves and the citizens of America.

23
24 In this report/complaint, one can easily understand the details behind the White House and
25 Department of Energy bribery, payola, quid pro quo, insider-trading case and witness reprisal attacks using
26 government resources. That Public Report has been provided to the *FBI, FTC, SEC, FINCEN, IG, AG,*
27 *GAO, Congressional Ethics Committees, OGE, U.S. and E.U. Courts, Interpol* and relevant offices. The
28 following is a draft version of that book still in development. This is Revision 3G. It is gistributed free

1 under Creative Commons rules. Typos, grammar and structure corrections will be addressed in future
2 revisions.

3
4 Further revisions of this document shall be forthcoming and, using AI technologies (like Palantir,
5 XKEYSCORE, ChatGPT and hundreds of others) and mass social media, it is being distributed to 8 billion
6 people. Millions of people already have it. No further cover-up is possible now.

FORWARD

Our goal is to have eight billion people read this book and take action to prevent this kind of corruption from ever happening again. We have been posting the drafts, in sections, to the public for over a decade. Millions of people already know these facts. We are using AI and Social Network technologies to distribute it to EVERYONE on the planet that can read. It is now impossible to hide the truth any more. By the time we are done, everyone will know. We have sued the culprits and will continue to sue them. We have launched, and advocated for, numerous federal investigations which have now resulted in arrests, indictments, federal Big Tech lawsuits and OPM terminations. We have created and optimized one of the largest ‘*Citizen Sleuth*’ efforts in the world, specifically focused on corruption. We, and our predecessors, won’t stop until every citizen on Earth knows how these quid pro quo bribery, payola and insider trading political scams happen and how to expose the culprits.

If *we* don’t get the justice we have demanded, then *they* don’t get to do their crimes any more!

1
2
3
4

SECTION ONE - Overview

5 Government executives have done everything in their power to cover these facts up and to harm the
6 whistle-blowers that reported this crime. They have used the most horrific weapons in their political
7 arsenal.

8 The ‘bad guys’, though have been unable to exterminate all of the witnesses or get past the one
9 weapon we have: ***THE TRUTH!***

10 ***Google/Alphabet organized a large part of this crime operation in cooperation with the NVCA***
11 ***and U.S. Senators, who took payola as stock perks! If you run all of the characters in this report,***
12 ***through XKEYSCORE, 90% of them come back to Google/Alphabet connections!***

13 Plaintiffs wrote a letter to Jesse Francis "Jeff" Bingaman Jr., as head of the Energy Committee in
14 the U.S. Congress. He was an american politician who served as a United States **Senator** from New
15 Mexico from 1983 to 2013, for 5 terms. A member of the Democratic Party, he served as Chairman of
16 Committee Outreach for the Senate Democratic Caucus. The Inspector General’s and Mr. Rusco’s GAO
17 office had interviewed Plaintiffs and asked them to raise a corruption issue, witnessed within the United
18 States Department of Energy and the White House staff, in writing, to the Energy Committee to see “*what*
19 *kind of response Plaintiff would get*”. The Energy Committe sent a letter to Steven Chu, the Secretary of
20 Energy, asking Chu to respond to the charges. In response, Chu and the Department of Energy via Lachlan
21 Seward, David Cohen, Kathy Zoi and, overseen by Robert Gibbs, David Axelrod, Steve Rattner and Rahm
22 Emanuel in the White House, launched a ‘Watergate’-style attack using the same kind of “Plumbers”,
23 media assassins and reprisal attacks as that previous Watergate scandal. Why? Because federal officials had
24 been caught in a ***TRILLION DOLLAR CRIME SCAM!***

25 Does a crime that rakes in a trillion dollars a day seem like a pretty big thing?

26 Every few hours someone is murdered for less than fifty dollars. What do you think people would
27 do, even the most famous people, to get their hands on a trillion dollars of cash per day.
28 Where can you even find a bank or a retail chain or...anything, that runs through trillions of dollars per day?

It's called **THE STOCK MARKET!** Yes! Did you know that trillions of dollars, per day, flow
through the financial system known as "the stock market"?

Do you actually know how this "***Stock Market***" works? Can *you* run it? Can you operate the "Stock
Market"? You can sign up for a trading account with some service and coat-tail onto the financial residue

of the .05% that do run the stock market but no normal person can do anything but watch and hope to catch a few scraps.

Preliminary Assessment of Non-Fuel Mineral Resources of Afghanistan, 2007
USGS
USAID
Report prepared in cooperation with the Afghanistan Geological Survey with the support of the U.S. Agency for International Development

THIS IS THE "PITCH BOOK" THAT USAID USED TO SELL AN AFGHAN WAR TO THE AMERICAN VENTURE CAPITAL OLIGARCHS FOR THEIR CELL PHONE AND TESLA BATTERY DEALS!

WHAT DO YOU THINK CRAZY POLITICIANS AND BILLIONAIRE OLIGARCHS WOULD DO TO STEAL SIX TRILLION DOLLARS

1 To put this in perspective, there are only 8 billion people on Earth. With a trillion dollars per day
2 you could give each and every person on the planet enough money, every day, to change their lives.

3 With that kind of money, the 'bad guys' in this case buy Hollywood and sports super stars to have
4 sex with that they shop for on Instagram, they buy private jets, they fly to super parties to get more sex and
5 drugs, they have Cocaine Uber'd to their homes, they buy private sex islands, they have 4 star dinners made
6 for them nightly, they spent \$100,000.00 per month to have the mainstream media glorify their PR facades,
7 and, worst of all, they buy America's democracy.

8 The bad guys in this case are chemically and clinically addicted to their sex, drugs and *Game of*
9 *Thrones* greed for power.

10 We, and various news and law enforcement entities, have used AI to track the money from bribe-to-
11 benefit, from politician-to-family-member and from quid-pro-quo to policy-promotion. The numbers don't
12 lie: only the politicians do!

13 This group of people operate a political Big Tech crime syndicate enterprise, known as a "**Cartel**" to
14 control this stock market for their own personal benefit using the money from private taxpayer citizens.
15 That is known as a "**Scam**".

16 See more: <https://en.wikipedia.org/wiki/Cartel>

17 This group of people are White House executives, government agency bosses, U.S. Senators and the
18 Big Tech oligarchs who finance and engage in covert quid pro quo with them. We met, worked with, lived
19 with and witnessed their crimes and schemes. We saw them solicit and take bribes. We saw them use
20 government offices to control digital media, lie to voters, run censorship and rig government process to
21 only help themselves and to destroy their competitors. They defrauded us. They defrauded the nation and
22 they will never, ever, get away with it!

23 By comparing records and files from FINCEN, FBI, FTC, SEC, Congressional Investigators, ICIJ,
24 FEC, Interpol, CIA, DOJ, ProPublica, and other sources, one can easily see that political officials own
25 Google, Tesla, Facebook, YouTube, Instagram, et al, (AKA "The Tech Cartel" or, in legal terms: "The
26 Enterprise"). This explains why those companies have been exempt from regulation and prosecution. Those
27 public officials and tech company oligarchs have exchanged millions, and millions, of dollars between
28 themselves and their families for unjust gain via political profiteering.

They were all either financed by, friends, with, sleeping with, dating the staff of, holding stock
market assets in, promised a revolving door job or government service contracts from, partying with,
personal friends with, photographed at private events with, exchanging emails with, business associates of
or directed by; our business adversaries, or the Senators and politicians that those business adversaries pay
campaign finances to, or supply political digital search manipulation services to. Criminal U.S. Senators

1 coordinated and profited in these schemes. Their own family members have now supplied evidence against
2 them. You don't hear about this, much, in the "main-stream news" because nearly half of Congress, White
3 House staff and government agency bosses own the stock in the news broadcasters and receive billions of
4 dollars of financing from them.

5 Many witnesses, including us, have now sworn, warranted and certified to federal law enforcement
6 about the details of these crimes. Many of those whistle-blowers were former executives in "The Tech
7 Cartel". "Plaintiff" and "Plaintiffs" in this document shall refer to the protected group of American Citizens
8 who personally eye-witnessed these events, were attacked in reprisal and who suffered the demanded
9 damages claims. This is not about politics. It is about *felony crimes*! Our government representatives
10 are business partners with our biggest, and most corrupt, enemies and make decisions based on greed, not
11 duty!

12 Even though Plaintiffs were already working for the Department of Energy, and had delivered his
13 work, without going bankrupt like most other Steven Chu funded groups, he was attacked for speaking
14 truth to power.

15 As one example of the corruption; The Department of Energy has stated that they picked Elon Musk
16 and Tesla Motors over Plaintiff's electric car company, because of 'METRICS'. Here are the real facts,
17 though, that the Department of Energy PR office has spent vast amounts of money and resources covering
18 up in a felony effort:

5 Corrupt political families conspire to give government funds, contracts, tax waivers, buildings,
6 stock market profits and other insider perks to themselves and their friends. They also conspire to blockade,
7 harm, sabotage and black-list those who compete with them and their friends. These corrupt politicians are
8 never prosecuted for their crimes, and can laugh in the face of those who point out their crimes, because
9 they control the prosecution system. Their Quid Pro Quo criminal corruption is the single largest cause of
10 the taxpayer hatred of Congress.

28 ***"Google is a sick corrupt criminal business run by sex trafficking perverts and sociopaths..."*** Say

- 1 GOOGLE'S own inside employees, Divorce Court records of Google executives, 70+ State & Federal
- 2 investigations and major news outlets.
- 3 - Google spies on competitors and steals their technology
- 4 - Google - Alphabet - YouTube stock is owned by almost all of the California politicians and their families
- 5 and that is why Google - Alphabet - YouTube is never regulated and always protected by them for their
- 6 political and profiteering manipulations
- 7 - Google runs tens of millions of dollars of defamation attacks against competitors
- 8 - Google hides all media and news coverage for competitors of Larry Page's boyfriend: Elon Musk
- 9 - Google lies to the public about what they really do with the public's data
- 10 - Google promotes illegal immigration in order to get cheap labor and control votes
- 11 - Google runs VC funding back-lists against start-ups that are competitive
- 12 - Google bribes thousands of politicians
- 13 - Google is a criminal RICO-violating monopoly
- 14 - Google rigs the stock market with Flash-boy, Pump/Dump and Microblast SEC violating computer tricks
- 15 - Google pays bribes to politicians in Google and YouTube stock
- 16 - Google manipulates who gets to see what web-sites, globally, for competitor black-lists
- 17 - Google has a "no poaching" Silicon Valley jobs blacklist
- 18 - Google bosses sexually abuse women and young boys
- 19 - Google bosses run sex trafficking operations in the Epstein and NXVIUM cults
- 20 - Google bosses control the NVCA financing cartel over start-ups
- 21 - Google has placed the majority of the corporate staff in at least one White House
- 22 - Google controls national elections for anti-competitive purposes
- 23 - The company "**Polyhop**", in the HOUSE OF CARDS tv show, does all the crimes that Google actually
- 24 does in reality
- 25 - Google's law firms, like Wilson Sonsini, are corrupt conduits for payola and political conduit-relays
- 26 - Google bribes some politicians with revolving door jobs
- 27 - Google is primarily responsible for destroying the Bay Area Housing opportunities
- 28 - Google runs DDoS attacks on competitors by massively crawling their sites

- 1 - Google boss Andy Rubin runs a sex slave farm according to his own family
- 2 - Google boss Eric Schmidt was a philandering sex-penthouse owner according to vast news articles
- 3 - Google executives hire so many hookers that one of them, Mr. Hayes, was killed by his hooker
- 4 - Google executives sexually abuse so many women that the women staff of Google walked out one day
- 5 - In the 2009 White House, you could not swing a cat without hitting a Google insider
- 6 - Google has paid covert bribes, PAC funds, real estate and search rigging payola to every CA Senator
- 7 - Google has paid bribes, through its lobby fronts, to halt FBI, SEC, FEC and FTC investigations of Google
- 8 crimes
- 9 - Google was funded by the CIA, via In-Q-Tel, a so called "501 c3 charity" which was caught with tons of
- 10 cocaine
- 11 - Google gets millions of dollars of taxpayer cash for spying on Americans inside the USA
- 12 - Google's map service was a spy system paid for by taxpayers money that Google now profits off of
- 13 - Nancy Pelosi and Dianne Feinstein have promised to "protect" Google because their families profit off
- 14 Google stocks
- 15 - Payment receipts prove that Google and Gawker/Gizmodo exchanged cash and staff for Character
- 16 Assassination attacks
- 17 - Google VC's and bosses have spent \$30M+ rigging the U.S. Patent Office to protect Google and harm
- 18 Google competitors
- 19 - Google bribed it's lawyer into position as head of the U.S. Patent office in order to have her protect
- 20 Google
- 21 - To rig insider stock trades, Google hides negative Tesla stories and pumps positive Tesla stories on "push
- 22 days"
- 23 - Google and Elon Musk Co-own, co-invest and co-market stocks covertly while running anti-trust schemes
- 24 - Google rarely likes, or hires, black employees per federal and news media investigations
- 25 - Google hired most of the Washington, DC K Street lobby firms and told them to "do what ever they
- 26 could"
- 27 - The film: "[Miss Sloane](#)" depicts only 2% of the illicit lobbying tactics Google employs daily
- 28 - Demands for an FTC and FBI raid of Google, for criminal activity, securities law and election felonies

1 have been filed

2 - Google's David Drummond had his Woodside, CA Quail Road house bugged revealing sex and financial
3 misdeeds

4 Google, and it's Cartel (Alphabet, Youtube, and hundreds of other shell-company facades) are a
5 criminal organization engaged in felony-class crimes. Google's bosses bribe politicians, regulators and law
6 enforcement officials to hold off prosecution.

7 At Google: Kent Walker, Andy Rubin, Larry Page, Eric Schmidt, Sergy Brin, Jared Cohen, Yasmin
8 Green, David Drummond and Ian Fette are so enmeshed in sex scandals, election manipulation, and White
9 House bribes that it is hard to comprehend how they can get any legitimate work done.

10 Between all of the sex cult activity; hookers; rent boys; political bribes to Pelosi, Harris, Newson,
11 and Feinstein; DDoS attacks they run; CIA and NSA stealth deals; privacy harvesting; Scientology-like
12 employee indoctrination; cheap Asian labor; covert Axiom scams and other illicit things they get up to;
13 one just has to wonder.

14 Some of the largest political bribes in American or European history were paid via billions of
15 dollars of pre-IPO cleantech stock, insider trading, real estate, Google search engine rigging and shadow-
16 banning, sex workers, revolving door jobs, nepotism, state-supported black-listing of competitors and
17 under-the-table cash. Why are these Silicon Valley Oligarchs and their K-Street law firms and lobbyists
18 immune from the law?

19
20 U.S. Senators, Agency Heads and Congress are bribed by Google intermediaries with: Billions of dollars of
21 Google, Twitter, Facebook, Tesla, Netflix and Sony Pictures stock and stock warrants which is never
22 reported to the FEC; Billions of dollars of Google, Twitter, Facebook, Tesla, Netflix and Sony Pictures
23 search engine rigging and shadow-banning which is never reported to the FEC; Free rent; Male and female
24 prostitutes; Cars; Dinners; Party Financing; Sports Event Tickets; Political campaign printing and mailing
25 services "Donations"; Secret PAC Financing; Jobs in Corporations in Silicon Valley For The Family
26 Members of Those Who Take Bribes And Those Who Take Bribes; "Consulting" contracts from McKinsey
27 as fronted pay-off gigs; Overpriced "Speaking Engagements" which are really just pay-offs conduited for
28 donors; Private jet rides and use of Government fuel depots (ie: Google handed out NASA jet fuel to staff);

1 Real Estate; Fake mortgages; The use of Cayman, Boca Des Tores, Swiss and related money-laundering
2 accounts; The use of HSBC, Wells Fargo, Goldman Sachs and Deustche Bank money laundering accounts
3 and covert stock accounts; Free spam and bulk mailing services owned by Silicon Valley corporations; Use
4 of high tech law firms such as Perkins Coie, Wilson Sonsini, MoFo, Covington & Burling, etc. to conduit
5 bribes to officials; and other means now documented by us, The FBI, the FTC, The SEC, The FEC and
6 journalists.

7 Google and Youtube are based on technology and business models that Google and YouTube stole
8 from small inventors who had launched other companies that were up and operating before YouTube or
9 Google even existed as business operations.

10 Google holds the record for the largest number of corporate sex scandals, abuses and sex trafficking
11 charges.

12 There are only two kinds of people that work at Google: 1.) Cult indoctrinated naive kids with odd
13 sexual quirks and 2.) divisive managers and executives who seek to exploit those eco-chambered
14 employees for nefarious political and stock market manipulation purposes under the Scientology-like guise
15 of "doing good things", when, in fact, they are engaged in horrific crimes against society.

16 Google has hired almost every technology law firm in order to "conflict them out" from ever
17 working to sue Google. If Google rapes you, robs your patents or does anything awful, you won't be able to
18 find a lawyer to help you.

19 Most Google executives in control of Google have been indoctrinated by family dynasties to believe
20 that any crime is justified by a bigger cause. Most of those executives are men. The few women in control
21 of departments are figure-heads.

22 Google bosses attend the same parties and business meetings in which they collude, co-lobby, rig
23 markets and make anti-trust violating plans together.

24 Google is a private government with more money and power than most smaller nations. Google has
25 more lobbyists bribing more politicians than any other company in America.

26 Jared Cohen and fashion show-horse Yasmin Green at Google had the job of over-throwing
27 countries in the Middle East. They openly bragged about it. (

28 <https://truthstreammedia.com/2013/06/02/googles-regime-change-agent-jared-cohen/>)

1 People that work at Google get paid \$260,000.00+ per year to lie, spy, manipulate politics, bribe
2 politicians and engage in other crimes. For that kind of money, a person will do ANYTHING and
3 rationalize it as "part of the higher cause".

4 The Project X investigation team is publicly quoted as stating: "*...give the same number of lawyers*
5 *as Google has, with the same level of skills and experience, the same discovery budget, legal expenses*
6 *budget and expert witness budget, we ABSOLUTELY GUARANTEE that we can put Google staff and*
7 *investors in federal prison and close Google, in bankruptcy...the Google Cartel has engaged in that*
8 *much criminal activity...*"

9 "Google is the largest financier of the Obama political campaign and exceeded FEC campaign
10 spending limits by tens of billions of dollars. We can prove this in a jury trial, a Grand Jury hearing and a
11 live Congressional hearing.

12 Google is the largest staffing source of the Obama Administration. We can prove this in a jury trial,
13 a Grand Jury hearing and a live Congressional hearing.

14 The largest number of laws and policy decisions, benefiting a single company and its investors,
15 went to: Google. We can prove this in a jury trial, a Grand Jury hearing and a live Congressional hearing.

16 *Google, and its investor's are the single largest beneficiary of the Obama Administration. We can*
17 *prove this in a jury trial, a Grand Jury hearing and a live Congressional hearing.*

18 The Obama Administration only won the White House because Google and Facebook engaged in
19 the largest digital media and search engine manipulation in human history. We can prove this in a jury trial,
20 a Grand Jury hearing and a live Congressional hearing.

21 Google, and its investors, during the Obama Administration, had most of their competitors denied
22 funding, grants, contracts and tax waivers while Google's investors GOT funding. We can prove this in a
23 jury trial, a Grand Jury hearing and a live Congressional hearing and prove that Google coordinated anti-
24 trust violations with senior Obama Administration White House staff...."

25 Google operates its staffing like a Scientology cult. They control their employees' lives,
26 information, transportation, free time, entertainment and social life. A Google life is a glass-bubble of echo-
27 chamber extremist, hyper-sex-kink, reinforcement.

21 [Project Veritas](#) has been lifting back the veil covering big tech companies and their nefarious
22 activities following the 2016 election. They tried to play left-leaning-but-mostly-fair before the 2016
23 election, believing in their hearts that Hillary Clinton would be President without their concerted meddling.
24 That didn't work out for them, so they are trying to prevent "another Trump situation" in 2020 by
25 unabashedly [purging, silencing, and censoring conservatives](#) on platforms like Facebook, Google, Twitter,
26 Pinterest, Instagram, and YouTube.

27 (Article by Michio Hasai republished from [NOQReport.com](#))

28 The answers delivered today before Congress in response to questions by [Representative Dan](#)

1 [Crenshaw](#) weren't the standard denials. They were politically manipulative answers designed to make it
 2 known they're doing what we've said they were doing all along, but they feel justified in doing it because
 3 "hate speech" must be stopped at all costs. Of course, what constitutes hate speech to the social justice
 4 warriors in big tech invariably circles around conservative thought. There is no form of hate speech short of
 5 physical threats that can be attributed to progressives, at least not in the minds of the people who control
 6 big tech. If conservatives are aggressive, they're delivering hate speech. If progressives are aggressive,
 7 they're just being truthful. That's what big tech thinks.

8 This is the worst-case scenario for conservatives. Before, we could call them liars and cheats. Now,
 9 we have to fight them on an ideological level, and while we have the truth on our side, they have the
 10 technology. They have the eyeballs. They control what people see and don't see. And as such, they can no
 11 longer be trusted to deliver anything even remotely close to fair and balanced. They're unhinged from
 12 reality, but instead of coming back to reality once exposed, they're building a new reality around their
 13 ideologies.

14 Russia may arrest Google employees for running Google as a manipulative service containing
 15 hidden political insertions affecting the human subconscious

- 16 • Russian government will now arrest those who try to 'control minds' via mass web
 17 manipulation
- 18 • Google was created to push liberal leftist political messages on the subconscious
- 19 • **Research exposes Google as insidious mind-control political shill**
- 20 • No matter your political persuasion, it is unfair and manipulative for Google to control
 21 minds ANY political purposes

22 By [Sophie Tanno For Mailonline](#)

23 [View comments](#)

24 A Russian journalist has been accused of 'controlling minds' and 'affecting the human subconscious'
 25 after referencing George Orwell's 1984 in an article.

26 Mikhail Romanov, a reporter for the Yakutsk Vecherniy weekly, was writing a story on the alleged
 27 torture of an academic.

28 Police in [Russia's](#) republic of Sakha charged Romanov after they suspected him of trying to tap into

1 the readers' sub-conscience, Russian newspaper [Kommersant](#) reported.

2 A Russian journalist has been accused of 'controlling minds' and 'affecting the human subconscious'
3 after referencing George Orwell's 1984 (pictured) in an article

4 Romanov's editor told the publication: 'This is a story about how anyone can be squashed by the
5 government machine.

6 'It's also about how Big Brother is watching, reading all comments on online forums.'

7 This is understood to be the first time a journalist will be tried under Russia's new legislation
8 punishing those who are perceived to have published information 'containing hidden insertions affecting the
9 human subconscious. '

10 The case has been forwarded to a Yakutsk city court.

23 <https://allthatsinteresting.com/what-are-subliminal-messages>

24 **Subliminal messages**, on the other hand, are likewise real and similar to supraliminal **messages**
25 except that the signal or stimulus is below our threshold of conscious awareness. In other words, you
26 cannot consciously perceive a **subliminal message**, even if you search for it.

27
28 **Google likely ‘thoroughly infiltrated’ by Chinese govt., expert warns**

1 [alex stamos](#), [big tech](#), [china](#), [cybersecurity](#), [facebook](#), [google](#), [internet](#), [peter thiel](#), [richard clarke](#),
2 [russia](#)

3 ([LifeSiteNews](#)) – Tech billionaire Peter Thiel recently called on the federal government to
4 investigate Google for potential infiltration by the Chinese government, and now security experts are
5 saying his concerns are well-founded.

6 Thiel, one of President Donald Trump’s most high-profile [gay supporters](#) and an [avowed critic](#) of
7 Silicon Valley, made the remarks at last weekend’s National Conservatism Conference, *Axios* [reports](#). He
8 called on the FBI and CIA to ask Google, “how many foreign intelligence agencies have infiltrated your
9 Manhattan Project for AI”; “does Google's senior management consider itself to have been thoroughly
10 infiltrated by Chinese intelligence”; and whether this alleged infiltration is why the company works with
11 China’s military but not America’s.

12 “I’m not sure quite how to put this, I would like them to be asked [these questions] in a not
13 excessively gentle manner,” Thiel added.

14 Alex Stamos, a researcher with the Stanford Internet Observatory and [former chief security officer](#)
15 [at Facebook](#), said Tuesday it was “completely reasonable” to assume that both the Chinese and Russian
16 governments have, in some form or another, already infiltrated not only Google but every top tech
17 company:

18 Note that “subverted” is very different than planting professional spies in “The Americans” style.
19 Each of the big companies employs thousands of employees with family members under the control of
20 these countries, and a gov request might be simple and seem borderline reasonable.

21 — Alex Stamos (@alexstamos) [July 16, 2019](#)

22 I expect that there will be a major combined HUMINT/InfoSec attack against a major tech company
23 revealed in the next couple of years, which will trigger the same awakening that Project Aurora did in
24 2009.

25 — Alex Stamos (@alexstamos) [July 16, 2019](#)

26 BTW, I don’t blame the foreign-born employees at all. They are just trying to make a good living
27 doing interesting work. If MSS had *my* Mom I would do whatever they asked.

28 — Alex Stamos (@alexstamos) [July 16, 2019](#)

1 Stamos predicted that the “next couple of years” would see the revelation of a “major combined
2 HUMINT/InfoSec [human intelligence/information security] attack against a major tech company.”

3 He’s not the only one who advises that Thiel’s warnings be taken seriously. Richard Clarke, a
4 former counterterrorism and cybersecurity advisor to both Democrat and Republican presidents, [told](#)
5 [CNBC](#) Wednesday there was cause for concern.

6 “Here’s what I think is true: Google refused to work for the Pentagon on artificial intelligence,”
7 Clarke said. “If you turn around and you work on artificial intelligence in China, and you don’t really know
8 what they’re going to do with that, I think there’s an issue.”

9 The internet giant has denied working with the Chinese military, but opened an artificial
10 intelligence center in Shanghai in 2017 despite the Communist regime’s strict speech and internet controls.
11 On Tuesday, Google executive Karan Bhatia [testified](#) to the Senate Judiciary Committee that the company
12 has terminated a [controversial](#) censored search engine it had been working on for China.

13 Clarke added that there was no meaningful distinction between Google working with Chinese
14 companies and the Chinese government, given the level of state control in the country.

15 The specter of foreign influence on the tech industry further intensifies its ongoing controversies
16 regarding [political bias and censorship](#) and [violations of user privacy](#). Responding to Thiel’s original
17 comments, President Trump [said Tuesday](#) that his administration will “take a look” at the matter.

18
19 Google being biased is glaringly obvious even to a retard. Google forcing their employees to
20 support them politically is a human rights violation.

21 Th old railroad barons a hundred years ago were bad people, but no where near as abusive as google
22 is to the employees. The old railroad tycoons had their supporters too who thought strikers and protesters
23 against their tyranny were awful people.

24 Silicon Valley just indoctrinated their followers and employees by brainwashing them first like any
25 cult does. "Do no evil" was always a smarmy block of shit in pixels, no different than the purple dinosaur
26 singing "I love you, you love me". The purple dinosaur never loved you one little bit. It was a lie, and
27 parents had no business being such gullible suckers and allowing their children to be lied to by an actor in a
28 fuzzy suit.

- [link](#)

forcing their employees to support them politically is a human rights violation.

>Civil and political rights are a class of rights that **protect individuals' freedom** from infringement by governments, social organizations, and private individuals. They ensure one's **entitlement** to participate in the **civil** and **political** life of the society and state **without discrimination or repression.**

From the first time they censored, shadow-banned people who opposed their way of viewing world, far-left, SJW, leftards has put cornerstone to **civil rights movement 2.0**, including people who are at the rock bottom and uppermost stairs of oppression. Clearly, this is infringement of rights by gov and private entities, which has been ignored from by the time it was apparent that such violation is well spread and not a unique case.

Those at silicon valley had no idea that their attempt to have conservative and alike voice removed/deplatformed is **someway resemble how "white" and "colored" segregation works**; which is no brainer considering that they did not pay any attention to "obscure" details and only remember famous persons who was oppressed at that time.

So, don't spout only "Hate speech is Freee speech". Tell them that when some peers mock center-right personalities by reenacting what happened prior to Civil Rights Act of 1968,throwing liquids to nigger who ignored the sign, isn't a good joke since **political affiliation is covered in protected class** in District of Columbia, IA,WV state, which put them as the white fellas and anyone who didn't entirely agree with them as the blacks in this reenactment.

If anyone reading this is somehow connected to parliament from local council to state, **consider ammending the laws to add political affiliation as one of class covered by "(unfounded)hate crimes"**. We won't need to see bike lock attacker and his copycat got sweetheart deals. Share this to Trump, since who doesn't love for shit and giggles watching leftards kvetching having cognitive dissonance episode explaining why adding another class would hurt other classes that already existed in last statue

Step 1: begin building foundational zeitgeist in pre-K through grade 12.

Step 2: con pupil into taking massive loan in order to obtain degree in advanced doctrine of

1 zeitgeist.

2 Step 3: place pupil into career path to pay off massive loan.

3 Step 4: threaten to remove livelihood of career path if pupil questions established zeitgeist.

4 Regarding Google – Alphabet – Youtube and their Cartel, the issues, that the public and the news
5 media have complained about include: producing child suicides and classroom shootings, racism,
6 misogyny, child mental health threats, domestic spying, data harvesting, sex trafficking, election
7 manipulation, tax evasion, Fusion GPS/Media Matters/ Black Cube hit jobs on competitors, censorship,
8 contrived market monopolization, intellectual property theft, political bribery and many other social
9 crimes!

10
11 -- An unusually large number of their staff have been arrested for, or charged with, sex crimes,
12 including under-age trafficking.

13
14 ---- They seem to be an organized crime entity protected by the politicians that they pay bribes to.

15
16 ---- This entity is one of the largest operators of bribes to public officials. Some of those bribes
17 include billions of dollars of, non-FEC reported, search engine rigging for the political campaigns of the
18 very politicians who are supposed to regulate them.

19
20 ---- “Google is a sick corrupt criminal business run by sex trafficking perverts and sociopaths...”
21 Say GOOGLE’S own inside employees, Divorce Court records of Google executives, 70+ State and
22 Federal investigations and major news outlets.

23
24 ---- Google spies on competitors and steals their technology.

25
26 --- Google – Alphabet – YouTube stock is owned by almost all of the California politicians and
27 their families and that is why Google – Alphabet – YouTube is never regulated and always protected by
28 them for their political and profiteering manipulations -

Musk

--- Google runs tens of millions of dollars of defamation attacks against competitors

---- Google hides all media and news coverage for competitors of Larry Page's boyfriend: Elon

---- Google lies to the public about what they really do with the public's data

---- Google promotes illegal immigration in order to get cheap labor and control votes

---- Google runs VC funding back-lists against start-ups that are competitive

---- Google bribes thousands of politicians

---- Google is a criminal RICO-violating monopoly – Google rigs the stock market with Flash-boy,
Pump/Dump and Microblast SEC violating computer tricks -

--- Google pays bribes to politicians in Google and YouTube stock

---- Google manipulates who gets to see what web-sites, globally, for competitor black-lists

---- Google has a “no poaching” Silicon Valley jobs blacklist

---- Google bosses sexually abuse women and young boys ---- Google bosses run sex trafficking
operations in the Epstein and NXVIUM cults

---- Google bosses control the NVCA financing cartel over start-ups -

1 --- Google has placed the majority of the corporate staff in at least one White House

2
3 ---- Google controls national elections for anti-competitive purposes

4
5 ---- The company "Polyhop", in the HOUSE OF CARDS tv show, does all the crimes that Google
6 actually does in reality

7
8 ---- Google's law firms, like Wilson Sonsini, are corrupt conduits for payola and political conduit-
9 relays

10
11 ---- Google bribes some politicians with revolving door jobs

12
13 ---- Google is primarily responsible for destroying the Bay Area Housing opportunities

14
15 ---- Google runs DDoS attacks on competitors by massively crawling their sites

16
17 ---- Google boss Andy Rubin runs a sex slave farm according to his own family -

18
19 --- Google boss Eric Schmidt was a philandering sex-penthouse owner according to vast news
20 articles

21
22 ---- Google executives hire so many hookers that one of them, Mr. Hayes, was killed by his hooker

23
24 ---- Google executives sexually abuse so many women that the women staff of Google walked out
25 one day

26
27 ---- In the 2009 White House, you could not swing a cat without hitting a Google insider

28

1 ---- Google has paid covert bribes, PAC funds, real estate and search rigging payola to every CA
2 Senator

3
4 ---- Google has paid bribes, through its lobby fronts, to halt FBI, SEC, FEC and FTC investigations
5 of Google crimes

6
7 ---- Google was funded by the CIA, via In-Q-Tel, a so called “501 c3 charity” which was caught
8 with tons of cocaine

9
10 ---- Google gets millions of dollars of taxpayer cash for spying on Americans inside the USA -

11
12 --- Google’s map service was a spy system paid for by taxpayers money that Google now profits off
13 of

14
15 ---- Nancy Pelosi and Dianne Feinstein have promised to “protect” Google because their families
16 profit off Google stocks

17
18 ---- Payment receipts prove that Google and Gawker/Gizmodo exchanged cash and staff for
19 Character Assassination attacks

20
21 ---- Google VC’s and bosses have spent \$30M+ rigging the U.S. Patent Office to protect Google
22 and harm Google competitors

23
24 ---- Google bribed it’s lawyer into position as head of the U.S. Patent office in order to have her
25 protect Google – To rig insider stock trades, Google hides negative Tesla stories and pumps positive Tesla
26 stories on “push days” -

27
28 --- Google and Elon Musk Co-own, co-invest and co-market stocks covertly while running anti-trust

1 schemes

2

3 ---- Google rarely likes, or hires, black employees per federal and news media investigations

4

5 ---- Google hired most of the Washington, DC K Street lobby firms and told them to “do what ever
6 they could”

7

8 ---- The film: “Miss Sloane” depicts only 2% of the illicit lobbying tactics Google employs daily

9

10 ---- Demands for an FTC and FBI raid of Google, for criminal activity, securities law and election
11 felonies have been filed

12

13 ---- Google’s David Drummond had his Woodside, CA Quail Road house bugged revealing sex and
14 financial misdeeds

15

16 ---- Google, and it’s Cartel (Alphabet, Youtube, and hundreds of other shell-company facades) are a
17 criminal organization engaged in felony-class crimes. Google’s bosses bribe politicians, regulators and law
18 enforcement officials to hold off prosecution.

19

20 ----At Google: Kent Walker, Andy Rubin, Larry Page, Eric Schmidt, Sergy Brin, Jared Cohen,
21 Yasmin Green, David Drummond and Ian Fette are so enmeshed in sex scandals, election manipulation,
22 and White House bribes that it is hard to comprehend how they can get any legitimate work done.

23

24 ---- There are hundreds of millions of people in America. The same 120 of them are all involved in
25 operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare
26 earth mine scandals operated through The Energy Department political slush fund that involves the lithium
27 battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery,
28 exclusionism, racism and misogyny issues they were taught at Stanford University;

1
2 ---- The Facebook – Meta – Google – Alphabet – Netflix, et al, coordinated news manipulation and
3 domestic spying that they engage in; the hiring of Fusion GPS – Black Cube – Gizmodo/Gawker assassins;
4 the destruction of the housing market by their mass real estate manipulations; patent theft and industrial
5 espionage; and the bribery of almost every politician all the way up to the Oval Office. ---- So, while the
6 categories covered in this investigation may seem diverse.

7
8 They are connected through an enterprise of criminality and illicit, coordinated operations. We list,
9 by name, the 120 most complicit individuals organizing these crimes, in the evidence documents already
10 submitted to the FBI, FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital
11 financial tracking of those persons and all of their family members should be assumed to have been under
12 way for some time. Wire-taps and device taps of those persons and all of their family members should be
13 assumed to have been under way for some time. -

14
15 --- Twitter, Splunk, Google, Facebook, Netflix, YouTube and the Silicon Valley internet Cartel
16 serve you custom manipulated content by automatically creating a covert digital dossier on you reflecting
17 the content consumption preferences they have spied on about you. They continually evolve their dossier
18 on you in order to steer you towards their ideology and their Democrat political party. At these companies,
19 “data mining”, “machine learning” and “AI” means computerized propaganda processing for certain
20 political entities. They began hiring off-shore people (because they would work so cheap) but most of
21 those people turned out to be Muslim. This created conflicts with the entire southern part of the United
22 States (which is anti-Muslim) because those workers steered content to pro-Muslim positions.

23
24 ---- Their spy dossier on you uses abstract content-specific features of the consumed content, such
25 as categories, topic models, and entities, which they automatically extract using natural language
26 processing by comparing every word you use to a giant computer library of what those words might mean
27 about your psychology. So it’s like you are getting “mind-raped” without any penis use. Their assessment
28 of what your words might mean is based on what rich, white male, \$200K/year, DNC-promoting

1 programmers think they might mean.

2
3 Their computers scale and expand their tools with algorithmic software created by those politically
4 and socially biased frat white boys that wrote the code. It is all biased as hell. They never hire blacks or
5 women in system creation roles so everything these companies do only supports rich white soyboy
6 snowflake type gamer thinking. ---- Because their Silicon Valley VC's told them to spy on billions of
7 people, even for these web giants, it is impractical to store the entire dynamic history of a user's interaction
8 features. They, thus, out of greed, use algorithms that selectively decay information in order to generalize
9 users and populations. To them, you are just a generalized data point, like cattle on a ranch, to be harvested
10 and fed upon by Silicon Valley.

11
12 You can try to sue Google for anti-trust, racketeering and other illicit deeds and Google will hire
13 tens of millions of dollars of lawyers to blockade you from getting to a Jury Trial. The best thing you can
14 do is assist the Federal Government, many State Attorney General's and citizen's groups with their lawsuits
15 against The Google Cartel.

16 Bloomberg, The Wall Street Journal, Stratfor, Wikileaks, FTC and SEC investigators and Kroll Intelligence
17 says that Google runs the largest domestic spying operation in the world; larger than that of even Russia,
18 China, Isreal or Iran. The Google Cartel has set up tho- USA - nds of companies in a spiderweb of
19 surveillance, around the globe, and in space, that knows everything that everyone is thinking, doing or
20 might do; and how to place media and events in front of them to subliminally steer people to do, or think,
21 things that they might not otherwise have thought, done or voted for. Many of these operations were
22 financed by IN-Q-TEL, which is the CIA and the NVCA combined. For example, A Google derivative
23 called 'JigSaw' is run by Pro-Isreal, Anti-Arab operatives and steers data to certain interested parties. Larry
24 Page is on multiple Arab secret police "kill lists", which means they should terminate him if the opportunity
25 arises. Barack Obama had Eric Schmidt in the basement of his campaign HQ on election night, running
26 computers, and has secretly claimed that "Google put him in office". Most of the key White House staff
27 came from Google. Google claims to 'not be political', but it is the most political business Cartel on Earth.
28 Google finances politicians that will do what Google tells them to do. It finances them with billions of
dollars of internet manipulation, insider stock favors and by getting every staff member to give max limits
to their camapign PACS.

Google and it's facades: Jigsaw; Alphabet; YouTube; Google LLC (core profit maker); XXVI Holdings
Inc.; Google Ireland Holdings (Google LLC subsidiary, that realizes most international profits); Alphabet
Capital US LLC; Alphabet Inc.- - USA - -Parent holding company since 2015. If you own stocks of
Google/Alphabet, you own a piece of this company; Calico Life Sciences LLC - - USA - - Research and
development company working on keeping Eric Schmidt alive; Calico LLC (Calico Group LLC)- - USA -

1 - Holding company of Calico Life Sciences LLC. Company is doing business as Calico Group LLC;
 2 Chronicle LLC - - USA - - Cybersecurity company that creates tools for businesses to spy on other
 3 companies; Google LLC - USA - - Core Google parent company originally named Google Inc. before
 4 Google transformed itself into Alphabet. This is where most of the profits come from; Loon Holdings Inc.
 5 - - USA - Holdings company - Loon LLC - - USA - - Company is working on providing Internet spying
 6 to rural and remote areas using high-altitude balloons; OB Technologies Inc. - - USA - Holdings company
 7 - OB Technology Holdings Inc.- - USA - -Holding company; Waymo Holding Inc.- USA - - Holding
 8 company for Waymo; Waymo LLC - USA - - - Company developed autonomous car technology and
 9 currently operates "testing" rides in several US states and already launched Waymo One service in
 10 Phoenix. Recently it announced that it will not make its own cars but rather focus on autonomous driving
 11 technology to spy on consumers; Wing Aviation LLC - US - Company developed drone delivering
 12 technology. It became independent from Project X in 2018. It is currently testing in Australia; X
 13 Development Holdings Inc.- USA - Holding company - X Development LLC - USA - -Called "Moonshot
 14 Factory." The company says it is working on solving the world's hardest problems using technology but
 15 seems to just be an outlet for Larry Page to steal and copy technologies with. Wing, Loom, and Waymo,
 16 which are now separate businesses, started as X projects; XXVI Holdings, Inc- USA - Layer between
 17 Alphabet Inc. and individual companies of Alphabet. The system is designed to lower regulatory or
 18 disclosure requirements, tax evasion, money laundering and for hiding political payola. The name of the
 19 company is referring to the Roman numeral of 26, the number of letters in the alphabet.

20 Google LLC has over 200 direct and indirect subsidiaries in order to limit where lawsuits and federal
 21 actions can go. The Mafia uses this same approach. Almost everything Google owns is involved in
 22 acquiring, and analyzing your personal and business data for the Google surveillance computers. It is
 23 almost impossible to find a Google group that does not 'feed the data beast'. Larry Page and Eric Schmidt
 24 believe that no citizen is intelligent enough to live in the world and that they must covertly 'guide'
 25 populations to their own ideology and "Master Plan". The rest of the Google Cartel for global domination
 26 includes:

27 DeepMind Technologies Limited GBR Artificial intelligence/Machine Learning

28 DoubleClick Holding Corp.- USA - Online advertising company that Google acquired a decade ago. It
 recently announced that it is rebranding its advertising products, and it will no longer use DoubleClick
 brand.

Dropcam, Inc.- USA - Home monitoring. Company is known for its Wi-Fi video streaming cameras. Was
 acquired by Nest soon after Nest was acquired by Google. This acquisition is often given as an example of
 how an acquisition can go wrong.

Google Asia Pacific Pte. Ltd SGP Singapore company that channels revenues (royalties) from Asia/Pacific
 region (through the Netherlands) to Ireland Holdings Unlimited. It has a similar purpose to Google Ireland
 Limited in Europe.

Google Bermuda Limited BMU Hard to say, where in the company hierarchy this sits. Might be the parent

1 company of Google Bermuda Unlimited

2 Google Dialer Inc.- USA - Not sure exactly but connected to Google Fiber and Google Voice.

3 Google Fiber Inc.- USA - Internet Access Provider

4 Google Fiber North America Inc.- USA - Internet Access Provider

5
6 Google International LLC - USA - Holdings company for Google's subsidiaries in individual countries
7 outside the US.

8 Google Ireland Holdings Unlimited Comp. - IRL - This is a very "famous" Google subsidiary that is
9 incorporated in Ireland but managed and controlled in Bermuda. Google at least up to recently used this
10 subsidiary as part of the "Double Irish" with "Dutch Sandwich" tax optimization scheme that is very
11 common among large international companies. The company serves partially as a holding company for
12 some international businesses but mainly as a holder of Google intellectual property that it further licensed
13 to other Google companies for a fee.

14 Google Ireland Limited - IRL - Google Services Provider for Europe and Switzerland. It books a lot of
15 revenue, but makes very small profits, since it pays a lot to Google Netherlands BV for Google's
16 intellectual property. Google Netherlands BV than channels this revenue to Google Ireland Unlimited that
17 is incorporated in Ireland but domiciled in Bermuda.

18 Google Netherlands Holdings B.V.NLD This company is used as a middle layer between Google Ireland
19 Limited and Google Ireland Holdings. This allows Alphabet to pay very low taxes from its European
20 operations thanks to a tax optimization scheme called "Double Irish" with "Dutch Sandwich." This
21 loophole was very popular among international technology companies and was already fixed for new
22 arrangements.

23 Google North America Inc.- USA - Provider of Google FI service (wireless network)

24 Google Payment Corp.- USA - Google's companies that handle money transfers and peer-to-peer
25 transactions. In US payments are processed by Google Payment Corp. (GPC), which has the appropriate
26 license for transmitting money and for peer-to-peer transactions in US.

27 Google Payment Ireland Limited - IRL - Providing Google Payment Services for whole European Union
28 (except UK) as a replacement for

Google Payment UK. UK subsidiary will keep providing services for UK.

Google Voice Inc.- USA - Provider of Google Voice service.

GU Holdings Inc.- USA - Through this company, Google is building subsea cable infrastructure. For

1 example, in 2019, they finished the connection between Los Angeles and Chile.

2 Nest Labs (Europe) Limited - IRL - “virtual subsidiary” of Nest Labs. Owned by Google Ireland Holdings
3 Unlimited, so not directly under

4 Nest Labs

5 Nest Labs Inc.- USA - Company flagship product and company’s first offering before it was acquired by
6 Google was Nest Learning Thermostat. Nest operated independently of Google from 2015 to 2018.
7 However, in 2018, Nest was merged into Google’s home-devices. (Still not sure if it was only
8 organizational merger or also legal merger)

9 Nest Labs Singapore Pte. Ltd.SGPvirtual “subsidiary” of Nest Labs. Owned by Google Ireland Holdings
10 Unlimited.

11 Verily Life Sciences LLC - USA - -Research company developing tools that focus on health data and how
12 they can help with timely decision-making and effective interventions. (formerly Google Live Sciences)

13 Waze Mobile Ltd.ISR GPS navigation software. Waze describes its app as a community-driven GPS
14 navigation app, which is free to download and use. Waze is owned directly by Google LLC.

15 YouTube, LLC - USA - -Youtube is a very successful video sharing and hosting service that Google
16 acquired in 2006. This acquisition became hugely successful for Google. But not everybody was persuaded
17 that the acquisition made sense at the time.

18 Alphabet Holding LLC is a holding company that is a direct subsidiary of XXVI Holdings, Inc. It is
19 focused mainly on managing Google/Alphabet investments. Both Alphabet investment managing firms
20 CapitalG and GV are housed under this holding. CapitalG and GV invest in other companies, but since
21 those are usually small stakes below 50%, these companies are not part of Alphabet Group. If you want to
22 know more about what companies do they invest in, both CapitalG and GV have a helpful list of their
23 investments on their webpages.

24 CapitalG 2013 GP LLC - USA - - - Fund Manager

25 CapitalG 2013 LP- USA - Fund

- 15
- 16 GV 2019, L.P.- USA - Fund
- 17
- 18 GV Management Company, L.L.C.- USA - Core management company for GV
- 19
- 20 GV UK Management Company LimitedGBRSmall UK based branch of “GV Management” (3 employees
in 2018)
- 21
- 22 Sidewalk Labs LLC - USA - -Urban innovation organization whose goal is to improve urban infrastructure
through technological solutions and tackle challenges of urban growth such as cost of living, efficient
transportation, and energy - USA - ge.
- 23
- 24 Sidewalk Labs Management Company LLC - USA - -Urban innovation
- 25
- 26 Before 2015, there was no Alphabet, and Google Inc. was a publicly-traded company that you could
directly own by buying its shares. All subsidiaries were subsidiaries to Google Inc. In 2015 Google
transformed into Alphabet, where Alphabet Inc became the top parent company that was publicly traded.
Google Inc. shareholders became overnight Alphabet Inc shareholders.
- 27
- 28 In reality, many “Other Bets” businesses still stayed as subsidiaries of Google LLC even after the 2015
transformation, and it was only recently when the whole transformation was finalized. Finally, “Other
Bets” companies were moved from outside Google LLC.

1 The reasons for this complex transformation were described by Google management as an “increase in
2 transparency and oversight,” That would be achieved by putting larger projects at the same level as Goole
3 LLC with their separate management, reporting directly to Alphabet Inc management. The proclaimed
4 increase in transparency was only internal for Google management. Transparency for investors did not
5 increase. Another reason behind the transformation was obviously limiting risk. By separating Google into
6 different companies, each one of them is independent of each other. If someone gets arrested in one
7 company, the others would be protected from it.

8 Double Irish & Dutch Sandwich is a very popular and publicized arrangement through which mostly US
9 companies were optimizing their taxes from European businesses. It involved two Irish and one Dutch
10 company. Wikipedia has a nice article on both Double Irish and Dutch Sandwich, explaining how it works.
11 In Alphabet/Google case. Companies involved in Double Irish with Dutch Sandwich arrangement are
12 assumed to be:

13 Google Ireland Holding Unlimited (Irish company with Bermuda domicile)

14 Google Netherlands Holdings B.V. (Dutch “sandwich” company that serves as an intermediary between
15 two Ireland companies)

16 Google Ireland Limited (Ireland company that is directly booking revenue from European business, and
17 sends most of the revenue to the Netherlands as royalties for leasing Google’s intellectual property.

18 Aardvark- USA - Q&A service

25
26
27
28 [FOX Business](#) reported:

1 Paul Pelosi, the multimillionaire husband of former House Speaker and current Rep. Nancy Pelosi,
2 D-Calif., sold 30,000 shares of Google stock a month prior to the Dept. of Justice’s announcement of an
3 antitrust lawsuit against the tech giant, according to a financial disclosure filed with the House of
4 Representatives.

5 Pelosi reported the sale of Google stock in three different transactions between Dec. 20 and Dec. 28,
6 2022, each of which involved the sale of 10,000 shares of stock in Google’s parent corporation Alphabet
7 Inc. The Periodic Transaction Report filed with the House notes that each transaction involved an amount
8 between \$500,001 and \$1,000,000 and yielded capital gains of more than \$200 — although it’s unclear
9 how large the profit was. Taken together, the trades involved 30,000 shares and between \$1.5 million and
10 \$3 million of assets.

11 The DOJ and eight states announced a lawsuit against Google on Tuesday, alleging that the
12 company engaged in anticompetitive behavior and exercised a monopoly over internet search traffic.

13 “Google’s anticompetitive behavior has raised barriers to entry to artificially high levels, forced key
14 competitors to abandon the market for ad tech tools, dissuaded potential competitors from joining the
15 market, and left Google’s few remaining competitors marginalized and unfairly disadvantaged,” the DOJ
16 and the states allege.

THE 'KILL CODES' USED BY BIG TECH AND COORDINATED WITH THE WHITE HOUSE

Google, Facebook, Twitter, Instagram, YouTube Found To Have Secret Cooperative Competitor KILL CODES Hidden In Their Products. We exposed these in our lawsuit against Google and helped the U.S. Government further expose these secret codes in the lawsuits by the U.S. Government against Google/Alphabet and their CIA control partners.

The White can have their political campaign financier/beneficiaries destroy you by employing secret KILL CODES in their products. A Cartel of Silicon Valley companies, that finance Obama and Biden, use these codes, among each other, to wipe out journalists, competitors, whistle-blowers and politicians that they hate.

In one of many hundreds of cases of proofs we have [commentator Dave Rubin](#) reported he had spent the last two weeks at Twitter's San Francisco headquarters talking to [engineers, product managers, and Elon Musk](#) and learned that the team still "have more questions than answers" including around a batch of "secret" labels used to [shadowban](#) conservatives beyond the revelations from the [Twitter Files](#).

Rubin tweeted, "Accounts aren't just hit with labels that are obvious to insiders. They now found more 'secret' labels which are causing shadowbans. My account was hit with all three; 'Recent abuse strike,' 'Recent misinformation strike,' 'Recent suspension strike'.

"It's unclear so far what these strikes actually do, but for sure they suppress views and recommendations, they are trying to figure out to what extent. I also had many innocuous tweets labeled NSFW or NSFA (not safe for ads) which affect visibility in the timeline.

"Also, there's an entire KeyWord database so that machine learning makes sure not to promote violence, porn etc., but it's a mess of overreaching words. Literally the word 'gay' was on the KeyWord list which would make you not advertiser friendly and harm the tweet in the algo," Rubin tweeted.

In July 2022, Rubin [was suspended](#) from Twitter for defending Jordan Peterson's tweet about Elliot Page.

"Backing up for a sec, they found the 'recent suspension strike' on my account most interesting because it was from July 2022, when I was suspended for calling out [@jordanbpeterson](#)'s unjust suspension. So though suspension was reversed the action on the account remained," Rubin tweeted.

On December 8, [Bari Weiss](#) tweeted [round 2 of the Twitter files](#) which confirmed that leadership at the social media platform built blacklists and participated in shadowbanning for years under the watch of

1 Vijaya Gadde, former Twitter lead counsel and former head of Twitter Trust and Safety [Yoel Roth](#).

2 Examples of shadowbanning under former Twitter management included Turning Point USA
3 founder Charlie Kirk being tagged with a "Do Not Amplify" tag. Talk show host Dan Bongino was tagged
4 with a "Search Blacklist" tag which had a similar suppressive consequence.

5 Rubin said, "Elon was bringing people in and out constantly and seems to be aware of pretty much
6 every issue. He thinks maybe the entire code has to be torn down and start from scratch. At the end last
7 night he said that the whole situation is 'a flaming dumpster rolling down the street.'"

8 "So I assure you they are aware of the problems and Elon and engineers are there all night trying to
9 untie this crazy knot. Some changes they've made, like the 'For You' tab, have confused people and hurt
10 engagement for accounts who have gotten the NSFA label without knowing," Rubin added.

11 Musk remarked on the Rubin's tweets and said, "Accurate thread."

12 In other reports it is revealed that the Google codebase contains everything from infrastructure
13 (serving, load balancing, capacity planning etc) to extensions of search (Google Now, instant search etc).

14 When you look at the exact algorithm(s) and their parameters used when determining search results
15 you see that there is no *single* algorithm that can be called "Google Search". There are many experiments
16 running in parallel at all times for A/B testing. Moreover, search is "tuned" by region, language and other
17 user characteristics in order to help Elon Musk and harm Toyota electric cars.

18 There is some of that "special code" can only be accessed on a need-to-know basis by Larry Page,
19 Eric Schmidt and Sergey Brin if they put a hit job on someone.

20 Google Search is like a gigantic moving machine where each cog and gear is maintained and tuned
21 by a different set of people who report to Larry Page, Eric Schmidt and Sergey Brin .

22 Larry Page, Eric Schmidt and Sergey Brin and their handful of people can access and change any
23 and all of this code.

24 **ATTACKS AND CENSORSHIP BY T-MOBILE-GOOGLE-ALPHABET-YOUTUBE-
25 FACEBOOK:**

26 We have placed more software sensors on more server networks globally than anyone else has ever
27 announced. When Google-Alphabet-YouTube Shadow Bans, DNS re-routes, Hides, Demonetizes, Search
28 Manipulates, Server Table Edits, Censors, Election Rigs, SEO limits, etc; our links, we record it, document
it technically and report it to every regulatory and publishing group in the world.

We also compile the data into evidence for lawsuits against Google and each Google executive. Our
insiders work at the deepest levels of their operation. It isn't nice to mess with Mother Nature or Freedom
Of Speech. It's worse to run tax evasion, sex trafficking, dark money funds, real estate fraud and other
crimes from inside Google! ----

1 Our autonomous monitoring applications are on a vast number of co-location servers, shared
2 hosting ISP's, stand-alone servers and sites around the world and have been operating for over ten years.

3 We log: 1.) Google's search results compared to other search engines, 2.) Google's DNS and
4 spoofing activities, 3.) Google's results on 100 key search terms including search terms of assets,
5 candidates and business associates connected to Google (ie: "Obama", "Elon Musk", "Election Results",
6 etc.), 4.) Where Google sends data from users clicking on Google supplied links, 5.) Where fabricated
7 "mole" data that was injected as user data ultimately ended up later, 6.) Google's election manipulation
8 attempts, and other metrics.

9 The results prove that Google abuses the market, the public, privacy rights, politics and human
10 rights. ---- So Google, every time you do it, you are just digging your own grave and giving us all the proof
11 we need to wipe you out, process anti-trust filings and expose your monopolist, sex trafficking, sociopath
12 owners!

13 The government reprisal attackers cancelled Plaintiffs federal funding and gave it to his competitor
14 who they owned the stock of and were dating; they cut off Plaintiffs social security benefits; they hacked
15 Plaintiffs devices; they cut off Plaintiffs HUD benefits; they took away Plaintiffs home; they got Plaintiffs
16 fired; they poisoned hiring databases; they manipulated Paypal payments; They used DNS redirection,
17 website spoofing, shadow-bans and other digital spy-tricks to keep Plaintiffs web storefronts hidden from
18 buyers; They hired IN-Q-Tel, Think Progress, Media Matters, Gawker Media, Syd Blumenthal, etc to run a
19 \$40M digital character assassination; They hired Google to rig billions of global searches; They enforced
20 blacklists and other anti-trust RICO actions; They exposed Plaintiff to weapons-grade toxins in his Dept of
21 Energy lab work; and other spycraft type 'political dirty tricks' operations; Plaintiff was a key whistle-
22 blower in the Solyndra FBI raids and Afghan war investigations yet never received his
23 whistle-blower/informant/witness fees.

24 A number of those attacked (Sharyl Attkisson, Monica Samille Lewinsky, Julian Assange, John
25 Michael Gravitt, Jeffrey Wigand, Dr. Aubrey Blumsohn, John Kopchinski, Robert Rudolph, Joseph
26 Faltaous, Steven Woodward, Dr. Eric Ben-Artzi, Cheryl Eckard, Coleen Rowley, Bradley Manning, Frank
27 Serpico, Edward Snowden, Daniel Ellsberg, et al) compared notes and found that the same government
28 contractors did, generally, the same things to each of them:

– Applicants employers were called, and faxed, and ordered to fire applicants from their places of
employment, in the middle of the day, with no notice, as a retribution tactic.

– Applicants HR and employment records, on recruiting and hiring databases, were embedded with
negative keywords in order to prevent them from gaining future employment.

– Disability and VA hearings and benefits were frozen, delayed, denied or subjected to lost records and

1 “missing hard drives” as in the Lois Lerner case.

2 – Paypal and other on-line payments for on-line sales were delayed, hidden, or re-directed in order to
3 terminate income potential for applicants who competed with DOE interests and holdings.

4 – DNS redirection, website spoofing which sent applicants websites to dead ends and other Internet activity
5 manipulations were conducted.

6 – Campaign finance dirty tricks contractors IN-Q-Tel, Think Progress, Media Matters, Gawker Media, Syd
7 Blumenthal, etc., were hired by DOE Executives and their campaign financiers to attack applicants who
8 competed with DOE executives stocks and personal assets.

9 – Covert DOE partner: Google, transfered large sums of cash to dirty tricks contractors and then manually
10 locked the media portion of the attacks into the top lines of the top pages of all Google searches globally,
11 for years, with hidden embedded codes in the links and web-pages which multiplied the attacks on
12 applicants by many magnitudes.

13 – Honeytraps and moles were employed by the attackers.

14 – McCarthy-Era “Black-lists” were created and employed against applicants who competed with DOE
15 executives and their campaign financiers to prevent them from funding and future employment and many
16 other forms of Government vengeance and retribution dirty tricks.

17 Financial and communication records have now been recovered by ICIJ, private investigators, news
18 organizations and others examining the leaked documents that prove who did what.

19 White House and Agency senior staff, along with members of Congress, ran an organized crime,
20 insider-trading “Enterprise”, within our government. They convinced major law enforcement executives to
21 look the other way. They sabotaged and attacked competitors using government resources. Their
22 ‘consigliere’ financier/beneficiary partners are the oligarchs of Silicon Valley’s Big Tech. All of their
23 covert links have now been exposed by leaks, family insiders and whistle-blowers. Arrests are demanded!

24 Help fight these corrupt scumbags. Support the AMERICAN STOCK ACT (LINK) in Congress,
25 Our CLASS-ACTION ANTI-CORRUPTION (LINK) , Our general anti-corruption lawsuits, the SHAME
26 (LINK) campaigns against the corrupt politicians, our Citizen-CIA (LINK), the use of our promoted
27 AMERICAN JOBS ACT (LINK) to allow crowd-funding, Our conversion of citizen lawsuits to federal
28 lawsuits against corrupt Big Tech oligarchs, a global financial database assisted by ICIJ to root out family
money-laundering by Senators and others, and much, much more...

WHO ARE THESE BAD GUYS?

Having worked with, and lived with, these people, been in their secret meetings and attended their
home parties for decades, we have decided we do not like them because they are infested with criminality
and they seek to normalize cultural horrors that any knowledgeable society would never tolerate. On top of

1 that, they used government resources to attack us in reprisal and anti-competition.

2 The documented characteristics of this “Cartel”, which is an organized ‘enterprise’ consisting of
3 Silicon Valley ‘Venture Capitalists’, Big Tech executives, Senators, White House executives, agency heads
4 and investment bankers; includes the following facts as detailed in, literally, millions of news articles and
5 law enforcement reports:

6 They have a sick, echo-chambered, criminality: A horrific phenomenon of cultural depravity and
7 white-collar crime is going unchecked in Silicon Valley because Silicon Valley controls the media and the
8 politicians that are usually supposed to check these kinds of things. Millions of pages of news reports,
9 documentaries, interviews and legal transcripts prove this to be true. Feature films and network TV shows
10 like: “Too Big Too Fail”; 60 Minutes (via over 10 investigation segments); Super-Pumped- The Uber
11 Story; Bad Blood; Silicon Valley – The TV Series; and hundreds more, show the true culture of depravity
12 that this crowd squirms around in.

13 They are an elitist cult. Silicon Valley elitists believe they are better than everyone else. Silicon
14 Valley’s Kleiner Perkins founder: VC Tom Perkins, said that poor people must be “Nazi’s” for not
15 accepting the “superior intellect” of VC’s. Silicon Valley’s Kleiner Perkins VC Vinod Khosla, took over
16 California’s favorite public beach, bribed the White House for “green cash” and got sued for arrogance by a
17 horde of public interest lawsuits. Silicon Valley’s Kleiner Perkins founder Ray Lane was indicted for tax
18 evasion. Silicon Valley’s Kleiner Perkins boss John Doerr was sued for sexual office abuse and running a
19 “frat house” and bribing Stanford University. Most of the VC’s and tech CEO’s in Silicon Valley are
20 charged with similar ethics breaches. They bribe press and political figures to keep their dirty deeds out of
21 the news.

22 They gorge on prostitutes. Silicon Valley males hire more hookers and “rent-boys” and fly more sex
23 workers into the Bay Area than any other city in America. Google’s and Tesla Investments executives were
24 killed in sex and drug romps with hookers. Google’s Eric Schmidt ran a huge “sex penthouse” and
25 promotes infidelity and “anti-marriage”. Google’s search engine rigging boss died at the hands of one of his
26 hookers. The Silicon Valley VC’s had the Rosewood Hotel built at the end of Sandhill Road as a place to
27 take interns and hookers to for sex. Underage sex efforts operated by these VC’s and Tech CEO’s have
28 created the “Pizzagate” phenomenon.

29 They engage in Rape and Sexual Coercion of employees. Young interns are “sent up the hill” by
30 Stanford to the VC’s Sandhill Road offices to become sexual playthings for the VC’s at the Rosewood
31 Hotel. Ellen Pao sued Kleiner Perkins over the sexual “rape culture” that they promoted. Thousands of
32 women have written books and articles about the sexual intimidation they are subjected to by Silicon
33 Valley VC’s and their tech CEO’s. VC’s Joe Lonsdale, Micheal Goguen and hundreds of others have been

1 charged with rape and sex trafficking. Stanford University gets “endowments” and “gifts” for hushing rape
2 culture and intern-fluffing up.

3 They are Assholes. Fraternity House Take-What-You-Want culture is re-percussively promoted in
4 the bars, clubs, meetings, conferences and emails of the VC’s and CEO’s. The TV Show: Silicon Valley,
5 underscores the point of the dangers of infectious asshole-ism in Silicon Valley.

6 They are tunnel-vision clones. They assemble those around them, that have the same stereotypical
7 facial structure. In a room full of ordinary people and Tech VC’s, the VC’s faces stand out as Hollywood-
8 type character-cartoon duplicates of each other. They act alike, talk alike, dress alike and do crime alike.

9 They are devoted to sexual deviance and extremism. In the book: BROTOPIA, and related books,
10 you see that Google’s founders have all had extreme sex scandals involving cheating, 3-way sex, divorces
11 over abuse, forced anal sex and other outrages. Their teachers at Stanford have had to quit over their sex
12 scandals. Their willingness and infatuation with sexual extremes defines them as moral degenerates who
13 care little about laws and ethics.

14 They had Dysfunctional Parents. The majority of the VC’s and Tech CEO’s come from rich dynastic
15 families who are cultism-like devoted to “the family bloodline” and run by male oligarchs who believe in a
16 rape culture/oligarch ethos. This belief system is passed on to their children. The oligarch parents threaten
17 to cut endowments to Stanford University if Stanford punishes their son’s Frat Houses for date rapes.

18 They are Tone Deaf. Silicon Valley Tech people exist in a conceptual ideology reinforcement
19 bubble by never interacting with, or reading information or news from, anyone outside of their group. VC
20 Tim Draper spent vast amounts of money trying to make Silicon Valley it’s own country in order to
21 systemize the Silicon Valley tunnel-vision bubble. They want to secede from America because they are
22 offended by normal people who they consider to be low-class and unworthy.

23 They have their enemies killed. Rajeev Motwani taught the Google founders how to build Google
24 and was found, mysteriously, floating, dead, in his Silicon Valley swimming pool. Silicon Valley’s Gary D.
25 Conley reported John Doerr and Elon Musk for corruption and was found with a bullet in his head behind
26 Beale Air Force base. Three top Tesla engineers reported corruption at Tesla Motors and then suddenly
27 died in a plane crash next to Tesla’s factory in San Carlos. There are over 100 mysterious deaths associated
28 with people who had conflicts with Google, Kleiner Perkins and other Silicon Valley oligarchs.

They are arrogant self-centered narcissists. Elon Musk has spent over a billion dollars buying
exclusive Google, Twitter, MSM and Facebook hype about himself. Every Tech CEO has a multi-million
dollar PR agent assigned to make them look like “Gods of Industry”. They regularly hold “Babes and
Ball’s” parties and sex parties in Woodside that require women to beg for their money. They were trained
to be “assholes” and “abusive dominants” via the Stanford Rape/Frat Culture.

1 They are misogynists. They are all White-Male-Controlled operations with frat house pasts. Women
2 are used As Sex Objects and Window Dressing. The largest number of anti-women news stories, jock/bro
3 blog reports and charges for abuse come from Silicon Valley. VC Steve Westly's CEO friend is notorious
4 for kicking his girlfriend hundreds of times because she "sassed" him. Almost of of their Divorce filings
5 include abuse charges against the man.

6 They manipulate employees. Silicon Valley cartel companies practice Scientology-like
7 indoctrination and "cultural programming" of employees. These highly impressionable naive young
8 employees are kept in "controlled environments", sent to "mindfulness programming workshops" and told
9 what kind of political opinions they should have. Tight-knit groups of females experience synchronized
10 menstrual periods (<http://www.nature.com/nature/journal/v229/n5282/abs/229244a0.html>) over time,
11 cohesive Google and Facebook employee groups engaged in decision-making discount dissenting
12 viewpoints in the interests of consensus, and that couples who stay together long enough begin to look
13 alike. A new study has captured another group phenomenon in Silicon Valley and chronicled in humans'
14 natural habitat: "group brain synchrony". This is a CIA-like brainwashing technique exploited to get all
15 Google/Facebook/Twitter employees to rapidly adopt the same political views.

16 They are racists. Silicon Valley companies have the lowest rates of hiring, or promoting blacks, in
17 America even though they have a high population of blacks at the edge of their community. Elon Musk was
18 raised by racists and is always getting sued for racism. Google and Facebook hire almost no black people
19 except window dressing tokens.

20 They have huge Male insecurity issues. They use TED-Talks, SXSW and Synchronicity Events as
21 self-promoting hype in which to act like an apostle of a tech religion. They buy Tesla cars as a badge of
22 arrogance and mock any male who does not own what they own or who who did not go to Stanford or
23 Yale. These pretentious and ostentatious boys are more inclined to brag about penis-size than family.

24 They run epic Blacklisting efforts. In the 'AngelGate' Investigation and the 'Silicon Valley No
25 Poaching Class Action Lawsuit', Silicon Valley was exposed as an insider club that black-lists those who
26 look different or are not part of the boys club.

27 They are Politically corrupt. Silicon Valley has bribed more politicians than any other domestic
28 region in history. They promote more immigration in order to get cheap labor for their tech companies.
29 They steal their technology and bribe politicians to eliminate patent protections for small inventors that
30 they steal from. Political Corruption and Bribery Is The Norm for these boys. Silicon Valley created a CIA
31 knock-off called "In-Q-Tel" in order to use CIA technology to manipulate elections at Google, Facebook
32 and Twitter. The 60 Minutes Episode called: "The Cleantech Crash" is about their multi-billion dollar scam
33 using the Dept. of Energy as a slush-fund. They refuse to allow their MSM to report on their corruption and

1 crony kickbacks, ie: Tesla Motors Funding, Off-shore tax evasion, Hooker networks, etc.

2 They engage in Collusion. In the AngelGate Investigation, the Silicon Valley No Poaching Class
3 Action Lawsuit, and hundreds of other cases, Silicon Valley was exposed as an insider club that colludes to
4 rig valuations, stock markets and employee poaching. They operate in herds within their peer group. They
5 are not inclined to independent thinking. Kleiner Perkins has been caught placing moles and saboteurs
6 inside competitors start-ups. They operate in herds within their peer group. They are not inclined to
7 independent thinking.

8 They are Stock Market Criminals. Stock Market Pump-and-Dump, Flash Boy Algorithm
9 Manipulation, Insider Trading, Market Rigging. The Securities and Exchange law violations and FTC
10 monopoly law violations are vast in number.

11 They are idiotic Burning Man Sex-and-Drugs Devotees. Silicon Valley frat boys have a huge
12 participation in the date-rape goings-on at Burning Man and buy extensive pheromone and skin contact
13 delivery animal-tranquilizer drugs to use on young Burning Man girls.

14 They have minimal regard for Consequences. Although their PR agents promote them as “green”
15 and “socially positive”, it is all hype to get tax waivers and government hand-outs. Mark Zuckerberg’s
16 take-over of San Francisco General Hospital’s brand was entirely a scam to get him a \$1 billion dollar tax
17 evasion deployment. The Silicon Frat Boys act on impulse and try to buy off the collateral damage later.

18 Many of them are closeted homosexuals. Using the tremendous funds they have at hand from their
19 exclusive monopolies in public media, they push their trans-gender agendas through their bought-and-paid
20 for politicians. This has resulted in a generation of sexually confused children who believe that they should
21 cut their penises off. The top bosses at Facebook, Google, Twitter, Tesla and other companies are lying to
22 the public about their sexuality and using hired wives, known as “beards”. If they lie about something so
23 basic, one has to wonder what else they lie about.

24 They are thieves. They steal most of their technology from small inventors who can’t defend
25 themselves. They get inventions from Indian engineers and then ship them back to India before the
26 employees can get any stock or IP rights. The tech CEO’s send their VC friends to competing start-ups to
27 spy on competing technologies and steal it. The VC’s say they are just doing “due diligence” but they are
28 actually sucking the competing start-up dry of IP and staff and making a clone of it under another name.
The NY Times ran an article about how Larry Page sneaks around at conferences stealing ideas and
technology for Google. (see www.usinventor.org)

There are so many other awful things about the people of Silicon Valley. You get the picture.
Silicon Valley is a swamp and a cesspool.

Criminal politicians and their Silicon Valley oligarch financiers organized a felony-class

1 ‘enterprise’ to exchange stock market shares, jobs, government cash, sex, exclusive public policy
2 switcheroos and other corrupt actions. They put hit jobs on us (their competitors and whistle-blowers) using
3 government resources. Now we are suing them and filing criminal referrals against them with the FBI,
4 DOJ, SEC, FTC, GAO, FEC and Congress!

5 By comparing records and files from FINCEN, FBI, FTC, SEC, Congressional Investigators, ICIJ,
6 FEC, DOJ, ProPublica, and other sources, one can easily see that Bay Area political officials own Google,
7 Tesla, Facebook, YouTube, Instagram, et al, (AKA “The Tech Cartel” or, in legal terms: “The Enterprise“).
8 This explains why those companies have been exempt from regulation and prosecution. Those public
9 officials and tech company oligarchs have exchanged millions, and millions, of dollars between themselves
10 and their families for profiteering.

11 They were all either financed by, friends, with, sleeping with, dating the staff of, holding stock
12 market assets in, promised a revolving door job or government service contracts from, partying with,
13 personal friends with, photographed at private events with, exchanging emails with, business associates of
14 or directed by; our business adversaries, or the Senators and politicians that those business adversaries pay
15 campaign finances to, or supply political digital search manipulation services to. Criminal U.S. Senators
16 coordinated and profited in these schemes. Their own family members have now supplied evidence against
17 them. You don’t hear about this, much, in the “main-stream news” because nearly half of Congress, White
18 House staff and government agency bosses own the stock in the news broadcasters and receive billions of
19 dollars of financing from them.

20 Many witnesses have now sworn, warranted and certified to federal law enforcement about the
21 details of these crimes. Many of those whistle-blowers were former executives in “The Tech Cartel’.

22 This is not about politics. It is about felony crimes! Our government representatives are business
23 partners with our biggest enemies and make decisions based on greed, not duty! Call them out! Demand
24 their arrests!

25 THIS SITE EXISTS SO THAT...

26 ...so that no law enforcement official or public agency official can ever say they didn’t know about
27 these crimes.

28 We told EVERY one of them in writing, verbally, in videos, in books, in court and at their front
offices.

So far, all they have done is run COVER-UPS, SHRED our documents, STONE-WALL, blockade
us from having a jury trial, tell FBI bosses NOT TO WRITE 302 REPORTS, and obfuscate.

WE DEMAND JUSTICE AND PROTECTION FROM THIS SILICON VALLEY BASED
ORGANIZED CRIME CARTEL!

1 The following videos address each of the assertions, via multiple experts, with hard facts and
2 evidence:

3 PAYBACK...

4 Without breaking a single law and WITH the help of the largest law enforcement and investigative
5 resources on the planet, we have had every single party that has come after us, including some of the largest
6 entities in the world, hunted down, and punished!

7 If you are attacking us in political reprisal, vendetta and revenge or because our products were
8 better than yours and you chose to cheat rather than compete, you can expect to lose a minimum of one
9 billion dollars in stock valuation. Corrupt politicians, criminal big tech companies and sex pervert
10 billionaire oligarchs can never survive THE TRUTH about them coming out in public and in Congressional
11 investigations.

12 We use lawsuits, federal investigations, news reports, whistle-blowers, new public regulations, anti-
13 trust filings, FBI criminal referrals, stock-devaluations, tens of millions of crowd-sourced voters and unique
14 AI-based forensics software.

15 When you attack us, when you kill our friends, when you run smear campaigns: we find every
16 person and organization on the globe that hates you, gather them together and aim them all at your life!
17 Anyone who attacks us stays on the 'shit list' for the rest of their lives plus the next 100+ years of internet
18 time. The corrupt should add up the market valuation of all of the stock they own. Then they can watch it
19 lose 40% to 90% of it's value and get huge investigations from the FBI, FTC, FINCEN, SEC, Interpol and
20 activist investors!

21 If you come for us again, prepare to suffer. You will become a trailer park and we will be the
22 tornado!

23 Every stock you buy is a notice to our team to bankrupt the company that you invested in. Every
24 politician that gets that stock as part of a quid pro quo bribe, will be exposed. Even if we are dead, your
25 punishment will be carried out by a legacy team of public volunteers and peers. It may happen to you
26 tomorrow or it may be a slow-drip over the next 15 years. Never stop looking over your shoulder. Billions
27 of citizens with notebook computers and criminology software are coming for every single one of these
28 corrupt insiders!

29 If you hired media attackers, expect 100 times what you did to us to come back at you and your
30 family forever!

THE SMELL OF MUSK

Tesla Motors is a failed scam effort buffered by a facade of cover-ups operated by the United States Government officials at the White House, In Congress and in The Department of Energy.

Every government official who decided, held sway in decisions or who participated in the Dept of Energy process was a shareholder in Tesla Motors or Tesla suppliers and Those public officials and tech company oligarchs have exchanged millions, and millions, of dollars between themselves and their families for unjust gain via political profiteering. They were all either financed by, friends, with, sleeping with, dating the staff of, holding stock market assets in, promised a revolving door job or government service contracts from, partying with, personal friends with, photographed at private events with, exchanging emails with, business associates of or directed by; our business adversaries, or the Senators and politicians that those business adversaries pay campaign finances to, or supply political digital search manipulation services to.

Self-driving Tesla STOPS and causes eight-vehicle pileup on busy San Fran bridge injuring nine - just hours after Elon Musk announced 'milestone' new feature

Highway surveillance footage from the San Francisco Bay Bridge shows a Tesla Model S vehicle in self-drive mode changing lanes and coming to an abrupt stop, causing an eight-vehicle crash. Nine people, including a two-year-old child, were among the people injured in the pileup which blocked traffic on the bridge for over an hour. Video and new photographs of the crash emerged online with the driver of the vehicle revealing that he had been using Tesla's new 'full self-driving' feature at the time.

Illustration 1: Tesla Cars Have More Safety Defects Than Any Other Car In The World

THE BONFIRE OF THE TESLAS
STOCK -70% FOR YEAR
DRUDGE REPORT

Illustration 2: Elon Musk Is Said To Be The Al Capone Of Big Tech

1 The following information is a small compilation of the many press clippings and Congressional
 2 reports of the true facts about Elon Musk and Tesla Motors, all of which the White House and Department
 3 of Energy staff were fully aware of, at all times. *The Department of Energy moved ahead on Elon Musk's*
 4 *funding because the White House told The Department of Energy to illicitly cough up the money to*
 5 *Musk. The Department of Energy did this even though they knew Musk and his company were the*
 6 *LEAST QUALIFIED compared to other applicants. Musk had the worst debt-ratio, no actual factory,*
 7 *the worst bill of materials, sketchy Russian and Arab financial connections, lawsuits from his partners,*
 8 *lawsuits from his employees, massive technical failures and a horde of other reasons not to get the*
 9 *money.... Yet, he got the cash because he ran an insider-trading, quid-pro-quo, scam with U.S. Senators*
 10 *and White House financiers!*

11 Musk's money is based on bribery and on Musk and his Silicon Valley cartel monetizing their
 12 efforts as the biggest government mooches in the history of America.

13 Why is Musk never taken down? Because California Senators, White House staff, FBI and CIA
 14 bosses and Department of Energy insiders own his stock, get him financing and protect him from facing
 15 arrest. Musk also employs an "Attack Squad" of ex-CIA staff and private investigators who he sends after
 16 anybody who seeks to disclose him. Said Gary Conley, now dead from a bullet to the head, "Musk is a
 17 threat to America..."

18 Elon Musk sent his "goon squad" after us. That made us particularly interested in Elon Musk. He
 19 was enabled in his RICO law and anti-trust law violations by his stock owners: Harry Reid, Nancy Pelosi
 20 and Dianne Feinstein.

21 The Department of Energy hard-wired the cash to Musk and exclusively greased-the-skids for Musk
 22 because Elon Musk was conduiting political campaign cash and favors from Google, Facebook and the
 23 Silicon Valley venture capitalists into Obama's political campaign. Per one report:

25 **ELON MUSK AND TESLA MOTORS FRAUD, STOCK RIGGING, BRIBERY AND SAFETY** 26 **INVESTIGATIONS**

27 *The CIA, FBI, FTC, EU and other agenci"es have been studying Elon Musk and the effects his strange government*
 28 *windfall financing has had on world economic and geopolitical events.*

1 *While some news outlets portray Musk as a man "...raised by a racist escort mother, that Musk desired sexually, and a*
2 *hateful father who killed a number of black's in South Africa and impregnated his own daughter..."; the psychological profile of*
3 *Elon Musk is more complex and severe.*

4 *Musk has been diagnosed with a buffet of psychological defects. Musk is predominantly driven by a desire to impress*
5 *his mother and to show his abusive father that he is as good as Musk says he is.*

6 *Musk is a consummate liar who will rationalize every lie, when caught, with a "what I really meant was this" tactic. In*
7 *the case of his Twitter vote to have him fired, he lost, but refused to quit, saying "it was not now he meant he would quit". In the*
8 *case of the thousands of animals he tortured to death for his fake 'brain chip' he said the innocent animal deaths were accidents.*

10 **ELON MUSK SPENDS BILLIONS ON HYPE PR TO COVER UP THESE FAILURES OF HIS**

11 ***Elon Musk's Biggest Tech Failures That No One Talks About***

12 *Elon Musk, at times the world's richest man, is certainly one of its most discussed. After making a name for himself at*
13 *PayPal, he would go on to buy his way into the already-established Tesla Motors company, becoming an industry leader in*
14 *electric vehicles. Unable to be constrained by Earth or its gravity, his next venture was SpaceX, and Musk became a leader in*
15 *private space exploration.*

16 *For years, Musk was hailed as a "visionary" (A term Musk pays reporters to say about him) who would help end the era*
17 *of fossil fuels and might even propel humanity to other planets. He was even a partial inspiration for the character of Tony Stark*
18 *in the Marvel Cinematic Universe, to whom he has often been compared.*

19 *But with wild success comes wild failure, and Musk's past is riddled with it. From being forced out of his own company*
20 *to costly business mismanagement, and even seeing his creations crash or explode, here are Elon Musk's biggest tech failures*
21 *that no one talks about. Musk will change his politics at the drop of a hat, depending on which party he can get the most cash*
22 *from.*

23 ***He was fired from PayPal***

24 *One of Elon Musk's earliest successes came with the financial services website X.com, which he founded by investing*
25 *the money he'd made from his first company, Zip2, after it was purchased by Compaq. Musk founded X.com in 1999, and the*
26 *company merged with tech vampire Peter Thiel's Confinity, which offered a money-transfer service called PayPal, but the*
27 *combined venture retained the name X.com (via The Verge).*

28 *But there were stormy seas ahead for Musk. In September 2000, while Musk was on honeymoon with his first wife,*

1 *Justine, a collection of employees at PayPal, dissatisfied with Musk's leadership, threatened to resign if Musk didn't step down*
2 *as CEO. Executives delivered a vote of no confidence to the board of X.com, forcing Musk out and replacing him with Thiel.*
3 *After Musk's departure, the company was renamed PayPal, and Thiel would later go on to sell it to eBay for \$1.5 billion (via*
4 *The New Yorker).*

5 *It was a rough early blow for the entrepreneur, but in the coming years, it would barely be remembered as a speed*
6 *bump on his road to riches.*

7 ***He waged war against Tesla whistleblowers***

8 *One of the least discussed but most revealing chapters in Musk's history came in 2018 when a Tesla assembly worker*
9 *named Martin Tripp noticed some concerning things at Tesla's Gigafactory in California. Tripp identified a number of wasteful*
10 *practices in production, so he brought his concerns to Musk, who proved unreceptive.*

11 *Tripp next brought internal Tesla documents to Business Insider, but in response, Musk waged war against the leaker,*
12 *as detailed in a bizarre and harrowing Bloomberg investigation. He fired Tripp, then sued him for \$167 million. He hired private*
13 *investigators who tailed him in person and hacked his phone to see his texts in real-time. And, on his alleged orders, Tesla's*
14 *security team passed along a "tip" to police claiming that Tripp was planning to commit a mass shooting at the factory. The*
15 *SWAT team deployed to Tripp's house found him unarmed and sobbing.*

16 *Aside from being, to put it mildly, a bit of an overreaction, Musk's enraged response to Tripp's whistleblowing is a*
17 *major failure for a tech CEO overseeing his own factory. As noted by CNBC, companies that are responsive to whistleblower*
18 *concerns are ultimately more profitable in the long run. And, as we shall see, this would not be the last time Musk paid a price*
19 *for ignoring the concerns of his workers. Musk has hired Nick Denton's tabloid empire of Gawker, Gizmodo, Jalopnik, etc. to*
20 *attack and destroy Musk's competitors and disfavored politicians.*

21 ***Under his management, Tesla covered up safety violations, workplace injuries, and racism***

22 *In 2019, Forbes found that Tesla had been investigated by California OSHA 24 times between 2014 and 2018 and was*
23 *fined for 54 violations. One worker lost a finger after his glove was caught in a torque gun. There were eight investigations at*
24 *Tesla's Tennessee factory with five violations found, and the one in Kentucky was investigated 13 times with four violations*
25 *issued. In 2020, the Los Angeles Times reported that Tesla had covered up hundreds of factory-related injuries since 2015.*

26 *Then, a judge ruled in April 2022 that Tesla must pay out \$15 million to a Black contract worker who was*
27 *systematically discriminated against inside the company (via NPR). And in July of that year, fifteen Black employees, both*
28 *former and current, filed a lawsuit alleging they were racially harassed with slurs, compared to chattel slaves, and assigned to*

1 *the most physically exhaustive labor while being passed over for promotions (via Al Jazeera).*

2 *Given Elon Musk's iron grip over his companies, noted by outlets like The Guardian, the buck stops with him. When*
3 *factories are this chaotic, is it really surprising we have yet to see deliveries of the Tesla Roadster or Cybertruck?*

4 ***Under his management, a shocking number of SpaceX rockets have exploded***

5 *After Tesla's success in the years after Elon Musk bought his way into the company, the billionaire's next venture left*
6 *the road behind in favor of the stars. SpaceX, the private, Musk-controlled spacecraft and satellite manufacturer has become one*
7 *of the leaders in space technology and was even the first private company to develop a liquid-propellant rocket that achieved*
8 *Earth orbit when it launched the Falcon 1 in 2008 (via NASA). But despite its successes, a surprising number of SpaceX rockets*
9 *have gone down in flames — according to the New York Post, at least 10 rockets have combusted between 2014 and 2021.*

10 *Indeed, many of SpaceX's rockets have become nothing more than incredibly expensive fireworks, such as a Falcon 9*
11 *that exploded over the Atlantic Ocean in 2015, costing the company an estimated \$112 million according to Futurism. As*
12 *reported by Reuters, another Falcon 9 carrying cargo bound for the International Space Station combusted two minutes after*
13 *liftoff that same year. And among the most spectacular failures was a Falcon 9 rocket that exploded on the launch pad, a failure*
14 *so mind-boggling to Musk that he — according to The Washington Post — investigated it as a case of sabotage.*

15 *At times, these technological failures can even present a threat to those of us who are terrestrially bound. According to*
16 *The Guardian, in August 2022, two Australian farmers found debris from a SpaceX crash on their respective properties.*

17 ***He got in trouble with the FCC over rigging Tesla stock prices***

18 *Elon Musk has always considered himself a bit of a troll, and nothing tickles his posting syndrome more than a weed*
19 *joke. But in 2018, Musk's stoner antics backfired when he made what may just be the world's costliest 420 joke. On Twitter, the*
20 *billionaire posted, "considering taking Tesla private at \$420 a share." Laughs were had. Yuks were yukked. And then the*
21 *Securities and Exchange Commission (SEC) got involved.*

22 *Musk's proposed share price may have been intended in jest, but he seemed serious about taking Tesla private, and his*
23 *announcement, which suggested a valuation 11% higher than the current trading price at that time, caused a sudden spike in*
24 *Tesla's stock prices and trading was halted by Nasdaq (via CNBC). The SEC charged him with civil securities fraud. Investors*
25 *sued, and a judge ruled that Musk had made intentionally false statements; he had been lying, to begin with (via CNBC). It*
26 *wouldn't even be the last time he messed with Tesla stock.*

27 *In 2019, Musk settled with the SEC, landing on an arrangement that included personally paying \$20 million — pocket*
28 *change for a man like Musk — and agreeing to have any tweets about Tesla vetted by the company's legal counsel before posting*

1 *them, as reported by Reuters. Though it was regarded as a slap on the wrist by experts, Musk filed to kill the SEC deal in 2022,*
2 *accusing the regulating body of violating his free speech (via Reuters).*

3 *Clearly, Musk is still chafing against the consent decree, but if there's one thing American businesspeople know, it's*
4 *that regulators never take kindly to defrauding investors.*

5 ***Under Musk's management, over 270 Tesla vehicles crashed on Autopilot in one year***

6 *While many of Elon Musk's technological failures represent setbacks for his companies or for himself, personally,*
7 *others have had much more dire consequences. Nothing is more representative of that fact than the staggering number of Tesla*
8 *cars that have been involved in crashes while in Autopilot mode. Between June 2021 and June 2022, a staggering 273 Teslas*
9 *were involved in crashes while in Autopilot mode, accounting for almost 70% of crashes that involved driver-assistance systems*
10 *according to the National Highway Traffic Safety Administration.*

11 *Tesla's Autopilot is, despite what its name suggests, not meant to drive the car fully autonomously. Rather, it is a suite*
12 *of driver-assistance features that help the vehicle maintain speed, make safe lane switches, and the like. Although a beta of "Full*
13 *Self Driving" mode is available on some models, it is not reliable enough to allow drivers to divert their attention from the road.*
14 *But that doesn't stop some Tesla drivers from doing so anyway, perhaps trusting Musk's exaggerated promises about the*
15 *technology (via The Verge). When that technology fails, the results can be deadly, which is probably why other auto*
16 *manufacturers avoid such hyperbole about their own vehicles' self-driving capabilities.*

17 ***He brought Tesla and SpaceX to the verge of bankruptcy***

18 *As the head of two companies that manufacture, respectively, automobiles and rockets, tech issues can be costly. And as*
19 *the head of both Tesla and SpaceX, both companies came dangerously close to the precipice of bankruptcy under Elon Musk's*
20 *leadership.*

21 *In the case of Tesla, the issues came while the company was in the production of its Model 3 electric sedan. As reported*
22 *by CNBC, Musk shared on Twitter that, from mid-2017 to mid-2019, Tesla was within a month of bankruptcy as production on*
23 *their vehicles stalled. The CEO named "production and logistics hell" as the culprit.*

24 *Then, in 2021, SpaceX nearly exploded into financial flames like a failed rocket launch. The problem was, similarly,*
25 *production issues with its Raptor rockets. In a companywide email obtained by CNBC, Musk warned his employees at the space*
26 *technology firm, "The Raptor production crisis is much worse than it seemed a few weeks ago. We face genuine risk of*
27 *bankruptcy if we cannot achieve a Starship flight rate of at least once every two weeks next year."*

28 *Ultimately, both companies overcame their technological difficulties, and their respective near bankruptcies became*

1 another in a long list of Musk's least publicized failures.

2 ***His Starlink satellites became Russian and Chinese military targets***

3 *Russia's invasion of Ukraine has dominated the 2022 news cycle, and Elon Musk plays a surprisingly key role in the*
 4 *ongoing conflict. Starlink satellites provided by SpaceX formed the backbone of Ukraine's communications network, helping its*
 5 *armed forces and civilians as Russia pummeled the country's ground infrastructure. The satellites were subsidized by the United*
 6 *States, though as The Washington Post suggests, SpaceX representatives have framed it as a charity operation.*

7 *Aside from their invaluable role in Ukraine's communications, the besieged nation uses the satellites provided by*
 8 *Musk's company to photograph Russian military deployments, review damage done to its enemy's air bases, and even provide*
 9 *grim evidence of mass graves in Russian-occupied territory (via Axios).*

10 *In September 2022, the Russian delegation to the U.N. General Assembly released a statement promising that "quasi-*
 11 *civilian infrastructure" could be a "legitimate target" if Ukraine continues to use them, almost certainly referring to SpaceX's*
 12 *Starlink Satellites, according to Futurism.*

13 *But as dire as the situation was, it was about to escalate due to Musk's own actions.*

14 ***He threatened Ukraine but was forced to back down***

15 *In October 2022, as the Russo-Ukrainian war waged on, Musk abruptly threatened to cease funding the use of Starlink*
 16 *satellites by Ukraine, as reported by The Washington Post. Given the nation's heavy reliance on those satellites for its war*
 17 *efforts, such a move would have crippled Ukraine's defenses and provided a major tactical advantage to Russia.*

18 *Even more shockingly, the threat seemed to be a response to a Ukrainian ambassador who insulted him on Twitter.*
 19 *After Musk ran a Twitter poll suggesting the conflict be ended via a UN-supervised vote, and that the contested Crimea region*
 20 *remain part of Russia, Andriy Melnyk, Ukraine's ambassador to Germany, told Musk, "F— off is my very diplomatic reply to*
 21 *you." Shortly after threatening to cut Ukraine off from the Starlink network, Musk tweeted, "We're just following his*
 22 *recommendation."*

23 *But only a day later, Musk rescinded his threat, promising to continue funding with a bitter tweet that read, "The hell*
 24 *with it ... even though Starlink is still losing money & other companies are getting billions of taxpayer \$, we'll just keep funding*
 25 *Ukraine govt for free" (via The New York Times). The Times speculated that Musk's about-face was in response to international*
 26 *rebuke for his threat, and noted that SpaceX had only donated 3,000 satellites to the Ukrainian effort, while the United States,*
 27 *the United Kingdom, and Poland footed the bill for almost 17,000.*

28 *The incident was a bizarre instance of a tech company becoming mired in international geopolitics, and the world may*

1 never know how close Musk came to handing Russia its desired annexation of Ukraine.

2 ***His management of Twitter is predicted to result in the loss of 32M users***

3 *While Twitter wasn't exactly in peak shape before Elon Musk took the reigns of the social media platform, his*
4 *management since then has been chaotic to say the least, and market analysis now suggests those mistakes may be costly.*

5 *As SlashGear recently reported, market research firm Insider Intelligence is predicting a loss of 32 million Twitter*
6 *users by 2024 due to Musk's layoffs at the company and a declining public perception of Musk himself. According to the report,*
7 *Twitter's vastly reduced workforce will likely struggle to address technical issues, leading to user frustration and, ultimately,*
8 *attrition.*

9 *Additionally, the report cites a proliferation of hateful content and a personal distaste of Musk as another reason users*
10 *may choose to abandon the platform, a concern raised by other tech experts. As Nilay Patel at The Verge pointed out in an*
11 *opinion column shortly after Musk marched into Twitter HQ with his sink in tow, social media may contain inbuilt mechanisms*
12 *that help to proliferate extreme content, but users generally like their experiences to be pleasant.*

13 *As of this writing, Musk is in the process of suspending notable journalists from the platform, ostensibly for violating a*
14 *new policy by posting the publicly available flight data of his private jet, which Musk claims is a personal safety risk. But while*
15 *it's not clear how many of those journalists did so, many appear to have been critical of the "chief Twit" (via CNBC). In the*
16 *immediate aftermath, many more media figures have declared their intention to leave Twitter for good. According to The*
17 *Washington Post, Musk may also face sanctions from the European Union.*

18 *While the dire long-term projections are not the subject of widespread discussion, the decline of Twitter would be*
19 *Musk's most visible tech failure yet.*

20 *Any homeless person could have done everything that Elon Musk has done if they too were handed billions of taxpayer*
21 *dollars, tax free perks, thousands of investment bankers and outside engineers and the exclusive favors of The White House.*
22 *Musk has never built a car or a rocket. He has invented nothing and has only taken the innovations of others. His cars and*
23 *rockets blow up; he tortured huge numbers of animals for his 'brain chip' experiments; his hole making company is ridiculous'*
24 *his father is a pedo, blood mineral exploiter and incest violator; his mother was an escort, and his brother is a scammer. He is*
25 *part of Jeffrey Epstein and Steve Jurvetson's sex ring. He is a mobster. His whole family is a pack of racist, perverted, privileged*
26 *assholes.*

27 *All of the 'glowing' news articles about him that ignore his lies were paid for by Musk's PR staff. Feinstein and Pelosi*
28 *own Musk assets and rig Congress on his behalf for their own profits. SpaceX is never going to Mars, that is just a smoke-screen*

1 tale to hide the fact that all SpaceX does is satellites that spy on people. Musk gets so many girls pregnant because he subscribes
 2 to the Deep Breeder scheme of Jeffrey Epstein. Musk is a narcissistic, drug abusing, sociopath that hires In-Q-Tel and Black
 3 Cube to attack others. His Tesla Cars have more safety defects than any car in the world. Obama shut down part of NASA, fired
 4 NASA staff and then gave that same part to Musk as political quid pro quo. His controlled news articles only talk about the few
 5 things that have worked and ignore the thousands of Musk things that have failed horrifically. Google and Musk are partners in
 6 stock market rigging and information manipulation.

7 *Corrupt political families conspire to give government funds, contracts, tax waivers, buildings, stock market profits and*
 8 *other insider perks to themselves and their friends. They also conspire to blockade, harm, sabotage and black-list those who*
 9 *compete with them and their friends. These corrupt politicians are never prosecuted for their crimes, and can laugh in the face of*
 10 *those who point out their crimes, because they control the prosecution system. Their Quid Pro Quo criminal corruption is the*
 11 *single largest cause of the taxpayer hatred of Congress.*

12 *Maybe you have not had the best year. But take some consolation from the fact that you did not YOLO yourself into*
 13 *overpaying for an unprofitable social-media platform, publicly try to [wriggle out of the deal](#), get lawyered into ponying up,*
 14 *liquidate [billions of dollars](#) of stock in a down market to do so, take over a company you did not really want, shitpost your way*
 15 *into a revenue crisis, quit [paying your bills](#), antagonize your [super-users](#), wink-wink [at Nazis](#), and decimate [your staff](#), all the*
 16 *while damaging your other, [more lucrative businesses](#). Or at least probably not, unless you are Elon Musk. Twitter's new owner*
 17 *might have fared better than Sam Bankman-Fried, the disgraced cryptocurrency magnate who improbably saved Musk from*
 18 *winning the title of [Tech Fortune-Craterer of the Year](#). But Musk nevertheless spent 2022 lighting billions of dollars and his*
 19 *reputation on fire.*

20 *Musk's behavior raises many questions, such as Why?, Why?, and Why?! And Is he going to bankrupt this thing? He*
 21 *looks like he is trying to: On Tuesday evening, Musk vowed to [resign as CEO](#) of Twitter "as soon as I find someone foolish*
 22 *enough to take the job!" He and whoever is foolish enough to succeed him certainly face a challenging year ahead. The once-*
 23 *richest man on Earth took over a company [losing](#) \$220 million a year and multiplied its losses by 10, if not more, according to*
 24 *one analyst's estimate. Twitter looks likely to bleed users, advertisers, and money for the foreseeable future. But the social*
 25 *network is Musk's to fund, not just run. And he's one of the few people on the planet with essentially limitless amounts of money*
 26 *to lose.*

27 [Caroline Mimbs-Nyce: This is what it looks like when Twitter falls apart](#)

28 *Musk's Twitter purchase never made much financial sense. The company's core microblogging product has scarcely*

1 changed since its debut in the mid-aughts. Its user base has [stopped expanding](#) in the United States. Its engagement levels are
2 [declining](#). And the company—less than one-third the size of TikTok and one-tenth the size of Facebook, as measured by monthly
3 active users—has turned a profit in just two of the past 10 years.

4 But Musk bought the platform for personal and ideological reasons, not financial ones. In the spring, he [bought](#) a large
5 chunk of the site’s shares, promising to push Twitter to be friendlier to the political right. Shortly after that, he offered to take the
6 company private, to turn it into “the platform for free speech around the globe,” he [wrote in a letter](#) to its then-chair, by which
7 he seems to have meant the platform for anti-Semitism, racism, and white-nationalist incitement. Plus, Musk is an impulsive rich
8 dude who just really, really loves to post: suggesting we [nuke Mars](#), defaming a hero who saved [a bunch of schoolkids](#), making
9 “[boner](#)” jokes at Bill Gates’s expense, getting in a fight with the Securities and Exchange Commission by falsely [claiming](#) he
10 had “secured” funding to take Tesla private at—deep breath—\$420 a share.

11 In Musk, idiosyncratic ends had endless means. And in April, he offered to buy Twitter at—inhale again—\$54.20 a
12 share, significantly higher than its share price at the time. Twitter’s executives naturally took the offer. The price tag might have
13 been hefty, but the plan was a straightforward one: Get control of Twitter. Narrow its losses. Expand its revenue base. Make the
14 company profitable. Hold it, sell it, or, most likely, have it go public again. Make bank.

15 On the cost side, Musk did trim the budget, if as erratically as possible. He purged more than half of the company’s
16 workforce, firing many employees outright and asking those remaining to sign up for an “[extremely hardcore](#)” cultural reset.
17 This produced “significant savings,” Drew Pascarella, who teaches corporate finance to M.B.A. students at Cornell, told me,
18 adding that Musk also seems to have positioned the company to renegotiate its rent and other contracts.

19 But Musk has slashed Twitter’s income as erratically as possible too. Nearly all of the social network’s revenue comes
20 from advertisements. Numerous deep-pocketed companies—Chevrolet, Ford, Jeep, BlackRock, Citigroup, Chanel, Nestlé, Coca-
21 Cola, Merck, Verizon, Wells Fargo, the list goes on and on—[have pulled or paused](#) advertising in the past two months. Dan Ives,
22 an analyst at Wedbush Securities, told me he estimated that Musk’s takeover has cost the company as much as \$4 billion.
23 “That’s a gut punch,” Ives said.

24 Those companies have stopped putting ads on the site, I would note, because of Musk. “Twitter has had a massive drop
25 in revenue, due to activist groups pressuring advertisers,” Musk himself [wrote on Twitter](#). “Extremely messed up! They’re trying
26 to destroy free speech in America.” He also insisted that hate speech [has declined](#) during his tenure. But [independent](#)
27 [researchers](#) have found the opposite. After his takeover, use of the N-word increased by 202 percent; the use of homophobic,
28 misogynist, and transphobic slurs went up at double-digit rates; the use of the slur groomer has increased [exponentially](#). Coca-

1 Cola does not want to put its ads next to vile terminology and anti-Semitic [Pepe memes](#), including ones Musk himself is posting.

2 [Tom Nichols: The childish drama of Elon Musk](#)

3 Plus, Musk loaded Twitter up with debt—some \$13 billion of it—when he acquired it via a leveraged buyout. The
4 company is going to need to make loan payments, roughly \$1 billion a year, even if it is running in the red. It has options. Musk
5 could write the checks; he is “unfathomably wealthy,” Pascarella told me. “While most of his wealth is not liquid, I have no
6 reason to believe he won’t be able to come up with several billion dollars of cash if need be.” Musk could buy the debt from the
7 company’s creditors. He could raise new [equity investment](#), something he seems to be trying to do already. Or, in an extreme
8 case, Twitter could go bankrupt.

9 Right now Musk is using “Tesla stock as his personal ATM machine to fund the losses from Twitter,” Ives noted. But his
10 behavior has cratered Tesla’s stock, which has dropped 42 percent in the [past six months](#). (By comparison, shares in Toyota are
11 down 13 percent and Ford’s stock is flat.) If Tesla becomes even more distressed, that could be a problem; the company’s
12 shareholders are [uneasy](#) and rightly angry. A broader economic downturn could hurt the carmaker and the social network alike.
13 Perhaps the most personally salient risk for Musk is that he could end up [losing control](#) of Tesla. Musk keeps personally funding
14 this thing that he bought, hates, and is ruining is not exactly a happy financial equilibrium. Some adult needs to come in to
15 return the social network to that general plan: keep it running, cut losses, and get it ready to go public again several years down
16 the road. Good luck to whoever is foolish enough to want to do that.

25 **TWITTER BRINGS ELON MUSK’S "GENIUS" REPUTATION CRASHING DOWN TO EARTH**
26 **AS EVERYONE CAN NOW SEE HE IS JUST SOME ARROGANT ASSHOLE**

27 Story by Faiz Siddiqui

28 Arrogant Elon Musk was speechless.

1 The Twitter CEO was on a live audio chat Tuesday night with software engineers when one user started quizzing him
2 about the internal workings of the company's systems. Musk, who hours [earlier said he would keep control](#) of Twitter's software
3 systems even though he plans to relinquish the CEO role, said the company's code needed a complete rewrite. One of the
4 participants asked what he meant — pushing for him to explain it from top to bottom.

5 “Amazing, wow,” Musk said after hesitations and pauses. “You're a jackass. ... What a moron.”

6 The incident highlights the new reality facing Musk, who also runs Tesla and SpaceX: a crisis of confidence in his [once-](#)
7 [unquestioned brilliance](#).

8 That crisis accelerated as Tesla stock prices plunged nearly 20 percent this week to \$123 per share on Friday, [largely](#)
9 [due to concerns about Musk](#). Also this week, roughly 58 percent of 17 million Twitter accounts that responded to an unscientific
10 poll from Musk [said he should step down](#) as Twitter CEO, after helping create, then reverse new policies that proved
11 controversial last weekend.

12 “Historically he's been a pendulum between genius and reckless,” said Gene Munster, managing partner at Loup
13 Ventures. “He's on reckless right now. He's way over recklessness.”

14 He added, “It leaves people to view him ... as slightly less of a genius.”

15 [The key moments that define Musk's leadership of Twitter](#)

16 Musk has built his reputation on [having a Midas touch with the companies](#) he runs — something many investors and
17 experts thought he would bring to Twitter when he [purchased it for \\$44 billion in October](#), paying nearly twice as much as it was
18 worth by some analyst estimates. He is known for [sleeping on the factory floor](#) at Tesla, demanding long hours and quick
19 turnarounds from his workers. He is seen as an engineering genius, propelling promises of cars that can drive themselves and
20 [rockets that can take humans to Mars](#).

21 But that image is unraveling. Some Twitter employees who worked with Musk are [doubtful his management style](#) will
22 allow him to turn the company around. And some investors in Tesla, by far the biggest source of his wealth, have begun to see
23 him as a liability. Musk's distraction has prompted [questions about leadership of SpaceX](#) as well, though it is much less reliant
24 on his active involvement. Meanwhile, Neuralink and Boring Co., two companies he founded, [continue to lag on promises](#).

25 Musk's net worth — largely fueled by his stake in Tesla, which has fallen by more than half this year — has plunged
26 this year from roughly \$270 billion to [below](#) \$140 billion on Friday, according to the Bloomberg Billionaires Index. That fall has
27 relieved him of the title of the world's richest man and called into question his ability to keep up with [his billions of dollars in](#)
28 [loans](#).

1 Musk is repeatedly described as a man obsessed with Twitter in all the wrong ways, who is failing both at protecting his
2 new investment and his previous ones, according to interviews with a half-dozen former Twitter employees and people in Musk's
3 orbit, who spoke on the condition of anonymity for fear of retribution or because they were not authorized to speak publicly
4 about company matters.

5 Musk this week said Twitter is in a financial hole and facing a cash crunch — even as it slashed more than half of the
6 workforce and closed offices.

7 “We have an emergency fire drill on our hands,” Musk said on Twitter Spaces. “Aspirationally, I’m not naturally
8 capricious.”

9 [From Jared Kushner to Salt Bae: Here’s who Elon Musk was spotted with at the World Cup](#)

10 Musk has always been [unpredictable and freewheeling with his public persona](#), but with Twitter, his actions have
11 directly affected the business, turning off some of the company’s users and pushing away advertisers, said Jo-Ellen Pozner, a
12 management professor at Santa Clara University’s Leavey School of Business.

13 “It really feels destabilizing for the whole Twitter community,” she said, adding that the reputation of a CEO does
14 affect businesses and their stock prices — and could even prompt consumers to choose another vehicle.

15 Musk and Twitter — which has disbanded most of its public relations team — did not respond to requests for comment.

16 Holed up in a 10th-floor conference room

17 Musk, who is South African and migrated to North America as a teenager, first forged his image as a tech wizard by
18 founding the company that became PayPal. He funneled much of his around \$165 million in gains from the sale of PayPal into
19 two ventures: Tesla and SpaceX. SpaceX went on to become the most successful private spaceflight company in history,
20 pioneering reusable rockets and launching astronauts to the International Space Station.

21 Tesla, meanwhile, [brought electric vehicles to the mainstream](#) with sleek, fast and competitively priced sedans and
22 SUVs that shattered the frumpy image of eco-conscious cars. His closest allies have held out faith even as he has missed major
23 deadlines for selling new vehicle models and [rolling out self-driving technology](#).

24 Musk has been focused almost solely on Twitter since he bought it, planning to reinvent the company as an engineering-
25 driven operation. He immediately ousted Twitter’s previous executives and embarked on a [campaign of harsh layoffs](#) that cut the
26 company in half. Many of Musk’s supporters, who had followed his rise at Tesla, gave him the benefit of the doubt that he had a
27 plan to transform Twitter.

28 But he immediately spooked advertisers by [engaging in a baseless accusation](#) and dialed back Twitter’s content

1 moderation, [prompting calls from civil rights groups](#) for advertisers to suspend their marketing on the site. And he had to pull
2 back his first major product launch — Twitter Blue Verified — [after a day](#) when a swarm of impersonators wreaked havoc.

3 [A fake tweet sparked panic at Eli Lilly and may have cost Twitter millions](#)

4 Musk appears to be struggling to grasp Twitter's business, the people said, and he demands a stance from his
5 employees that stifles discussion of problems. "He doesn't see from the zoom-out view at all," one of the people close to Musk
6 and his team said, describing him as "uncovering and solving and programming all night."

7 He has been holed up in a 10th-floor conference area with a staging room for visitors — where they often remain for
8 more than an hour before being called in. They are instructed not to speak until Musk does. And when they do finally meet with
9 him, he's sometimes watching YouTube videos.

10 Many staffers have quickly learned they can't rely on the erratic and unpredictable Musk, even as he makes assurances
11 about the various facets of the company they have raised as concerns.

12 The driving team behind Project Eraser — which carries out functions such as deleting the user data of those who ask,
13 part of compliance with federal requirements — has been gutted. Musk has brought in a [new roster of leaders](#), many who are
14 loyalists.

15 When one executive met with Musk and voiced concerns about the [Federal Trade Commission's consent decree](#), Musk
16 assured that person there was nothing to worry about. He said Tesla had plenty of experience on privacy matters, and pointed to
17 his deep knowledge and awareness of the constraints Twitter was under.

18 Minutes after the meeting concluded, a subordinate of Musk emailed: Would the executive be willing to send over a
19 copy of the consent decree they had just discussed?

20 Instead of focusing on plans to make the site a [competitor to YouTube with video](#) and rolling out other new features that
21 will earn revenue, he instead got sucked into the culture wars, the people said.

22 That took the [form of the Twitter Files](#), an examination by some journalists of many of the company's actions before
23 Musk's arrival, such as the blocking of a New York Post story that dug into the contents of Hunter Biden's laptop and the ban on
24 former president Donald Trump.

25 Musk chose Bari Weiss, a former New York Times columnist, as one of the writers invited inside the company to go
26 through documents.

27 "Please give Bari full access to everything at Twitter," Musk wrote to a subordinate in a Signal message viewed by The
28 Washington Post. "No limits at all."

1 [Journalists who won't delete tweets remain locked out of Twitter](#)

2 That was concerning to many inside Twitter — particularly those familiar with the [2011 FTC settlement after hacks](#) of
3 high-profile accounts, including that of then-President Barack Obama. Staffers responsible for her onboarding pushed back and
4 refused to grant Weiss the full access Musk had requested, believing it would violate the settlement.

5 One former employee described that step as “super unprecedented” and “highly inappropriate,” saying Twitter would
6 never have granted that level of access to an outside party who might suddenly be able to read direct messages, for example.

7 The pushback, however, was not taken as seriously at senior levels.

8 Days later, Musk announced deputy general counsel Jim Baker had been “exited” from the company, as the CEO cited
9 what he called his “possible role in suppression of information important to the public dialogue.” Former employees said it
10 would have been normal for an attorney to review documents for release.

11 That same day, Alan Rosa, Twitter’s chief information security officer in charge of access matters, was fired from the
12 company as well. Employees that week found Weiss’s name searchable in Slack, the company’s internal messaging service. But
13 her access was overseen by a chaperone, new Twitter Trust and Safety chief Ella Irwin.

14 Irwin’s name appeared in a watermark on the Twitter Files. When Twitter suspended more than half a dozen journalists
15 last week over alleged violations of its rules on doxing — the sharing of private information — the suspensions were labeled in
16 internal systems “direction of Ella.”

17 Musk had also publicized an old message from his previous Trust and Safety head and took aim at Twitter executives,
18 unleashing a swarm of criticism on employees — sometimes while they were still working for Twitter.

19 “These guys did amazing damage,” one former employee said of Musk’s circle at Twitter, which included employees of
20 his other companies and friends who lacked expertise on Twitter. “They are basically bullying their way to getting ‘super god’
21 access to these things. All they’re doing is they’re witch hunting for Elon, so they can find people talking [about him] so they can
22 fire them.”

23 Musk is running the newly private company largely on his instincts — mirroring the workflows of his other major
24 technology company: Tesla. The electric car company, the world’s most valuable automaker, has eschewed market research in
25 its dominance of the electric vehicle space, seeding the automotive industry with a raw and authentic expressions of Musk’s id.
26 Tesla’s [stainless steel Cybertruck pickup](#), which shocked automotive analysts with its angular sci-fi looks, has served as a key
27 example of that ethos.

28 At Tesla, employees often find out about deadlines and major product changes through tweeted edicts. But they have

1 also grown used to the CEO's shoot-from-the-hip attitude, his reliance on his gut instincts rather than the research and
2 development arms typical of multibillion-dollar corporations.

3 *The unraveling*

4 *But Tesla's stock price has plummeted — which Musk frequently attributes to economic trends.*

5 *“As bank savings account interest rates, which are guaranteed, start to approach stock market returns, which are *not**
6 *guaranteed, people will increasingly move their money out of stocks into cash, thus causing stocks to drop,” he [said](#) in a tweet*
7 *Tuesday.*

8 *But analysts have pointed to problems more specific to Tesla and concern with Musk's time at Twitter, suggesting in*
9 *essence that the sheen has worn off a company whose value was not rooted in its fundamentals.*

10 *“I felt for a while he was given a pass,” said Karl Brauer, executive analyst at the website iSeeCars. “Oh, it's Elon.*
11 *He's Midas: If he's touching it, it's going to be successful.’ Now a certain number of people have stopped giving him a pass on*
12 *things that probably should have been looked at a little more critically or acknowledged as potential downside.”*

13 *The crisis in confidence in his leadership accelerated when Musk began making changes to Twitter to address his*
14 *personal problems and concerns.*

15 *Last week, he reneged on a previous commitment to keep an account on Twitter that [published the location of his](#)*
16 *[private jet](#), which he held up as an example of his free speech principles. After abruptly suspending @ElonJet, Twitter [suspended](#)*
17 *[journalists](#) who tweeted about it, drawing ire from both sides of the political spectrum.*

18 *He launched a poll, which directed Musk to allow them back on the site.*

19 *“The people have spoken,” he tweeted that Friday.*

20 *[Elon Musk's private jet is tracked with public data. Is it doxing?](#)*

21 *Musk jetted around the globe to Qatar for the World Cup final on Sunday, where he was spotted alongside former*
22 *President Trump's son-in-law Jared Kushner and Qatari leaders.*

23 *That day, Twitter announced a new policy: It was banning the promotion of outside social media sites on its platform,*
24 *including Facebook, Instagram and Trump-backed Truth Social. Users would no longer be able to promote outside links to those*
25 *sites and others including Mastodon, Tribel, Post and Nostr. Twitter said cross-posting of content would be allowed, but it would*
26 *no longer permit “free promotion.”*

27 *The criticism was swift, and even loyalists expressed concern. [Musk apologized](#).*

28 *“Going forward, there will be a vote for major policy changes,” he tweeted. “My apologies. Won't happen again.”*

1 *Then Musk launched a new poll. “Should I step down as head of Twitter?” he wrote in a tweet. “I will abide by the*
2 *results of this poll.”*

3 *By Monday morning, the result was clear that Musk should step down. He went silent on the platform for much of the*
4 *day — one of his longer stretches as a prolific tweeter to his more than 120 million followers. He responded to a few tweets later*
5 *in the day calling the results into question.*

6 *On Tuesday, he said he would resign — with caveats.*

7 *“I will resign as CEO as soon as I find someone foolish enough to take the job!” he wrote in a tweet. “After that, I will*
8 *just run the software & servers teams.”*

9 *Gerrit De Vynck and Cat Zakrzewski contributed to this report.*

11 In another report we see:

13 **HOW MUSK DESTROYED THE ELECTRIC CAR INDUSTRY**

15 *Only men seem to start car companies. Most psychologists say that this is because men, particularly Elon Musk, see*
16 *cars as dick insecurity emblems.*

17 *Elon Musk is known to be a wildly insecure narcissist who feels that he must get every woman, that he can find,*
18 *pregnant in order to prove his manhood to his abusive father, who got his sister pregnant.*

19 *Musk embodies the ultimate expression of ‘car-as-dick’ thinking because Musk was not only molded by his purse-*
20 *swinging, kept-woman, mother, abusive father and crooked brother but also by the Silicon Valley frat boy rape-culture.*

21 *Silicon Valley is, of course, the Eden of modern misogyny and tech-bro douche-baggery.*

22 *Musk dragged all of the biggest assholes from Silicon Valley, The DNC and Goldman Sachs into his Tech Cartel.*
23 *Together they created a temporary monopoly in the electric car industry by exchanging stock market payola with Senators and*
24 *White House staff who, in exchange, locked off the electric car and space industries just for Musk.*

25 *But that scheme was not sustainable. It was amazingly crooked and lucrative but, it could not last. It was Big Tech’s*
26 *Roman Empire and it was doomed to fail spectacularly.*

27 *Musk counted on Obama and Biden to stick with his original quid-pro-quo deal to trade government cash for election*
28 *rigging via his boyfriends at Google and Facebook. Tesla was the money conduit for a bunch of political scammy.*

1 *Biden and his cheerleader actress front girl: Jennifer Granholm, bounced into office with a Wizard of Oz promise to*
2 *give everybody electric cars. They were so wrong about the pitfalls of their plan and they hired so many idiot sex freaks and*
3 *unicorn fart unaware fools that their scheme blew up...instantly and literally.*

- 2 *"He is the world's biggest government mooch"*
- 3 *"He is a member of the Palo Alto Mafia"*
- 4 *"Google (who is a major Tesla investor) hides all negative Musk/Tesla news and hypes TSLA stock in order to profiteer with*
- 5 *TSLA stock. This is a violation of federal SEC laws"*
- 6 *"More drivers have been caught driving drunk, in Tesla's, than any other car Per Capita produced"*
- 7 *"Larry Page is Musk's 'bromance' boyfriend buddy and he uses Google to cover-up Musk's scandals"*
- 8 *"His so-called 'foundation' is just a payola and tax evasion scam for his family"*
- 9 *"His batteries are the most dangerous use of lithium ion storage ever conceived"*
- 10 *"His partner: Panasonic has been charged with multiple corruption, dumping, price rigging and manipulation crimes around the*
- 11 *globe"*
- 12 *"Almost all of the internet 'Tesla Fanboys' are Russian troll farms and hired bloggers that Musk pays vast amounts of money to*
- 13 *in order to hype up a fake image for him"*
- 14 *"The drug and murder-for-hire website: Silk Road, was built at drug-enthusiast Musk's company SpaceX by Musk's programmer*
- 15 *and Musk hires many people from a group called: In-Q-Tel, who were caught with tons of cocaine on their airplanes in a DEA*
- 16 *raid"*
- 17 *"His SpaceX is nothing more than a domestic spy satellite company"*
- 18 *"Musk's brain chip company tortures small animals in bad science experiments"*
- 19 *"His father screwed his daughter and got her pregnant"*
- 20 *"His father brags about all of the black men he has killed in South Africa"*
- 21 *"Dianne Feinstein and her family covertly own many Musk interests and arranged for him to get his funds from the taxpayers"*
- 22 *"You can't put out the fires when his batteries explode"*
- 23 *"The fumes from his thermal battery vapors give you cancer, lung and brain damage"*
- 24 *etc.....*
- 25 *You may have run across Musk's self promoting, narcissistic, multi-billion dollar, self-aggrandizing PR hype but here is*
- 26 *the other side of his hype-coin. Here is who Elon Musk really is:*
- 27 *We know these facts from personal interaction with Musk, his companies and his politicians. Everything in this report*
- 28 *can be proven in a jury trial, Congressional hearings or live TV debates.*

1 Musk will do anything to keep this information from getting out but... it is too late for him!

2 While Musk's dirty deeds sound like a bad Hollywood movie script. It all really happened and there is now massive hard
3 copy evidence to prove it.

4 Elon Musk exists because he bribed DNC politicians including Obama, Clinton and Senators Feinstein, Reid, Boxer,
5 Harris, Spier and Pelosi to give him free taxpayer cash and government resources from the Department of Energy and the
6 California political tax pool. This is proven when you follow-the-money and the insider trading, stock ownership and crony
7 payola kick-backs. The payola between Musk, his scummy cronies and the politicians included:

8
9 Billions of dollars of Google (Where Musk's boy buddy Larry Page works), Twitter, Facebook, Tesla, Netflix and Sony
10 Pictures stock and stock warrants which is never reported to the FEC; Billions of dollars of Google, Twitter, Facebook, Tesla,
11 Netflix and Sony Pictures search engine rigging and shadow-banning which is never reported to the FEC; Free rent; Male and
12 female prostitutes; Cars; Dinners; Party Financing; Sports Event Tickets; Political campaign printing and mailing services
13 "Donations"; Secret PAC Financing; Jobs in Corporations in Silicon Valley For The Family Members of Those Who Take
14 Bribes And Those Who Take Bribes; "Consulting" contracts from McKinsey as fronted pay-off gigs; Overpriced "Speaking
15 Engagements" which are really just pay-offs conduited for donors; Private jet rides and use of Government fuel depots (ie:
16 Google handed out NASA jet fuel to staff); Real Estate; Fake mortgages; The use of Cayman, Boca Des Tores, Swiss and related
17 money-laundering accounts; The use of HSBC, Wells Fargo, Goldman Sachs and Deutsche Bank money laundering accounts
18 and covert stock accounts; Free spam and bulk mailing services owned by Silicon Valley corporations; Use of high tech law
19 firms such as Perkins Coie, Wilson Sonsini, MoFo, Covington & Burling, etc. to conduit bribes to officials; and other means now
20 documented by us, The FBI, the FTC, The SEC, The FEC and journalists.

21 22 **INSIDE THE MUSK CORRUPTION OPERATION**

23 The U.S. Energy Dept (DOE) has been covering-up organized political crime activities in which government funds are
24 being used as a slush-fund to pay off political campaign financiers and to pay for CIA/GPS Fusion-Class attacks on Silicon
25 Valley business competitors.

26 Political campaign financiers and government agency staff share stock market holdings with each other under family
27 trusts, shell corporations and layered Goldman Sachs accounts.

28 The Musk scam-deal was: "Obama funds Tesla, Musk conduits campaign funds to Obama, top Obama staff profit off of

1 *insider Musk stocks..."*

2 *Elon Musk is a criminal, a mobster, an asshole, a balding fake-hair wearing, plastic surgery-addicted, bi-sexual*
3 *douchebag, woman-abusing, sex addicted, tax evader. We can put this in writing because all of those identifications regarding*
4 *Musk can be proven in court and are documented in existing lawsuits and news stories.*

5 *Musk exploits poor people and child slaves in the Congo and Afghanistan to mine his lithium and Cobalt. Look up this*
6 *phrase on the top search engines: "child labor electric car batteries".*

7 *Musk spends billions per year to hire Russian trolls, fake blogger fan-boys and buy fake news self-glory look-at-me*
8 *articles about himself. Musk thinks he is the 'Jesus' of Silicon Valley and he will do anything to make the public think so. Musk is*
9 *insecure because his father was abusive and his "trophy wife" Mother is overbearing so he developed sociopath-like mental*
10 *issues. Musk has been professionally diagnosed as a 'psychotic narcissist. He public stated on an investor call that he uses drugs*
11 *and alcohol to get through the night. We have the tapes.*

12 *Musk relies on Google and the DNC Main Stream News (MSN) to hide bad news about him. Fake News manipulator*
13 *Google is run by Larry Page. Larry is Musk's investor and bromance 'Butt buddy'. They share an apartment. Musk uses massive*
14 *numbers of shell companies and trust funds to self-deal, evade the law and hide his bribes and stock market insider trading. His*
15 *brother ran Solar City and is now under federal investigation for securities fraud.*

16 *A huge number of Tesla drivers have been killed; pedestrians and oncoming drivers have also been killed, and Musk*
17 *covers it up.*

18 *Extremist politicians and their controlled news outlets refuse to allow any articles about Musk's crimes to be printed*
19 *because they benefit from Musk's crimes.*

20 *Investor oligarch's Tim Draper and Steve Jurvetson are so fanatical about not being embarrassed from a Tesla*
21 *bankruptcy that they will pump the TSLA stock and threaten anybody who might disclose the Musk misdeeds.*

22 *Peter Thiel, a Musk 'boyfriend' also protects Musk. Musk, and his cronies, use Palantir, Google and related software*
23 *to scan the entire internet every few minutes for any occurrence of the words: "Musk", "Tesla" or "Tesla Fire". They send*
24 *trolls and fake bloggers (Many of them Russian) to put pro-Musk comments on the comments section of any blogs or articles*
25 *discussing those topics and try to flood out the truth about Musk.*

26 *In EVERY blog that you read that mentions 'Musk', at least 1/3 of the comments have been placed their by Musk's paid*
27 *skills. There are no "Tesla Fan Boys". All of the fanatic Tesla comments on the internet are Musk's, Thiel's, Jurvetson's and*
28 *Draper's fake fanboy trolls. Musk, himself, stays up late at night pretending to be a 'Tesla Fan Boy' on blogs.*

1 *The 'Silicon Valley Mafia; cartel of frat boy sociopath venture capitalists like Steve Jurvetson, Tim Draper, Eric*
2 *Schmidt, et al; threaten those who do not support the cult of Tesla or their political candidates.*

3 *Musk holds the record for getting sued for fraud by his investors, wives, former partners, employees, suppliers and co-*
4 *founders. Elon Musk has gone out of his way to hire hundreds of ex-CIA and In-Q-Tel staff and assign them to "dirty tricks*
5 *teams" to attack his competitors and elected officials who Musk hates.*

6 *Musk never founded his companies. He took Tesla away from the founder: Marty, in a hostile take-over!*

7 *Musk's "Starlink" satellites are domestic spy and political manipulation tools - never get your internet from one. SpaceX*
8 *is entirely a spy satellite operation.*

9 *The same kind of EMF radiation proven to cause cancer from cell phones exists in massive amounts in a Tesla.*

10 *Musk can't fix a car or build a rocket and has almost no mechanical skills.*

11 *If you pull a report of every VIN# of every Tesla ever built and cross reference that with insurance, repair and lawsuit*
12 *records you will find that the "per volume" fire, crash, death and defect rate is THE WORST of any car maker in history!*

13 *Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Sachs has a dedicated team of 18*
14 *men who rig stocks and valuation bumps for Musk.*

15 *Over 1000 witnesses can prove every one of those claims in any live televised Congressional hearing! Senators Dianne*
16 *Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla Motors and/or it's suppliers and*
17 *mining companies. That is why they criminally help cover-up investigations of Tesla! All of this was reported, in writing, to*
18 *James Comey, Patricia Rich and David Johnson at the FBI.*

19 *Why aren't all of those parties in prison if it is so easy to prove the crime? Think back to recent history: the heads of the*
20 *Department of Energy, the FBI, The DOJ and the U.S. Attorney General were kicked out of their jobs for corruption. THIS was*
21 *the corruption they were doing. They all knew about this crime but they were covering it up.*

22 *Musk took over Tesla Motors in a hostile take-over in order to exploit lithium, cobalt and other mining corruption deals*
23 *for his business partners. Let's take a look at the 'lithium' in Musk's horrifically miss-engineered lithium ion batteries:*

24 *His batteries cause wars in the Congo, Afghanistan and Bolivia from the corrupt mining deals involved with mining*
25 *lithium and cobalt. Lithium ion batteries are insider trading-owned by ex-CIA boss Woolsey and DOE Boss Chu. Lithium ion*
26 *batteries excrete chemicals that mutate fetuses when they burn; destroy your brain, lungs and nervous system when they burn;*
27 *kill the factory workers who make them; cause Panasonic to be one of the most corrupt companies in the world; poison the Earth*
28 *when disposed of; can't be extinguished by firemen; poison firemen when they burn; are based on criminally corrupt mining*

1 schemes like URANIUM ONE; Have over 61 toxic chemicals in them; come from an industry that spends billions on internet
2 skills and trolls used to nay say all other forms of energy; and are insider-trading owned by corrupt U.S. Senators who are
3 running a SAFETY COVER-UP about their dangers.

4 *Apple products with lithium ion batteries have been exploding and setting people on fire. Over time the chemical*
5 *dendrites, or deposits, inside each battery grow worse and increase the chances of explosion as they age - LITHIUM ION*
6 *BATTERIES BECOME MORE AND MORE LIKELY TO EXPLODE AS TIME GOES ON AND AS THEY AGE. This is not a*
7 *theory. This is a scientific fact. That is why you hear about more and more lithium batteries catching fire and blowing up.*
8 *Additionally, scientists also speculate that the increasing presence of low energy nuclear background energy and wifi energy in*
9 *the environment is making lithium ion batteries explode more often lately. This theory is upheld by the increasing number of FAA*
10 *reports about commercial airline cabins suddenly "filling up with toxic smoke" as some lithium ion battery explodes in*
11 *someones overhead luggage. As commercial jets go higher they lose the protection of the atmosphere and are subjected to more*
12 *gamma (and other) radiation from overhead. This makes the already unstable lithium ion batteries on board blow up.*

13
14 *"Bad Guys" have figured out how to make them explode remotely in devices by making the device electronics cause the*
15 *batteries to overload. The dangers of lithium ion batteries are hidden by CNN and Main Stream News (MSN) because pretty*
16 *much only the DNC people profit from them and the DNC folks control CNN and the MSN.*

17
18 *The Obama Administration promised Silicon Valley oligarchs the market monopoly on lithium ion batteries and the*
19 *sabotage of fuel cells in exchange for campaign financing and search engine rigging; United States Senators that are supposed*
20 *to protect us from these deadly products own the stock market assets of them so they protect them and stop the FDA, OSHA,*
21 *DOT & NHTSA from outlawing them.*

22
23 *Tom Steyer is a notorious DNC financier. His partner, Margaret Sullivan ran, the federal USAID agency, USAID sent*
24 *all of the DNC campaign financiers in Silicon Valley a federal 'report' from USAID that said there was "A TRILLION*
25 *DOLLARS OF LITHIUM IN AFGHANISTAN" and promised to give those lithium mines, EXCLUSIVELY, to the Silicon Valley*
26 *venture capitalists if they funded and web search manipulated the election for Obama to take over the White House. We have the*
27 *documents proving this. In other words, a re-up of the Afghan War was caused by Elon Musk and it killed American soldiers so*
28 *that Musk could buy more mansions and trophy wives.*

1
2 *Alkaline, NiCAD and hundreds of other battery chemistries DO NOT have all of these problems but Lithium Ion*
3 *batteries get a monopoly because of politician insider trading ownerships.*

4
5 *Tesla Motors has caused far more deaths and injuries than the world generally knows about. A recent fire on U.S.*
6 *Highway 101 near Mountain View, CA, burned the driver alive and killed him. In Florida two kids died in a Tesla, burned alive,*
7 *screaming in agony. A man died in agony in a Tesla crash in Malibu that set Malibu Canyon on fire. A young woman, at the start*
8 *of life, and her boyfriend were burned alive in their crashed Tesla. There are many more deaths and crashes than you have seen*
9 *in the Main Stream News (MSN) The deaths and the cover-ups are endless.*

10
11 *Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla*
12 *Motors and/or it's suppliers and mining companies and they cover-up and halt investigations and laws designed to save the*
13 *public. They, and their crony's, spend over \$1B a year to shill and troll hype about lithium ion batteries and cover-up the*
14 *dangers. Lithium ion EVs are more prone to battery fires. Experts say that their lithium-ion batteries can fuel hotter fires that*
15 *release toxic fumes and are more difficult to put out. Lithium ion fires keep reigniting which explains why it takes so long and*
16 *requires copious amounts of water or foam (it is an electric fire, after all) to smother the flames. Tesla employee Bernard Tse*
17 *and his team warned Elon Musk about these dangers in 2008 and they got fired and/or warned to "say nothing" by Musk. Three*
18 *top Tesla engineers died in a plane crash next to Tesla offices in San Carlos after two of them agreed to become whistle-blowers.*

19
20 *The DNC bosses, Congress people and federal executives own the stock in lithium, Solar and EV markets and use*
21 *kickbacks from those markets (Especially via convoluted campaign finance laundering via Elon Musk) to finance the DNC.*

22
23 *The DNC bosses and Musk use character assassination as their main political tool against any member of the public*
24 *who speaks out against their felony stock market scams and PizzaGate-like scandals. The Harvey Weinstein reports by Ronan*
25 *Farrow show that they have teams of hired goons that they pay to destroy people's lives.*

26
27 *They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media, Gizmodo Media, Media Matters, David Brock, Sid*
28 *Blumenthal, NY Times, Google servers, Facebook servers, Podesta Group, Perkins Coie, Covington & Burling and a host of*

1 "media assassins". Gawker and Gizmodo Media set-up the attack stories and, in paid partnership with Google, Google kicks
2 their attack links around the globe, in front of 8 Billion people, forever. Google locks the attack articles of its enemies on the
3 front top search results of Google search results forever, on purpose! Google and Musk are partners-in-crime. Larry Page steals
4 technology for Google and Musk meets with Larry Page to advise him on which technologies to steal and how to bypass FEC
5 laws. Musk has exceeded FEC campaign finance limits by billions of dollars via "in-kind" services.

15 16 **ELON MUSK AND HIS CRONY STOCK MARKET SLUSH-FUND PAYOLA**

17 - *Why We Know That Elon Musk Is A Criminal*

18
19
20 By Susan T. and Andrew H.

21 *We saw Elon Musk commit crimes and we saw the Obama White House cover-up those crimes.*

22 *We, and our associates, worked for Bright Automotive, Zap Electric, Aptera, Eco Motors, XPV, The United States Department*
23 *of Energy and the federal Office of Management and Budget and Tesla Motors itself.*

24 *Americans have an expectation that their tax dollars will be used in a fair and legal manner and not to pay off crony campaign*
25 *financiers like Elon Musk. Americans have an expectation that fair market competition will decide which companies get to live*
26 *or die and that no campaign financiers gets to order the White House to produce the death or success decision about any*
27 *American business. Elon Musk's operation exists entirely because of criminal corruption and all of his companies must be shut*
28 *down by federal law enforcement.*

1 For nearly a decade, the U.S. Department of Energy has refused to comply with Freedom of Information Act (FOIA) requests
2 for copies of Tesla Motors entire D.O.E. funding application documents. Former D.O.E. employees have shredded copies of
3 those documents in order to keep them from being exposed to the public and the media. Why would they do that? Because those
4 documents reveal felony criminal fraud by Tesla Motors, federal violations of the Section 136 law requirements and
5 manipulations of the "hard-wiring" of the entire D.O.E. program. Those documents, which we have seen (and some Senate staff
6 have private copies of) prove that, in a side-by-side comparison with all other applicants, the Tesla application was
7 manipulation, rigged, false-reviewed and crony-advanced in order to pay-off certain campaign financiers and damage their
8 competitors. Tell the U.S. Congress to demand that the U.S. Department of Energy stop breaking the law and comply with the
9 FOIA requests to stop hiding the incriminating evidence in the Tesla files. Demand that the public be shown the original paper
10 and not the later, "doctored" versions.

11 We saw Elon Musk operate an entirely illegal and unethical program based on State and Federal corruption. We told this, in
12 writing and in person to the U.S. Attorney General: Eric Holder, who then quit his job after we reported these facts to him.

13 We reported that Elon Musk lied about vast number of dangers of the lithium ion chemistry he was using. Nothing was done.

14 We reported that our associates at the Department of Energy were having their safety reports on lithium ion danger suppressed.
15 Nothing was done.

16 We reported that Elon Musk's credit rating and financial records were fraudulent and amounted to "cooking the
17 books". Nothing was done.

18
19 We reported bribes paid by Musk's lobbyists and associated to government officials in order to grease the skids for his
20 crony payola. Nothing was done.

21 We reported that Goldman Sachs and Tesla Motors were operating a stock fraud pump-and-dump scam to manipulate
22 Elon Musk's stock holdings. Nothing was done.

23 We reported over a hundred illegal and corrupt actions by Elon Musk and his mob of Silicon Valley gangsters. Nothing
24 was done.

25
26 **TESLA MOTORS: CREATED BY CORRUPTION, BRIBES AND LIES!**

27 - DEMAND THAT A FEDERAL SPECIAL PROSECUTOR REVIEW ALL OF THESE CHARGES IN A PUBLIC HEARING!
28

1 *** If you have an ounce of morality, then you will not want to help Musk & Tesla profit from the crony political corruption that*
2 *created them. Musk exists because he bribes politicians & acts as an illegal campaign financing conduit.*

3
4 *** DOT/NHTSA has covered up years of reports about an acceleration surge issue that can suddenly crash your Tesla into walls*
5 *and drive it off cliffs. It is either a known hacking attack or the effect of WiFi on Tesla electronics. Either can kill you.*

6
7 *** Musk & Tesla are pure evil & exist because of hyper-corruption. You don't want to contribute to their evil or be part of it in*
8 *any way. You are funding evil & supporting criminal corruption by buying a Tesla or any Elon Musk owned product like Solar*
9 *City, Tesla, Space X, Hyperloop, etc.!*

10
11 *** Elon Musk spent more money, than any other car company in history, to do the exact same things that any other car has done,*
12 *or could do, for 20 times less money. Musk's Tesla was \$100,000.00 over budget, per car, at the time that Musk was handed his*
13 *crony Dept. of Energy froms by Steven Chu. Musk has no clue how to operate a car company.*

14
15 *** In one lawsuit it is noted that: "...Plaintiff and Tesla both applied for funds at the same time, in the same funding cycle in the*
16 *same program. Tesla had the historically epic number of horrific issues listed below, which were known to DOE at the time of*
17 *application, and Plaintiffs had NONE of these issues. How can any court, or rational person, believe that Plaintiffs were not*
18 *intentionally bypassed, targeted and damaged for political reasons while Tesla was simultaneously approved for political*
19 *reasons, when the comparative metrics between the two applicants prove the largest merit disparity in the entire recorded*
20 *history of the U.S. Department of Energy....the singular, and only, review criteria used by Department of Energy officials was:*
21 *WHICH ONE BRIBED THE CAMPAIGN FINANCE GROUP FOR BARACK OBAMA?!"; Thus proving that Tesla exists*
22 *because of organized-crime level political corruption.*

23
24 *** Elon Musk's self-driving "autopilot" feature, which keeps crashing and failing, is his attempt to scam taxpayer cash from*
25 *Dept. of Transportation and Dept. of Energy public funds. He is only trying to do it to get more free federal cash.*

26
27 *** The inventor of lithium ion batteries has confessed that lithium ion batteries blow up eventually. He says that deadly dendrites*
28 *plague lithium-ion battery technology. The dendrites accumulate as part of the standard charging and recharging cycle and*

1 eventually cause a short circuit that often results in a smoldering or burning battery. These dendrites are destined to eventually
2 blow up most Tesla cars and many electronic devices using lithium ion!

3
4 **** The CIA's software designed to take over any Tesla on Earth and kill the driver, passengers and bystanders has been released
5 in the wild and every hacker on Earth can now easily get a copy of it and kill you in your Tesla!**

6
7 **** Ex-employees have leaked faked financial records, evidence of massive click-farm fake social media manipulation and
8 evidence of unreported deaths and accidents. They say that most Tesla's have one kind of defect or another.**

9
10 **** If you read about the dirty deeds and cocaine dealings with the In-Q-Tel airplanes called "Cocaine 1" & "Cocaine 2", & the
11 corruption behind the company called In-Q-Tel & Musk's software programmer who ran "The Silk Road" drug & murder
12 service then you must be concerned that many In-Q-Tel people work for Musk. Why does Musk need dirty druggies & spies on
13 his payroll unless he is running covert drug and business spying activities?**

14
15 **** Ex-employees, Gawker writers and gay lawyers from Covington & Burling have leaked stories that Elon Musk, Reid
16 Hoffman, Larry Page are "butt buddies".**

17
18 **** Musk is anti-American and Anti-Worker Rights and has been caught flying in H1-B cheap offshore labor and exploiting
19 immigrants for his deadly profits. Musk hates unions and worker rights efforts.**

20
21 **** Elon Musk gets the Cobalt chemical to make his lithium ion batteries from slave trade and blood-money corruption in the
22 Congo!**

23
24 **** The lithium ion batteries that Musk uses also blow up when they naturally encounter Low Energy Nuclear (LENR) effects in
25 the ambient environment. Millions of chemicals don't blow up from LENR'd but lithium ion does!**

26
27 **** If you are a Democrat then know that Elon Musk cost you the Hillary Clinton campaign because of his payola schemes. If you
28 are a Republican, know that Elon Musk is the epitome of the worst form of DNC crony corruption you ever saw!**

1
2 *** Musk bribed California politicians to give him hundreds of millions of dollars of taxpayer dollars & resources he never*
3 *earned or worked for. He only got those crony payola perks handed to him because he operated as an illicit front for corrupt*
4 *campaign financing for Dianne Feinstein, Jerry Brown, Harry Reid, Barack Obama and Hillary Clinton.*

5
6 *** Multiple parties have filed "Demands For The Arrest of Elon Musk" with the FBI, DOJ, AG, FTC, SEC and other law*
7 *enforcement agencies. It is not likely that Musk, or his companies will survive a full investigation.*

8
9 *** Tesla and Solyndra sit on the same land in Fremont, CA. Solyndra was raided by the FBI for corruption. Tesla SHOULD be*
10 *raided by the FBI for corruption. Both companies had kick-back crony payola schemes with Senator Dianne Feinstein. She*
11 *owned the land, lease, HR, construction company and supplier interests and stock for both companies in one of the most massive*
12 *conflict-of-interest crony financing schemes in U.S. history. Elon Musk and the Feinsteins are corruption partners.*

13
14 *** People who see you in a Tesla think of you as a "Tone Deaf Douchebag", "Tesla Tool!", "Arrogant Prick", "Ostentatious*
15 *Obama Oaf", "Sheep", "Mindless Yuppie Scum", "Misogynistic Silicon Valley Clone", "Self-promoting Elitist Douche", "Fake*
16 *News Reading Main Stream Boob", "Naive Idiot" or other bad things.*

17
18 *** Elon Musk is one of the main financiers behind Barack Obama & Hillary Clinton, both of whom have been charged with*
19 *corruption. Musk endlessly tweets lies & "...No I didn't do those bad things" BS but nobody else supports him.*

20
21 *** Tesla financial records are "cooked" in a fraudulent manner to make the stock market valuation of Tesla a falsely*
22 *manipulated factor. Musk uses "pre-orders", by his own investors, to fake sales and wrote emails to customers asking them to*
23 *put small deposits down so he could book them as fully paid sales in one of a large number of stock and loan valuation frauds.*
24 *Musk and his investors practice stock market skims, pump-and-dumps and Flash Boy manipulations.*

25
26 *** Lithium ion batteries are blowing up, starting fires &, generally, destroying people's homes, cars, electronics & physical*
27 *health. Boeing was ordered to stop flying the 787 Dreamliner because it's Lithium ion batteries are catching fire spontaneously.*
28 *A group of silicon valley venture capitalists forced/leveraged the government to buy & pay for these specific batteries, that they*

1 have stock in, in order to benefit their profit margins. Other batteries don't have these problems. They knew about the dangers
2 from day one, but put greed ahead of safety. There are thousands & thousands of reports of spontaneous lithium ion fires but the
3 VC's who back lithium ion pay to keep this information hushed up. Millions of these batteries have been recalled for fire risk.
4 The VC's tried to push as many as they could before they got caught. Now they are caught. These VC's & the Senators they
5 bribed own stock in lithium mining companies too. HERE IS THE PROOF: [HTTP://LITHIUMBATTERYCOVERUP.COM](http://LITHIUMBATTERYCOVERUP.COM)

6
7 **** Tesla Motors has filed a patent which states the following , THESE ARE TESLA MOTORS WORDS** warning about a crisis,
8 the level of which they never disclosed to the consumer: "Thermal runaway is of major concern since a single incident can lead
9 to significant property damage &, in some circumstances, bodily harm or loss of life. When a battery undergoes thermal
10 runaway, it typically emits a large quantity of smoke, jets of flaming liquid electrolyte, & sufficient heat to lead to the combustion
11 & destruction of materials in close proximity to the cell. If the cell undergoing thermal runaway is surrounded by one or more
12 additional cells as is typical in a battery pack, then a single thermal runaway event can quickly lead to the thermal runaway of
13 multiple cells which, in turn, can lead to much more extensive collateral damage. Regardless of whether a single cell or multiple
14 cells are undergoing this phenomenon, if the initial fire is not extinguished immediately, subsequent fires may be caused that
15 dramatically expand the degree of property damage. For example, the thermal runaway of a battery within an unattended laptop
16 will likely result in not only the destruction of the laptop, but also at least partial destruction of its surroundings, e.g., home,
17 office, car, laboratory, etc. If the laptop is on-board an aircraft, for example within the cargo hold or a luggage compartment,
18 the ensuing smoke & fire may lead to an emergency landing or, under more dire conditions, a crash landing. Similarly, the
19 thermal runaway of one or more batteries within the battery pack of a hybrid or electric vehicle may destroy not only the car, but
20 may lead to a car wreck if the car is being driven or the destruction of its surroundings if the car is parked". See
21 <http://whoisonmusk.com> for more...

22
23 **** Tesla's own staff, & every fire department, have now admitted that once a lithium ion fire gets started in a Tesla, that it is**
24 **impossible to extinguish burning lithium ion material. This is Telsa's own words in THEIR patent filing, (You can look it up**
25 **online) saying that the risk is monumental. Tesla has 6800 lithium ion batteries, any one of which can "go thermal", start a**
26 **chain reaction and blow up all of the rest of the 6800+ deadly batteries! Tesla drivers have been burned alive in thermal globs**
27 **of flaming lithium ion, plastics & metal. Bystanders have heard their horrific screams of unutterable pain & terror as they were**
28 **burned alive! Tesla fires can't be extinguished & the bodies are burned into "unrecognizable lumps of charred flesh", according**

1 to fireman.

2
3 *** Lithium Ion batteries "go thermal" in peoples pockets, in your notebook, especially in a Tesla & Fisker car. There are tens of*
4 *thousands of articles documenting this & there is a cover-up by the VC's that fund these things to keep this fact out-of-sight.*
5 *Making Lithium Ion batteries poisons the workers who make them. It is a dangerous product that is covered-up by the Obama*
6 *Administration. Panasonic knows that these batteries are deadly.*

7
8 *** Tesla only exists to exploit Elon Musk's briberies. The lithium ion batteries blow up when they get: wet, hot, bumped, over-*
9 *charged, struck by energy fields, exposed to air or squashed. Lithium ion batteries poison the Earth & that they poison & kill the*
10 *workers that make them. Lithium ion batteries come from war profiteering in Afghan & Bolivian corruption.*

11
12 *** Panasonic is Elon Musk's partner. Panasonic is one of the most corrupt companies in the world. Panasonic has been*
13 *charged, on multiple continents with: Product dumping, bribery, collusion, price fixing, anti-trust law violations, racketeering,*
14 *worker abuse, toxic poisoning of workers, & other crimes. It is no wonder that Elon Musk & Panasonic are partners. Tata*
15 *Motors executive Karl Slym was killed for exposing this fact.*

16
17 *** Your tax dollars were stolen in order to make Tesla Motors, as part of a political financing kick-back scam. In other words,*
18 *part of your paycheck was taken away from you in order to buy hookers, rent-boys & private jets for Musk & company.*

19
20 *** Tesla's are forged in criminal corruption, so anybody who drives a Tesla must be either ignorant, a weasel or one of the*
21 *corrupt. The whole world now knows all of the facts in this list so you can never plead ignorance to these crimes.*

22
23 *** Telsa's have a huge amount of highly documented defects. The defects are so extensive that Tesla made buyers sign*
24 *confidentiality agreements to try to hide how messed up their cars are.*

25
26 *** Tesla's have killed more people than the main-stream news has reported. The full Tesla death-list is covered up.*

27
28 *** Musk lied about why he wanted to make electric cars, when, in fact, he actually poisons the environment because Tesla*

1 *investors wanted to exploit toxic minerals & materials which can't be recycled in a clean manner*

2
3 *** No other electric car has been so mundane, & yet had so many problems with it, since the electric car was first sold in the*
4 *1800's. There is nothing "novel" or "amazing" about the Tesla aside from dime store parlor tricks for PR hype.*

5
6 *** More drunks have crashed Tesla's, than any other per capita car in the world, per volume of cars made*

7
8 *** Elon Musk's co-founders, investors, partners, wives, investors, suppliers & employees have sued him for being a fraud &*
9 *essentially, called him an "asshole" in court records.*

10
11 *** Elon Musk lied on this Department of Energy funding application and the Obama Administration refuses to allow any federal*
12 *employees or witnesses to testify to these facts in public due to the devastating potential results of these facts.*

13
14 *** More owners of Tesla's have been found to cheat on their taxes, & be involved in abuse-based divorces, than almost any other*
15 *car brand owner. Tesla owners are bad people who rationalize their poor life choices. Owning a Tesla is a red-flag for a tax*
16 *audit!*

17
18 *** Elon Musk will lie, cheat & steal in order to self-aggrandize & glorify his egotistical mania. Musk has been documented*
19 *engaging in over 100 lies which were later proven to be false. He has spent tens of millions of dollars to buy fake news about*
20 *himself on Twitter, Facebook & Google because he is such a mentally disturbed ego-maniac.*

21
22 *** None of Elon Musk's companies would exist if not for taxpayer funded handouts given to him by corrupt politicians in*
23 *exchange for illegal campaign finance deals with him & his investors.*

24
25 *** Google, & Tesla, who are financial & political partners, have both been caught spying on consumers & manipulating*
26 *Internet data in order to cover-up their complicity in huge political corruption & kick-back deals*

27
28 *** Musk took U.S. taxpayer dollars from the government & then hired cheap off-shore labor & fired U.S. Union workers &*

1 *domestic workers. He lied to & screwed the NUMMI workers that were working at the Fremont plant.*

2
3 *** Musk has put over 18 surveillance devices in the Tesla. Anybody can hack those devices & monitor you. WORSE YET, foreign*
4 *agents have hacked the Tesla & taken over the controls & driven Tesla's into bystanders & over cliffs.*

5
6 *** When Erick Strickland was head of the NHTSA he was confronted about DOT safety cover-ups of the Tesla to protect Obama.*
7 *He quit 48 hours later. The DOT safety cover-ups to protect the Obama campaign finance payola scheme continue to this day.*
8 *Obama's Gibbs, Emanuel, Plouffe, Axelrod and Carney quit within a week of being threatened with exposure.*

9
10 *** Tesla's have had a large number of recalls but Elon Musk refuses to call them "recalls". Tesla's have had multiple recalls*
11 *for SEVERE safety dangers. DOT has been told this, in writing, for years, but wont take action in order to protect Obama.*

12
13 *** Elon Musk is a bullshit artist who has no original ideas & wears black-turtle neck shirts (like Elizabeth Homes) to try to*
14 *create a "cult" around himself & convince the world that he is a "Jesus-like" figure when, in fact, he is a clinical sociopath.*

15
16 *** Tesla is a severe public safety hazard that has been systematically covered up by corrupt politicians.*

17
18 *** Large numbers of Ex-CIA staff and In-Q-Tel spy staff work for Musk. Why does he need spies to build cars?*

19
20 *** Tesla Motors batteries were promoted by those who wished to exploit the Afghanistan War for personal profit by controlling*
21 *the Afghan lithium mining fields. Kleiner Perkins and Draper Fisher hyped the "...trillions of \$ of lithium in Afganistan."*

22
23 *** Tesla Motors batteries blow up on their own.*

24
25 *** Tesla Motors batteries blow up when they get wet.*

26
27 *** Tesla Motors batteries fires cannot be put out by any common fire-fighting resources.*

28

1 *** Tesla Motors batteries set themselves on fire.*

2

3 *** Per Federal MSDS disclosure documents, Tesla Motors batteries emit cancer-causing vapors when they burn.*

4

5 *** Tesla Motors Vehicles toxicity poison bystanders, nearby vehicular passengers, airline passengers in planes carrying said*
6 *batteries in their holds, & environments where such incidents occur.*

7

8 *** Tesla Motors batteries blow up when bumped by the same level of car incident that would, otherwise, only dent a normal car*
9 *bumper.*

10

11 *** In an accident, when a Tesla rolls over, molten metal & plastic can drip on & burn the occupants alive.*

12

13 *** Tesla has multiple sexual harassment and unsafe work-place lawsuits against the company.*

14

15 *** Per MSDS documents, Tesla Motors batteries emit brain damaging chemicals when they burn.*

16

17 *** Tesla is a stock pumping scam to profiteering on stock market peak manipulation at the expense of taxpayers.*

18

19 *** Per MSDS documents, Tesla Motors batteries emit chemicals, burning, or not, that can damage an unborn fetus.*

20

21 *** Per MSDS documents, Tesla Motors batteries emit chemicals that can cause lung damage.*

22

23 *** Per MSDS documents, Tesla Motors batteries emit chemicals that can cause liver damage.*

24

25 *** Per published lawsuits & news reports, the factories that make Tesla Motors batteries have been charged with the deaths, &*
26 *potentially fatal illness, of over 1000 workers & the poisoning of nearby towns.*

27

28 *** Tesla Motors batteries become even more dangerous over time, particularly when tasked by electric transportation systems*

1 *like Hover-boards & Tesla's. The chemistry in a lithium ion battery changes to become more unstable over time.*

2
3 *** Tesla Motors batteries were never designed to be used in automobiles. Tesla used non-automotive batteries in one of the most*
4 *dangerous configurations possible.*

5
6 *** Tesla Motors occupants experience higher EMF radiation exposure than gasoline vehicle occupants.*

7
8 *** Elon Musk's Space X vehicles & Tesla Motors vehicles have both had a higher-than-average number of explosions. This has*
9 *caused outside experts to doubt Musk's ability to place safety considerations over his need for hyped-up PR.*

10
11 *** Leaked Sandia National Labs & FAA research videos dramatically demonstrate the unstoppable, horrific, "re-percussive*
12 *accelerating domino-effect" explosive fire effect of the Tesla Motors batteries.*

13
14 *** Tesla's own "Superchargers" & home 3-prong chargers have set Tesla's, homes & businesses on fire.*

15
16 *** Consumer rights groups contacted Erick Strickland, the head of the NHTSA, & charged him with a cover-up. He quit days*
17 *later. The NHTSA then issued a safety investigation request to Tesla Motors, which would have more publicly exposed these*
18 *dangers, but the safety investigation was never under-taken due to White House requests & lobbyist bribes, from Tesla, which*
19 *got the investigation shut down.*

20
21 *** NEPA regulations for the Tesla NUMMI factory in California & the Nevada Tesla "Gigafactory" have been violated relative*
22 *to environmental safety standards. See <http://xyzcase.xyz> for details.*

23
24 *** Tesla Motors vehicles are not "Factory Built" "like Ford" builds cars, as Tesla professes. They are hand built in small*
25 *volumes & subjected to numerous defects. Blogs have documented hundreds of defects, as listed by Tesla owners. Tesla has lost*
26 *at least one LEMON CAR LAWSUIT for defective manufacturing.*

27
28 *** Tesla's "showrooms" are often "pop-up" retail storefronts that are in tight-proximity retail centers, putting it's neighbors at*

1 *risk of total loss from fire damage.*

2
3 *** Tesla Motors vehicles have been hacked & taken over. Their doors, steering, listening devices & navigation have been taken*
4 *over by outside parties. Multiple Tesla have suddenly swerved off the road, over cliffs & into other vehicles, killing bystanders &*
5 *Tesla drivers.*

6
7 *** Three Tesla top engineers & two competing senior executives, all of whom had whistle-blown on Tesla, who were in perfect*
8 *health one day, suddenly died mysteriously the next day.*

9 *** Multiple employees, founders, investors, marital partners, suppliers & others have sued Tesla Motors, &/or it's senior*
10 *executives for fraud. Musk had nothing to do with creating Tesla. He ran a hostile take-over of Tesla from the founders.*

11
12 *** In addition to suing him, many of his former staff & partners have described Musk as an "Arrogant Prick".*

13
14 *** Main-Stream Media (MSM) have agreed not to provide news coverage of the deadly defects of the Tesla because the MSM*
15 *are owned by the same politicians who own Tesla Motors. It is now legal to sue The New York Times for hiding these deadly*
16 *defects, though, particularly if your family member was injured or killed because they covered-up the danger for political*
17 *reasons.*

18
19 *** If you think the above bullet-points are bad there are over a 1000 more. Find the book "Is Elon Musk A Fraud" online or*
20 *visit <https://stopelonfromfailingagain.com/> or thousands of other sites that expose the truth about Musk & Tesla!*

21
22 **BANKRUPT MUSK – NO CASH FOR CRONY CORRUPTION**

1 Print this out & freely re-post it on blogs & social media. Post this on bulletin boards. Put this on the windshield of
2 every Tesla you find. Print this out & hand these out in front of every Tesla dealership: Nobody can stop you from handing these
3 out, it is your U.S. Constitutional First Amendment Right! Pass the word! We are prepared to back up every single fact on here
4 at any public meeting with the FBI, Congress, FTC, GAO, SEC or before a Federal Special Prosecutor.

11
12
13
14 *The crash of a Tesla Model X through the home of South Korean singer and actor Ji Chang Son. The crash ended with*
15 *the nose of the vehicle in Ji Chang Son's living room after the Tesla malfunctioned. Hundreds of such Tesla crashes have*
16 *occurred, resulting in the deaths and injuries of Tesla owners, passengers, bystanders, oncoming drivers and others.*
17 *Following accusations by a Korean celebrity that a Tesla car spontaneously drove through a wall, the carmaker has replied that*
18 *the crash was “entirely due to the man’s horrible driving” in an ongoing effort, by Tesla, to steer the blame away from Tesla*
19 *faulty engineering*

20 *Actor and singer Son Ji-chang (identified as Ji Chang Son in court documents) claimed he was parking his Tesla Model*
21 *X SUV when the vehicle suddenly [lurched forward into his living room](#).*

22 *In a lawsuit filed last week in California, Son claimed that the crash was due to “sudden unintended acceleration” and*
23 *sought class-action status with other Model X owners.*

24 *In a nod to the car’s ability to sense and avoid crashes, the lawsuit also hinted that the Model X should not be allowed*
25 *take actions that the car “knows will result in the collision with a fixed object.”*

26 *But Tesla contends its Model X was only dutifully following Son’s instructions to plough through his house.*

27 *“The evidence, including data from the car, conclusively shows that the crash was the result of Mr. Son pressing the*
28 *accelerator pedal all the way to 100 per cent,” said Tesla [in a statement to Reuters](#).*

1
2 *Although most new cars are equipped with “black box” technology to record driver actions in the event of a crash,*
3 *Tesla is unique for amassing vehicle data as detailed as whether a driver’s hands are on the steering wheel.*

4 *The data is collected to aid in research and design, but Tesla user agreements also reserve the carmaker’s right to use*
5 *it to defend itself in court.*

6 *The term “sudden unintended acceleration” has a checkered recent history. Most famously, between 2009 and 2011*
7 *Toyota recalled more than eight million vehicles following widespread allegations that the vehicles were subject to unexpected*
8 *ac celeration.*

9 *But a subsequent investigation by the U.S. Department of Transportation found that most of the reported cases of*
10 *“sudden unintended acceleration” were simply drivers stepping on the gas instead of the brake — with only a handful of*
11 *incidents being due to pedals getting stuck on floormats.*

12 *In June, another California-based Model X owner, Puzant Ozbag, similarly claimed that his Model X spontaneously*
13 *accelerated through a parking lot and into a wall. In that case, too, Tesla reviewed vehicle records and reported that the actual*
14 *culprit was Ozbag jamming his foot down on the accelerator. A special prosecutor is needed to investigate Tesla due to the huge*
15 *number of cover-ups, by Tesla and the Obama Administration, to protect campaign financier Elon Musk. Jeff Sessions needs to*
16 *hire a [lawyer](#) from outside the [government](#) appointed by Sessions as [attorney general](#) or, in the United States, by [Congress](#) to*
17 *investigate a government official for misconduct while in office. A reasoning for such an appointment is that the governmental*
18 *branch or agency may have political connections to those it might be asked to investigate. Inherently, this creates a [conflict of](#)*
19 *[interest](#) and a solution is to have someone from outside the department lead the investigation. The term “special prosecutor” may*
20 *have a variety of meanings from one country to the next, from one government branch to the next within the same country, and*
21 *within different agencies within each government branch. Critics of the use of special prosecutors argue that these investigators*
22 *act as a “fourth branch” to the government because they are not subject to limitations in spending, nor do they have deadlines to*
23 *meet.*

24 *Attorneys carrying out special prosecutor functions in either federal or state courts of the United States are typically*
25 *appointed [ad hoc](#) with representation limited to one case or a delineated series of cases that implicate compelling governmental*
26 *interests, such as: Fraud (SEC, Complex, Cybercrime, Mortgages), Public Corruption, Money Laundering & Asset Forfeiture,*
27 *Civil Rights, Racketeering Across State lines, Environmental Protection, National Security, Tax & Bankruptcy, Organized*
28 *Crime, or International cases where the US is a party). [\[1\]](#) Special prosecutors in courts of the [United States](#) may either be*

1 appointed formally by one of the three branches of government in a criminal proceeding, or when dictated by federal law or
 2 regulation, or informally in civil proceedings, and also by one of the three branches of government, or by a non-governmental
 3 entity to prosecute alleged unlawful conduct by government agents. When appointed by the [judicial branch](#) to investigate and, if
 4 justified, seek indictments in a particular judicial branch case, the attorney is called special prosecutor. [2] When
 5 appointed/hired particularly by a governmental branch or agency to investigate alleged misconduct within that branch or
 6 agency, the attorney is called [independent counsel](#). [3] When appointed/hired by the state or political subdivision to assist in a
 7 particular [judicial branch](#) case when the public interest so requires, the attorney is called [special counsel](#). [3] When
 8 appointed/hired by an organization, corporation, person or other non-governmental entity to investigate and, if justified, seek
 9 indictments against one or more government officials for acts committed under color of law, the attorney may be called [special](#)
 10 [counsel](#) or special prosecutor, but not [independent counsel](#). [3]

11
 12 On January 3, 1983, the United States federal government substituted the term independent counsel for special
 13 prosecutor. [4] [Archibald Cox](#) was one of the most notable special prosecutors. However, special prosecutor Archibald Cox
 14 today would be called independent counsel Archibald Cox in the United States.

15 The term is sometimes used as a synonym for [independent counsel](#), but under the former law authorizing the
 16 independent counsel, the appointment was made by a special panel of the [United States Court of Appeals for the District of](#)
 17 [Columbia Circuit](#). The [Ethics in Government Act](#) expired in 1999, and was effectively replaced by [Department of Justice](#)
 18 regulation 28 CFR Part 600, under which Special Counsel [Patrick Fitzgerald](#) was appointed to look into the [Plame affair](#). The
 19 [Tesla Motors and Elon Musk Case](#) requires a Special Prosecutor.

22 THE CORRUPTION, FRAUD AND BRIBERY CHARGES AGAINST ELON MUSK AND TESLA 23 MOTORS

24 Update 2.7

25
 26
 27 The following, culled from a variety of news articles, lawsuits and investigative reports, demonstrates the profound number of
 28 illicit actions charged against Elon Musk and his Silicon Valley cartel insiders. While any given, unbiased, expose on Musk

1 covers some of these issues, it is important to examine the width and breadth of Musk's culture of corruption. Expert witnesses,
2 former employees and investigators are able to fully detail and confirm, with extended evidence, the following charges, in court,
3 or Congressional public hearings:

4 [A.\) ELON MUSK AND TESLA FACE CRIMINAL FRAUD CHARGES BY FEDS! MUSK FINALLY EXPOSED!](#)

5
6 [B.\) SEC subpoenas TESLA over Musk tweets...](#)

7
8 [C. Whistleblower posts 'flawed cars' details...](#)

9
10 D.) *Elon Musk's Incredible Smoke And Mirrors Dance. Elon Musk's untraceable money laundering and political bribery scam*
11 *has now been exposed. It is called an "Invisible Bridge". It is the way that covert funds move through a secret conduit of close*
12 *associates and family members. Elon Musk is at the head of the conduit and his mother, brother and associates Tim Draper,*
13 *Steve Jurvetson, and George Soros round out the other tentacles. With operational links through Wells Fargo Bank, Silicon*
14 *Valley Bank and Goldman Sachs, the scheme is perfected corruption. The "bridge" uses a combination of fake tax evasion*
15 *charities and business assets, passes through Senator's pockets and is never visible to the FBI, the FEC and the SEC unless they*
16 *have very good agents assigned to the matter.*

17
18 E.) *NTSB, DOJ, SEC and FEC have been blocked from action by DNC lobbyists.*

19
20 F.) *The overt and arrogant Musk misdeeds have now become "obvious and RICO-violating..."*

21
22 G.) *He is protected by Senators Reid, Harris, Pelosi and Feinstein. They are beneficiaries of the scam. Musk's self promoting,*
23 *narcissistic, multi-billion dollar, self-aggrandizing PR hype. Elon Musk exists because he bribed DNC politicians including*
24 *Obama, Clinton and Senators Feinstein, Reid, Boxer, Harris, Spier and Pelosi to give him free taxpayer cash and government*
25 *resources from the Department of Energy and the California political tax pool. This is proven when you follow-the-money and*
26 *the insider trading, stock ownership and crony payola kick-backs.*

27
28 H.) *He is protected by the Clinton and Obama organizations along with most of the DNC. He finances these politicians via this*

1 *scheme.*

2

3 *I.) The U.S. Dept of Energy (DOE) has been covering-up organized crime activities at DOE in which DOE funds are being used*
4 *as a slush-fund to pay off DNC campaign financiers and to pay for Fusion-GPS attacks on Silicon Valley business competitors.*

5

6 *J.) DNC campaign financiers and DOE staff share stock market holdings with each other under family trusts, shell corporations*
7 *and layered Goldman Sachs accounts. The deal was: Obama funds Tesla, Musk conduits campaign funds to Obama, top Obama*
8 *staff profit off of insider Musk stocks.*

9

10 *K.) Elon Musk is a criminal, a mobster, an asshole, a balding fake-hair wearing, plastic surgery-addicted, bi-sexual douchebag,*
11 *woman-abusing, sex addicted, tax evader.*

12

13 *L.) Musk exploits poor people and child slaves in the Congo and Afghanistan to mine his lithium and Cobalt. Look up this phrase*
14 *on the top search engines: "child labor electric car batteries".*

15

16 *K.) Musk spends billions per year to hire Russian trolls, fake blogger fan-boys and buy fake news self-glory look-at-me articles*
17 *about himself. Musk thinks he is the 'Jesus' of Silicon Valley and he will do anything to make the public think so. Musk is*
18 *insecure because his father was abusive and his "trophy wife" Mother is overbearing so he developed sociopath-like mental*
19 *issues.*

20

21 *M.) Musk has been professionally diagnosed as a 'psychotic narcissist.*

22

23 *N.) Musk has publicly stated on an investor call that he uses drugs and alcohol to get through the night. We have the tapes.*

24

25 *O.) Musk relies on Google and the DNC Main Stream News (MSN) to hide bad news about him. Fake News manipulator Google*
26 *is run by Larry Page. Larry is Musk's investor and bromance buddy. They share an apartment.*

27

28 *P.) Musk uses shell companies and trust funds to self-deal, evade the law and hide his bribes and stock market insider trading.*

1 *His brother ran Solar City and is now under federal investigation for securities fraud.*

2
3 *Q.) A huge number of Tesla drivers, per capita, have been killed; pedestrians and oncoming drivers have also been killed, and*
4 *Musk covers it up.*

5
6 *R.) The DNC and the MSM refuse to allow any articles about Musk's crimes to be printed because they benefit from Musk's*
7 *crimes.*

8
9 *S.) VC's Tim Draper and Steve Jurvetson are so fanatical about not being embarrassed from a Tesla bankruptcy that they will*
10 *pump the TSLA stock and threaten anybody who might disclose the Musk misdeeds.*

11
12 *T.) Peter Thiel, a Musk 'boyfriend' also protects Musk. Musk, and his cronies, use Palantir, Google and related software to scan*
13 *the entire internet every few minutes for any occurrence of the words: "Musk", "Tesla" or "Tesla Fire". They send trolls and*
14 *fake bloggers (Many of them Russian) to put pro-Musk comments on the comments section of any blogs or articles discussing*
15 *those topics and try to flood out the truth about Musk. In EVERY blog that you read that mentions 'Musk', at least 1/3 of the*
16 *comments have been placed their by Musk's paid shills.*

17
18 *U.) There are no "Tesla Fan Boys". All of the fanatic Tesla comments on the internet are Musk's, Thiel's, Jurvetson's and*
19 *Draper's fake fanboy trolls. Musk, himself, stays up late at night pretending to be a 'Tesla Fan Boy' on blogs.*

20
21 *V.) Main Stream DNC-biased News organizations who refuse to cover the story reveal themselves as shills for Musk.*

22
23 *W.) The Silicon Valley Mafia promotes Musk as a "Tech God" leader but, in reality Musk is the same kind of "Leader" as*
24 *Charles Manson, Jim Jones, David Koresh, Swami Rajneesh and Al Capone.*

25
26 *X.) His own people have sued him for fraud and lies once they realized that Musk-ism and Scientology had so much in common.*

27
28 *Y.) The 'Silicon Valley Mafia; cartel of frat boy sociopath venture capitalists like Steve Jurvetson, Tim Draper, Eric Schmidt, et*

1 *al; threaten those who do not support the cult of Tesla or their political candidates.*

2
3 *Z.) Musk holds the Silicon Valley record for getting sued for fraud by his investors, wives, former partners, employees, suppliers*
4 *and co-founders.*

5
6 *A1.) Elon Musk has gone out of his way to hire hundreds of ex-CIA and In-Q-Tel staff and assign them to "dirty tricks teams" to*
7 *attack his competitors and elected officials who Musk hates.*

8
9 *A2.) Musk and his culture are being sued for abuse to women and blacks and the Unions hate him for lying to them.*

10
11 *A3.) <https://stopelonfromfailingagain.com> reveals even more Musk lies.*

12
13 *A4.) Musk never founded his companies. He took Tesla away from the founder: Marty, in a hostile take-over!*

14
15 *A5.) Musk's "Starlink" satellites are domestic spy and political manipulation tools - never get your internet from anything*
16 *SpaceX has launched. SpaceX is entirely a domestic spy operation.*

17
18 *A6.) Musk's "Mars" scheme is just a PR distraction.*

19
20 *A7.) The same kind of EMF radiation proven to cause cancer from cell phones exists in massive amounts in a Tesla.*

21
22 *A8.) Musk can't fix a car or build a rocket and has almost no mechanical skills.*

23
24 *A9.) If you pull a report of every VIN# of every Tesla ever built and cross reference that with insurance, repair and lawsuit*
25 *records you will find that the "per volume" fire, crash, death and defect rate is THE WORST of any car maker in history! Musk's*
26 *lobbyists have bribed DOT and NHTSA to stall safety inspections.*

27
28 *A10.) NO COMPLETE UNCOMPROMISING SAFETY REPORT ON TESLA CARS HAS EVER BEEN PUBLISHED but we have*

1 *a copy of a hushed up report that would put Tesla out of business.*

2
3 *A11.) Musk's 'Autopilot' system is a scam to get government cash BUT IT NEVER WORKS. The Tesla 'Autopilot' has crashed*
4 *into police cars, pedestrians, swamps and driven owners over cliffs.*

5
6 *A12.) Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Sachs has a dedicated team of 18 men*
7 *who rig stocks and valuation bumps for Musk.*

8
9 *A13.) The "Silk Road" Cocaine and Murder-For-Hire website was created at Musk's SpaceX*

10
11 *A14.) Musk's In-Q-Tel staff ran two transport planes filled with drugs; listed as "Cocaine 1" on FAA records.*

12
13 *A15.) Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla Motors*
14 *and/or it's suppliers and mining companies. That is why they criminally help cover-up investigations of Tesla!*

15
16 *A16.) All of this was reported, in writing, to James Comey, Patricia Rich and David Johnson at the FBI.*

17
18 *A17.) Tesla and Solyndra sit on the same land and share staff, contracts and lobbying. California politicians own parts of both*
19 *companies.*

20
21 *A18.) Musk took over Tesla Motors in a hostile take-over in order to exploit lithium, cobalt and other mining corruption deals*
22 *for his business partners.*

23
24 *A19.) The 'lithium' in Musk's horrifically miss-engineered lithium ion batteries cause wars in the Congo over mining corruption.*

25
26 *A20.) Afghanistan and Bolivian mobsters benefit from the corrupt mining deals involved with mining lithium and cobalt for Elon*
27 *Musk's batteries.*

28

1 *A21.) Elon Musk's Lithium ion batteries are insider trading-owned by ex-CIA boss Woolsey and DOE Boss Chu and they*
2 *engaged in extreme conflict-of-interest to help Musk.*

3
4 *A22.) Elon Musk's Lithium ion batteries excrete chemicals that mutate fetuses when they burn.*

5
6 *A23.) Elon Musk's Lithium ion batteries destroy your brain, lungs and nervous system when they burn.*

7
8 *A24.) Elon Musk's Lithium ion batteries kill the factory workers who make them.*

9
10 *A25.) Elon Musk's Lithium ion batteries cause Panasonic to be one of the most corrupt companies in the world.*

11
12 *A26.) Elon Musk's Lithium ion batteries poison the Earth when disposed of.*

13
14 *A27.) Elon Musk's Lithium ion batteries can't be extinguished by firemen because water makes them explode even more and then*
15 *explode again hours later.*

16
17 *A28.) Elon Musk's Lithium ion batteries have chemical dendrites and deposition massing issues (revealed by X-Ray analysis)*
18 *which makes them more and more likely to explode as they age.*

19
20 *A29.) Elon Musk's Lithium ion batteries poison firemen when they burn.*

21
22 *A30.) Elon Musk's Lithium ion batteries are based on criminally corrupt mining schemes like URANIUM ONE.*

23
24 *A31.) Elon Musk's Lithium ion batteries have over 61 toxic chemicals in them.*

25
26 *A32.) Elon Musk's Lithium ion batteries come from an industry that spends billions on internet shills and trolls that they hire to*
27 *nay say all other forms of energy*

28

1 A33.) *Elon Musk's Lithium ion batteries are insider-trading owned by corrupt U.S. Senators who are running a SAFETY*
2 *COVER-UP about their dangers.*

3
4 A34.) *Apple products with lithium ion batteries have been exploding and setting people on fire.*

5
6 A35.) *Over time the chemical dendrites, or deposits, inside each battery grow worse and increase the chances of explosion as*
7 *they age - LITHIUM ION BATTERIES BECOME MORE AND MORE LIKELY TO EXPLODE AS TIME GOES ON AND AS*
8 *THEY AGE. This is not a theory. This is a scientific fact. That is why you hear about more and more lithium batteries catching*
9 *fire and blowing up. Additionally, scientists also speculate that the increasing presence of low energy nuclear background*
10 *energy and wifi energy in the environment is making lithium ion batteries explode more often lately. This is upheld by the*
11 *increasing number of FAA reports about commercial airline cabins suddenly "filling up with toxic smoke" as some lithium ion*
12 *battery explodes in someones overhead luggage. As commercial jets go higher they lose the protection of the atmosphere and are*
13 *subjected to more gamma (and other) radiation from overhead. This makes the already unstable lithium ion batteries on board*
14 *blow up.*

15
16 A36.) *Tesla owner's had had more DUI's, abuse filings in divorce proceedings and crashes than any other car maker PER*
17 *VOLUME. This makes Tesla the #1 car for douche bags and scummy people.*

18
19 A37.) *Tesla's own federal patent filing records confirm that Tesla batteries are as dangerous as this document reports.*

20
21 A38.) *"Bad Guys" have figured out how to make Elon Musk's Lithium ion batteries explode remotely in devices by making the*
22 *device electronics cause the batteries to overload.*

23
24 A39.) *The dangers of Elon Musk's Lithium ion batteries batteries are hidden by CNN and Main Stream News (MSN) because*
25 *pretty much only the DNC people profit from them and the DNC folks control CNN and the MSN.*

26
27 A40.) *George Soros owns part of Tesla Motors so that Soros can help conduit DNC cash.*

28

1 *A41.) The Obama Administration promised Silicon Valley oligarchs the market monopoly on lithium ion batteries and the*
2 *sabotage of fuel cells in exchange for campaign financing and search engine rigging.*

3
4 *A42.) United States Senators that are supposed to protect us from these deadly products own the stock market assets of them so*
5 *they protect them and stop the FDA, OSHA, DOT & NHTSA from outlawing them.*

6
7 *A43.) There have been thousands of defect reports filed on Tesla cars.*

8
9 *A44.) Tom Steyer is a notorious DNC financier. His partner, Margaret Sullivan ran, the federal USAID agency, USAID sent all*
10 *of the DNC campaign financiers in Silicon Valley a federal 'report' from USAID that said there was "A TRILLION DOLLARS*
11 *OF LITHIUM IN AFGHANISTAN" and promised to give those lithium mines, EXCLUSIVELY, to the Silicon Valley venture*
12 *capitalists if they funded and web search manipulated the election for Obama to take over the White House. We have the*
13 *documents proving this. In other words, a re-up of the Afghan War was caused by Elon Musk and it killed American soldiers so*
14 *that Musk could buy more mansions and trophy wives.*

15
16 *A45.) If a Tesla battery gets wet it will explode and cause all of the other batteries to explode in a "cascade of explosions".*

17
18 *A46.) Water makes Tesla batteries explode.*

19
20 *A47.) In an accident, when a Tesla rolls over, molten metal & plastic can drip on & burn the occupants alive and seal them in*
21 *molten metal.*

22
23 *A48.) Alkaline, NiCAD and hundreds of other battery chemistries DO NOT have all of these problems but Lithium Ion batteries*
24 *get a monopoly because of politician insider trading owner-ships.*

25
26 *A49.) Tesla Motors has caused far more deaths and injuries than the world generally knows about.*

27
28 *A50.) A recent fire on U.S. Highway 101 near Mountain View, CA, burned the driver alive and killed him.*

22
23
24
25
26
27
28

A51.) In Florida two kids died in a Tesla, burned alive, screaming in agony.

A52.) A man died in agony in a Tesla crash in Malibu that set Malibu Canyon on fire.

A53.) A young woman, at the start of life, and her boyfriend were burned alive in their crashed Tesla.

A54.) There are many more deaths and crashes than you have seen in the Main Stream News (MSN) The deaths and the cover-ups are endless.

A55.) Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla Motors and/or it's suppliers and mining companies and they cover-up and halt investigations and laws designed to save the public.

A56.) Elon Musk's Lithium ion battery partners spend over \$1B a year to shill and troll hype about lithium ion batteries and cover-up the dangers.

A57.) Lithium ion EVs are more prone to battery fires.

A58.) Experts say that their lithium-ion batteries can fuel hotter fires that release toxic fumes and are more difficult to put out. Lithium ion fires keep reigniting which explains why it takes so long and requires copious amounts of water or foam (it is an electric fire, after all) to smother the flames.

A59.) Tesla employee Bernard Tse and his team warned Elon Musk about these dangers in 2008 and they got fired and/or warned to "say nothing" by Musk.

A60.) Three top Tesla engineers died in a plane crash next to Tesla offices in San Carlos after two of them agreed to become whistle-blowers. Another whistle-blower has suggested they were killed in a "Boston Brakes" hit-job.

1 A61.) *The DNC bosses, Congress people and federal executives own the stock in lithium, Solar and EV markets and use*
2 *kickbacks from those markets (Especially via convoluted campaign finance laundering via Elon Musk) to finance the DNC.*

3
4 A62.) *The DNC bosses and Musk use character assassination as their main political tool against any member of the public who*
5 *speaks out against their felony stock market scams and PizzaGate-like scandals. The Harvey Weinstein reports by Ronan Farrow*
6 *show that they have teams of hired goons that they pay to destroy people's lives.*

7
8 A63.) *They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media, Gizmodo Media, Media Matters, David Brock, Sid*
9 *Blumenthal, NY Times, Google servers, Facebook servers, Podesta Group, Perkins Coie, Covington & Burling and a host of*
10 *"media assassins".*

11
12 A65.) *Musk buddies: Gawker and Gizmodo Media set-up the attack stories and, in paid partnership with Google, Google kicks*
13 *their attack links around the globe, in front of 8 Billion people, forever. Google locks the attack articles of its enemies on the*
14 *front top search results of Google search results forever, on purpose! Google and Musk are partners-in-crime.*

15
16 A66.) *Larry Page steals technology for Google and Musk meets with Larry Page to advise him on which technologies to steal*
17 *and how to bypass FEC laws.*

18
19 A67.) *Musk has exceeded FEC campaign finance limits by billions of dollars via "in-kind" services.*

20
21 A68.) *Had the full scope of these facts been acted on during the Obama Administration, Barack Obama would have become the*
22 *first modern sitting President to have been arrested in the White House. Barack Obama was fully aware of these schemes, crony*
23 *payola deals and corruption crimes and discussed the implementation of these crimes, daily, with Rahm Emanuel, David Plouffe,*
24 *Steven Rattner, Robert Gibbs, John Podesta, David Axelrod, Eric Holder and Jay Carney in the Oval Office.*

25
26 A69.) *THIS corruption involves TRILLIONS of dollars of corrupt mining deals, automotive and energy monopolies!*

27
28 A70.) *THIS is why the federal budget analysis reports are showing TRILLIONS of dollars of 'untraceable' losses from the United*

1 *States Treasury from 2006 up to today!*

3 *A71.) THIS is why a large number of reporters, whistle-blowers and prosecutors suddenly, and mysteriously turned up dead!*

5 *A72.) The company that Elon Musk built to usher in the electric-car future might not have enough cash to make it through the*
6 *calendar year.*

8 *A73.) Tesla again fell far short of its own production targets for the mass-market Model 3 sedan*

10 *A74.) Another person died in a crash involving its assisted-driving feature.*

12 *A75.) Musk entered into a public dispute with federal safety regulators.*

14 *A76.) Tesla's once high-flying stock, buffeted by a downgrade from credit analysts, has dropped 24 percent from its peak in*
15 *September.*

17 *A77.) No one has raised or spent money the way Elon Musk has; Nor has any other chief executive officer of a public company*
18 *made a bankruptcy joke on Twitter at a time when so much seemed to be unraveling.*

20 *A78.) Tesla is going through money so fast that, without additional financing, there is now a genuine risk that the 15-year-old*
21 *company could run out of cash in 2018. The company burns through more than \$6,500 every minute, according to data compiled*
22 *by Bloomberg. Free cash flow—the amount of cash a company generates after accounting for capital expenditures—has been*
23 *negative for five consecutive quarters. That will be a key figure to watch when Tesla reports earnings May 2. Read the full story*
24 *here: <https://www.bloomberg.com/graphics/2018-tesla-burns-cash/>*

26 *A79.) In years to come, we will all look back and wonder how so many people were taken in by this shyster, who makes Enron*
27 *look honest.*

1 *A80.) One of Tesla's greatest strengths is its ability to monetize the patience and goodwill of its customers and loyal fans. The*
2 *company is sitting on a staggering \$854 million in customer deposits as of the end of 2017.*

3
4 *A81.) Since Tesla sells its products direct to consumers, without relying on a dealer network, customer deposits are cash*
5 *payments that essentially serve as interest-free loans—and these loans can stretch on for years. If Tesla were to go bankrupt,*
6 *those deposit holders would likely be wiped out.*

7
8 *A82.) Tesla is holding customer deposits for two vehicles that aren't even in production yet: an electric Tesla Semi (\$20,000*
9 *deposit) and a next-generation Roadster (either \$50,000 down or the \$250,000 retail price paid up front to reserve a limited*
10 *edition). Even customers interested in installing an array of solar roof panels or the company's Powerwall home battery must*
11 *hand over \$1,000 to place an order.*

12
13 *A83.) Tesla doesn't break out deposit numbers by car, but the vast majority comes from \$1,000 reservations for the Model 3.*
14 *When Musk first introduced the lower-priced sedan in March 2016, fans stood in long lines at Tesla stores. Two years later, the*
15 *slower-than-expected pace of production means that most of the more than 400,000 reservation holders are still waiting. And*
16 *new people appear to be joining the queue: As of April, the company reported "net Model 3 reservations remained stable."*

17
18 *A84.) There's an additional source of free money from loyal believers: An unknown number of customers have paid up for*
19 *vehicle features—\$3,000 for "Full Self Driving" capability, for example—that Tesla thus far hasn't figured out or released to*
20 *anyone.*

21
22 *A85.) Elon Musk cooked the books by emailing interested sales prospects and asked them to put a deposit down before each*
23 *quarter ended so he could book their tiny deposits as fully transacted \$60K+ "sales" before each quarter closed.*

24
25 *A86.) Elon Musk and SpaceX are being sued by multiple employees for "lying about safety standards, safety records" and deadly*
26 *safety defects.*

27
28 *A87.) The Elon Musk Tesla Money Laundering Board Of Directors is as full of fraud and corruption as Musk. Birds of a feather*

1 *stick together and the Jurvetson, Draper, Musk, et al; clan of corruption runs deep. The Board of Directors can't operate their*
2 *scam without the whole pack of thieves and liars in place. An outsider will break theirs swamp of tax evasion, Dark Money*
3 *political bribes, off-shore cash, self-dealing, book-cooking, real estate fraud, expense padding and other nefarious deeds.*

4
5 *A88.) Dianne Feinstein's family member: Herb Newman of Sausalito, California's HR firm: Newman Search (415 332-8425) has*
6 *a company as of 1972 with the sole purpose of setting up investment bank deals with the People's Republic of China. Feinstein*
7 *arranged for Newman to provide the staffing for Tesla and Solyndra. Dianne Feinstein has been under investigation for spy*
8 *activities with China and her senior aide was arrested as a Chinese top spy. In 1973 Mr. Newman arrived in Canton at the*
9 *invitation of the Chinese Council for the Promotion of International Trade. (CCPIT). He and his company MVTC were one of*
10 *fifty businesses to be invited to the Canton Trade Fair held in Kwangchow China. In 1978 Mr. Newman founded China*
11 *Investments and in partnership with California Trade Delegations both companies as members of the San Francisco Chamber of*
12 *Commerce began taking US Corporations to China. Mr. Newman along with one of his associates at the time Mr. Darryl Schoon*
13 *helped organize Senator Dianne Feinstein's first trip to China in conjunction with the San Francisco Chamber of Commerce.*
14 *Herb Newman, Mart Bailey and Feinstein's Husband; Dick Blum are on intelligence agency watch-lists, and under electronic*
15 *surveillance, for potentially corrupt deals with China, Tesla and Solyndra.*

16
17 *A89.) Dianne Feinstein's husband owns CBRE which owns the real estate contracts for both Tesla and Solyndra.*

18
19 *A90.) Dianne Feinstein's family owns interests in the construction companies hired by both Tesla and Solyndra.*

20
21 *A91.) Dianne Feinstein had her staff warn other California businesses away from using the NUMMI car factory in order to*
22 *protect the real estate deal for both Tesla and CBRE, which is owned by her husband.*

23
24 *A92.) Tesla began real estate deals in multiple states and then cancelled them at the last minute, which got them sued for fraud*
25 *and charged with "lying" to different communities. They started, and then pulled out of these different building (San Jose,*
26 *Southern California, New Mexico, Etc.) deals, because CBRE and Feinstein were trying to leverage real estate profit*
27 *exploitation using taxpayer funding.*

28

1 A93.) Panasonic and Tesla have known for decades that the Panasonic 18650 batteries used in the Tesla suffer from multiple
2 chemistry degradation defects which will almost always make them eventually explode or "go thermal". The defects include: 1.)
3 LENR activation, 2.) Dendrite lengthening, 3.) Particle congealing, 4.) Chemistry evolution and other defects. The Tesla projects
4 is, essentially, a failed product product dumping effort of a failed and dangerous battery product.

5
6 A94.) Elon Musk has demanded that his employees sign "loyalty pledges", "vows" and engage in Omerta's in order to keep the
7 corruption details of Tesla from being exposed to the public.

8
9 A95.) Tesla insider Antonio Gracias is the mob boss insider at Tesla who arranges media hit-jobs on those who displease Musk.

10
11 A96.) The NHTSB has issued requests to Tesla for safety tests and data that Tesla never complied with. Instead, Tesla paid
12 bribes, which were referred to as "fees" to avoid having to complete those tests. An independent group of outside investigators
13 issued a damning safety report to the NHTSB demanding that Tesla be compelled to produce the safety tests in 2010 but Obama
14 appointed NHTSB executives buried the report and protected Tesla in order to keep the connection between Obama's funding
15 and Tesla protected. NHTSB boss: Strickland, an Obama insider, was confronted with this in Washington, DC and resigned from
16 his job 48 hours later. NHTSB has still not acted on the severe Tesla safety defects that have been reported since 2009.

17
18 A97.) An SEC investigation of Musk uncovered horrific evidence of Musk corruption but the SEC could not report or act on it
19 because Obama congressional bosses and lobbyists got the SEC investigation "limited" to only examine a single Twitter "Tweet"
20 from Musk.

21
22 A98.) Elon Musk is protected by top DOJ, SEC, CFTC, FEC and other Obama left-over staff as well as 45 U.S. Senators and top
23 Federal Reserve members and Goldman Sachs, who live in terror that exposure of the entire Elon Musk financial food-chain will
24 topple the entire DNC Dark Money payola scam. This is the reason that Tesla can get away with so much obvious and overt
25 corruption and still continue operations. Tesla Motors book-cooking, financial frauds and political payola conduits, if fully
26 revealed, would change the course of political influence in America.

27
28 A99.) Elon Musk has been sued by a man that Musk called a "Pedo", yet Musk's own father has been accused of child sex abuse,

1 *racism and, indeed, got his own daughter pregnant!*

2

3 *A100.) Elon Musk's mother has been accused of being a "self-indulgent trophy wife" who Musk was trained by to be an arrogant*
4 *elitist. Her hatred of black people was imbued on Musk who has been sued by black people at his company for "running a racist*
5 *culture".*

6

7 *A101.) Elon Musk divorced the same woman twice because she knew his dirty little secret and threatened to out him if he did not*
8 *keep the deal going. She was hired to "act" as his wife.*

9

10 *A102.) Musical artist Iggy Azalea was at a Musk Party, with other friends, who captured Elon Musk on video on drugs and in*
11 *weird sex acts. Musk had Iggy's camera stolen at the party to hie the evidence but he did not get the other cameras and did not*
12 *realize that some of those cameras placed their images and videos directly on the Cloud, where hackers acquired them.*

13

14 *A103.) With cover-up help from Eric Holder, Steven Chu, Obama, Valarie Jarret, DNC FBI agents, Perkins Coie, Covington and*
15 *Burling, Wilson Sonsini, etc; sociopath Musk actually believes he is "untouchable" and that he can get away with anything. His*
16 *downfall will be the same downfall of every narcissist sociopath oligarch throughout all of recorded history.*

17

18 *A104.) Elon Musk is a drug addict. A simple urine and blood test proves it. Musk's downfall and the downfall of John DeLorean*
19 *are seeming to align.*

20

21 *Who is violating the law protecting Tesla by withholding investigations and prosecutions?*

22

23 *Why are they allowing American citizens to continue to die from the 1.) "sudden acceleration electronics defect"; 2.) "The failed*
24 *Auto-pilot electronics defect"3.) "The deteriorating and deadly lithium ion batteries" and 4.) numerous other defects widely*
25 *documented in the news media and filed lawsuits?*

26

27

28

WHY ELON MUSK IS A REALLY BAD GUY

1
2
3 *By Former Tesla Staff*

4
5 *You may have run across Musk's self promoting, narcissistic, multi-billion dollar, self-aggrandizing PR hype but here is*
6 *the other side of the coin. We know these facts from personal interaction with Musk, his companies and his politicians.*
7 *Everything in this letter can be proven in a jury trial, Congressional hearings or live TV debates. Musk will do anything to keep*
8 *this information from getting out but... it is too late for him! While this may sound like a bad Hollywood movie script. It all*
9 *really happened and there is now massive hard copy evidence to prove it.*

10
11 *Elon Musk exists because he bribed DNC politicians including Obama, Clinton and Senators Feinstein, Reid, Boxer,*
12 *Harris, Spier and Pelosi to give him free taxpayer cash and government resources from the Department of Energy and the*
13 *California political tax pool. This is proven when you follow-the-money and the insider trading, stock ownership and crony*
14 *payola kick-backs.*

15
16 *The Energy Dept (DOE) has been covering-up organized crime activities at DOE in which DOE funds are being used*
17 *as a slush-fund to pay off DNC campaign financiers and to pay for CIA/GPS Fusion-Class attacks on Silicon Valley business*
18 *competitors. DNC campaign financiers and DOE staff share stock market holdings with each other under family trusts, shell*
19 *corporations and layered Goldman Sachs accounts. The deal was: Obama funds Tesla, Musk conduits campaign funds to*
20 *Obama, top Obama staff profit off of insider Musk stocks.*

21
22 *Elon Musk is a criminal, a mobster, an asshole, a balding fake-hair wearing, plastic surgery-addicted, bi-sexual*
23 *douchebag, woman-abusing, sex addicted, tax evader. We can put this in writing because all of those identifications regarding*
24 *Musk can be proven in court and are documented in existing lawsuits and news stories.*

25
26 *Musk exploits poor people and child slaves in the Congo and Afghanistan to mine his lithium and Cobalt. Look up this*
27 *phrase on the top search engines: "child labor electric car batteries".*
28

1 Musk spends billions per year to hire Russian trolls, fake blogger fan-boys and buy fake news self-glory look-at-me
2 articles about himself. Musk thinks he is the 'Jesus' of Silicon Valley and he will do anything to make the public think so. Musk is
3 insecure because his father was abusive and his "trophy wife" Mother is overbearing so he developed sociopath-like mental
4 issues. Musk has been professionally diagnosed as a 'psychotic narcissist. He publicly stated on an investor call that he uses
5 drugs and alcohol to get through the night. We have the tapes.

6
7 Musk relies on Google and the DNC Main Stream News (MSN) to hide bad news about him. Fake News manipulator
8 Google is run by Larry Page. Larry is Musk's investor and bromance 'Butt buddy'. They share an apartment. Musk uses massive
9 numbers of shell companies and trust funds to self-deal, evade the law and hide his bribes and stock market insider trading. His
10 brother ran Solar City and is now under federal investigation for securities fraud.

11
12 A huge number of Tesla drivers have been killed; pedestrians and oncoming drivers have also been killed, and Musk
13 covers it up.

14
15 The DNC and the MSM refuse to allow any articles about Musk's crimes to be printed because they benefit from Musk's
16 crimes. VC's Tim Draper and Steve Jurvetson are so fanatical about not being embarrassed from a Tesla bankruptcy that they
17 will pump the TSLA stock and threaten anybody who might disclose the Musk misdeeds. Peter Thiel, a Musk 'boyfriend" also
18 protects Musk. Musk, and his cronies, use Palantir, Google and related software to scan the entire internet every few minutes for
19 any occurrence of the words: "Musk", "Tesla" or "Tesla Fire". They send trolls and fake bloggers (Many of them Russian) to
20 put pro-Musk comments on the comments section of any blogs or articles discussing those topics and try to flood out the truth
21 about Musk. In EVERY blog that you read that mentions 'Musk', at least 1/3 of the comments have been placed their by Musk's
22 paid shills. There are no "Tesla Fan Boys". All of the fanatic Tesla comments on the internet are Musk's, Thiel's, Jurvetson's
23 and Draper's fake fanboy trolls. Musk, himself, stays up late at night pretending to be a 'Tesla Fan Boy' on blogs. Main Stream
24 News organizations who refuse to cover the story reveal themselves as shills and are then targeted for bankruptcy (ie: Time,
25 Gawker, etc.) because they serve no public service.

26
27
28 The Silicon Valley Mafia promotes Musk as a "Tech God" leader but, in reality Musk is the same kind of "Leader" as

1 *Charles Manson, Jim Jones, David Koresh, Swami Rajneesh and Al Capone. His own people have sued him for fraud and lies*
2 *once they realized that Musk-ism and Scientology had so much in common.*

3
4
5 *The 'Silicon Valley Mafia; cartel of frat boy sociopath venture capitalists like Steve Jurvetson, Tim Draper, Eric*
6 *Schmidt, et al; threaten those who do not support the cult of Tesla or their political candidates.*

7
8 *Musk holds the record for getting sued for fraud by his investors, wives, former partners, employees, suppliers and co-*
9 *founders. Elon Musk has gone out of his way to hire hundreds of ex-CIA and In-Q-Tel staff and assign them to "dirty tricks*
10 *teams" to attack his competitors and elected officials who Musk hates.*

11
12 *Musk and his culture are being sued for abuse to women and blacks and the Unions hate him for lying to them.*
13 <https://stopelonfromfailingagain.com> reveals even more Musk lies.

14
15 *Musk never founded his companies. He took Tesla away from the founder: Marty, in a hostile take-over!*

16
17 *Musk's "Starlink" satellites are domestic spy and political manipulation tools - never get your internet from anything*
18 *SpaceX has launched. SpaceX is entirely a domestic spy operation. Musk's "Mars" scheme is just a PR distraction.*

19
20 *The same kind of EMF radiation proven to cause cancer from cell phones exists in massive amounts in a Tesla.*

21
22 *Musk can't fix a car or build a rocket and has almost no mechanical skills.*

23
24 *If you pull a report of every VIN# of every Tesla ever built and cross reference that with insurance, repair and lawsuit*
25 *records you will find that the "per volume" fire, crash, death and defect rate is THE WORST of any car maker in history! Musk's*
26 *lobbyists have bribed DOT and NHTSA to stall safety inspections. NO COMPLETE UNCOMPROMISING SAFETY REPORT*
27 *ON TESLA CARS HAS EVER BEEN PUBLISHED but we have a copy of a hushed up report that would put Tesla out of*
28 *business. Musk's 'Autopilot' system is a scam to get government cash BUT IT NEVER WORKS. The Tesla 'Autopilot' has crashed*

1 into police cars, pedestrians, swamps and driven owners over cliffs.

2
3 Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Sachs has a dedicated team of 18
4 men who rig stocks and valuation bumps for Musk. The "Silk Road" Cocaine and Murder-For-Hire website was created at
5 Musk's SpaceX and Musk's In-Q-Tel staff ran two transport planes filled with drugs; listed as "Cocaine 1" on FAA records.

6
7 Over 1000 witnesses can prove every one of those claims in any live televised Congressional hearing! Senators Dianne
8 Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla Motors and/or its suppliers and
9 mining companies. That is why they criminally help cover-up investigations of Tesla! All of this was reported, in writing, to
10 James Comey, Patricia Rich and David Johnson at the FBI. Tesla and Solyndra sit on the same land and share staff, contracts
11 and lobbying. California politicians own parts of both.

12
13 Why aren't all of those parties in prison if it is so easy to prove the crime? Think back to recent history: the heads of the
14 Department of Energy, the FBI, The DOJ and the U.S. Attorney General were kicked out of their jobs for corruption. THIS was
15 the corruption they were doing. They all knew about this crime but they were covering it up.

16
17 Musk took over Tesla Motors in a hostile take-over in order to exploit lithium, cobalt and other mining corruption deals
18 for his business partners. Let's take a look at the 'lithium' in Musk's horrifically miss-engineered lithium ion batteries:

19
20 His batteries cause wars in the Congo, Afghanistan and Bolivia from the corrupt mining deals involved with mining
21 lithium and cobalt. Lithium ion batteries are insider trading-owned by ex-CIA boss Woolsey and DOE Boss Chu. Lithium ion
22 batteries excrete chemicals that mutate fetuses when they burn; destroy your brain, lungs and nervous system when they burn;
23 kill the factory workers who make them; cause Panasonic to be one of the most corrupt companies in the world; poison the Earth
24 when disposed of; can't be extinguished by firemen; poison firemen when they burn; are based on criminally corrupt mining
25 schemes like URANIUM ONE; Have over 61 toxic chemicals in them; come from an industry that spends billions on internet
26 shills and trolls used to nay say all other forms of energy; and are insider-trading owned by corrupt U.S. Senators who are
27 running a SAFETY COVER-UP about their dangers.

28

1 *Apple products with lithium ion batteries have been exploding and setting people on fire. Over time the chemical*
2 *dendrites, or deposits, inside each battery grow worse and increase the chances of explosion as they age - LITHIUM ION*
3 *BATTERIES BECOME MORE AND MORE LIKELY TO EXPLODE AS TIME GOES ON AND AS THEY AGE. This is not a*
4 *theory. This is a scientific fact. That is why you hear about more and more lithium batteries catching fire and blowing up.*
5 *Additionally, scientists also speculate that the increasing presence of low energy nuclear background energy and wifi energy in*
6 *the environment is making lithium ion batteries explode more often lately. This theory is upheld by the increasing number of FAA*
7 *reports about commercial airline cabins suddenly "filling up with toxic smoke" as some lithium ion battery explodes in*
8 *someones overhead luggage. As commercial jets go higher they lose the protection of the atmosphere and are subjected to more*
9 *gamma (and other) radiation from overhead. This makes the already unstable lithium ion batteries on board blow up.*

10
11 *Tesla owner's had had more DUI's, abuse filings in divorce proceedings and crashes than any other car maker PER*
12 *VOLUME. This makes Tesla the #1 car for douche bags and scummy people.*

13
14 *Tesla's own federal patent filing records confirm that Tesla batteries are as dangerous as this document reports.*

15
16 *"Bad Guys" have figured out how to make them explode remotely in devices by making the device electronics cause the*
17 *batteries to overload. The dangers of lithium ion batteries are hidden by CNN and Main Stream News (MSN) because pretty*
18 *much only the DNC people profit from them and the DNC folks control CNN and the MSN. George Soros owns part of Tesla*
19 *Motors so that Soros can help conduit DNC cash.*

20
21 *The Obama Administration promised Silicon Valley oligarchs the market monopoly on lithium ion batteries and the*
22 *sabotage of fuel cells in exchange for campaign financing and search engine rigging; United States Senators that are supposed*
23 *to protect us from these deadly products own the stock market assets of them so they protect them and stop the FDA, OSHA,*
24 *DOT & NHTSA from outlawing them. There have been thousands of defect reports filed on Tesla cars.*

25
26
27 *Tom Steyer is a notorious DNC financier. His partner, Margaret Sullivan ran, the federal USAID agency, USAID sent*
28 *all of the DNC campaign financiers in Silicon Valley a federal 'report' from USAID that said there was "A TRILLION*

1 *DOLLARS OF LITHIUM IN AFGHANISTAN” and promised to give those lithium mines, EXCLUSIVELY, to the Silicon Valley*
2 *venture capitalists if they funded and web search manipulated the election for Obama to take over the White House. We have the*
3 *documents proving this. In other words, a re-up of the Afghan War was caused by Elon Musk and it killed American soldiers so*
4 *that Musk could buy more mansions and trophy wives.*

5
6 *If a Tesla battery gets wet it will explode and cause all of the other batteries to explode in a "cascade of explosions".*
7 *Water makes Tesla batteries explode. In an accident, when a Tesla rolls over, molten metal & plastic can drip on & burn the*
8 *occupants alive and seal them in molten metal.*

9
10 *Alkaline, NiCAD and hundreds of other battery chemistries DO NOT have all of these problems but Lithium Ion*
11 *batteries get a monopoly because of politician insider trading owner-ships.*

12
13 *Tesla Motors has caused far more deaths and injuries than the world generally knows about. A recent fire on U.S.*
14 *Highway 101 near Mountain View, CA, burned the driver alive and killed him. In Florida two kids died in a Tesla, burned alive,*
15 *screaming in agony. A man died in agony in a Tesla crash in Malibu that set Malibu Canyon on fire. A young woman, at the start*
16 *of life, and her boyfriend were burned alive in their crashed Tesla. There are many more deaths and crashes than you have seen*
17 *in the Main Stream News (MSN) The deaths and the cover-ups are endless.*

18
19 *Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla*
20 *Motors and/or it's suppliers and mining companies and they cover-up and halt investigations and laws designed to save the*
21 *public. They, and their crony's, spend over \$1B a year to shill and troll hype about lithium ion batteries and cover-up the*
22 *dangers. Lithium ion EVs are more prone to battery fires. Experts say that their lithium-ion batteries can fuel hotter fires that*
23 *release toxic fumes and are more difficult to put out. Lithium ion fires keep reigniting which explains why it takes so long and*
24 *requires copious amounts of water or foam (it is an electric fire, after all) to smother the flames. Tesla employee Bernard Tse*
25 *and his team warned Elon Musk about these dangers in 2008 and they got fired and/or warned to "say nothing" by Musk. Three*
26 *top Tesla engineers died in a plane crash next to Tesla offices in San Carlos after two of them agreed to become whistle-blowers.*

27
28 *The DNC bosses, Congress people and federal executives own the stock in lithium, Solar and EV markets and use*

1 *kickbacks from those markets (Especially via convoluted campaign finance laundering via Elon Musk) to finance the DNC.*

2
3 *The DNC bosses and Musk use character assassination as their main political tool against any member of the public*
4 *who speaks out against their felony stock market scams and PizzaGate-like scandals. The Harvey Weinstein reports by Ronan*
5 *Farrow show that they have teams of hired goons that they pay to destroy people's lives.*

6
7 *They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media, Gizmodo Media, Media Matters, David Brock, Sid*
8 *Blumenthal, NY Times, Google servers, Facebook servers, Podesta Group, Perkins Coie, Covington & Burling and a host of*
9 *"media assassins".*

10
11 *Gawker and Gizmodo Media set-up the attack stories and, in paid partnership with Google, Google kicks their attack*
12 *links around the globe, in front of 8 Billion people, forever. Google locks the attack articles of its enemies on the front top search*
13 *results of Google search results forever, on purpose! Google and Musk are partners-in-crime. Larry Page steals technology for*
14 *Google and Musk meets with Larry Page to advise him on which technologies to steal and how to bypass FEC laws. Musk has*
15 *exceeded FEC campaign finance limits by billions of dollars via "in-kind" services.*

16
17 *Had the full scope of these facts been acted on during the Obama Administration, Barack Obama would have become*
18 *the first modern sitting President to have been arrested in the White House. Barack Obama was fully aware of these schemes,*
19 *crony payola deals and corruption crimes and discussed the implementation of these crimes, daily, with Rahm Emanuel, David*
20 *Plouffe, Steven Rattner, Robert Gibbs, John Podesta, David Axelrod, Eric Holder and Jay Carney in the Oval Office.*

21
22 *THIS corruption is what all of the big political scandals are about today!*

23
24 *THIS corruption involves TRILLIONS of dollars of corrupt mining deals, automotive and energy monopolies!*

25
26 *THIS is why the federal budget analysis reports are showing TRILLIONS of dollars of 'untraceable' losses from the*
27 *United States Treasury from 2006 up to today!*

28

1 *THIS is why a large number of reporters, whistle-blowers and prosecutors suddenly, and mysteriously turned up dead!*

2
3 *THIS can all be proven in jury trial and in live televised Congressional hearings!*

4
5 *There is so much more to reveal but you get the picture.*

6
7 *This is all being covered up because top State and Federal officials are in on it, own the stock in it and are so deeply*
8 *involved in it that they could go to Federal prison when this all comes out.*

9
10 *This is Part 1. There is more to be released. Show this document to the United States Senate and see what they say*
11 *about all this..."*

12 **THE STENCH OF MUSK**

13
14
15 *A complete guide to how Elon Musk has raised, and then spent, billions of dollars, mostly from your tax money and*
16 *pension funds.*

17 *The company that Elon Musk built to usher in the electric-car future might not have enough cash to make it through the*
18 *calendar year.*

19 *The anxieties that lurk beneath the tremendous ambition of Tesla Inc. moved into the forefront in recent weeks. The*
20 *company again **fell far short** of its own production targets for the mass-market Model 3 sedan, another person **died in a***
21 ***crash** involving its assisted-driving feature and Musk entered into **a public dispute** with federal safety regulators. Tesla's once*
22 *high-flying stock, buffeted by a downgrade from credit analysts, has dropped 24 percent from its peak in September.*

23 *There's a good reason to worry: No one has raised or spent money the way Elon Musk has. Nor has any other chief*
24 *executive officer of a public company made a **bankruptcy joke** on Twitter at a time when so much seemed to be unraveling.*

25 *Tesla is going through money so fast that, without additional financing, there is now a genuine risk that the 15-year-old*
26 *company could run out of cash in 2018. The company burns through more than \$6,500 every minute, according to **data compiled***
27 ***by Bloomberg**. Free cash flow—the amount of cash a company generates after accounting for capital expenditures—has been*
28 *negative for five consecutive quarters. That will be a key figure to watch when Tesla reports earnings May 2.*

1 *Read the full story here:*

2 <https://www.bloomberg.com/graphics/2018-tesla-burns-cash/>

3 *In years to come, we will all look back and wonder how so many people were taken in by this shyster, who makes*
4 *Enron look honest. A lot of Musk's money has been extracted from suckers, who think he is God's gift, as Bloomberg report:*

5 *One of Tesla's greatest strengths is its ability to monetize the patience and goodwill of its customers and loyal fans. The*
6 *company is sitting on a staggering \$854 million in customer deposits as of the end of 2017.*

7 *Since Tesla sells its products direct to consumers, without relying on a dealer network, customer deposits are cash*
8 *payments that essentially serve as interest-free loans—and these loans can stretch on for years. If Tesla were to go bankrupt,*
9 *those deposit holders would likely be wiped out.*

10 *Tesla is holding customer deposits for two vehicles that aren't even in production yet: an electric Tesla Semi (\$20,000*
11 *deposit) and a next-generation Roadster (either \$50,000 down or the \$250,000 retail price paid up front to reserve a limited*
12 *edition). Even customers interested in installing an array of solar roof panels or the company's Powerwall home battery must*
13 *hand over \$1,000 to place an order.*

14 *Tesla doesn't break out deposit numbers by car, but the vast majority comes from \$1,000 reservations for the Model 3.*
15 *When Musk first introduced the lower-priced sedan in March 2016, fans stood in long lines at Tesla stores. Two years later,*
16 *the **slower-than-expected pace of production** means that most of the more than 400,000 reservation holders are still waiting.*
17 *And new people appear to be joining the queue: As of April, the company reported "net Model 3 reservations remained stable."*

18 *There's an additional source of free money from loyal believers: An unknown number of customers have paid up for*
19 *vehicle features—\$3,000 for "Full Self Driving" capability, for example—that Tesla thus far hasn't figured out or released to*
20 *anyone.*

21 *The consumer psychology that sees hundreds of thousands of people essentially extending an interest-free loan to a*
22 *public company is unusual, to say the least. Consider the devotion of Bruce Sidlinger, a 60-year-old aerospace engineer who*
23 *lives in Flagstaff, Arizona:*

24 *"The morning after the Roadster was announced, I put a deposit down. Putting down \$50,000 for a Roadster that won't*
25 *be out for a few years is kind of like buying a bond that returns zero. Elon Musk is one of our planet's great hopes. I would offer*
26 *a kidney to him if he needed it."*

27 *Keep in mind that Sidlinger already owns both a Model S and a Model X. He drove across the country to Florida*
28 *earlier this year in a car made by one Musk company so he could watch a rocket made by another Musk company take flight for*

1 *the first time.*

2 *I think the phrase “more money than sense” rather sums it up*

3
4 **U.S. LAWSUIT OVER CONGOLESE CHILD COBALT MINING DEATHS FOR ELON MUSK'S**
5 **TESLA CARS**

6 [Exploitation in focus](#)

7 [Global development](#)

8 *Dell, Microsoft and Tesla also among tech firms named in case brought by families of children killed or injured while*
9 *mining in DRC*

- 10
 - [Comment: ‘I saw the unbearable grief inflicted on families by cobalt mining. I pray for change’](#)

11 *Exploitation in focus is supported by*

12 [About this content](#)

13 [Annie Kelly](#)

14 *A landmark legal case has been launched against the world’s largest tech companies by Congolese families who say*
15 *their children were killed or maimed while mining for cobalt used to power smartphones, laptops and electric cars, the Guardian*
16 *can reveal. Apple, Google, Dell, Microsoft and Tesla have been named as defendants [in a lawsuit filed](#) in Washington DC by*
17 *human rights firm [International Rights Advocates](#) on behalf of 14 parents and children from the Democratic Republic of the*
18 *Congo (DRC). The lawsuit accuses the companies of aiding and abetting in the death and serious injury of children who they*
19 *claim were working in cobalt mines in their supply chain. The families and injured children are seeking damages for forced*
20 *labour and further compensation for unjust enrichment, negligent supervision and intentional infliction of emotional distress. It*
21 *is the first time that any of the tech companies have faced such a legal challenge. Cobalt is essential to power the rechargeable*
22 *lithium batteries used in millions of products sold by Apple, Google, Dell, [Microsoft](#) and Tesla every year. The insatiable*
23 *demand for cobalt, driven by desire for cheap handheld technology, has tripled in the past five years and is expected to double*
24 *again by the end of 2020. More than 60% of cobalt originates in DRC, one of the poorest and most unstable countries in the*
25 *world. Aerial view of the Kasulo neighborhood of Kolwezi. In the first picture, taken May 2016, there are just residential*
26 *houses. By May 2019, Congo DongFang International Mining (a subsidiary of chinese company Huayou Cobalt) have built a*
27 *mining site, with a walled perimeter and processing buildings (in blue). The pink tarps cover tunnels used for mining. The*
28 *extraction of cobalt from DRC has been linked to human rights abuses, corruption, environmental destruction and [child labour](#).*

1 The lawsuit argues that Apple, Google, Dell, Microsoft and Tesla all aided and abetted the mining companies that profited from
 2 the labour of children who were forced to work in dangerous conditions – conditions that ultimately [led to death](#) and serious
 3 injury. The families argue in the claim that their children were working illegally at mines owned by UK mining company
 4 Glencore. The court papers allege that cobalt from the Glencore-owned mines is sold to Umicore, a Brussels-based metal and
 5 mining trader, which then sells battery-grade cobalt to Apple, [Google](#), Tesla, Microsoft and Dell.

6 Other plaintiffs in the court documents say they worked at mines owned by Zhejiang Huayou Cobalt, a major Chinese
 7 cobalt firm, which the lawsuit claims supplies [Apple](#), Dell, and Microsoft and is likely to supply the other defendants.

8 In the court documents, the Congolese families describe how their children were driven by extreme poverty to seek work
 9 in large mining sites, where they claim they were paid as little as \$2 (£1.50) a day for backbreaking and dangerous work digging
 10 for cobalt rocks with primitive tools in dark, underground tunnels.

11 The families claim that some of the children were killed in tunnel collapses while others were paralysed or suffered life-
 12 changing injuries from accidents.

13 [I saw the unbearable grief inflicted on families by cobalt mining. I pray for change”](#)

14
 15 Plaintiff’s car and energy storage solution beat Tesla on every metric; Plaintiff’s car and energy
 16 system cost the taxpayers 500% less than Tesla; Plaintiff’s car and energy system was vastly safer than
 17 Tesla’s; Plaintiff’s car and energy system did not self-ignite and blow up it’s passengers like Tesla’s do;
 18 Plaintiff’s car and energy system driving controls never killed anyone like Tesla cars often do; Plaintiff’s
 19 car and energy system does not relay on child labor like Tesla cars do....

20 Plaintiff will not belabor and reiterate the thousands of comparative metrics between Plaintiff’s car
 21 and energy system, that were peviously listed in these exhibits, that exceeded Tesla on every level. The
 22 Court has had those comparative notes in hand for over a year.

23 The point is: ***It is impossible for the Department of Energy to have fairly ruled out funding for***
 24 ***Plaintiff unless the Department of Energy was covertly beholden to Elon Musk and Tesla for stock***
 25 ***marketing profiteering, revolving door job bribes, political campaign financing Quid Pro Quo and other***
 26 ***illegal and illicit payola. The Court is strongly encouraged to demand that FINCEN, The IG, The FBI***
 27 ***and related investigators show their files on the previously named suspects to the Court.***

1 In the 300,000+ documents provided in the evidence repository online, one book stands out. That
 2 book is called: ***Ludicrous: The Unvarnished Story of Tesla Motors***. It is [Edward Niedermeyer](#)'s non-
 3 fiction book about [Tesla, Inc.](#), published in 2019. The book traces Tesla's inception along with episodes and
 4 controversies from the first fifteen years of the company under the leadership of [Elon Musk](#). In it,
 5 Niedermeyer uses original research, anonymous insider accounts, and industry analysis to explore "Tesla's
 6 attempt to merge Silicon Valley arrogance with automotive industry standards".^[1] *The Wall Street Journal*
 7 noted that the book's sources have "refused to be quoted out of fear of Mr. Musk".^[2] The book devotes a
 8 significant portion of its contents to a cultural account of the ongoing "confrontation" between Tesla's fans
 9 and its skeptics.^[3] Another book, available to the Court, is: ***The Secret History Of Tesla Motors. These***
 10 ***books further validate the assertions that the entire Department of Energy program is a covert, hard-***
 11 ***wired, inside-job to reimburse political campaign financiers.***

12
 13 ***Plaintiff beat Tesla, Fisker, and other competitors, fair-and-square, but was attacked with anti-***
 14 ***competitive government funded and managed reprisals for being a better idea! Plaintiff, if allowed into***
 15 ***the market, would have made Tesla obsolete and eliminated the national security and energy risks that***
 16 ***Tesla CAUSED!***

17 18 SECTION TWO - Top Officials Chose To Turn A Blind Eye

19
 20 ***“ELON MUSK AND THE U.S. DEPT OF ENERGY ARE THE LARGEST PRODUCERS OF***
 21 ***BLACK SLAVERY AND CHILD LABOR IN THE WORLD”***

22 A shocking statement, to be sure, but today, on the Joe Rogan show over 11 million viewers heard
 23 the facts, looked it up for themselves, online, and found out it was TRUE!

24 The lithium, cobalt, copper and Rare Earth ‘BLOOD MINERAL’ fields **TODAY** produce 100 times
 25 more rape, genocide, child labor, and toxic worker poisoning than all the cotton fields in the American
 26 Civil War.
 27
 28

1 Bernard Tse and over 40 of Elon Musk's staff have told him this since 2007. Over 1000 Department
2 of Energy staff and consultants have told Secretaries of Energy Chu, Moniz and Granholm this. This
3 horrific human rights abuse fact has been well known at the Department of Energy for over 100 years but
4 The Department of Energy is controlled by Silicon Valley Venture Capital Companies on Sand Hill Road
5 in Palo Alto and California Senators who own Blood Mineral mining investments.

6 Today on the Rogan show, over 11 Million people heard these facts exposed, again, to the public.

7
8 Elon Musk and the Department of Energy owe Black people reparation cash for these crimes.

9
10 The United States Government and the Department of Energy owe Plaintiff reparation cash for
11 sending White House "Plumbers" after him for reporting these crimes to authorities.

12 Elon Musk and the United States Department of Energy lie, delay, defer and obfuscate this horror
13 for one reason and one reason only: PROFITEERING!

14 The proceeds of these dirty Blood Mineral mines are owned by the families of Harry Reid, Barack
15 Obama, Joe Biden, Dianne Feinstein, Gavin Newsom and other notorious politicians. Their stock portfolio
16 and FINCEN investigations prove it. These also happen to be the same the same people that tell the United
17 States Department of Energy what to do and who are also invested in Elon Musk.

18
19 Interesting? A Coincidence? NO!

20 They lie and cover-up these facts to make dirty profits! They make TRILLIONS OF DOLLARS IN
21 PROFITS BECAUSE OF THEIR LIES.

22 They kill these workers for profits! There are a thousand other vehicle energy system solutions
23 besides lithium ion but California Senator's families don't own any of those other, safer, domestic, non-
24 national security risk, non-slave-produced options.

25

25
26
27
28 In the Congo, an estimated 20,000-40,000 children are mining Cobalt for Elon Musk.

1 <https://youtu.be/RFHvq-8np1o>

2
3 About 70% controlled by Chinese Companies.

4
5 So you have TRILLIONS OF DOLLARS of PROFITS being protected by billions of dollars of PR
6 lies, financed by the American taxpayers so that billionaires can buy private jets and ‘baby ovens’ while
7 putting black people in slave camps.

8
9 Elon Musk is well known to have anti-black roots and to be under a vast number of lawsuits from
10 his own workers for horrific racism. The Department of Energy has never helped a black-owned electric car
11 company and has always supported car companies with white male board’s of directors.

12 The Department of Energy refuses to make a law or a hard rule that: A.) No battery minerals that
13 enter the USA can come from any fields not certified and inspected by the United Nations as fair labor
14 produced, B.) That no politicians or Dept of Energy staff can own energy and mining stocks which are
15 actually quid pro quo bribes, C.) That the ULTIUM \$2.5B battery deal cannot proceed if it uses Blood
16 Minerals.

17
18 Department of Energy staff will not regulate these blood minerals slavery crimes because
19 Department of Energy staff own these companies and are paid bribes in stock market perks, as quid pro
20 quo.

20 21 22 23 **SECTION THREE – Eating Their Own Children**

24
25 After working for the U.S. Department of Energy (“DOE”) for a number of years, and receiving
26 assurance from top White House, Congressional and agency leaders that Plaintiff’s next government
27 funding phase was going to move forward; AND; after being featured in the largest newspapers and news
28 broadcasts in the world as the “next solution for America”; AND; after Plaintiff personally took the largest

1 number of customer pre-orders to the U.S. Department of Energy and the U.S. Congress (To prove market
2 interest)(Which were 1000 times more than any other applicant); AND after Plaintiff's team were surprised
3 by the date listed that the U.S. Department of Energy stated that one of Plaintiff's funding paperwork
4 submissions was "substantially complete" as Plaintiff was told by DOE staff verbally and in writing that all
5 of the materials required were received at the beginning of the year; ..after all of that; It was leaked to
6 Plaintiff that Lachlan Seward and Steven Chu at the U.S. Department of Energy had "assured White House
7 staff" that Plaintiff's car and energy project, along with 6 other competing car companies, had been
8 covertly black-listed, in advance, because they would compete with, or obsolete, Tesla Motors, a White
9 House financier, and Fisker, another White House financier. Plaintiff had refused to pay bribes or
10 participate in political Quid Pro Quo and Plaintiff's products accomplished advantages which Tesla and
11 Fisker were unable to accomplish. Thus, every anti-trust and RICO law was violated by government
12 officials out of greed and a lust for power.
13

14 The U.S. Department of Energy has been historically rife with operational errors. Mr. Rusco, the
15 head of the federal GAO, and his team at GAO, have published multiple federal reports about the
16 corruption and mismanagement at DOE. Mainstream domestic top-20 newspapers have published similar
17 findings. In one of thousands of examples: Plaintiff has written notice of being "substantially complete"
18 from DOE dated December 31, of one year and then another letter where DOE lists Nov. of the next year as
19 the date this was determined. This is one of many extensive conflicts of information countered by facts,
20 which Plaintiff and his team have encountered in this process.
21

22 In communications with the Washington Post, prior to Amazon's Bezo's taking control of it, the
23 following discussion occurred:
24

25 "Did you not see this email:

26 Want to see how the secret "DOE Time Warp Distortion Processor works"? See attached:

27 See the TWO DIFFERENT dates that Lachlan Seward decides we are SUBSTANTIALLY Complete on. First
28 on Dec. 31, 2008 and Brent and some of the staff start processing the paper to get us money in

1 January, Then Lachlan says "oh Shit" when Doerr sees the list and he shoves our paper in the
2 deepest drawer of his filing cabinet. He "Loses" the thousands of customer letters pleading with
3 DOE to fund us (the likes of which not a SINGLE OTHER APPLICANT PROVIDED). He forgets he told us
4 that and stonewalls until he decides we are substantially complete, on Nov. 10, 2009 because we
5 keep bugging him. I guess he thought the "DOETWDP" would make the first letter disappear but
6 they must have forgotten to plug it in. Then, the next lovely thing is the four-point rejection
7 reasons for our car which uses the same power plant as the Nissan and the

8 Tesla:

9 A. "You can't build your car which has 60% less parts than Nissan or Telsa, as fast as they
10 can".

11 B. "You aren't using enough gasoline in your 100% ELECTRIC FRIGGIN CAR!"

12 C. "Batteries are too weird of a technology, we can't understand batteries.. it seems like
13 science fiction to use batteries in a car"

14 D. " Oh by the way, did we mention that YOU AREN'T USING ENOUGH GASOLINE in that damn car!!!"
15 DOE is still telling us that XP is welcome to reapply, get to the back of the line, and start
16 the entire process from square one! They are just wonderful people!

27 Also.. you know who hates alternative energy cars more than oil companies?

28 The Steel Industry!

1 None of us alternative energy companies want to use much, if any steel. See the front page
2 picture at <http://www.myxpcar.com>

3 The steel industry hates the fact that they cause most of the bad gas mileage because steel is
4 so heavy and they cause the most deaths and dismemberments because their steel cuts you to
5 shreds in a car accident.. hence the "jaws of life" to pry you out of the
6 steel. You don't need the jaws of life for carbon fiber, Vectran and plastics composites.

28 Russian-steelmaker

This one irks me more than most of the loans

1 From: Carol D Leonnig [mailto:leonnigc@washpost.com]

2 Sent: Wednesday, October 26,"

3 Mr. Peterson. Mr. Bergsman and other Dept of Energy staff informed Plaintiff that competing
4 companies were personally coached in their applications and “hand-walked” through the DOE process,
5 (especially Tesla) and completions of those applications. We are informed that those companies applied at
6 later dates than Plaintiff did. Elon Musk promoted himself as the “technology god and financier of the
7 Democrats” at that time. Of course, we now see him promoting himself as the “technology god and
8 financier of the Republican’s”. It is obvious, to all, that Musk will side with any entity that can shovel more
9 insider-based taxpayer cash into his pig trough.

10
11 Plaintiff received no coaching or support resources such as Ford, Nissan, Tesla, Fisker, GM and
12 others who had paid over \$200,000.00 in fees and many millions of dollars in disclosed, AND COVERT,
13 lobby expenditures for their ATVM and TARP funds sourcing attempts had received.

14 DOE says they conducted “extensive review” yet no communication or discussion occurred with
15 any of Plaintiff’s technical staff, engineers, contractors, partners, founder or anyone who had designed and
16 developed the car. Plaintiffs therefore questions the qualification of the term “extensive review” as the
17 “interactive review” which DOE staff stated would take place, never took place with Plaintiff. Low level
18 DOE workers may have conducted reviews and typed up lots of paper but top-level DOE staff and White
19 House staff ordered it shredded if it said anything positive. Plaintiff has copies of some of those shredded
20 documents in which the highest level DOE scientists, (the few that weren’t promised bribes or revolving
21 door jobs with Tesla, Fisker and Kleiner) stated that Plaintiff’s technology beat all of the others (See Sandia
22 Labs Docs).

23
24 Additionally, regarding the itemized points:

25
26 The DOE statement that the proposed vehicle was at a “development stage” that was not ready for
27 commercialization is contradicted by the applications and funding approvals for the competing companies,
28 who on the same date that our company applied, had less plans or hard development data, than our

1 company had, yet they were awarded funds. When Tesla received DOE funds Tesla had no car and no
2 factory and no factory ready design. Every single thing that Tesla has today was designed, engineered and
3 created AFTER Tesla got the DOE money.

4 The other awardees had the same 3 year timeframe in their proposals, less developed plans and
5 many had less resources than our partner groups supplied. Some even had no building selected, Yet
6 Plaintiff did have a primary, secondary and back-up building selected, yet the others were handheld through
7 the process and accelerated ahead of Plaintiff because they paid political campaign bribes and expenses.
8

9 The DOE reference to the US Light Duty fleet was never discussed with Plaintiff's team by DOE at
10 any point. It is not possible to see how a vehicle that is lighter than any other applicant by half, safer than
11 any other applicant by many times and beats the metrics of every other applicant could not have exceeded
12 every applicant on any sane comparison to Light Duty fleet metrics, a market that was core to Plaintiff's
13 business plan. Plaintiff's fleet sales were targeted directly at the Light Duty Fleet so this DOE points seems
14 to make no sense unless DOE was, again, making up issues that never existed in order to cut Plaintiff out of
15 consideration. Other car companies were awarded funds for cars that weighed far more, went far less range
16 on electric only power.
17

18 Relative to DOE's point about "advanced fuels", At no point did anyone discuss Plaintiff's fuel
19 plans with Plaintiff's technical staff. In fact DOE's Carol Battershal, refused to discuss anything with
20 Plaintiff's team and she is seen winking and smirking at a competitor in the DOE-provided surveillance
21 video. Hydrogen is non-essential to Plaintiff's vehicle yet a DOE letter states that the discussion of its use
22 is one of the reasons our vehicle was rejected. Toyota, Honda and Hyundai hydrogen vehicles use the exact
23 same technology, have none of the problems of lithium ion and are working perfectly today around the
24 world. DOE must prove that Toyota, Honda and Hyundai hydrogen vehicles which were developed in the
25 same time-frame as Plaintiff's vehicle, have failed when in fact they have beat lithium ion on every front.
26

27 Plaintiff submitted a variety of technical documents, some produced by the competing companies.
28 Thus, DOE awarded funds to companies who were using the same exact advanced fuels solutions based on

1 the same documents yet they denied Plaintiff application. Plaintiff fails to see how a tank of hydrogen, as a
2 stand-by power system for an electric vehicle, should be considered an “impractical and unproven energy
3 source” by the DOE in light of the fact that Honda and BMW ships such cars today and that all of the
4 Japanese automakers sell hydrogen cars.

5 The DOE comment about petroleum reductions seems to have no merit as the Plaintiff vehicle is an
6 electric car which uses no gasoline based on petroleum. Competing interests were funded that provided the
7 same metrics via entirely electric vehicles. In Plaintiff’s case, Plaintiff’s car weighs less, goes further and is
8 safer so it is not possible to comprehend how Plaintiff’s vehicle would not have exceeded the petroleum fuel
9 reduction of every other applicant.
10

11 In summation, none of the points listed as rejection merits by DOE were ever discussed with any
12 authorized, qualified, technical member of Plaintiff’s team at any time. The listed points appear to have no
13 foundation in facts relative to Plaintiff’s design, no foundation in technical comparison to the competing
14 applicants and were not even generated from any viable communications with the Plaintiff’s developers.
15 It continues to appear that others who were less developed but spent more money on lobby efforts received
16 support and guidance whereas the smaller start-ups were ignored and pre-negated from the first day.
17

18 ***The United States Department of Energy, Since 2007, has been operated as a scam to reimburse***
19 ***political campaign financiers and put the competitors of those political campaign financiers out of***

24 ***script kiddies and Iranian spies (who got all of the instructions on how to build the bombs to blow up***
25 ***Israel from hacking DOE servers) safe. DOE staff will lie until they are blue in the face to try to cover-***
26 ***up all of their misdeeds. No honest facts can be expected to come from DOE officials in a discussion of***
27 ***this matter.***
28

1 *As a side note to the paragraph above, hackers have acquired almost every record from the*
 2 *Department of Energy, email and communication since 2005. It is impossible for DOE officials to deny*
 3 *the fact that DOE has been operated as a political inside job for White House and California Senate*
 4 *political figures because the emails and documents prove that DOE is a political scam operation and*
 5 *hundreds of Congressional investigation testimony records also verify that fact.*

6
 7 The world now knows that the 2008+ Department of Energy schemes were based on lithium ion
 8 rare earth mining schemes. An idea aggressively promoted by CIA Director Woolsey, who believed that his
 9 stock market investments in, and market promotions of, rare earth lithium ion mining could make he and
 10 his peers “trillionaires”. It now can be seen that all of those mines are in regions that hate the U.S. and that
 11 must be invaded in order to control them; account for the largest causes of child labor and black slavery;
 12 create genocide and rape cultures in the undeveloped regions they exist in; have put over 30,000 people in
 13 the Congo in Blood Mineral “cotton plantation-like conditions; create massively toxic waste; create
 14 products that spontaneously explode; have hundreds of other downsides, but, most of all WILL NEVER
 15 EXIST IN ENOUGH VOLUME to serve more than a tiny percentage of the cars in the world. Only the rich
 16 will ever be able to afford lithium ion cars. On the other hand, Plaintiff’s car technology has none of these
 17 national security issues and the energy source of water and organic waste will last forever!

18 These are 20 TRILLION DOLLAR issues! TRILLIONS of dollars of market manipulations are the
 19 kinds of reasons that White House “Plumbers” are sent after citizens like Plaintiff.

20 21 **SECTION FOUR – Killing The Messenger**

22
 23 Why would White House “Plumbers” and attack operatives be sent out to attack a citizen that was
 24 simply serving his country? Because of **THE DEADLY LITHIUM ION BATTERY POLITICAL**
 25 **PROFITEERING LIES OF THE CORRUPT INSIDER-TRADING-BASED DEPARTMENT OF**
 26 **ENERGY (“DOE”) AND TRILLIONS OF DOLLARS OF MARKET MANIPULATION SCHEMES!**

27 An effort has been made by special interests and corrupt Senators (Who own stock assets in this
 28 matter) to hush up, cover-up, delay, defer and obfuscate the facts in this filing and in this case over-all. Let

1 it be clear, to everyone, that copies of all of this evidence have been now been filed with every law
 2 enforcement agency, every regulatory agency, every news agency and tens of millions of citizens, around
 3 the globe, as of this date. On top of that, an additional insurance protection encrypted file of millions of
 4 pages of additional evidence has been filed with many of those parties as protection. On top of that this
 5 evidence has been filed on Court records in over 30+ federal lawsuits on Court servers globally. On top of
 6 that, hard drives on satellites in orbit and server farms around the globe also hold copies of the evidence.
 7 These crimes are now, literally, “impossible” to cover-up! This is not “*Conspiracy Theory*”. This is
 8 *Conspiracy Fact* supported by hard evidence. Plaintiff technology removed all of the problems detailed in
 9 this document but Plaintiff technology also obsoleted the corrupt mining scams and Senator payola scams
 10 listed herein.
 11

12 ***United States Department of Energy Employees and Contractors*** cover-up these facts because
 13 they own the stocks in these companies and are promised jobs at these companies after they leave the
 14 United States Department of Energy. The entire operation at the United States Department of Energy is an
 15 organized-crime, revolving-door of corruption, operating at the expense of the American taxpayer! The
 16 United States Department of Energy is operated by the largest crony pack of liars, perverts and insider-
 17 traders ever assembled. It is no surprise that DOE’s male staff are seen in headline news making men dress
 18 up as dogs to have anal sex with and stealing women’s dresses from airport luggage racks, ie: [Biden taps](#)
 19 [non-binary drag queen to look after nuclear waste](#)
 20

21 It is no surprise that hooker-addict: Hunter Biden, is now charged with insider trading for Chinese
 22 Rare Earth mining deals, ie: [Hunter Biden spent \\$30k on prostitutes within FIVE MONTHS ...](#)
 23

24 A law firm called *Covington and Burling*, who Plaintiff retained, openly bragged to Plaintiff that
 25 they had put the last set’s of Secretaries of Energy (Including Steven Chu) and Attorney General’s
 26 (Including Eric Holder) in power “For Silicon Valley VC’s and their beholden government employees” so
 27 that “Government policy can be controlled to give those investors exclusive monopolized profits...”.
 28

Covington and Burling sells White House Appointee positions, in the United States Government, to the

1 *highest bidder!* Is that “treason” or a “felony”? That question should certainly be raised before the United
2 States Congress. Just as Perkin’s Coie is under investigation for conduiting the Steele and Fusion GPS
3 attacks, dirty law firms turn out to be the Dogs Of War in this corruption. The Court can have the NSA,
4 FINCEN, FBI and SEC reveal all of the personal and corporate emails and personal and corporate financial
5 records of these firms for easy proof of these assertions.

6 Plaintiff, BMW, Honda, Toyota, Hyundai, Kai and Sandia National Laboratories maintain that Fuel
7 Cell electric cars solve all of the problems of lithium ion electric cars but DNC billionaires and Senator’s
8 families own the mines for lithium ion batteries, so they sabotage and blockade fuel cell electric cars. As
9 warned to to DOE since 2001: “... ***there is not enough lithium ion rare earth metal to solve America’s***
10 ***electric car problem and of that which does exist, it will destroy America’s economy, environment and***
11 ***national security to attempt to exploit it...*”; ...the whole lithium ion electric car industry has crashed as
12 everyone realizes that what they were warned about lithium ion, decades ago, is absolutely true. Those
13 government employees who promoted this “Rare Earth” scam threatened the national security of America
14 for their own greed based motivations.**

15
16
17 Corrupt political families conspire to give government funds, contracts, tax waivers, buildings,
18 stock market profits and other insider perks to themselves and their friends. They also conspire to blockade,
19 harm, sabotage and black-list those who compete with them and their friends. These corrupt politicians are
20 never prosecuted for their crimes, and can laugh in the face of those who point out their crimes, because
21 they control the prosecution system. Their Quid Pro Quo criminal corruption is the single largest cause of
22 the taxpayer hatred of Congress. The 2023 Congress has over 20 investigations planned to examine the
23 abuse of federal law enforcement agencies by special interests and bias monopolizations geared to protect
24 insider trading.

25
26 The Russian's left mining "*Treasure Maps*" behind in Afghanistan. But; were those “Treasure
27 Maps” a trick or a treat? The maps claimed to show ten trillion dollars of electric car minerals hidden in the
28 Afghan deserts... but was that all a lie? To this day, controversy exists across the intelligence communities,

1 of many nations, about whether, or not, those maps were a scam created to “trick the American’s” or the
2 actual locations of trillions of dollars of mining deals that were “antibody's for the taking”. The papers that
3 the CIA geologists pulled out of that archival library in Kabul, Afghanistan still read to be a bit too
4 convenient for what happened next.

5 Decades later, after an invasion or two, and vast expenditures of cash, political capitol and lives,
6 very little of the promised golden mining treasure has materialized. What has materialized is epic
7 corruption, political payola, campaign secrets, deaths and controversy.

8
9 Goldman Sachs, McKinsey Consulting and Deloitte helped a few rogue CIA buddies distribute a
10 huge number of white papers and press releases which used the buzz words: “Trillions of dollars of lithium
11 in Afghanistan” and “Afghanistan is the Saudi Arabia of Lithium”. Why would those particular companies
12 put so much effort into hyping a pile of dirt on the other side of the planet?The answer lies in who they
13 hyped it to and who took the bait. It turns out, most of the money that flowed through this (probable) scam
14 financed the Obama campaign. It also turns out that those who skimmed profits from this vast flowing river
15 of corruption sludge were Elon Musk, John Doerr, Eric Schmidt, Steve Jurvetson and the very same pack
16 of investors who co-funded the Obama campaign. They were also the very same people who, exclusively,
17 got the only cash from the Obama Administration.

18
19 They are also the very same people who had partnered with the Russian mining companies who
20 were standing by to go back into Afghanistan to dig up this ‘magical’ dirt-pile. Where “covert mining
21 deals” were never a big election deal, in 2016, thanks to some monumental document leaks, they became
22 one of the biggest deals in U.S. history..and not in a good way.

23
24 Lithium ion batteries are blowing up, starting fires, poisoning workers, creating genocide, causing
25 child labor camps and, generally, destroying people’s homes, cars, electronics and physical health. Boeing
26 was just ordered to stop flying the 787 Dreamliner because it's Lithium ion batteries are catching fire
27 spontaneously.

28 A group of Silicon Valley venture capitalists forced/leveraged the government to buy and pay for

1 these specific batteries, that they have stock in, in order to benefit their profit margins. Other batteries don't
 2 have these problems. NICAD batteries in the Prius don't have all these problems. Hydrogen cars don't have
 3 these problems. They knew about this from day one but put greed ahead of safety. There are thousands and
 4 thousands of reports of spontaneous lithiumion fires but the VC's who back lithium ion pay to keep this
 5 information hushed up.

6 Millions of these batteries have been recalled for fire risk. The VC's tried to push as many as they
 7 could before they got caught. ***A lithium ion battery blows up and/or catches on fire every 2 minutes***
 8 ***somewhere in the world!*** Now they are caught.

28 There are vast sets of other links proving the point.

1 Tesla Motors has filed a patent which states the following , THESE ARE TESLA MOTORS
2 WORDS warning about a crisis, the level of which they never disclosed to the consumer:

3 *“Thermal runaway is of major concern since a single incident can lead to significant property*
4 *damage and, in some circumstances, bodily harm or loss of life. When a battery undergoes thermal*
5 *runaway, it typically emits a large quantity of smoke, jets of flaming liquid electrolyte, and sufficient heat*
6 *to lead to the combustion and destruction of materials in close proximity to the cell. If the cell undergoing*
7 *thermal runaway is surrounded by one or more additional cells as is typical in a battery pack, then a single*
8 *thermal runaway event can quickly lead to the thermal runaway of multiple cells which, in turn, can lead to*
9 *much more extensive collateral damage. Regardless of whether a single cell or multiple cells are*
10 *undergoing this phenomenon, if the initial fire is not extinguished immediately, subsequent fires may be*
11 *caused that dramatically expand the degree of property damage. For example, the thermal runaway of a*
12 *battery within an unattended laptop will likely result in not only the destruction of the laptop, but also at*
13 *least partial destruction of its surroundings, e.g., home, office, car, laboratory, etc. If the laptop is on-*
14 *board an aircraft, for example within the cargo hold or a luggage compartment, the ensuing smoke and fire*
15 *may lead to an emergency landing or, under more dire conditions, a crash landing. Similarly, the thermal*
16 *runaway of one or more batteries within the battery pack of a hybrid or electric vehicle may destroy not*
17 *only the car, but may lead to a car wreck if the car is being driven or the destruction of its surroundings if*
18 *the car is parked.”*

ABSTRACT
(57) An improved protection system for a battery pack mounted between the passenger cabin floor panel of an electric vehicle and the driving surface is provided, the system utilizing a ballistic shield mounted under the electric vehicle and interposed between the battery pack enclosure and the driving surface, where the ballistic shield is spaced apart from the enclosure bottom panel. A layer of a compressible material may be interposed between the ballistic shield and the battery pack enclosure.

20 Claims, 14 Drawing Sheets

Figure 1: Tesla Motor's Actual Filed Patents Disclose These Deadly Dangers And That Is Why Musk Gave The Tesla Patents Away

1
2 Tesla's own staff have now admitted that once a lithium ion fire gets started in one of their cars, it is
3 “*almost impossible*” for firemen to extinguish burning lithium ion material. This is Telsa’s own words in
4 THEIR patent filing, (You can look it up online) saying that the risk is monumental. Tesla has 6800 lithium
5 ion batteries, any one of which can “go thermal” and start a chain reaction! If you look at all of the
6 referenced YOUTUBE movies you will see how easy it is to set these things into danger mode. Tesla’s
7 Panasonic batteries were never designed to be used in cars and it is, in fact, criminally negligent for Elon
8 Musk to have cut corners and used the Panasonic batteries.
9

10 Imagine a car crash with a Tesla where these 6800 batteries get slammed all over and then exposed
11 to rain, floods, fire hose water, water on the roads, cooling system liquid.. OMG!! And then if, in that same
12 accident the other car is a gasoline car... getting burned alive sounds “BAD”! Telsa is covering up the
13 problems with its batteries.
14

15 Lithium ion batteries have already crashed a UPS plane and killed people. Look here:
16 [http://washingtonexaminer.com/dreamliner-fires-spark-new-doubts-about-a-green-energy-technology/
17 article/2519353](http://washingtonexaminer.com/dreamliner-fires-spark-new-doubts-about-a-green-energy-technology/article/2519353)

18 Tesla and Fisker have only sold a few hundred cars, (thank god) because nobody but elite rich frat
19 boy dicks want these overpriced eliteist toys. A regular car company sells hundreds of thousands of cars per
20 model. Every single Tesla or Fisker sold increases the likelihood of a burn up. Those burn-ups will affect
21 the homes, cars and lives of the people next door who never even bought one.
22

23 ***Some of the major global news investigations and Congressional***
24 ***inquiries have revealed the following to the public and to Congress:***
25

26 Go to <http://www.youtube.com> and type into the search window:

27 “Lithium ion explosion” or “lithium battery and water” or “lithium ion water” and anyrelated
28 derivation and you will hundreds of videos about how dangerous these batteries are.

1 This article in the LA Times sheds more light of the horrors of Lithium Ion:

2 <http://articles.latimes.com/2013/jan/18/business/la-fi-dreamliner-battery-20130119>

3 Lithium Ion batteries “go thermal” in peoples pockets, in your notebook, especially in your Tesla
4 and Fisker car and everywhere else. There are thousands and thousands of articles documenting this and
5 there is a cover-up by the VC’s that fund these things to keep this fact out-of-sight.

6 Making Lithium Ion batteries poisons the workers who make them. It is a dangerous product. Each
7 time the workers, particularly in Asia, realize they are being poisoned by the factory, they jack up the
8 product.

9
10 In the report: ***The Afghanistan Mining Scam Failure, G.I. Dough - The U.S. Spent a Half Billion***
11 ***on Mining in Afghanistan With ‘Limited Progress’*** - Megan McCloskey reveals that
12 ProPublica is investigating how billions of U.S. tax dollars have been spent on questionable or failed
13 projects and how those responsible for this waste are rarely held accountable.

14
15
16 The Military Built Another Multimillion-Dollar Building in Afghanistan That No One Used; The
17 United States has spent nearly half a billion dollars and five years developing Afghanistan’s oil, gas and
18 minerals industries — and has little to show for it, a government watchdog reported today.

19 The project’s failings are the result of poorly planned programs, inadequate infrastructure and a
20 challenging partnership with the Afghan government, the Special Inspector General for Afghanistan
21 Reconstruction wrote in its newest damning assessment of U.S. efforts in the war-torn country. The finding
22 comes after some 200 SIGAR reports have detailed inefficient, unsuccessful or downright wasteful
23 reconstruction projects. A recent ProPublica analysis of the reports found that there has been at least \$17
24 billion in questionable spending. Further, she wrote: We Blew \$17 Billion in Afghanistan. How Would
25 You Have Spent It? Here’s just what the Special Inspector General for Afghanistan Reconstruction found.
26 See for yourself how that money could have been used at home. The United States Agency for International
27 Development and a Pentagon task force were in charge of developing a so-called “extractive” industry in
28

1 Afghanistan — basically a system for getting precious resources out of the ground and to the commercial
2 market. SIGAR called out both USAID and the Defense Department last year for their failures to
3 coordinate and to ascertain the ability of Afghans to sustain the project, which unsurprisingly is not
4 promising. In fact, when international aid stopped supporting the Afghan office responsible for oversight of
5 the petroleum and natural gas industries, two- thirds of the staff were fired.

6 Exploiting these resources, which are estimated to be worth as much as \$1 trillion, is pivotal to
7 Afghanistan’s economic future. SIGAR noted that the Afghan government has shown progress under
8 USAID’s tutelage in regulating and developing the commercial export of the resources. But the report said
9 the project was still hampered by corruption, structural problems and a lack of infrastructure for the mining
10 industry, such as reliable roads. Many of the mines operate illegally, with some profit going to the
11 insurgency, SIGAR said.

12 When it came to individual extractive projects, there was little progress made, the IG found.
13 The controversial Pentagon task force in charge of much of the effort, the Task Force for Business
14 Stability Operations, spent \$215 million on 11 extractive programs, but “after operating in Afghanistan for
15 5 years, TFBSO left with nearly all of its extractive projects incomplete,” SIGAR found. Three of the
16 programs technically met objectives, but one of those is of questionable value at best. The task force built a
17 gas station for an outrageously inflated cost and in the end it didn’t have any customers. So while the
18 objective to create the station was achieved, SIGAR doubted it was a worthwhile venture. The task force,
19 made up of mostly civilian business experts and designed to develop the Afghan economy, has come under
20 fire from SIGAR and Congress for demanding unusual and expensive accommodations in the country,
21 allegedly punishing a whistleblower, and lacking overall accountability. The Senate is holding a hearing on
22 the task force next week.

23 In today’s report, SIGAR highlighted that the task force spent \$46.5 million to try to convince
24 companies to agree to develop the resources, but not one ended up signing a contract. About \$122
25 million worth of task force programs had mixed results, SIGAR said.
26
27
28

1 The Defense Department declined SIGAR's request to comment on its findings. In its response, USAID
2 said it has helped Afghanistan "enact investor-friendly extractive legislation, improve the ability to market,
3 negotiate and regulate contracts, and generate geological data to identify areas of interest to attract
4 investors." Any conclusions and criticisms, USAID told SIGAR, "need to be substantially tempered by the
5 reality that mining is a long-term endeavor." Megan McCloskey covers the military for ProPublica.

9 **GOOGLE AND ELON MUSK ARE CO-CONSPIRATORS**

10 11 ***WHY A WEBSITE COMPANY DESPERATELY WANTS TO EXCLUSIVELY TO PUSH ELON*** 12 ***MUSK'S CARS! GOOGLE'S AWFUL SECRET***

13
14 Google's owners got an exclusive kickback scam between themselves and the White House over
15 lithium ion batteries ravaged from war profiteering in Afghanistan, political rigging in Bolivia and other
16 war incursions. Google wants to push electric cars to keep it's owners political payola scams alive. Deadly,
17 toxic, explosive, a risk to national security, fetus damaging...yet Google charged full speed ahead into it..

18
19 ***In Obama administration to announce efforts to boost self-driving cars for Government***
20 ***subsidies scams*** - By David Shepardson, it was revealed that The Obama administration will announce
21 efforts to boost Musk's self-driving cars on and President Barack Obama may discuss advanced
22 transportation efforts in his final State of the Union Address on Tuesday, according to government officials.
23 Mark Rosekind, head of the National Highway Traffic Safety Administration, told reporters that
24 Transportation Secretary Anthony Foxx will be in Detroit to talk about efforts by the Obama administration
25 to speed the introduction of self-driving vehicles.
26

27 "This is the White House telling you that the secretary is going to be here to amplify stuff that is
28 coming out of the State of the Union, and it's focused on Musk self-driving cars,"

1 Rosekind told reporters in Detroit. There is not yet a clear legal framework governing their presence
2 on U.S. roads. Automakers and technology companies such as Alphabet Inc's Google have called on
3 regulators to clarify guidelines for introduction of autonomous driving technology, in part out of concern
4 that a mishap involving a self-driving car could result in costly litigation.

5 A Google spokesman said the company will take part in Thursday's announcement by Foxx. Detroit
6 automakers are also likely to participate. In December, Rosekind said he opposes a "patchwork" of state
7 regulations on driverless cars and promised a "nimble, flexible" approach to writing new rules for self-
8 driving vehicles. (Reporting by David Shepardson; Editing by Bill Rigby and Dan Grebler)

9 Dana Hull and John Lippert that Google wants to begin announcing some joint efforts this year .
10 Google vehicle chief John Krafcik Elon Musk's and Obama's financing partner: Google, hopes to form
11 partnerships with many automakers and suppliers as it develops self-driving cars to reduce traffic accidents
12 and expand mobility for elderly and disabled people, the head of its vehicle project said. The Alphabet Inc.
13 company wants to announce some of those joint efforts during 2016, John Krafcik, the Google executive,
14 said in Detroit at an Automotive News conference Tuesday held in conjunction with North American
15 International Auto Show. Almost every automaker "has been in to speak with us, if only to understand
16 where we are," Krafcik said. "I don't know how many we'll end up having."

17 His comments counter speculation that Google would pick a single automaker as its exclusive
18 partner for self-driving cars. Yahoo Autos reported last month that Ford Motor Co. would announce a joint
19 venture with Google on self-driving. Fiat Chrysler Automobiles NV and General Motors Co. have also said
20 they're talking with Google about developing self-driving cars.

21 Jack Clark reports that *Google Hires Former Obama Adviser Atkinson to Lead Global Spy Policy*

22 Caroline Atkinson was deputy national security adviser Company faces probes in Europe and U.S.
23 as influence grows. Google has hired former White House Deputy National Security Adviser Caroline
24 Atkinson to lead its global policy team as the Internet advertising giant seeks an advocate to deal with
25 regulators around the world. Atkinson, 63, stepped down in December from her post in U.S. President
26
27
28

1 Barack Obama's administration as an emissary to the Group of 20 economies, negotiating behind-the-
 2 scenes on agreements of international scope and significance. Google, a unit of Alphabet Inc., currently
 3 faces probes from both federal and European regulators into its businesses, as the company's increasing
 4 influence over areas like mobile phones and Web search draws scrutiny. "Caroline's an internationally
 5 respected diplomat and adviser, and we're delighted to have such a thoughtful leader heading our global
 6 policy team," Google General Counsel Kent Walker said in a statement. Atkinson also previously worked
 7 at the National Security Council, the International Monetary Fund, the Treasury Department, and investor
 8 consultancy Stonebridge International. She was selected by the Obama administration in June 2013. ***Google***

THE CORRUPT FUTURE OF SILICON VALLEY LIES IN THE MOUNTAINS OF AFGHANISTAN

18 By Richard Byrne Reilly

19
20 The future of Silicon Valley's technological prowess may well lie in the war-scarred mountains and
21 salt flats of Western Afghanistan.

22 United States Geological Survey teams discovered one of the world's largest untapped reserves of
23 lithium there six years ago. The USGS was scouting the volatile country at the behest of the U.S.
24 Department of Defense's Task Force for Business and Stability Operations. Lithium is a soft metal used to
25 make the lithium-ion and lithium-polymer batteries essential for powering desktop computers, laptops,
26 smartphones, and tablets. And increasingly, electric cars like Tesla's.

Lithium ion battery manufacturer EnerI (HEV) could become the country's first lithium ion bat mass producer—if it wins a \$480M Department of Energy loan. CNSMency has more.

At this point, enough evidence has accumulated to clearly prove that a mining scam was underway involving trillions of dollars of lithium, which Tesla, John Doerr and the Silicon Valley Cartel, 1.) clearly acquired the monopoly ownership of, 2.) at exactly the right moment to time it to the Afghan War, 3.) and place their associate: Steven Chu in office, 4.) and arrange the Dept. of Energy exclusive cash give-aways and 5.) tie in with Goldman Sachs commodity rigging which every suspect has now been shown to have had an operational hand in, and financial & political benefit from.

Solyndra was staged to exploit indium and other related minerals from the same mining deal. Alas, the Afghan War failed, costing U.S. taxpayers (According to multiple news reports) over six trillion dollars, the Republicans found out about the "Cleantech Scam" and dissected it, almost all of the Cartel's pool of exploitation companies went out of business, the Russian portions went into cold war mode with their U.S. counter-parts and leaks from Dept. of Energy staff broke the cover-up. Senior Federal employees participated in, coordinated and benefitted from the crime.

How many Afghan farmers, soldiers and workers had to die to buy John Doerr his new mansion?

Why did federal employees get the profits from helping do this crime?

1
2 The vast discovery could very well propel Afghanistan — a war-ravaged land with a population of
3 31
4 million largely uneducated Pashtuns and Tajiks, and whose primary exports today are opium, hashish, and
5 marijuana — into becoming the world’s next “Saudi Arabia of lithium,” according to an internal Pentagon
6 memo cited by the New York Times.

7
8 The USGS survey report on Afghanistan that detailed the findings also noted that, in addition to
9 lithium, the country also contains huge deposits of iron ore, gold, cobalt, copper, and potash, among many
10 other valuable minerals.

11 “The mineral wealth there is astonishing,” said professor Michel Chossudovsky of the Montreal-
12 based Center for Research and Globalization, who has written extensively on Afghanistan.

13 A conservative estimate of the riches is \$1 trillion. In some circles, it’s as high as \$5 trillion+.
14 In Silicon Valley and beyond, tech companies like Apple, Google, Amazon, Microsoft, Hewlett-
15 Packard, Samsung, Sony, and Tesla rely on continual, and uninterrupted, access to lithium, as lithium-
16 based batteries are the primary power storage devices in their mobile hardware.
17 Without these batteries, MacBooks, iPads, iPhones, Kindles, Nooks, Galaxy IIIs, Chromebooks, and, yes,
18 Tesla Model S cars would be largely worthless. If forced to use older, nonlithium batteries, their battery
19 lives would certainly be much shorter.
20

21 The world’s current lithium heavyweight is Bolivia, the biggest exporter of the element. There, in
22 the swamps and marshlands of the southern region of the country near where the borders of Chile and
23 Argentina meet, are the biggest deposits.
24

25 Canada, China, Australia, and Serbia also have varying amounts of lithium, but not as much as
26 Bolivia....
27 Or apparently, Afghanistan.

28 Enough to last a lifetime

1 Depending on who you talk to, the current lithium global reserves are adequate for at least another
2 generation of lithium-ion battery manufacturers to produce them.

3 But not everybody thinks so, and some say the light metal compound may someday run dry. That
4 could in turn spell trouble for any company whose business depends on light and portable mobile
5 electronics — unless someone comes up with an alternative to lithium batteries before then.

6 The experts VentureBeat interviewed pointed to sharp year-on-year increases in the demand for
7 lithium.

8 That's putting heavy pressure on existing stockpiles.

9 According to Lithium Americas, a Canadian lithium-mining company with significant business
10 interests in Argentina, lithium demand will more than double in the next 10 years, while lithium prices have
11 nearly quadrupled during the same timeframe.

12 Tesla, for its part, is in the process of investing up to \$5 billion to build its own lithium-ion
13 Gigafactory in Texas, a plant capable of churning out 500,000 expensive battery packs a year by 2020 for
14 its line of zero-emission, all-electric cars. Above: Tesla predicts that its "Gigafactory" will produce more
15 lithium batteries (by capacity) in 2020 than the entire global production of such batteries in 2013.

16 A Tesla spokeswoman did not return calls seeking comment.

17 As a potential source to feed that demand, enter Afghanistan.

18 "At some point, if present trends continue, demand [for lithium] will outstrip the supply. And again,
19 at some point, the market for lithium-ion could get so big that it actually affects the supply chain," said
20 Donald R. Sadoway, a professor of the Materials Chemistry Department of Materials Science and
21 Engineering at MIT.

22 Looking at Afghanistan, Sadoway says the war-ravaged nation, which has no effective mining
23 infrastructure in place, may well be attractive to the world's mining outfits.

24 "In this regard," Sadoway, one of the world's foremost experts on energy sources, says, "the deposits in
25 Afghanistan could be important."
26
27
28

1 Andrew Chung, a venture capitalist with Khosla Ventures in Silicon Valley who has invested in
2 multiple startups producing alternative batteries, says lithium-ion batteries are limited in their lifetime
3 cycles, scalability, and cost. Despite this, Chung says, he can understand how the untapped reserves of
4 Afghan lithium are now an increasing focus.

5 “It is an issue of the supply chain, whether it’s Afghanistan or other [countries]. There is a finite
6 supply, and lithium-ion will continue to be the [power] choice for the next decade,” Chung said.
7 Some of the Valley’s biggest and most powerful tech companies either declined to comment for this
8 story or never returned calls. But they didn’t deny the importance of lithium-ion batteries.

9
10 For instance, an Apple spokesperson declined to comment for this story but provided VentureBeat
11 with a 2014 “Suppliers List” of the 200-plus vendors it uses to produce its products. A related post made the
12 Cupertino, Calif.-based company’s commitment to lithium batteries clear, at least in the short term.
13 “Rechargeable, lithium-based technology currently provides the best performance for your Apple
14 notebook computer, iPod, iPhone, or iPad,” the Apple post says.

15
16 Sony Energy Devices Corp. invented the lithium-ion battery in 1994. It was hailed as a
17 breakthrough, providing longer battery life and without the “memory effect” that gradually reduced the
18 effective capacity of previous types of batteries.

19 Since then, companies have gradually refined lithium battery technology but have not succeeded in
20 moving beyond it. Indeed, early Tesla cars are actually powered by large packs of industry-standard
21 lithium-ion battery cells — the same type of cells found in many laptop batteries.

22 And here is where it gets interesting.

23 **Sharply increasing demand**

24
25 If electric car manufacturers begin ramping up production of lithium-ion battery-powered cars, the
26 global demand for lithium will skyrocket. This could potentially come about at the same time for
27 increasing demand for handheld consumer goods like tablets and laptops, Chung said, thus creating a
28 perfect storm.

1 “So you want to start looking at other sources producing it with current supplies being called into
2 question, if we move more toward production of electric cars,” Chung said.

3 Which is why, increasingly, eyes are turning to Afghanistan and its new purported lithium reserves,
4 a country long referred to as the “graveyard of empires.” The U.S. invaded Afghanistan after the terror
5 attacks of Sept. 11, 2001, and according to iCasualties, 2,315 American servicemen and women have been
6 killed there.

7 Analyst Jay Jacobs of Global X Funds in New York, which has interests in lithium mining, said
8 demand for the compound is growing, and that “there are two regions that have been revealed to contain
9 hugelithium reserves: Afghanistan and Bolivia.”
10

11 William Tahil, a respected lithium expert who lives in France and is the general director for
12 Material International Research, argues that lithium deposits in Bolivia will at some point be depleted.
13 Jacobs was sanguine about safely extracting lithium from Afghanistan. He said political risks there
14 were considerable.

15 “With that being said, should there be a substantial and sustained increase in demand for lithium,
16 lithium miners may become increasingly interested in the country as it has an abundance of the
17 resource,” Jacobs said.
18

19 It was the Soviets who first discovered the country’s deposits when they invaded in 1979. Soviet
20 geologists began mapping Afghanistan’s lithium, gold, and potash fields but abandoned their efforts
21 after the former communist superpower pulled out of the country in 1989.
22

23 But with a weak and corruption-plagued “central government,” Afghanistan is now ripe for the
24 picking, Chossudovsky said. Indeed, the country is still very much divided into fiefdoms, with the Muslim
25 fundamentalist Taliban, warlords, and drug traffickers controlling large swaths of the country — and using
26 violence to advance their interests.

27 “There’s no question the mining companies will go in there. No question. There’s no real
28 functioning government there to reap the foreign investment of the mineral deposits. This makes it all the

1 more enticing to the mining companies because nobody in the government of [President] Hamid Karzai
2 will be regulating the bonanza of lithium, so they can do what they want,” he said.

3 For its part, the U.S. government, which helped locate the lithium deposits using flyovers with a
4 sensor-filled Lockheed P-3 Orion and teams of geologists fielding soil samples, knows a potential gold rush
5 when it sees one. And it has no intention of being left on the sidelines. Especially since the Chinese are
6 now — and quickly — making deals with Afghan pols for mineral rights to copper
7 deposits.

8 The USGS did return multiple calls seeking comment. Nor did the Pentagon.

9 Despite what some say are the shortcomings of lithium-ion batteries, venture capitalists and
10 investors continue pouring money into them. Amprius, a lithium battery maker based in Sunnyvale, Calif.,
11 snared a \$30 million infusion round of investor cash in January.

12 Over at the Afghan embassy in Washington, D.C., the Afghans are licking their lips at the potential
13 lithium and mineral windfall despite the country’s continued conflict with a resurgent Taliban. What this
14 may portend for the impoverished and war-torn nation is anybody’s guess. But the Afghans are playing up
15 the finds — or they were, until recently.

16 “In recent years, headlines from the Afghan mineral sector have competed to outdo each other in
17 scale: from the landmark \$3 billion Chinese investment in the Aynak copper concession to the astounding
18 survey work of the U.S., Afghan, and British Geological Services estimating anywhere between \$1 trillion
19 and \$3 trillion in mineral potential, to the historic \$11 billion deal now being finalized with an Indian
20 consortium for the Hajigak iron ore concession,” said a posting on the Afghani Washington DC website.
21 Afghanistan’s ambassador to the U.S., Eklil Hakimi, presided over a press conference at the Afghan
22 embassy in Washington, D.C., on March 10, where he talked about the untapped deposits, along with reps
23 from the USGS and other U.S. politicians.

24 But Hakimi, through a spokesman, told me he simply didn’t have the time to talk...but he may have
25 been warned NOT TO TALK by the CIA...
26
27
28

SCIENTISTS PROVE THAT LITHIUM ION BATTERIES GROW MORE EXPLOSIVE OVER TIME

- Using lithium ion batteries in cars, hover-boards and other “high tasking” systems FORCES them to blow up more
- Chemicals degrade into more self-igniting states over time
- Use in a system with electric motors dramatically increases likelihood of explosions, self-ignition and release of cancer-causing, brain damaging fumes that can harm un-born infants
- Exposure to electric fields, high altitude radiation and water in air causes very much increased danger parameters
- Cover-up of safety issues charged because many Senators and Energy Department executives own stocks in Lithium Ion batteries
- Public welfare at risk due to political greed, per <http://lithium-ion.weebly.com/>
- Combining the type of chemicals that lithium ion batteries hold is like “making a blasting cap” warn researchers

The U.S. Department of Energy knew that lithium ion batteries were a dead-end super explosive product but refused to consider that because they were bribed by Obama and Biden’s Silicon Valley oligarch financiers. Obama and Biden’s Silicon Valley oligarch financiers are almost the exclusive financiers of lithium ion mines and batteries.

THE LURKING, COVERED-UP, LITHIUM ION BATTERY THREAT IN YOUR CAR AND HOME

[Over 1000 Reason’s Why Lithium-ion Is a DEADLY, CRIMINAL, VERYBAD THING! -](#)

Lithium ion batteries, when they burn, cause brain cancer, liver cancer and other, potentially lethal, toxic poisoning. Certain regulators are told to "ignore these issues" because certain lithium ion investors

1 donated cash to certain campaigns.

2 The chemicals for lithium ion batteries come from countries which needed to be invaded in order to
3 monopolize the mining of those chemicals. Certain politicians are told to "ignore these issues" because
4 certain lithium ion investors engaged in war profiteering in order to control those minerals.

5 The FAA has issued numerous warnings and videos showing that lithium ion batteries *do*
6 spontaneously self-ignite and crash airplanes. Numerous people have been killed in lithium ion plane
7 crashes. Certain regulators are told to "ignore these issues" because certain lithium ion investors donated
8 cash to certain campaigns.
9

10 Lithium ion batteries have self-ignited and set numerous children and senior citizens on fire. They
11 have set homes on fire. They have set offices on fire. They have set Apple Stores on fire. You constantly
12 hear about passenger airlines being forced to land because passengers "smell smoke in the cabin". This is
13 almost always a lithium ion battery going off in the cabin and exposing all of the passengers to it's
14 carcinogenic ignition vapors.
15

16 Silicon Valley investors took over the lithium ion battery market, along with Goldman Sachs,
17 because they knew they were getting large government hand-outs from the Department of Energy in
18 exchange for campaign contributions.

19 Lithium ion batteries lose their power and memory over a relatively short time.

20 Lithium ion batteries blow up when they get wet or bumped. Fisker Motors went out of business
21 when millions of dollars of Fisker cars, using lithium ion batteries, got wet and all blew up.
22

23 Tesla battery packs have blown up, on multiple occasions, from simply hitting bumps in the road.

24 Manufacturing these kinds of batteries is so toxic that even China, a country known for the most
25 minimal regulations, has closed a huge number of battery factories because of the massive numbers of
26 deaths they caused to workers and nearby residents.
27
28

U.S. Identifies Vast Mineral Riches in Afghanistan

Tyler Hicks/The New York Times

A bleak Ghazni Province seems to offer little, but a Pentagon study says it may have among the world's largest deposits of lithium.

By JAMES RISEN

Published: June 13, 2010

WASHINGTON — The United States has discovered nearly \$1 trillion in untapped mineral deposits in [Afghanistan](#), far beyond any previously known reserves and enough to fundamentally alter the Afghan economy and perhaps the Afghan war itself, according to senior American government officials.

At War

Notes from Afghanistan, Pakistan, Iraq and other areas of conflict in the post-9/11 era.

[Minerals in Afghanistan](#)

Readers' Comments

Readers shared their thoughts on this article.

The previously unknown deposits — including huge veins of iron, copper, cobalt, gold and critical industrial metals like [lithium](#) — are so big and include so many minerals that are essential to modern industry that Afghanistan could eventually be transformed into one of the most important mining centers in the world, the United States officials believe.

An internal Pentagon memo, for example, states that Afghanistan could become the “Saudi Arabia of lithium,” a key raw material in the manufacture of batteries for laptops and BlackBerrys.

The vast scale of Afghanistan’s mineral wealth was discovered by a small team of Pentagon officials and American geologists. The Afghan government and

15 LITHIUM ION BATTERIES
16

17
18 - "LITHIUM-ION BATTERIES WILL SELF-IGNITE" SAY FEDS!. THE FORCE OF "MULTIPLE
19 HAND-GRENADES"... AIRLINE PILOTS UNIONS DEMAND ACTION!

20
21 - TESLA'S OWN PATENT FILINGS SAY THEIR BATTERIES ARE "SUBJECT TO DEADLY
22 EXPLOSIONS AND FIRES"! THAT IS WHY TESLA GAVE THEIR PATENTS AWAY.

23
24
25 - FISHER LITHIUM ION ELECTRIC CARS SIMPLY EXPLODED WHEN THEY GOT WET!

26
27 - NHTSA COVER-UP CHARGED. STAFF SAY NHTSA HEAD, ERICK STRICKLAND, COVERED
28 UP THE KNOWLEDGE TO PROTECT OBAMA CAMPAIGN BACKERS WHO OWNED LITHIUM

1 ION STOCK

2 Over 1000 Reason's Why Lithium-ion Is a DEADLY, CRIMINAL, VERY BADTHING! Why is
3 such a dangerous thing being promoted with your tax dollars while those same tax dollars are being used to
4 cover up these dangers? Let's discuss...

5 Share the link to this page: <http://wp.me/p4e1uX-2nj>

6 This will be an on ongoing project article. New additions will be added as the team receive tips and
7 data. Keep checking back. This article is currently in draft form (Note: if you count all of the items
8 below, plus all of the items at the end of each link below, there are now over 2000 reasons... but who's
9 counting):

10
11 Please print this article out and send it every Senator, Congressman and Mayor and ask them to tell
12 you what they are doing about it!

13
14 [Did Lithium ion blow the Malaysian Airlines flight out of the air? Websearch: "Malaysian Airlines Lithium
15 Ion" for details...](#)

16
17
18 [Are militants trying to hack Tesla's to make their battery pack overcharge and blow up? Websearch
19 "TSA Lithium Ion Warnings" for details...](#)

20
21 -The Trillion dollar + Lithium-ion industry pays over a billion dollars a year to elected officials,
22 appointed officials, their staff and lobbyists in order to get them to cover up the facts listed here and to
23 promote this dangerous chemical for profit. Many of those have family stock in lithium-ion companies,
24 private sector job promises and PAC funding from lithium-ion companies. Why won't the people who are
25 using lithium-ion stop using it? Why is there almost no regulation of deadly lithium-ion? The answer:
26

27 POLITICAL KICKBACKS!

28 - If you are exposed to burning lithium-ion from a burning car, iPad, phone, [airplane, FED-Ex or](#)

1 [UPS truck](#), or other fire from lithium-ion batteries, the smoke and vapors that you inhale are some of the
2 most cancer-causing, brain-damaging, lung damaging liver poisoning chemicals you could be exposed to.

3 [SEE HIS LINK](#) and [THIS ONE](#) and [THIS ONE](#) and [THIS ONE](#) (More coming)

4 - Lithium-ion batteries are made in “concentration camp-like” fenced-in compounds where low
5 income workers are exposed to poison gas and powders from the lithium-ion manufacturing process. A
6 dramatically large group of these workers die from the cancers and toxic poisoning from these factories.
7 They have always been made in overseas, impoverished, regions because there is little or no occupational
8 safety regulation there. Tesla’s factory has been fined by OSHA for setting workers on fire. This is a very
9 deadly business. Now they are trying to build these factories in the American southwest to try to exploit
10 Mexican workers like they do overseas. Some argue that large “white man owned” corporations “fighting
11 for immigration rights” are really fighting to relax laws to allow cheap labor into these kinds of camp-
12 factories in the desert. Some of the factory owners have even purchased multiple lots, in multiple southern
13 states, and told investors that they will “build on the one where we can buy control of the most
14 local politicians”.

15
16
17 - The makers of lithium ion batteries have issued a document called the “MSDS”. It states known
18 facts about the batteries. The MSDS warns firefighters they can get cancer. It warns that the batteries are
19 toxic. It clearly states the very great dangers of spontaneous, or easily caused fire from bumps or moisture.
20 Why did Panasonic kill its MSDS web links the day the first Tesla fires hit the news? Look at the facts
21 [HERE](#).

22
23 - Lithium-ion batteries seem to have caused some wars. At [THIS LINK](#), you will see hundreds of
24 facts, films and links showing the direct connection between lithium ion investors in Silicon Valley and
25 wars for ore in middle east countries.

26 - [Silicon Valley Lithium-ion investors signed deal with Russian “businessmen”](#) to create an
27 international lithium ion cartel.

28 - Lithium ion battery companies Enerdel, and A123, and others, went bankrupt, after being funded

1 with your tax dollars, from corruption, explosions and spontaneous fires. Facts that were well known by the
2 people that funded them.

3
4 - Less compromised Senators have railed against the dangers of lithium-ion has shown [HERE](#) and
5 [HERE](#)

6 - IPAD Lithium-ion batteries have blown up setting entire stores on fire.

7
8 - Samsung lithium-ion batteries in cell phones have set a number of people, including many
9 children, on fire.

10 - Lithium-ion does not even work as well as other lower-cost, safer energy solutions:

11 - The charge-keeping capability of a typical lithium-ion battery degrades steadily overtime and with
12 use. After only one or two years of use, the runtime of a laptop or cell phone battery is reduced to the point
13 where the user experience is significantly impacted. For example, the runtime of a typical 4-hour laptop
14 battery drops to only about 2.5 hours after 3,000 hours of use. By contrast, the latest fuel cells continue to
15 deliver nearly their original levels of runtime well past the 2,000 and 3,000 hour marks and are still going
16 strong at 5,000+ hours.

17
18 - The electrical capacity of batteries has not kept up with the increasing power consumption of
19 electronic devices. Features such as W-LAN, higher CPU speed, “always-on”, large and bright displays and
20 many others are important for the user but severely limited by today’s battery life. Lithium ion batteries,
21 and lithium-polymer batteries have almost reached fundamental limits. A laptop playing a DVD today has a
22 runtime of just above one hour on one battery pack, which is clearly not acceptable.

23
24 - Silicon Valley Lithium-ion billionaires try to exploit the lack of public awareness with
25 disinformation campaigns linking anti-lithium-ion to saying that you are anti-environment. In fact: Lithium
26 ion use and manufacturing is one of the most toxic industries on the planet.

27 - Lithium-ion battery companies have actually been charged with, and sued for organized crime.

28 - AT&T’s U-verse TV service now had a exploding battery problem, making it necessary for the

1 firm to replace 17,000 backup batteries in its nationwide network.

2 - Lithium-ion batteries might have crashed the Malayasian airlines flight.

8
9
10 1. Overview

11
12 Regulators asked Tesla to detail the possible consequences of battery packdamage to the Model S and how
13 those problems were addressed in the Model S design. NHTSA also asked Tesla to describe the “limits
14 ofthat design to prevent damage to the propulsion battery, stalling and fires”. While electric cars have been
15 in commercial productionsince the 1800’s, and have been widely released by major automobile
16 manufacturers, only the Tesla vehicles have experienced the fireissues, relative-to-inventory, in this
17 magnitude. The questions and data required by NHTSA, in the letter from NHTSA, contained
18 below,demands disclosure of certain Tesla information which will reveal conflicts in previously provided
19 Tesla data. Reporters and publicinterest law firms will be using the FOIA process to disclose the responses,
20 required under federal law, in the public interest.
21

22 Additional...

23
24
25 3. Safety Tests That Were Never Conducted and Must Now Be Conducted.

26
27 The continued failure to engage in these tests, and/or provide the results from these tests, continues to call
28 into question the efficacy and conflicts of interest of the original testing. The batteries used by Tesla were

1 never designed, or created, to be used in automobiles and this short-cut to cost reduction must be
2 mitigated by the relative increase in safety reduction.

3
4 - Vehicle with fully charged batteries drives into 3', 4", 5", 6", 7" 8" concrete curb at 5MPH, 15MPH,
5 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH,
6 75MPH and then is allowed to sit, post crash, for up to 3
7 hours to analyze spontaneous lithium ion combustion.

8
9
10 - Vehicle with fully charged batteries drives into 3", 4", 5", 6", 7" 8" metal post embedded in road at 5MPH,
11 15MPH, 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH,
12 70MPH, 75MPH and then is allowed to sit, post crash, for up to 3 hours to analyze spontaneous lithium ion
13 combustion..

14
15 - Vehicle with fully charged batteries drives into 3", 4", 5", 6", 7" 8" concrete curb at 5MPH, 15MPH,
16 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH,
17 60MPH, 65MPH, 70MPH, 75MPH and then is allowed to sit, post crash, for up to 3
18 hours in simulated rain storm to analyze spontaneous lithium ion combustion..

19
20
21 - Vehicle with fully charged batteries drives into 3", 4", 5", 6", 7" 8" concrete
22 curb at 5MPH, 15MPH, 20MPH, 25MPH, 30MPH, 35MPH, 40MPH, 45MPH, 50MPH, 55MPH, 60MPH,
23 65MPH, 70MPH, 75MPH and then is allowed to sit, post crash, for up to 3 hours after complete immersion
24 in water as in a hurricane or high-water event to analyze spontaneous lithium ion combustion..

25
26
27 - Rolling the vehicle with fully charged batteries in a 3 roll crash at 20MPH, 25MPH, 30MPH, 35MPH,
28 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH ending in the vehicle laying on it's

1 roof and counting the number of lithium ion cells that came loose from their mounts risking burning lithium
2 falling on passengers.

3
4 - Rolling the vehicle with fully charged batteries in a 3 roll crash at 20MPH, 25MPH, 30MPH, 35MPH,
5 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH ending in the vehicle laying on it's
6 roof and counting the number of lithium ion cells that had their housings damaged risking burning lithium
7 falling on passengers.

8
9
10 - Rolling the vehicle with fully charged batteries in a 3 roll crash at 20MPH, 25MPH, 30MPH, 35MPH,
11 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH ending in the vehicle laying on it's
12 roof and simulating a full rain storm on the, now exposed, underside of the vehicle for 2 hours to see if
13 lithium ion ignites when wet risking burning lithium falling on passenger and to analyze spontaneous
14 lithium ion combustion.

15
16
17 - Filling the battery compartment, with fully charged batteries, with water, draining it and observing for 4
18 hours to analyze spontaneous lithium ion combustion.

19
20 - Pouring 18 Oz. soft drinks into the battery compartment, with fully charged batteries, and observing for 4
21 hours to analyze spontaneous lithium ion combustion.

22
23
24 - Impacting the lower quarter panel of Tesla with fully charged batteries on the side of the car, on each side,
25 at the lower center of the passenger door and two feet to either side at 20MPH, 25MPH, 30MPH, 35MPH,
26 40MPH, 45MPH, 50MPH, 55MPH, 60MPH, 65MPH, 70MPH, 75MPH at 3", 4", 5", 6", 7" 8" so as to
27 penetrate the battery chamber at least 4 inches and then saturating the damaged area with water and waiting
28 four hours to analyze spontaneous lithium ion combustion.

1
2 - Forced ignition of lithium ion cells in flipped over (vehicle resting upside down on it's roof) with fully
3 charged batteries and timing of penetration of smoke and flames to occupants simulated as contained within.

4
5 - Spectrograph analysis and complete full-range chemical read-out of the front metal and plastics of a Tesla
6 on fire with fully charged batteries along with the lithium ion batteries. Disclosure of all known
7 harmful chemicals in said smoke.
8

9
10 - Manually cutting 10 (ten) fully charged lithium ion Tesla battery cells in half long-ways in open air
11 at average humidity and videotaping the results followed by dropping them in a bucket of water 60 seconds
12 after cutting them. With the large number of lithium ion cells in a Tesla, physics and the law of averages
13 predict that at least 10 cells will be fully ruptured in a high speed accident.

Passed Out Tesla Driver

1
2 Sociological reports, such as the report below, confirm that Tesla drivers are more likely to drive
3 drunk, use drugs and respect less laws:

4 Various crash reports find that a large number of Tesla drivers drive drunk. Here is a typical
5 mocking web graphic pointing out this fact:

6 Tesla related investors engage in this sort of extreme behavior and use their resources to promote
7 the car as a tool to skirt social bounds with speed and sex. Skirting social bounds often lies close to skirting
8 laws and common sense. Here are reports on activities and personalities of these people who promote the
9 vehicle:
10

11 SEE MORE AT: <http://vcrocket.weebly.com>

12
13 **A Tesla Driver is now charged with the homicide of two people in a crash with their Tesla.**

14 The evidence shows that Tesla drivers and the Tesla Culture promotes extra-carelessness, extra
15 arrogance, extra drinking, extra distraction due to sexual theatrics and an overall social pressure
16 requirement to create higher-than-normal safety parameters for these drivers, particularly in light of the
17 highly explosive bed of material they are driving around amongst other consumers and structures. Tesla
18 drivers appear to be more likely to crash, or create lithium ion thermal event circumstances, because of the
19 cultural dynamic which Tesla attracts.
20

21
22
23 **7. Original participant conflicts-of-interest created reduced safety oversight**

24
25 A certain, specific, group of investors, known to the FBI, The GAO, The SEC and the Senate Ethics
26 Committee, purchased undue influence on the previous Tesla decisions process, in order to acquire “unjust
27 rewards” from the U.S. Treasury.

28 These investors, coincidentally, provided funds to related campaign efforts and, shockingly, they all

1 hold major investments in the very battery system in question.
2

3 Because of this, the American consumer has been forced to “accidentally” conduct some of these
4 tests at great personal risk to those consumers. These risks should have been disclosed by Tesla prior to the
5 application for their DOE loan and prior to their first contact with NHTSA. Tesla produced documents
6 show that Tesla was aware of the dangers disclosed herein.
7
8

12 FROM: <http://lithium-ion.weebly.com>

13 The lurking threat in your car and home “over a million failures of this chemistry and these batteries
14 globally..”

15 Go to <http://www.nts.gov/> and demand action:

16
17 “LITHIUM ION BATTERIES ARE MADE OVERSEAS BY CHEAP LABOR WHERE OSHA CAN’T
18 WATCH. POOR PEOPLE MAKE LITHIUM ION BATTERIES OFF SHORE WHERE THEY ARE NOT
19 TOLD ABOUT THE TOXIC CANCER, LIVER AND LUNG DISEASES THEY GET FROM THE
20 MANUFACTURING PROCESS. SILICON VALLEY VC’S PUSH LITHIUM ION BECAUSE THEY
21 CAN MAKE A HUGE PROFIT ON THE CHEAP LABOR BUILDING A BATTERY THAT SELF
22 DESTRUCTS BUILT BY WORKERS WHO DIE FROM TOXIC POISONING. CHINESE, MALAY,
23 MEXICAN AND OTHER WORKERS, SHOULD FILE CLASS ACTION LAWSUITS AGAINST
24 SILICON VALLEY VC’S WHO PUSH THESE BATTERIES.”
25
26

27 *Another Tesla Fire*

28 October 2, 2013, 4:27 PM

1 Tesla Motors Inc. TSLA shares tanked after a video of a Model S fire circulated on the web,
2 prompting the electric car company to move quickly to douse the flames of bad publicity.

3
4 Elizabeth Jarvis-Shean, director of global communications at Tesla, confirmed that the vehicle engulfed in
5 flames was indeed a Tesla but stressed that the driver walked away without injuries.

6
7
8 ***Another Tesla Caught On Fire While Sitting In A Toronto ...***

9
10 Earlier this month, a Tesla Model S sitting in a Toronto garage ignited and caught on fire. The car was
11 about four months old and was not plugged in to an electric socket, says a source.

12 rr.com/articles/2014/02/13/a/another-tesla-cau...

13
14 ***Tesla Issues Statement On Fiery Car Crash That Caused The Stock To Tank***

15
16
17 Tesla's stock was down over 7% to a low of \$175.40 today, but pared some of its losses to close down
18 6.24% at \$180.95. It appears that shares began to tumble in the last half hour on reports that a Tesla Model S
19 car caught fire on Washington State Route 167. Some speculated that the video highlights problems with
20 the car's battery. Though others rushed to point out that the battery is located in the back of the car.

21
22 ***Tesla Hires Blogger Shills Globally***

23
24
25 "Media finds that "Safety Investigators" (read "SHILLS") are bribed by VC's and lithium holding
26 companies to say "nothing to see here", "lithium batteries are probably ok". Beware of NTSB
27 "consultant's" and "investigators" who are being bribed, offered after-politics high pay jobs, called up by
28 bribed congressional staff with "suggestions", given sports tickets, handed stock in certain ventures and

1 other bribes. Many of the “investigators” need to be put under investigation themselves!!!! When you see an
2 investigator talking about how lithium ion is a wonderful thing, investigate them!”

3 The following are a variety of quotes, from across the web, demonstrating the critical nature of this
4 public safety issue:

5
6 “Lithium ion batteries are blowing up, starting fires and, generally, destroying people’s homes, cars,
7 electronics and physical health. Boeing was just ordered to stop flying the 787 Dreamliner because
8 it’s Lithium ion batteries are catching fire spontaneously.”

9
10
11 “A group of silicon valley venture capitalists forced/leveraged the government to buy and pay for these
12 specific batteries, that they have stock in, in order to benefit their profit margins. Other batteries don’t have
13 these problems. They knew about this from day one but put greed ahead of safety. There are thousands and
14 thousandsof reports of spontaneous lithium ion fires but the VC’s who back lithium ion pay to keep this
15 information hushed up. Millions of these batteries have been recalled for fire risk. The VC’s tried to push as
16 many as they could before they got caught. Now they are caught. These VC’s own stock in lithium mining
17 companies too.”

18
19
20 “Here is the Fisker Karma after it got wet and the batteries blew up. These batteries blow up JUST FROM
21 GETTING WET! ALL of these burned up hulks are brand new \$100,000.00+ cars that just blew up and
22 torched everything around them just because they got wet! How bad do you want a Fisker or Tesla now?
23 Fisker’s insurance company is balking at paying for this saying: “You knew this would happen”.

24
25
26 These links show vast sets of Fisker electric cars that burst into flames just because they GOT WET:

23 Look at this: Wewere just sent a link that our website showed up in this movie:
24 Hereis another link to the move at: <http://tinypic.com/r/7295hs/6>
25
26 THIS IS THE TESLA MAGIC CARPET OF DOOM. THISWHOLE THING IS FULL OF LITHIUM.
27 YOUR WHOLE FAMILY IS SUPPOSED TO SIT ON TOP OF THIS!!!
28 TESLA HAS TO TEST THEIR BATTERIES IN a BLASTCHAMBER!!!!!!!!!!:

1
2 IF TESLA SAYS THIS THING IS SO SAFE WHY DO THEY TEST IT IN A STEEL ENCLOSED
3 EXPLOSION ROOM WITH WIRES COMING IN THROUGH BLAST HOLES!!!!???????

4 “TESLA ELECTRIC CARSHAVE 6800 CHANCES OF “GOING THERMAL”.

5 “TESLA ELECTRIC CAR BATTERIES ARE MORE LIKELY TO BLOW UP.” SAYS STANFORD
6 ENGINEER, “USING LITHIUM ION IN AN ELECTRIC CAR DOUBLES THE CHANCESIT WILL
7 EXPLODE OR GO THERMAL BECAUSE AN ELECTRIC CAR PUSHES IT FURTHER THAN
8 ANYTHING ELSE. BOEING HAD MANY SAFETY CIRCUITS AND EVENTHOSE FAILED. THERE
9 IS NO WAY THE TESLA SAFETY CIRCUITS WILL NOT EVENTUALLY FAIL”
10

11
12 “Tesla Electric cars have 6800 lithium ion batteries wedged into a box. This can create arepercussive
13 thermal event that can set the whole car off. The TESLA 18650 batteries can be seen exploding in multiple
14 YOUTUBE videos. Itis NOT TRUE that they are “an entirely different battery” they are the same chemical
15 compound that blows up.”
16

17
18 “A direct quote from Tesla’s patent application, below. Tesla KNEWthis was going to happen and never
19 adequately warned anybody. Tesla wrote these words in the federal papers they filed yet they nevershowed
20 these words to any buyers :

21
22 “Thermal runaway is of major concern since a single incident can lead to significantproperty damage and,
23 in some circumstances, bodily harm or loss of life. When a battery undergoes thermal runaway, it typically
24 emits alarge quantity of smoke, jets of flaming liquid electrolyte, and sufficient heat to lead to the
25 combustion and destruction ofmaterials in close proximity to the cell. If the cell undergoing thermal
26 runaway is surrounded by one or more additional cells as istypical in a battery pack, then a single thermal
27 runaway event can quickly lead to the thermal runaway of multiple cells which, in turn,can lead to much
28

1 more extensive collateral damage. Regardless of whether a single cell or multiple cells are undergoing this
2 phenomenon, if the initial fire is not extinguished immediately, subsequent fires may be caused that
3 dramatically expand the degree of property damage. For example, the thermal runaway of a battery within
4 an unattended laptop will likely result in not only the destruction of the laptop, but also at least partial
5 destruction of its surroundings, e.g., home, office, car, laboratory, etc. If the laptop is on-board an aircraft,
6 for example within the cargo hold or a luggage compartment, the ensuing smoke and fire may lead to
7 an emergency landing or, under more dire conditions, a crash landing. Similarly, the thermal runaway of
8 one or more batteries within the battery pack of a hybrid or electric vehicle may destroy not only the car, but
9 may lead to a car wreck if the car is being driven or the destruction of its surroundings if the car is parked.”

11
12 Tesla’s own staff have now admitted that once a lithium ion fire gets started in one of their cars, it is
13 almost impossible to extinguish burning lithium ion material. This is Tesla’s own words in THEIR patent
14 filing, (You can look it up online) saying that the risk is monumental. Tesla has 6800 lithium ion batteries,
15 any one of which can “go thermal” and start a chain reaction! If you look at all of the referenced
16 YOUTUBE movies you will see how easy it is to set these things into danger mode.”

17
18 “Imagine a car crash with a Tesla where these 6800 batteries get slammed all over and then exposed
19 to rain, fire hose water, water on the roads, cooling system liquid.. OMG!! And then if, in that same
20 accident the other car is a gasoline car... getting burned alive sounds “BAD”! Tesla is covering up the
21 problems with its batteries.”

22
23 “Lithium ion batteries have already crashed a UPS plane and killed people. Look here:
24 [http://washingtonexaminer.com/dreamliner-fires-spark-new-doubts-about-a-green-energy-technology/
25 article/2519353](http://washingtonexaminer.com/dreamliner-fires-spark-new-doubts-about-a-green-energy-technology/article/2519353) “

26
27 More Lithium Ion Battery disasters: [http://www.forbes.com/sites/petercohan/2013/01/24/is-787s-lithium-
28 ion-battery-hazardous-to-boeings-health/](http://www.forbes.com/sites/petercohan/2013/01/24/is-787s-lithium-ion-battery-hazardous-to-boeings-health/)

1
2 AS A DEMONSTRATION OF HOW DANGEROUS LITHIUM IS, NASA IS GOING TO MAKE IT
3 BURN IN OUTER SPACE

4 “If you’re along the Eastern Seaboard tonight, it might be worth your while to look at the sky this evening.
5 NASA’s Wallops Flight Facility is scheduled to launch a sounding rocket that will release “two red-
6 colored lithium vapor trails in space.”

7
8
9 As Space.com reports, those trails might be seen across the Mid-Atlantic and perhaps as far north as
10 Canada and as far south as northern Florida. Space.com explains how these trails will produce a “night sky
11 show:”

12 “The sounding rocket that will be used to create the two NASA-made glowing cloud trails will be a Terrier-
13 Improved Orion. In this technology test launch, two canisters in the rocket’s payload section will contain
14 solid metal lithium rods or chips
15 embedded in a thermite cake. The thermite is ignited and produces heat to vaporize the lithium.

16
17
18 “Once the vapor is released in space, it can be detected and tracked optically. The rocket will eject two
19 streams of lithium which will be illuminated at high altitudes by the sun (which will be below the local
20 horizon at ground level).”

21
22 In a statement, mission project manager Libby West said the launch is a test flight for two
23 upcoming missions. It’ll give scientists a view of two different methods for creating lithium vapor trails.

24 By the way, NASA says the “lithium combustion process poses no threat to the public during the release in
25 space.”
26

27
28 If lithium is so dangerous it will even burn in space, why are we putting it in our airplanes and cars???????

1
2 Lithium Ion batteries blow up and burn down commercial

3 building:[http://westhawaii.com/sections/news/nation-world-news/787-battery-blew-%E2%80%999906-](http://westhawaii.com/sections/news/nation-world-news/787-battery-blew-%E2%80%999906-lab-test-burned-down-building.html)
4 [lab-test-burned-down-building.html](http://westhawaii.com/sections/news/nation-world-news/787-battery-blew-%E2%80%999906-lab-test-burned-down-building.html)

5
6 “Tesla and Fisker have only sold a few hundred cars, (thank god) because nobody but dicks want these
7 overpriced eliteist toys. A regular car company sells hundreds of thousands of cars per model. Every
8 single Tesla or Fisker sold increases the likelihood of a burn up. Those burn-ups will affect the homes, cars
9 and lives of the people nextdoor who never even bought one.”
10

11
12 “Go to <http://www.youtube.com> and type into the search window:

13 “Lithium ion explosion” or “lithium battery and water” or “lithium ion water” and any related derivation
14 and you will hundreds of videos about how dangerous these batteries are. There are numerous videos of
15 Tesla’s 18650 batteries blowing up.”
16

17
18 “This article in the LA Times sheds more light of the horrors of Lithium Ion:

19 <http://articles.latimes.com/2013/jan/18/business/la-fi-dreamliner-battery-20130119> “
20

21 “Lithium Ion batteries “go thermal” in peoples pockets, in your notebook, especially in your Tesla and
22 Fisker car and everywhere else. There are thousands and thousands of articles documenting this and there is
23 a cover-up by the VC’s that fund these things to keep this fact out-of-sight.
24

25
26 Making Lithium Ion batteries poisons the workers who make them. It is a dangerous product. Each time the
27 workers, particularly in Asia, realize they are being poisoned by the factory, they jack up the product.
28

Outlaw lithium ion batteries. Demand a recall.”

1
2 There are PLENTY of other energy storage solutions that do not involve the highly compromised Lithium
3 Ion chemistry!”

4
5 “Below are a few samples of HUNDREDS of videos proving that Lithium Ion Batteries JUST BLOW UP.
6 This is why TSA does not want them, or liquid, on planes.”

7
8
9 ***Report: Galaxy S 4 Lithium Explosion Burns Hong Kong Home To The Ground:***

10
11 By Stephanie Mlot

12
13 A Hong Kong couple have been displaced after an exploding Samsung Galaxy S 4 smartphone burst
14 into flames, burning their house to a crisp. The man, identified in the original Xianguo.com report only as
15 Mr. Du, claims that his phone, battery, and charger were all legitimate Samsung products, but that’s now
16 difficult to confirm since his home and everything in it were destroyed. According to the translated report,
17 Du sat on the living room sofa playing the game “Love Machine” on his charging GS4 when it suddenly
18 exploded. In the heat of the moment, he threw the device onto the couch, which caught fire. The flames
19 then spread to the curtains and the rest of the house, “out of control,” Xianguo said. Du, his wife, and his
20 dogs managed to escape the house unscathed; neighbors were temporarily evacuated as firefighters fought
21 the flames. Almost all of the couple’s furniture and appliances burned to ash, the news site said, adding that
22 their Mercedes parked outside was also damaged.

23
24
25 Samsung did not immediately respond to PCMag’s request for comment, but told Xianguo that it
26 will “carry out detailed investigations and tests to determine the cause of the incident.” Last year, a Galaxy S
27 III owner in Dublin was driving in his car when the device caught fire. Cell phone safety is increasingly
28 becoming an issue in Asia, where two cases of iPhone shock occurred within a week of each other this

1 month. On July 11, a 23-year-old flight attendant with China Southern Airlines was allegedly electrocuted
2 when she took a call on her Apple device while it was charging. She was reportedly using the original
3 charger when she was killed.

3 ***Boeing 787 Dreamliner woes put spotlight on lithium ion battery risks***

4 BY KEN BENSINGER, Los Angeles Times

5 Chances are the same kind of battery that twice caught fire in Boeing 787 Dreamliners in recent
6 weeks is in your pocket at this very moment. Lithium ion batteries, small and powerful, have become the
7 electricity storage device of choice. They are everywhere — in cellular phones, laptops, power tools, even
8 cars. They allow us to talk, email and drill longer than ever possible in the past.
9

10 But the incidents that led to the grounding of the 787 fleet worldwide, and the decision by Boeing on
11 Friday to temporarily halt all deliveries of the plane, have highlighted a troubling downside of these
12 energy-dense dynamos: their tendency to occasionally burst into flames and the casualty list is long. In
13 recent years, tens of thousands of laptop batteries have been recalled due to the risk of fire or explosion.
14 The 400-pound lithium ion battery on General Motors' cutting-edge electric car, the Chevrolet Volt, burst
15 into flames seemingly spontaneously while parked in 2011. Investigators blamed a cargo hold full of
16 lithium ion batteries for a fire that caused a UPS-operated 747 to crash shortly after takeoff from Dubai in
17 late 2010. That crash, which killed both pilots, is one of more than 100+ incidents recorded by the Federal
18 Aviation Administration linking lithium ion batteries to onboard fires over the last two decades. This
19 month, new rules took effect limiting the transport of lithium ion batteries in aircraft. And the FAA had
20 long prohibited use of the technology in commercial airplanes.
21

22 That changed in 2007, when it granted Boeing permission to use the batteries in the 787 under a
23 number of conditions to ensure safety. For Boeing the lithium ion profit advantage was clear.
24

25 Thanks to their chemistry, the rechargeable batteries can store as much energy as a nickel metal
26 hydride pack that's 50% heavier, while charging and discharging faster than other battery types. That's
27 made them attractive for military applications such as the B-2 bomber and also for use on the International
28 Space Station and the Mars Rover.

1
2 Lithium ion batteries enabled Boeing to swap out heavy hydraulic systems in the airframe for
3 lightweight electronics and electric motors to operate systems like wing de-icers. That's a key reason the
4 Dreamliner burns 20% less fuel than other wide-body aircraft.

5 "They completely dominate the consumer market," said Vishal Sapru, energy and power systems
6 research manager at consulting firm Frost & Sullivan in Mountain View, Calif.. He estimates that global
7 sales of lithium ion batteries reached \$14.7 billion last year, up from \$9.6 billion in 2009, a 53% increase.
8 Sapru expects the market to soar to \$50.7 billion by 2018. "No other battery chemistries are growing at that
9 rate."
10

11 But lithium ion also has downsides. The batteries tend to have shorter life spans than older, more
12 proven battery technologies. And although the price is falling, lithium ion is still more expensive than other
13 batteries. Although some carmakers have embraced the technology, others, such as Toyota, have decided
14 against it. Several makers of lithium ion auto batteries for electric vehicles have filed for bankruptcy last
15 year because of weak demand.
16

17 Safety experts also have concerns. Because lithium ion batteries can store more energy, and
18 discharge it more quickly, than other batteries, lithium ion cells can get much hotter than other technologies
19 in the event of an over charge or the external application of a heat source. Larger applications, such as the
20 63-pound batteries on the 787, incorporate multiple cells and the heat can spread rapidly from cell to cell, a
21 chain reaction called "thermal runaway."
22

23 And while other types of batteries use a water-based electrolyte in each cell, lithium ion relies on a
24 highly flammable solvent. When heated up, that solvent tends to vaporize, spraying the burnable gas into
25 the surrounding air. As a result, lithium ion battery fires burn extremely hot, as high as 2,000 degrees
26 Fahrenheit.
27

28 Those conditions were blamed for an explosion at a General Motors battery testing lab last April
that caused \$5 million in damage and sent one person to the hospital. GM said flammable gas had vented

1 froman experimental lithium ion battery that heated up during extreme testing.
2
3

4 “Lithium ion is very controversial in the safety engineering space,” said Brian Barnett, vice
5 presidentfor battery technology at Tiax, a technology firm in Lexington, Mass. He spoke last month at a
6 conference on battery safety in LasVegas, where more than three-quarters of the presentations focused on
7 lithium ion batteries.
8

9 The cause of the fires in the two Dreamliners has still not been determined and neither Boeing nor
10 the Japanese company that made the batteries, GS Yuasa, have publicly commented on likely factors.
11 Boeing subjected the batteries on the plane to thousands of hours of testing and installed numerous safety
12 systems specific to the batteries.

13 “We have high confidence in the safety of the 787 and stand squarely behind itsintegrity as the
14 newest addition to our product family,” Boeing Chief Executive im McNerny said Friday.
15

16 Barnett and others emphasize that it’s not uncommon to see problems in relatively new
17 technologies. But they add that most lithium ion fires are caused by an external problem, such as a bad
18 circuit or a software glitch thatleads to overcharging. Another common problem in consumer electronics is
19 the use of low-cost wiring and other components thatcan overheat and spark or catch fire next to the battery
20 itself.

21 The problem is more persistent. In 2006, Sony announced a global recall of more than 10 million
22 lithiumion laptop batteries used in a variety of laptop computers after more than a dozen fires, and two
23 years later issued a second recall.
24

25 “This is a battery type that is only one of hundreds of possible batteries but this particular type was
26 pushed bya few companies and investors so they could make money off it at the risk of public injury or
27 death...”
28

Lithium ion battery fire under NTSB scrutiny

Carli Brosseau Arizona Daily Star

When a test of a lithium-ion battery charger turned into an inferno at Securaplane Technologies Inc. in 2006, temperatures reached as high as 1,200 degrees and three waves of firefighters failed to save the building. An employee of the Oro Valley company blasted the flaming battery with a fire extinguisher to no effect. Two hours later, the galvanized metal roof collapsed, and the 10,000 square-foot building was a total loss. It's a fire that federal safety regulators are taking another look at now, since Securaplane provides two key battery components to the Boeing 787

Dreamliner, the start-power and battery-charger units. Records from local Golder Ranch Fire Department, the first of three fire departments to respond to the blaze, describe "an uncontrolled thermal reaction (that) caused the battery to vent and this venting caused the ignition to various items and fixtures throughout the test lab area." "The electrical technician who was performing a test on the battery when it exploded likened the experience to being near a jet after-burner.

Electrolytes from inside the battery were shooting 10 feet into the air, the former Securaplane employee, Michael Leon, said in an interview Friday. "The magnitude of that energy is indescribable." "The fire stands as a graphic illustration of the power stored within energy-dense lithium-ion batteries and the potential consequences if something goes awry. It also highlights the importance and delicacy of the quality-control measures applied to a novel – and potentially explosive – technology, a technology now allowed, under special conditions, to be used as the main and auxiliary power source of certain aircraft. The

2 ***“Whistleblower: Dreamliner LITHIUM ION Batteries Could Explode***

3 He says he was fired after warning about battery problems

4 By Christopher Freeburn, InvestorPlace Writer

5
6 Boeing’s (NYSE:BA) new 787 Dreamliner could end up being a nightmare for the aircraft giant.

7
8 A former senior engineering technician at Securaplane Technologies, which makes the charging system for
9 the lithium-ion batteries used in 787 Dreamliners, told CNBC that the batteries are defective and liable to
10 explode if they overheat.”

11 ” Lithium-ion batteries are heat intolerant, according to a potential whistleblower familiar with...

12 Lithium-ion batteries are heat intolerant, according to a potential whistleblower familiar with their
13 technology. “Too much heat on those things, they will go into a thermal runaway, they will explode.” The
14 informant, a former senior engineering technician of Securaplane Technologies, was fired in 2007 for
15 repeated misconduct, but he says it was in retaliation for voicing concerns about the batteries. The NTSB
16 acknowledges that the lithium-ion batteries in Boeing’s (BA) Dreamliner experienced a thermal runaway,
17 but insists there’s no connection between the incident and the whistleblower’s claims. “

18
19 “The Japan Transport Safety Board makes a number of interim points. This battery, unlike one that burst
20 into flames in a Japan Airlines 787 earlier in January, did not actually ignite. It experienced a thermal
21 runaway, as a result of a build up of heat, yet the materials affected did not start burning. While the
22 semantics might escape the casual observer the safety investigator said:-

23
24 “The battery was destroyed in a process called thermal runaway, in which the heat builds up to the point
25 where it becomes uncontrollable.

26 “But it is still not known what caused the uncontrollable high temperature”.

27
28 In simple language, uncontrollable rises in temperature will if uncontrolled most likely result in a fire,

1 including one that can burn through structural composites and alloys, and prove almost uncontrollable by
2 fire fighters, even on the ground.

3
4 It took a Boston airport fire brigade detachment 99 minutes to put out the Japan Airlines fire using
5 equipment unavailable if the airliner was hours away from an emergency landing strip in the high arctic or
6 north Pacific, which that particular flight had only recently traversed before the fire broke out after landing.

7
8
9 The Japan air safety investigator said the wire supposed to ground or discharge static electricity build ups in
10 the battery had been severed meaning it had experienced abnormal levels of current.

11
12 However as also confirmed by the early stage of the US incident investigation into the Japan Airlines fire,
13 this large lithium-ion battery had not experienced a voltage surge, and had so far as flight data recordings
14 could tell, had been operating normally immediately before the emergency landing.

15
16
17 Expect the news release in Japan to cause more tension between those who want the 787s to fly again
18 pending a full understanding of the causes and cures in these incidents, and independent safety
19 investigators who will recommend to safety regulators like the FAA a continuation of the grounding”

20
21 “One aspect that may confuse some people relates to the decision to use this particular type of battery. The
22 danger posed by it has been evident by a lengthy and documented list of disturbing events in recent years.

23 They include many thousands of batteries used in laptops being recalled, because of determined risks of fire
24 or explosion. General Motors were also placed in the battery limelight. In 2011, the 400 pounds Lithium ion
25 battery in their Chevrolet Volt apparently was subject to spontaneous combustion when it burst into flames,
26 while reportedly in a parked vehicle. In 2010, a UPS-operated Boeing 747 crashed just after take-off from
27 Dubai. Investigators placed the blame on a cargo hold that contained Lithium ion batteries, for a fire that
28

1 caused the incident.”

2
3 A number of incidents of cell phones with lithium ion batteries blowing up in peoples pockets,
4 notebook computers blowing up in peoples briefcases and other shocking fires have been deeply
5 documented.

6
7
8 ***FISKERS CARS THAT BLEW UP AND BURST INTO FLAMES JUST BECAUSE THEIR***
9 ***LITHIUM ION BATTERIES GOT WET***

10 “Here is where they make some of these batteries, inforced labor camps:

11 <http://www.thedailybeast.com/newsweek/2013/01/13/china-s-labor-pains.html> Because, as we all know,
12 chinese prostitutes are the best choice to make the things that keep our airplanes in the air and our cars on
13 the road. The silicon valley venture capital guys front these batteries because they have such cheap labor to
14 give them great profits.. quality control? not so much...”

15
16
17 Additional Mechanical Failures of the Tesla. Some could lead to lock-in during fire:

18 The Chevy Volt did a recall because of the lithium ion dangers and added extra steel, around the lithium
19 ion chamber but they had already acknowledged this danger by burying the lithium ion deep within
20 the body of the car without exposing it to the outside edges like Tesla does:

21 The following article (image below:) indicates that Tesla was in violation of federal law when it applied for
22 DOE funds, which required that a company was not about to go bankrupt. Musk, herein states that he WAS
23 about to go bankrupt when he applied. Additionally, he states that he front-loading his friends contracts to
24 grab all the federal cash at a bankruptcy. This seems to indicate that safety due diligence data was being
25 manipulated, along with federal law, on behalf of Tesla investors. This calls into question, all data has
26 submitted, or will submit, relative to honesty.
27
28

Exclusive: Tesla Model S charging system may have started garage fire –California fire dept

1
2 BYBERNIE WOODALL AND NORIHIKO SHIROUZU

3 (Reuters) – A fire department in Southern California said a garage fire may have been caused by an
4 overheated charging system in a Tesla Model S sedan, in the latest link between the top selling electric car
5 and the potential for fire.

6 While Tesla Motors Inc maintains that the fire was not related to the car or its charging system, the Orange
7 County Fire Authority said the Tesla-supplied charging system or the connection at the electricity panel on
8 the wall of the garage of a single-family home could have caused the fire.
9

10
11 “The fire occurred as a result of an electrical failure in the charging system for an electric vehicle,” said a
12 report by the fire authority, a copy of which was obtained by Reuters. The report also emphasizes that the
13 cause of the fire is unclear.
14

15
16 “The most probable cause of this fire is a high resistance connection at the wall socket or the Universal
17 Mobile Connector from the Tesla charging system” which was plugged into a 240-volt wall socket,
18 the report said.
19

20 The fire occurred on November 15 in Irvine, California. The possible link between the fire and the Tesla
21 Model S was not reported previously.
22

23
24 The garage fire is not related to three road fires in Model S sedans that occurred in October and November
25 and which caused Tesla’s stock to fall sharply last month. The road fires occurred in Washington state,
26 Tennessee and Mexico.
27

28 In the U.S. incidents, Model S sedans caught fire after running over road debris. In Mexico, a Model S

1 caught fire after striking a concrete wall. U.S. regulators are investigating the cause of the U.S. road fires,
2 which caused the high-flying stock of the “green” car maker to fall from a high of \$194.50 in late
3 September to under \$120 in late November. On Wednesday, Tesla shares fell 2.9 percent to close at \$147.98
4 on the Nasdaq. The November residential fire on the campus of the University of California-Irvine caused
5 \$25,000 of damage to the garage and its contents, but the Model S sustained only smoke damage, and no
6 one in the house was injured, according to the Orange County Fire Authority’s report.

7
8
9 A Tesla representative disagreed on Wednesday with some of the report’s findings. “We looked into
10 the incident,” said Tesla spokeswoman Liz Jarvis-Shean. “We can say it absolutely was not the car, the
11 battery or the charging electronics.”

12
13 She added: “The cable was fine on the vehicle side. All the damage was on the wall side. “A review of
14 the car’s logs showed that the battery had been charging normally, and there were no fluctuations in
15 temperature or malfunctions within the battery or the charge electronics,” said Jarvis-Shean.

16
17
18 The owner of the Model S, who lives at the Irvine residence, had parked the car in the garage the evening of
19 November 14, plugged the cord from the vehicle into the 240-volt wall socket, and set a timer to begin the
20 flow of electricity to the car’s on-board batteries at midnight. She noticed a fire just before 3 a.m. and
21 called for help. Fire crews put out the blaze quickly.

22
23
24 Some cardboard boxes stacked near the point of connection between the Tesla Model S charging system and
25 the connection to the 240-volt outlet helped the fire spread, the report said. (Reporting by Bernie Woodall
26 in Detroit and Norihiko Shirouzu in Beijing; editing by Matthew Lewis)

27 *- Questioning the validity of the German Tesla “Safety Report” from bribed reviewers*

2 *Hard to Take the German Absolution of Tesla Fires Seriously*

3 [NLPC ^](#) | By Paul Chesser

4 Following incidents in Washington state, Mexico and Tennessee, the National Highway Traffic Safety
5 Administration announced it would probe fires that occurred recently over a six weekperiod in Tesla
6 Motors' electric Model S.

7 And this week, as revealed in a Detroit News story, the NHTSA looks like they're serious – at least more
8 serious than Germany's transportation safety authority.

9 Why bring up Germany? Because as the regulatory heat bears down in the U.S. on Tesla and high-profile
10 CEO Elon Musk, they have trotted out the Eastern Europe nation to demonstrate that they've been absolved
11 of any culpability in the fires. The media that has mostly fawned over the electric automaker
12 helpfully amplified the development, which certainly Musk welcomed. He even got a slight recovery in the
13 company stock price as a result.

14 On Monday Tesla posted a press release that claimed the company received an inquiry from the German
15 Federal Motor Transport Authority about the three fires. While the NHTSA seems intent on conducting a
16 thorough investigation (I'll get to those details momentarily), the Germans have already wrapped up their
17 inquiry! The result: After Tesla provided "data and additional information" and the Germans "reviewed
18 Tesla's responses to their inquiries," they determined that "no manufacturer-related defects could be found.
19 Therefore, no further measures under the German Product Safety Act are deemed necessary."

20 Tesla posted a copy of the letter from the German Transport Authority – which is addressed to what appears
21 to be the company's local legal counsel – with the translation into English in the press release. Four things
22 beg for explanation:

- 23 • The letter is dated Nov. 27, which is only about three weeks after the most recent fire. Such
24 a rapid conclusion to an inquiry would seem to be a new record for governmental efficiency looking
25

1 into complicated, sensitive matters such as this.

2 • The letter references a phone call earlier in the day with the attorney. What was that
3 discussion about, that the Transport Authority immediately issued its exculpatory letter the same
4 day?

5 • Tesla blacked out the identity and contact information of the Transport Authority
6 representative who wrote the letter. Why?

7 • It's apparent the German authority depended only on limited information supplied to it by
8 Tesla ("According to the documents, no manufacturer-related defects could be found"). So it's hard
9 to give their "investigation" much credibility.

10 Compare that to what the US NHTSA is asking for. As the Detroit News reported Tuesday, the
11 safety agency has requested that Tesla turn over detailed records of all consumer complaints, field reports,
12 warranty claims and property damage claims related to the fires.

13 "Describe in detail all possible consequences to the vehicle from an impact to the subject component that
14 damages the battery," wrote NHTSA vehicle integrity chief D. Scott Yon. "Describe in detail how
15 these possible consequences were addressed in the design of the (Model S) and the limits of that design to
16 prevent damage to the propulsion battery, stalling and fires."

17 The newspaper reported that Yon also asked for the results of all Tesla's tests, studies, and investigations to
18 review the battery fires and the alleged defect, and information about whether Tesla made any changes to
19 the Model S to address the possible defect of roadway debris sparking fires in the battery packs. He also
20 wants detailed records of vehicles at the time of the incidents, owner contact information, and all
21 communication to owners or regional officers that the company plans to issue in the next four months.

22 The letter was dated November 27, and Tesla has until January 14 to respond. That's about 50 days just to
23 gather the information – more than twice as long as it took the Germans to collect, analyze and conclude
24 their "inquiry" that "cleared" Tesla.
25
26
27
28

1
2 Tesla has carefully controlled information that's been released about the fires, including statements from the
3 Model S owners. For the most part media reports have derived from these. It makes you wonder if there is
4 some sort of non-disclosure agreement between the company and its vehicle owners.
5

6 For example, in early October – shortly after the first fire in Kent, Wash. – Musk posted an essay on Tesla's
7 blog that explained how the Model S “struck a large metal object” that caused damage.
8

9
10 “A curved section that fell off a semi-trailer was recovered from the roadway near where the accident
11 occurred and, according to the road crew that was on the scene, appears to be the culprit,” Musk explained.
12 “The geometry of the object caused a powerful lever action as it went under the car, punching upward and
13 impaling the Model S with a peak force on the order of 25 tons. Only a force of this magnitude would be
14 strong enough to punch a 3-inch diameter hole through the quarter inch armor plate protecting the base of
15 the vehicle.”
16

17
18 Maybe so, but for all the physical explanations Musk has tried to present, no photos of the large metal
19 object have been produced. Nor are there any pictures – that are reasonably findable on the Web, at least –
20 of the tow hitch that was accused of causing the Model S fire in Tennessee. In such a hotly scrutinized case
21 you'd think Musk would be parading the evidence if it existed, but he hasn't.
22

23
24 In the same blog post Musk went to great lengths to argue a conventional gasoline powered car, in the same
25 circumstances, could have experienced a far worse fate.
26

27 “A typical gasoline car only has a thin metal sheet protecting the underbody, leaving it vulnerable to
28 destruction of the fuel supply lines or fuel tank, which causes a pool of gasoline to form and often burn the

1 entire cart to the ground,” he wrote.

2
3 But the crash data doesn’t support that. As Justin Hyde of Yahoo!’s automotive Web site Motoramic wrote
4 in early November, “Even though it has fewer electric cars on the road than its competitors (such as the
5 Chevy Volt or Nissan Leaf), none have reported similar fires after crashes. And while liquid-fueled vehicles
6 suffer about 170,000 such fires every year, federal data show they take place in only 0.1 percent of
7 all crashes.”

8
9
10 Tesla’s control freakishness is also reflected in how the Model S owners who were fire victims. Has
11 any independent journalist interviewed them? Below Musk’s blog post was a portion of an email exchange
12 between Tesla’s vice president for sales and service and Rob Carlson, the Washington driver. The VP’s
13 missive came off as a carefully crafted (lawyered?) explanation of how the fire occurred and that the Model
14 S’s safety protections “operated correctly.” In reply, Carlson supported Tesla’s response to the incident and
15 said, “I am still a big fan of your car and look forward to getting back into one.” Then he revealed that he is
16 an investor in Tesla – so certainly a critical response on his part would not have helped the value of the
17 shares he owns!

18
19
20 While not exactly tanking, Musk likely felt some anxiety (and investor pressure) when the company’s stock
21 dropped from almost \$200 earlier this year to about \$120 the last couple of weeks, after the fires. Publicly
22 Musk has said Tesla’s share price was overpriced anyway (he’s right), but at the same time, what executive
23 wants to see a rapid drop like he’s seen? Not a moment too soon, this week he discovered a way to turn the
24 German “inquiry” of the Model S fires into a Wall Street bump – the stock is up to almost \$139 this
25 morning.

26
27
28 As for the American investigation, time – and a serious examination – will tell whether Tesla needs to

1 revisit its Model S design or not. Before the fires NHTSA still gave it a top safety rating, which seemed
2 more like it was joining the irrational exuberance party rather than an accurate evaluation. The signs point to
3 the agency taking this a lot more seriously than the Germans did, but then again, this is the Obama
4 administration we're talking about, which has relentlessly protected and subsidized the electric vehicle
5 industry.

11 ***Samsung exploding Lithium ion Galaxy COVER-UP Expose proves Danger of Lithium ion!***

12 Lithium ion and Cover-Ups seem to go hand-in-hand. [Samsung tries to silence user whose S4 caught](#)
13 [fire, it doesn't go overwell](#)

14
15
16 Oh Samsung, you tried to have a YouTube video pulled after it showed a Galaxy S4 that caught fire while
17 charging but this is about to blow up in your PR and legal teams face after you sent a 'hush' document to
18 the user.

19
20 Here's the deal, YouTube user GhostlyRich posted a video on YouTube in early December that showed
21 that his Samsung Galaxy S4 caught fire while charging. While the battery did not explode (thankfully) you
22 can clearly see the charging port is burnt. To no surprise, a burnt charging point rendered the device useless
23 and seeing that the Phone is still under warranty, you would think Samsung would simply exchange the
24 device and make good with the consumer to fix the issue.

25
26 Wrong. What Samsung has done, foolishly, is sent the user a document saying that they will exchange his
27 defective device only after he pulls his initial video from YouTube. If Samsung was unaware of how the
28 Internet works, it's about to find out that trying to quiet the user will result in a black eye for the company.

1 Yes, we can understand why a company would want keep this type of incident quiet but anyone who has a
2 basic understanding of the Internet will tell you that once it's posted to the web, there is no way to delete it.
3 Sure, removing the video might keep it a bit quieter, but that would likely only raise more suspicion in the
4 long run with the followers of that YouTube channel.

5 Samsung has goofed up big time as the original YouTube video, at the time of this posting, had 45,000
6 views and the video showing the Samsung demand letter, well, it has over 277,000 views.

7 The video discussing the letter and the incident is posted above and is worth a watch. It goes to show
8 what Samsung will do anything to keep its S4 issues off the radar but in this case, it has completely
9 backfired. Not to mention that having to sign a contract to execute a warranty is borderline unethical for the
10 circumstances of this incident.

11 Additionally, the lithium ion in Apple iPad Tablets are exploding:

28 ***Hard to Take the German Absolution of Tesla Fires Seriously***

- by Paul Chesser

1
2
3 Following incidents in Washington state, Mexico and Tennessee, the National Highway Traffic Safety
4 Administration announced it would probe fires that occurred recently over a six week period in Tesla
5 Motors' electric Model S.

6
7
8 And this week, as revealed in a Detroit News story, the NHTSA looks like they're serious – at least more
9 serious than Germany's transportation safety authority.

10
11 Why bring up Germany? Because as the regulatory heat bears down in the U.S. on Tesla and high-profile
12 CEO Elon Musk, they have trotted out the Eastern Europe nation to demonstrate that they've been absolved
13 of any culpability in the fires. The media that has mostly fawned over the electric automaker
14 helpfully amplified the development, which certainly Musk welcomed. He even got a slight recovery in the
15 company stock price as a result.

16
17
18 On Monday Tesla posted a press release that claimed the company received an inquiry from the German
19 Federal Motor Transport Authority about the three fires. While the NHTSA seems intent on conducting a
20 thorough investigation (I'll get to those details momentarily), the Germans have already wrapped up their
21 inquiry! The result: After Tesla provided "data and additional information" and the Germans "reviewed
22 Tesla's responses to their inquiries," they determined that "no manufacturer-related defects could be found.
23 Therefore, no further measures under the German Product Safety Act are deemed necessary."

24
25
26 Tesla posted a copy of the letter from the German Transport Authority – which is addressed to what
27 appears to be the company's local legal counsel – with the translation into English in the press release. Four
28 things beg for explanation:

1 • The letter is dated Nov. 27, which is only about three weeks after the most recent fire. Such
2 a rapid conclusion to an inquiry would seem to be a new record for governmental efficiency looking
3 into complicated, sensitive matters such as this.

4 • The letter references a phone call earlier in the day with the attorney. What
5 was that discussion about, that the Transport Authority immediately issued its exculpatory letter the
6 same day?

7 • Tesla blacked out the identity and contact information of the Transport Authority
8 representative who wrote the letter. Why?

9 • It's apparent the German authority depended only on limited information supplied to it by
10 Tesla ("According to the documents, no manufacturer-related defects could be found"). So it's hard
11 to give their "investigation" much credibility.

12 Compare that to what the US NHTSA is asking for. As the Detroit Newsreported Tuesday, the
13 safety agency has requested that Tesla turn over detailed records of all consumer complaints, field reports,
14 warranty claims and property damage claims related to the fires.

15
16
17
18 "Describe in detail all possible consequences to the vehicle from an impact to the subject component that
19 damages the battery," wrote NHTSA vehicle integrity chief D. Scott Yon. "Describe in detail how
20 these possible consequences were addressed in the design of the (Model S) and the limits of that design to
21 prevent damage to the propulsion battery, stalling and fires."

22
23
24 The newspaper reported that Yon also asked for the results of all Tesla's tests, studies, and investigations to
25 review the battery fires and the alleged defect, and information about whether Tesla made any changes to
26 the Model S to address the possible defect of roadway debris sparking fires in the battery packs. He also
27 wants detailed records of vehicles at the time of the incidents, owner contact information, and all
28 communication to owners or regional officers that the company plans to issue in the next four months.

1
2 The letter was dated November 27, and Tesla has until January 14 to respond. That's about 50 days just to
3 gather the information – more than twice as long as it took the Germans to collect, analyze and conclude
4 their "inquiry" that "cleared" Tesla.

5
6 Tesla has carefully controlled information that's been released about the fires, including statements from the
7 Model S owners. For the most part media reports have derived from these. It makes you wonder if there is
8 some sort of non-disclosure agreement between the company and its vehicle owners.
9

10
11 For example, in early October – shortly after the first fire in Kent, Wash. – Musk posted an essay on Tesla's
12 blog that explained how the Model S "struck a large metal object" that caused damage.

13
14 "A curved section that fell off a semi-trailer was recovered from the roadway near where the accident
15 occurred and, according to the road crew that was on the scene, appears to be the culprit," Musk explained.

16
17 "The geometry of the object caused a powerful lever action as it went under the car, punching upward and
18 impaling the Model S with a peak force on the order of 25 tons. Only a force of this magnitude would be
19 strong enough to punch a 3-inch diameter hole through the quarter-inch armor plate protecting the base of
20 the vehicle."

21
22 Maybe so, but for all the physical explanations Musk has tried to present, no photos of the large metal
23 object have been produced. Nor are there any pictures – that are reasonably findable on the Web, at least –
24 of the tow hitch that was accused of causing the Model S fire in Tennessee. In such a hotly scrutinized case
25 you'd think Musk would be parading the evidence if it existed, but he hasn't.
26

27
28 In the same blog post Musk went to great lengths to argue a conventional gasoline powered car, in the same

1 circumstances, could have experienced a far worse fate.

2
3 “A typical gasoline car only has a thin metal sheet protecting the underbody, leaving it vulnerable to
4 destruction of the fuel supply lines or fuel tank, which causes a pool of gasoline to form and often burn the
5 entire car to the ground,” he wrote.

6
7
8 But the crash data doesn't support that. As Justin Hyde of Yahoo!'s automotive Web site
9 Motoramic wrote in early November, “Even though it has fewer electric cars on the road than its
10 competitors (such as the Chevy Volt or Nissan Leaf), none have reported similar fires after crashes. And
11 while liquid-fueled vehicles suffer about 170,000 such fires every year, federal data show they take place in
12 only 0.1 percent of all crashes.”

13
14 Tesla's control freakishness is also reflected in how the Model S owners who were fire victims. Has
15 any independent journalist interviewed them? Below Musk's blog post was a portion of an email exchange
16 between Tesla's vice president for sales and service and Rob Carlson, the Washington driver. The VP's
17 missive came off as a carefully crafted (lawyered?) explanation of how the fire occurred and that the Model
18 S's safety protections “operated correctly.” In reply, Carlson supported Tesla's response to the incident and
19 said, “I am still a big fan of your car and look forward to getting back into one.” Then he revealed that he is
20 an investor in Tesla – so certainly a critical response on his part would not have helped the value of the
21 shares he owns!

22
23
24 While not exactly tanking, Musk likely felt some anxiety (and investor pressure) when the company's stock
25 dropped from almost \$200 earlier this year to about \$120 the last couple of weeks, after the fires. Publicly
26 Musk has said Tesla's share price was overpriced anyway (he's right), but at the same time, what executive
27 wants to see a rapid drop like he's seen? Not a moment too soon, this week he discovered a way to turn the
28

1 German “inquiry” of the Model S fires into a Wall Street bump – the stock is up to almost \$139 this
2 morning.

3
4 As for the American investigation, time – and a serious examination – will tell whether Tesla needs to
5 revisit its Model S design or not. Before the fires NHTSA still gave it a top safety rating, which seemed
6 more like it was joining the irrational exuberance party rather than an accurate evaluation. The signs point to
7 the agency taking this a lot more seriously than the Germans did, but then again, this is the Obama
8 administration we’re talking about, which has relentlessly protected and subsidized the electric vehicle
9 industry.
10

14
15
16 *Deadly Smoke and Fumes. If the crash and fire don’t kill you now, the toxins in the deadly smoke*
17 *fumes kill you later.*

18
19 (See all that smoke in the TESLA fire, above? That smoke is filled with deadly toxins from burning
20 [lithium ion](#) combined with plastics. Why does Tesla say nothing about this in its buyer documents? See
21 all the cars stuck in traffic in the smoke plume? Do those innocent drivers, and their families, that have to sit
22 there, behind the fire and in the smoke, appreciate having to breathe in deadly vapors?
23

24 Per the IJES via the State School of Chemical Engineering and Technology of China:
25

26
27 New tests can see the cancer causing chemicals that got in your body from a Tesla fire from just two strands
28 of your hair or one drop of blood or one swab of saliva. You can’t hide product toxic poisoning anymore.

1 There are a vast number of MSDS disclosure forms and technical product documents from the feds, the
2 battery companies, the FAA, the TSA, the SME, The IEEE and tons of others say that “Lithium ion
3 batteries will explode and they will give off toxic gas”.

4 Why were the Tesla’s not equipped with carbon dioxide fire extinguishers as required? Why was a simple
5 sheet of soft metal placed between the explosives and a “thousands-of-pound-per-sq.-ft. impact surface”
6 (the road)? Was the car actually engineered or did Musk just doodle it out on the back of a napkin? You can
7 hit the edge or front of the car and it will go off. The reason “Elon Musk stands behind Tesla” is because
8 they usually blow up starting from the front.
9

10 Andrew- DC Group

11
12
13 ***THE TESLA COVER UP***
14

15
16 Lithium Ion goes boom when it gets wet, poked, charged, used or pretty much gets unhappy for no apparent
17 reason. All those car hulks, below, lined up next to each other are lithium ion electric piles of burned up
18 \$100K, per pile, cars, Nice huh? They are going to great lengths to cover that fact up:

19 Those images above show many different lithium ion electric car fires. Why is this being covered up? By
20 whom? So far, most Tesla’s have been acquired by Tesla Fan Boys and their own investors to pump up the
21 numbers. This has prevented a number of “thermal events” from getting reported.
22

23
24
25
26 ***Tesla “battery supply” problem - NOT. Battery explosion problem- YES.***
27

28 “The napalm-like lava that is burning lithium-ion, combined with burning Tesla plastic, can eat through

1 your entire face in about 2.5 seconds and it is nearly impossible to extinguish. This is not good stuff. They
2 tried it on pig-corpse, ugly results.

3 There are over 1000 different ways to store electricity. Lithium ion is the worst. The faster a car goes, the
4 more likely it is to crash and to flipover in a crash. Tesla is the fastest car so it will crash more and flip over
5 more. People that drive Tesla's are, generally, arrogant yuppie males with ego issues who want to go fast
6 and show off. That makes crashes even more likely. While you are driving around on a carpet of deadly
7 lithium ion, buried in the floorboards of the Tesla at your feet, and the car suddenly flips over, you are now
8 trapped under a ceiling of burning lithium ion that firefighters can't extinguish and your face burns off.

9 This is like flouridation of water controversy; this chemical was specified because a certain group is making
10 money off of this chemical. Over time, each battery has a higher and higher chance of "going off" because
11 the charging demands of a car combined with the degradation offset of a single lithium ion battery is high in
12 normal circumstances. Tesla uses them in extreme circumstances. They were never built for cars. You are
13 not going to see less Tesla fires, you are going to see more. Tesla has dense-packed 6800 lithium ion packs
14 in a closed metal box under your seat. That is 6800 chances of having your face burned off and 6800
15 chances of getting rained on with burning lithium ion and plastic, gassed out and burned up by the Tesla. I
16 don't like the odds. Look at some of these pictures on this site, it even melts the metal.
17
18

19
20 The people that are telling you "Lithium Ion is just a lovely thing, don't worry about all of those
21 scare stories" have a financial investment in batteries using this chemical. Almost all of them have worked
22 for, invested in or been hired by the people that make money off it. The form factor Tesla uses is a common
23 18650 battery you can buy on Amazon and Ebay so Tesla is not telling the truth about "having a battery
24 supply problem" in their latest financial reports. They are having a battery blow-up problem. Suppliers
25 won't sell them any batteries because they know Tesla abuses the batteries in the way they deploy them in
26 cars and they don't want to get sued too, along with the lawsuits that are coming after Tesla. These batteries
27 were never intended to be used in cars. All this has been known for decades. If the "biggest electric car
28

1 funding effort in history” hired the “greatest technical review team ever created”, how did this get by?
2 Why didn'tthe reviewers mention this for Tesla's 'loan'? This is not new technical information!”

3
4
5
6 NHTSA has now called Musk a Liar TWICE, said he lied about probe and liedabout NHTSA safety rating

7
8
9 The National Highway Traffic Safety Administration (NHTSA), whichproduced the safety rating, isn't
10 happy about Tesla's boasting.

11
12 In its announcement, Tesla explained that the Model S earned five-starmarks in every category; a rare feat.
13 On top of that, its overall Vehicle Safety Score, provided to manufacturers, gave it a “newcombined record
14 of 5.4 stars.”

15
16
17 In a statement on its website, the NHTSA issued a rebuke to Tesla:

18 “NHTSA does not rate vehicles beyond 5 stars and does not rank or ordervehicles within the star rating
19 categories. In addition, the agency has guidelines in place for manufacturers and advertising agencies
20 tofollow to ensure that accurate and consistent information is conveyed to thepublic.”

21
22
23 <http://www.businessinsider.com/nhtsa-tesla-didnt-request-investigation-2013-11>

24
25 <http://www.businessinsider.com/government-mad-at-tesla-over-safety-claim-2013-8>

26
27 Reporters use a new technology called: FACTS, to recall that only just the other day Musk was screaming
28 in thepress that “no recall” and “no probe” was needed, yet today he says he has secretly been demanding

1 that NHTSA do a probe. Hmmmmm?Interesting!

2
3
4
5 Bloomberg, Guardian and Reuters staff have now spoken with NHTSA staff, including the head: David
6 Strickland, who have said, on record, that Tesla did NOT request probe and that it would be
7 “unprecedented” for any car company to request a liability probe like that. Another Musk lie to his
8 investors. Both the lie and the counter, published and on the record. NHTSA said it had already had
9 concerns about Tesla prior to any calls from Tesla or Tesla’s investors. Previous communications had been
10 from Tesla backers and Senators (Who Tesla investors already had in their pockets) saying “don’t do a
11 probe”! Another P.T. Barnum “smoke-screen” move by Musk. Musk tried to take credit for creating Tesla
12 even though Martin Eberhard created Tesla. Musk tried to take credit for creating the probe even though the
13 feds had it already going. Musk tried to take credit for inventing electric cars even though GM and others
14 did it decades earlier. Musk changed the NHTSA safety results and got caught lying about that too. Musk
15 tried to take credit for creating the HyperLoop even though MIT created it 9 years earlier. What’s up with
16 this douche bag?

25 Tesla: Unsafe At Any Speed, Unethical at Inception.
26

27 If I read all of the posts and articles on this page I get:
28

1 “Tesla seems to have been used to provide kickbacks to [lithium ion](#) investors in exchange for politics and
2 those investors may, or may not, have known that lithium ion blows up, on its own, way more often than
3 gasoline. When it does blow-up, alongwith the plastics and metals of the car, the toxic smoke and vapors
4 can lead to a slow death of the occupants and bystanders. The Tesla batteries were not made for cars and
5 when they are made, the workers who make them become very ill orfatally ill. There are plenty of electric
6 cars available, today, from othercompanies. Tesla was not the first or the last and has led no wave of
7 innovation that was not already in place decades earlier. Tesla staff and bundlers bribed Washington DC
8 officials to get taxpayer money and fake stock market positioning for abillionaire. They deserve no
9 applause. Almost all of the “Tesla fanboy Hype ” is Tesla’s own hired bloggers, and investors, run out of
10 Fremont,creating fake buzz by operating as thousands of fake social media accounts.”

11
12
13 Does that about sum it up?
14
15
16
17

18 EACH of those electric Fisker cars, in the photos above, blew up as they sat there when their lithium ion
19 got wet in a storm. Lithium Ion blows up justfrom getting wet (or overcharged or banged). The cars, in the
20 photos above, were not all brought there, and put together, after they blew up. They just blew up sitting in
21 the parking lot waiting to get delivered tocustomers. That is a picture of dozens and dozens of VERY
22 expensive cars thatwere being used as a scam to sell this chemical called “lithium ion” that campaign
23 financiers had a near monopoly on. It was a kickback deal. Due Diligence was done, but ordered to be
24 ignored, in order to shoveas much cash out the door, and in their pockets, before they got caught.
25
26

27 Here is another one, below, the owner just ran into the grocery store and BOOM the lithium ion batteries in
28 his \$100K+ lithium ion electric super car just blew up, taking the tree and the car next to it out:

TESLA PATENTS, FILED WITH FEDS, SHOW MUSK KNEW CARS WERE UNSAFE!

TESLA knew their car was unsafe and says so in their own patent filings. This, alone, says Musk was lying. The extreme military tank-type “ballistic shield” measures called for in their patent, below, are shocking proof that they knew how awful lithium ion is the way they use it. In another Tesla patent, Tesla says, in THEIR words filed with the feds: “Thermal runaway is of major concern since a single incident can lead to significant property damage and, in some circumstances, bodily harm or loss of life. When a battery undergoes thermal runaway, it typically emits a large quantity of smoke, jets of flaming liquid electrolyte, and sufficient heat to lead to the combustion and destruction of materials in close proximity to the cell. If the cell undergoing thermal runaway is surrounded by one or more additional cells as is typical in a battery pack, then a single thermal runaway event can quickly lead to the thermal runaway of multiple cells which, in turn, can lead to much more extensive collateral damage. Regardless of whether a single cell or multiple cells are undergoing this phenomenon, if the initial fire is not extinguished immediately, subsequent fires may be caused that dramatically expand the degree of property damage. For example, the thermal runaway of a battery within an unattended laptop will likely result in not only the destruction of the laptop, but also at least partial destruction of its surroundings, e.g., home, office, car, laboratory, etc. If the laptop is on-board

1 an aircraft, for example within the cargo hold or a luggage compartment, the ensuing smoke and fire may
2 lead to an emergency landing or, under more dire conditions, a crash landing. Similarly, the thermal
3 runaway of one or more batteries within the battery pack of a hybrid or electric vehicle may destroy not
4 only the car, but may lead to a car wreck if the car is being driven or the destruction of its surroundings if
5 the car is parked.”

6
7 Plus this other Tesla patent which says you need to, essentially, be in a military tank to drive a Tesla safely.
8 Patent calls for “Ballistic Shielding” to keep drivers & passengers alive !!!!:

16
17
18 Per SME, lithium ion has blown up in products over 2000 times more often than any other energy storage.

19
20 Lead acid batteries, gasoline, hydrogen, nickel metal hydride, and all other product energy storage
21 technologies COMBINED have NOT blown up as much as lithium ion has gone thermal in cars, airplanes,
22 cell phones, computers, datacenters, tablets, backup power systems and other systems. People have died in
23 some of these incidents. Planes have crashed. Homes have been set on fire. People have been horribly
24 burned. It is not OK to let lithium ion investors buy the news media and shut down the articles about these
25 dangers.

Please Send This open letter to the German Federal Motor Transport Authority, or Kraftfahrt-Bundesamt (KBA):

Regarding: Your recent Tesla “safety declaration”.

Dear German Federal Motor Transport Authority:

It is quite surprising to hear that your organization has declared the Tesla completely safe without engaging in full due diligence. It makes it appear like someone got bribed. We certainly hope that Deutsche Bank staff’s substantial positions in Tesla held no bearing. We see that Deutsche Bank staff were just indicted for massive securities fraud and we hope that is just a coincidence.

Numerous organizations and experts have provided data showing that the car is not safe. The statistics, historical facts about lithium ion, and actual evidence point to the opposite conclusion. Many websites, including: <http://lithium-ion.weebly.com> and others provide rather contrary evidence. Tesla’s own patent documents state that the car is not safe. The Chevy Volt was recalled for far less battery issues with lithium ion.

There are over 200 safety concerns that can be provided to you in a documented report. America has not even started their safety investigation and has requested a deep set of technical documents from Tesla. Did

1 youragency request such documents?
2

3 The members of the public hereby request publication of the identities of the reviewers, themethods and
4 analysis methods they employed, the read-out of their data and the conclusive, specific data that the
5 research was basedupon. Here is a link to a much more overt investigation you might want toreview:

Samsung exploding Lithium ion Galaxy COVER-UP Expose proves Danger of Lithiumion! Lithium ion and Cover-Ups seem to go hand-in-hand. Samsung tries to silence user whose S4 caught fire, it doesn’t go overwell

Brad Sams 08 December 2013

Oh Samsung, you tried to have a YouTube video pulled after it showed a Galaxy S4 that caught fire while

1 charging but this is about to blow up in your PR and legal teams face after you sent a 'hush' document to
2 the user.

3
4 Here's the deal, YouTube user GhostlyRich posted a video on YouTube in early December that showed
5 that his Samsung Galaxy S4 caught fire while charging. While the battery did not explode (thankfully) you
6 can clearly see the charging port is burnt. To no surprise, a burnt charging point rendered the device useless
7 and seeing that the Phone is still under warranty, you would think Samsung would simply exchange the
8 device and make good with the consumer to fix the issue.
9

10
11
12
13 Wrong. What Samsung has done, foolishly, is sent the user a document saying that they will exchange his
14 defective device only after he pulls his initial video from YouTube. If Samsung was unaware of how the
15 Internet works, it's about to find out that trying to quiet the user will result in a black eye for the company.
16

17
18 Yes, we can understand why a company would want keep this type of incident quiet but anyone who has a
19 basic understanding of the Internet will tell you that once it's posted to the web, there is no way to delete it.
20 Sure, removing the video might keep it a bit quieter, but that would likely only raise more suspicion in the
21 long run with the followers of that YouTube channel.
22

23
24 Samsung has goofed up big time as the original YouTube video, at the time of this posting, had 45,000
25 views and the video showing the Samsung demand letter, well, it has over 277,000 views.
26

27 The video discussing the letter and the incident is posted above and is worth a watch. It goes to show
28 what Samsung will do anything to keep its S4 issues off the radar but in this case, it has completely

1 backfired. Not to mention that having to sign a contract to execute a warranty is borderline unethical for the
2 circumstances of this incident.

3
4
5
6 Germany Clears Tesla Of Fire Probe...????? Was it a real probe?

7 Tue Dec 3, 2013

8
9 (Business Insider) The German Federal Motor Transport Authority, Kraftfahrt-Bundesamt (KBA) has
10 concluded an investigation into three recent Tesla Model S fires and found “no manufacturer-related
11 defects,” Tesla said today.

12
13 In a press release, Tesla said it provided the KBA with relevant data on the accidents, and received a letter
14 saying “no further measures under the German Product Safety Act [Produktsicherheitsgesetz (ProdSG)] are
15 deemed necessary.”

16
17
18 In November, the National Highway Transportation Safety Administration (NHTSA) opened an
19 investigation into the three fires. Tesla said it has “requested” the process, but NHTSA Administrator told a
20 House panel that was untrue, according to The Detroit News.

21
22 That investigation is ongoing, but at least the Germans have been placated.

23
24
25 If you woke up this morning and read this, as I did, upon seeing TSLA up 6% before the open and my puts
26 reversing lower on this “news”, you could be forgiven if your first impression was, “when the hell did
27 Germany open an investigation?”

1 You see, I remember being told about the investigation being conducted by the NHTSA, the US based auto
2 safety agency. I remember they opened an investigation following three fires, two of which occurred in the
3 US, and the remaining one in Mexico. Barely a few weeks ago...

4
5 But it's funny, as I don't recall there ever being an announcement of a German investigation. It must have
6 got lost under the Blankenship resignation announcement.

7
8
9 In fact, swinging over to Tesla's Investor Press Releases – it's astounding – but it seems completely devoid
10 of any bad news at all. Not even a mention of the US based investigation, much less a German one, or a
11 peep about the VP of sales leaving the company.

12
13 Meanwhile, in the real world, real men and women are throwing their money into this company, shaking off
14 oversold conditions on a hard bounce. And class action lawsuits are raining from the sky. I've mostly been
15 thinking those lawsuits were warrantless before now, but if this is how Tesla handles communications, I'm
16 not so sure.

17
18
19 This isn't a game, people.

20
21 Mr. Cain Thaler

22 Stock advice in actual English.

23
24
25
26
27 If GM had to do a recall for a potential thing, why didn't Tesla have to do one for an actual thing? (Hint:
28 Bribes)

1
2 “GM to Call Back 8,000 Chevrolet Volt to Strengthen Battery Pack

3
4 Michael Graham Richard

5 Transportation / Cars @ Treehugger

6
7
8 The saga continues! After some Chevy Volt battery fire issues during testing and GM offering Volt owners
9 to buy back their cars or loan them replacements, we learn that that GM has decided to not take any
10 chances; it is supposedly about to announce a call back of 8,000 Volt electric cars.

11
12 The Associated Press only writes: “A person briefed on the matter says General Motors will ask Volt
13 owners to bring their electric cars into dealers to strengthen the structure around the batteries.” We should
14 have more details later today, but if you own a Volt, expect to be contacted by your dealer and to have to
15 bring them your car for some strengthening of the structure protecting the battery pack.”

16
17 ####

18
19 See image below. Even though Chevy Volt batteries are contained deep within the body and chassis of the
20 car, GM still had to do a recall to cover the lithium ion batteries up in even more steel. Tesla [lithium ion](#)
21 batteries are fully exposed at the edges and bottom of the car. It should not be possible for NHTSA to NOT
22 require a recall unless someone is paying someone off. Is Musk “Convinced there will be no recall”
23 because Rahm told him so?
24

25
26
27
28 (C) GM

1
2 The Tesla Battery pack has TONS more impact points than a Chevy Volt, Nissan Leaf or other car. It has
3 less shielding density per Lithium Ion Square inches than any car. The batteries are very close to the edge
4 and exterior of the car without protection equal to the known, and calculated, destruction potential. That is
5 why Tesla's blow up more often:
6

7
8 The Tesla battery box wall is a mere breath away from a deadly road surface moving with tremendous force
9 and the lower edge of the car where an impact is most likely to occur. Thousands of pounds of shock force
10 will instantly do things to those batteries that will be: Awesome in a frightening and fire-explosion kinda
11 way.
12

26 _____
27 Incriminating New Evidence!

28 Corporate testing videos have now been uncovered showing mice in a glass box exposed to a single burning

1 Tesla Lithium ion cell and then exposed to a single burning Tesla Lithium 2 inch ionbattery with a section
2 of Tesla car body plastic and metal burning. After the horrid results, the mouse bodies were tested for
3 toxins. Needless to say, none of the results were good. U.S. Government MSDS documents reveal the toxic
4 vapor danger from these batteries was fully documented outside of DOE, yet never discussed by staff.
5 Federal MSDS documents, from multiple federal agencies, specifically state that the Tesla lithium ion
6 batteries are deadly toxic when burning.

22
23 Tesla Batteries Act Like Solid "rocket fuel" when they ignite!
24
25
26

27 As of 11/6/2013 Tesla had said there were only 3 fires, yet social mediashows there were many more fires.
28 Those other fires have been documented in photos and videos and Elon Musk has said he has tracking chips

1 on all of the cars so Tesla had to have known about all of the otherfires. The reality of the documentation
2 and the statements from Tesla seem to clearly show a cover-up. Lithium ion in a metal box burns like solid
3 rocket fuel when it gets going in a fire. Musk would have known this since he started SPACE X: A rocket
4 company! (Which keeps having technical failures)

1
2 Bad Engineering

3
4 It was an idiotic move to use thousands of lithium ion consumer flashlight-type batteries, that were never
5 made to be used in a car, to create an entire bed of toxic explosive material and put it just a hair breadth
6 away from a surface that can puncture, explode and inflame it. That surface, the road, is trying to puncture,
7 bump, and destroy the undercarriage, of every car, every inch of every mile of every road across the
8 country. Also, the batteries are so close to almost all of the outside edges of the car, that puncture damage in
9 a crash is certain. They decided to CHEAP OUT with the flashlight batteries yet they charge buyers insane
10 amounts of money for a car with a growing list of technical failures. What were these people thinking?

21 Understanding Tesla's Life Threatening Battery Decisions

22
23 SEEKING ALPHA- John Peterson

24
25 Nov 22 2013

26
27 In the last couple of months, electric cars from Tesla Motors (TSLA) have had three collision-related
28 battery fires that were widely covered by the media. Last week, the NHTSA decided to conduct a formal

1 investigation of these incidents. While Tesla's CEO Elon Musk immediately went on the offensive arguing
2 that Tesla's BEVs have a lower fire risk than gasoline powered cars, the question an increasing number of
3 investors are asking is "Why has Tesla had three battery fires in a fleet of 17,000 BEVs while Nissan hasn't
4 had any fires in its fleet of over 90,000 BEVs?" The answer is simple. Tesla's battery decisions significantly
5 increased battery risks for both the customer and the company. MORE...

11 Musk Claim of Fewer Tesla Fires Questioned in MIT Report

12 Bloomberg

13
14 By Angela Greiling Keane & Jeff Green

15
16
17 Tesla Motors Inc. (TSLA) cars have caught fire caused by collisions more often than gasoline-powered
18 vehicles, according to a Massachusetts Institute of Technology report rebutting assertions by Elon Musk, the
19 electric-car maker's chief executive officer.

20
21 Because only 4 percent of vehicle fires are caused by collisions, Tesla's Model S sedan, with a
22 rechargeable lithium-ion battery, is statistically more likely to catch fire than are cars with gasoline tanks,
23 wrote Kevin Bullis, senior editor for energy for MIT Technology Review.

24
25

iPad air explodes in Australia, fire department had to be called in to contain the smoke Posted by Stefan Constantinescu on Nov 08, 2013 | No Comments »

iphonehacks.com/2013/11/ipad-air-explodes-australia-fir...

What kind of battery did they put in the Apple iPad AIR?

LITHIUM!!!!!!!!!!

Randy Oates- DC

TESLA MATH:

If one IPAD can take out a whole store and a Tesla has the equivalent of thousands of IPAD batteries in each car, how many homes in your neighborhood can a Tesla take out?

I want my neighbor to keep his Tesla at the office. Musk has made a big point out of saying, in recent interviews, that the new fires were not “spontaneous” thereby admitting he knows that Lithium Ion CAN go off spontaneously like it did in the Boeing planes and with many other electronics in the last 10 years.

WATCH THIS VIDEO OF A TESLA BURNING AND BLOWING UP BECAUSE OF BATTERY UNHAPPINESS.

<http://m.digitaltrends.com/cars/second-tesla-model-s-catches-fire-critical-crash-mexico/>

“Is the beginning of an onslaught of fiery Tesla Model S wrecks?”

A second Tesla Model S reportedly caught fire last week after crashing through a concrete wall in Mexico.

According to Mexican paper Progreso Hoy (by way of Business Insider), a Model S owner was speeding when he lost control of the car and went through a concrete wall and then into a large tree.

You can see the resulting fire in the video below.

The man was apparently not seriously injured and walked away from the incident.

Here is an official recount from Tesla:

“We were able to contact the driver quickly and are pleased that he is safe. This was a significant accident where the car was traveling at such a high speed that it smashed through a concrete wall and then hit a large tree, yet the driver walked away from the car with no permanent injury. He is appreciative of the safety and performance of the car and has asked if we can expedite delivery of his next Model S. The first reported Model S fire occurred earlier this month when a Washington State driver struck an object in the road, which caused a fire in the front portion of the car, beneath the carpeted trunk area. It appears the Mexican Model S fire also began in the forward section of the car.” ”

Manu Fs. – Obsido

The Lithium ion profiteering scam. Dump, grab the money and run.

1 FISKER lithium Ion batteries burst into flames at the drop of a hat. This is now well-known. Tesla and
2 Fisker funding with tax dollars was more about funding battery company deals for their investors than
3 anything else. Lithium Ion Batteries blow up in Boeing's, Tesla's and they just blow up. That is why TSA
4 does not allow liquid on airplanes. That is why AT&T eliminated Lithium Ion in its server racks.
5 EVERYBODY knows that lithium ion blows up and releases deadly chemicals, why is this cover-up still
6 going on? Oh, I See: Profits and kickbacks!

7
8
9
10
11 Everyone was warned about this. Over 100 published reports from major universities and federally funded
12 studies have now been sourced and posted showing that this had been guaranteed to happen by some of
13 the top scientists in the world prior to Tesla receiving DOE money. Who owns all these battery companies?
14 Watch for the WESTON REPORT from a major Huffington Post Journalist which links every investor in
15 TESLA to all of their political connections and influences. Invest in Tesla and you will get tracked by
16 numerous investigative reporters.

Tesla shares slip more on reports of third fire, other car problems

By Jerry Hirsch- LA Times

November 7, 2013

By Jerry Hirsch November 7, 2013, 8:39 a.m.

Tesla Motors shares continued to fall Thursday as the automaker confirmed a third fire in one of its high-end electric cars and a major auto reviewer pointed out problems with its Model S luxury hatchback.

1 The 9%, or \$13.40, decline in mid-morning trading to \$137.76 followed a 15% plunge in the shares
2 Wednesday after the automaker said limited supplies of batteries were hampering sales and that it was
3 spending heavily on research and development to design new models. Tesla shares have been on a run for
4 most of the year, rising about 400% before this reversal.

5
6 Car shopping website Edmunds.com said its 2013 Model S was “making an ominous noise
7 under acceleration and deceleration. It originates from the rear of the car and seems to be getting worse.”
8

9
10 It is a complaint that’s also starting to show up on Tesla’s owners forum, an online discussion group hosted
11 by the automaker for drivers of its cars.

12
13 “Mine had that and it got bad at 70 mph,” said one owner, posting under the “mortgagebruce” moniker.
14

15
16 He said Tesla had to replace the drive unit twice to fix the problem.
17

18 Tesla also replaced the drive unit on the Edmunds car, but declined to tell the company what caused the
19 problem. It also replaced the driver door mechanism because of another problem. The car has just less than
20 11,000 miles on the road.
21

22
23 “We’re not sure what to think about the fact that both of these repairs were completed with just one
24 overnight stay,” said Mike Schmidt, Edmunds’ vehicle testing manager. “Maybe the dealer is really on the
25 ball. Maybe the supply chain is short. Or maybe the parts are readily available because they’ve seen these
26 before.”
27

28 Tesla spokeswoman Liz Jarvis Shean said she was not familiar with the Edmunds complaint.

1
2 Meanwhile, another Model S electric car caught fire Wednesday near Smyrna, Tenn., following a crash.

3 This was the third Model S to have caught fire in the last five weeks. One burned near Seattle and another in
4 Mexico. Both cars were in crashes and the fires injured no one.

5
6 Normally, car fires are not significant events that influence investors. There are about 150,000 annually,
7 according to the National Fire Protection Assn. However, safety officials have been tracking fires in
8 electric cars, as well as computers and other equipment, out of concern that the lithium-ion battery systems
9 might be fire-prone.
10

11
12 Earlier this year, federal regulators grounded Boeing 787 planes for four months after batteries on two
13 planes overheated, with one catching on fire. Boeing later ordered modifications to the jets to increase
14 ventilation and insulation near the batteries, but the company and investigators never determined the root
15 cause of the overheating.
16

17
18 The National Highway Traffic Safety Administration reviewed the Tesla fire in Seattle and concluded it
19 was caused by the accident rather than a vehicle defect.
20

21 Tesla said it contacted the driver of the car in Tennessee and noted he was not injured and “believes the car
22 saved his life. Our team is on its way to Tennessee to learn more about what happened in the accident.”
23

24
25 “The problem is that we have three fires in six weeks,” said Karl Brauer, senior analyst at Kelley Blue
26 Book, the car information company. “For a company with a stock price based as much or more on image
27 than financials, those recurring headlines are highly damaging.”
28

1 The Palo Alto automaker said Tuesday it posted a loss of \$38.5 million, or 32 cents per share, in the third
2 quarter. That compares to a loss of \$110.8 million, or \$1.05 per share, in the same period a year
3 earlier. Now that it is delivering cars, revenue grew to \$431 million from just \$50.1 million a year earlier.

October 2, 2013, 4:27 PM

Tesla Motors Inc. TSLA shares tanked after a video of a Model S on fire circulated on the web, prompting the electric car company to move quickly to douse the flames of bad publicity.

Elizabeth Jarvis-Shean, director of global communications at Tesla, confirmed that the vehicle engulfed in flames was indeed a Tesla but stressed that the driver walked away without injuries.

Tesla Issues Statement On Fiery Car Crash That Caused The Stock To Tank

 Mamta Badkar Oct. 2, 2013, 3:45 PM 13,469 11

tesla

Aj Gill via YouTube

Tesla's stock was down over 7% to a low of \$175.40 today, but pared some of its losses to close down 6.24% at \$180.95.

1
2 It appears that shares began to tumble in the last half hour on reports that a Tesla Model S car caught fire
3 on Washington State Route 167.

4
5 Some speculated that the video highlights problems with the car's battery. Though others rushed to point out
6 that the battery is located in the back of the car.
7

8
9 -----
10
11 **"Media finds that "Safety Investigators" (read "SHILLS") are bribed by VC's and lithium holding**
12 **companies to say "nothing to see here", "lithium batteries are probably ok". Beware of NTSB**
13 **"consultant's" and "investigators" who are being bribed, offered after-politics high pay jobs, called**
14 **up by bribed congressional staff with "suggestions", given sports tickets, handed stock in certain**
15 **ventures and other bribes. Many of the "investigators" need to be put under investigation**
16 **themselves!!!! When you see an investigator talking about how lithium ion is a wonderful thing,**
17 **investigate them!"**
18

19
20
21 The following are a variety of quotes, from across the web, demonstrating the critical nature of this public
22 safety issue:
23

24
25
26 "Lithium ion batteries are blowing up, starting fires and, generally, destroying people's homes, cars,
27 electronics and physical health. Boeing was
28 just ordered to stop flying the 787 Dreamliner because it's Lithium ion batteries are catching fire

1 spontaneously."

2
3 "A group of silicon valley venture capitalists forced/leveraged the government to buy and pay for these
4 specific batteries, that they have stock in, in order to benefit their profit margins. Other batteries don't have
5 these problems. They knew about this from day one but put greed ahead of safety. There are thousands and
6 thousands of reports of spontaneous lithium ion fires but the VC's who back lithium ion pay to keep
7 this information hushed up.

8
9 Millions of these batteries have been recalled for fire risk. The VC's tried to push as many as they could
10 before they got caught. Now they are caught. These VC's own stock in lithium mining companies too."

11
12 "Here is the Fisker Karma after it got wet and the batteries blew up. These batteries blow up JUST FROM
13 GETTING WET! ALL of these burned up hulks are brand new \$100,000.00+ cars that just blew up and
14 torched everything around them just because they got wet! How bad do you want a Fisker or Tesla now?
15 Fisker's insurance company is balking at paying for this saying: "You knew this would happen".
16

17
18 These links show vast sets of Fisker electric cars that burst into flames just because they GOT WET:

19 <http://updates.jalopnik.com/post/34669789863/more-than-a-dozen-fisker-karma-hybrids-caught-fire-and>

28

1 <http://www.carbuzz.com/news/2012/11/1/Karmas-Ignite-After-Hurricane-Floods-Newark-Port-7711437/>

2 There are vast sets of other links proving the point.

3
4 TESLA BATTERIES EXPLODE INTO FLAMES ON PUBLIC ROAD

5
6 **Look at this: We were just sent a link that our website showed up in this movie:**

7 Here is another link to the movie at: <http://tinypic.com/r/7295hs/6>

8
9
10
11 HERE IS THE BATTERY YOU COULD HAVE BEEN SITTING ON TOP OF IN A TESLA

12
13 THIS IS THE TESLA MAGIC CARPET OF DOOM. THIS WHOLE THING IS FULL OF
14 LITHIUM. YOUR WHOLE FAMILY IS SUPPOSED TO SIT ON TOP OF THIS!!!

15 TESLA HAS TO TEST THEIR BATTERIES IN a **BLAST CHAMBER!!!!!!!**:

16
17
18 IF TESLA SAYS THIS THING IS SO SAFE WHY DO THEY TEST IT IN A STEEL
19 ENCLOSED EXPLOSION ROOM WITH WIRES COMING IN THROUGH BLAST HOLES!!!!???????

20 **"TESLA ELECTRIC CARS HAVE 6800 CHANCES OF "GOING THERMAL".**

21 **"TESLA ELECTRIC CAR BATTERIES ARE MORE LIKELY TO BLOW UP." SAYS**
22 **STANFORD ENGINEER, "USING LITHIUM ION IN AN ELECTRIC CAR DOUBLES THE**
23 **CHANCES IT WILL EXPLODE OR GO THERMAL BECAUSE AN ELECTRIC CAR PUSHES**
24 **IT FURTHER THAN ANYTHING ELSE. BOEING HAD MANY SAFETY CIRCUITS AND EVEN**
25 **THOSE FAILED. THERE IS NO WAY THE TESLA SAFETY CIRCUITS WILL NOT**
26 **EVENTUALLY FAIL"**

1 "Tesla Electric cars have 6800 lithium ion batteries wedged into a box. This can create a repercussive
2 thermal event that can set the whole car off. The TESLA 18650 batteries can be seen exploding in
3 multiple YOUTUBE videos. It is NOT TRUE that they are "an entirely different battery" they are **the same**
4 chemical compound that blows up."

5
6 "A direct quote from **Tesla's patent application**, below. Tesla KNEW this was going to happen and never
7 adequately warned anybody. Tesla wrote these words in the federal papers they filed yet they never showed
8 these words to any buyers :

9
10
11 *"Thermal runaway is of major concern since a single incident can lead to significant property damage and,*
12 *in some circumstances, bodily harm or loss of life. When a battery undergoes thermal runaway, it typically*
13 *emits a large quantity of smoke, jets of flaming liquid electrolyte, and sufficient heat to lead to*
14 *the combustion and destruction of materials in close proximity to the cell. If the cell undergoing thermal*
15 *runaway is surrounded by one or more additional cells as is typical in a battery pack, then a single thermal*
16 *runaway event can quickly lead to the thermal runaway of multiple cells which, in turn, can lead to much*
17 *more extensive collateral damage. Regardless of whether a single cell or multiple cells are undergoing this*
18 *phenomenon, if the initial fire is not extinguished immediately, subsequent fires may be*
19 *caused that dramatically expand the degree of property damage. For example, the thermal runaway of a*
20 *battery within an unattended laptop will likely result in not only the destruction of the laptop, but also at*
21 *least partial destruction of its surroundings, e.g., home, office, car, laboratory, etc. If the laptop is on-board*
22 *an aircraft, for example within the cargo hold or a luggage compartment, the ensuing smoke and fire may*
23 *lead to an emergency landing or, under more dire conditions, a crash landing. Similarly, the thermal*
24 *runaway of one or more batteries within the battery pack of a hybrid or electric vehicle may destroy not*
25 *only the car, but may lead to a car wreck if the car is being driven or the destruction of its surroundings if*
26 *the car is parked."*
27
28

1
2 **"WTF!!!!!!**

3
4 **Tesla's own staff have now admitted that once a lithium ion fire gets started in one of their cars, it is**
5 **almost impossible to extinguish burning lithium ion material. This is Telsa's own words in THEIR**
6 **patent filing, (You can look it up online) saying that the risk is monumental. Tesla has 6800 lithium**
7 **ion batteries, any one of which can "go thermal" and start a chain reaction! If you look at all of the**
8 **referenced YOUTUBE movies you will see how easy it is to set these things into danger mode."**

9
10
11 **"Imagine a car crash with a Tesla where these 6800 batteries get slammed all over and then exposed**
12 **to rain, fire hose water, water on the roads, cooling system liquid.. OMG!! And then if, in that same**
13 **accident the other car is a gasoline car... getting burned alive sounds "BAD"! Telsa is covering up the**
14 **problems with its batteries."**

15
16
17 **"Lithium ion batteries have already crashed a UPS plane and killed people. Look here:**

18 [http://washingtonexaminer.com/dreamliner-fires-spark-new-doubts-about-a-green-energy-](http://washingtonexaminer.com/dreamliner-fires-spark-new-doubts-about-a-green-energy-technology/article/2519353)
19 [technology/article/2519353](http://washingtonexaminer.com/dreamliner-fires-spark-new-doubts-about-a-green-energy-technology/article/2519353) "

20
21 **More Lithium Ion Battery disasters:** [http://www.forbes.com/sites/petercohan/2013/01/24/is-787s-](http://www.forbes.com/sites/petercohan/2013/01/24/is-787s-lithium-ion-battery-hazardous-to-boeings-health/)
22 [lithium-ion-battery-hazardous-to-boeings-health/](http://www.forbes.com/sites/petercohan/2013/01/24/is-787s-lithium-ion-battery-hazardous-to-boeings-health/)

23
24
25 [AS A DEMONSTRATION OF HOW DANGEROUS LITHIUM IS, NASA IS GOING TO MAKE](#)
26 [IT BURN IN OUTER SPACE:](#)

27 ["If you're along the Eastern Seaboard tonight, it might be worth your while to look at the sky this evening.](#)

28 [NASA's Wallops Flight Facility is scheduled to launch a sounding rocket that will release "two red-colored](#)

1 lithium vapor trails in space."

2
3 As Space.com reports, those trails might be seen across the Mid-Atlantic and perhaps as far north as
4 Canada and as far south as

5 northern Florida. Space.com explains how these trails will produce a "night sky show:"

6 "The sounding rocket that will be used to create the two NASA-made glowing cloud trails will be a Terrier-
7 Improved Orion. In this technology test launch, two canisters in the rocket's payload section will contain
8 solid metal lithium rods or chips

9 embedded in a thermite cake. The thermite is ignited and produces heat to vaporize the lithium.

10
11
12 "Once the vapor is released in space, it can be detected and tracked optically. The rocket will eject two
13 streams of lithium which will be illuminated at high altitudes by the sun (which will be below the local
14 horizon at ground level)."

15
16
17 In a statement, mission project manager Libby West said the launch is a testflight for two upcoming
18 missions. It'll give scientists a view of two different methods for creating lithium vapor trails. By the way,
19 NASA says the "lithium combustion process poses no threat to the public during the release in space."

20
21 If lithium is so dangerous it will even **burn in space**, why are we putting it in our airplanes and cars???????

22
23
24 Lithium Ion batteries blow up and burn down commercial

25 building: [http://westhawaii.com/sections/news/nation-world-news/787-battery-blew-%E2%80%99906-](http://westhawaii.com/sections/news/nation-world-news/787-battery-blew-%E2%80%99906-lab-test-burned-down-building.html)
26 [lab-test-burned-down-building.html](http://westhawaii.com/sections/news/nation-world-news/787-battery-blew-%E2%80%99906-lab-test-burned-down-building.html)

27
28 **"Tesla and Fisker have only sold a few hundred cars, (thank god) because nobody but dicks want**

1 these overpriced eliteist toys. A regular car company sells hundreds of thousands of cars per model.
2 Every singleTesla or Fisker sold increases the likelihood of a burn up. Those burn-ups will affect the
3 homes, cars and lives of the people nextdoor who never even bought one."

4
5 "Go to <http://www.youtube.com> and type into the search window:

6 "Lithium ion explosion" or "lithium battery and water" or "lithium ion water" and any related
7 derivation and you will hundreds of videos about howdangerous these batteries are. There are
8 numerous videos of Tesla's 18650 batteries blowing up."
9

10
11 "This article in the LA Times sheds more light of the horrors of LithiumIon:

12 <http://articles.latimes.com/2013/jan/18/business/la-fi-dreamliner-battery-20130119> "
13

14 "Lithium Ion batteries "go thermal" in peoples pockets, in your notebook, especially in yourTesla
15 and Fisker car and everywhere else. There are thousands and thousands of articles documenting this
16 and there is a cover-up by theVC's that fund these things to keep this fact out-of-sight.
17

18
19 Making Lithium Ion batteries poisons the workers who make them. It is adangerous product. Each
20 time the workers, particularly in Asia, realize they are being poisoned by the factory, they jack up
21 theproduct. Outlaw lithium ion batteries. Demand a recall."
22

23
24 There are PLENTY of other energy storage solutions that do not involve thehighly compromised
25 Lithium Ion chemistry!"
26

27 "Below are a few samples of HUNDREDS of videos proving that Lithium IonBatteries JUST BLOW
28 UP. This is why TSA does not want them, or liquid, on planes."

1
2 **Report: Galaxy S 4 Lithium Explosion Burns Hong Kong Home To The Ground:**

- 3 • By [Stephanie Mlot](#) July 30, 2013

4 A Hong Kong couple have been displaced after an exploding Samsung Galaxy S 4 smartphone burst
5 into flames, burning their house to a crisp.

6
7 The man, identified in the [original Xianguo.com report](#) only as Mr. Du, claims that his phone, battery, and
8 charger were all legitimate Samsung products, but that's now difficult to confirm since his home and
9 everything in it were destroyed.

10
11
12 According to the translated report, Du sat on the living room sofa playing the game "Love Machine" on his
13 charging GS4 when it suddenly exploded. In the heat of the moment, he threw the device onto the couch,
14 which caught fire. The flames then spread to the curtains and the rest of the house, "out of control," Xianguo
15 said.

16
17
18 Du, his wife, and his dogs managed to escape the house unscathed; neighbors were temporarily evacuated as
19 firefighters fought the flames. Almost all of the couple's furniture and appliances burned to ash, the news
20 site said, adding that their Mercedes parked outside was also damaged.

21
22 Whether or not the true cause of an entire house fire was a singular 5-inch smartphone remains to be seen,
23 though a fire department investigation initially resulted in a report of "no suspicious circumstances."

24
25
26 Samsung did not immediately respond to PCMag's request for comment, but told Xianguo that it will
27 "carry out detailed investigations and tests to determine the cause of the incident." Last year, a Galaxy S III
28 owner in Dublin was driving in his car when [the device caught fire](#). Cell phone safety is increasingly

1 becoming an issue in Asia, where two cases of iPhoneshock occurred within a week of each other this
2 month. On July 11, a 23-year-old flight attendant with China Southern Airlines was allegedly electrocuted
3 when she took a call on her Apple device while it was charging. She was reportedly using the
4 original charger when she was killed.

5
6 Here is what the Lithium Ion Batteries did to their home:
7

8
9
10 **Boeing 787 Dreamliner woes put spotlight on lithium ion battery risks**

11 **BYKEN BENSINGER, Los Angeles Times**

12
13 **Chances are the same kind of battery that twice caught fire in Boeing 787 Dreamliners in recent**
14 **weeks is in your pocket at this very moment.**

15
16 **Lithium ion batteries, small and powerful, have become the electricity storage device of choice. They**
17 **are everywhere — in cellular phones, laptops, power tools, even cars. They allow us to talk, email and**
18 **drill longer than ever possible in the past.**

19
20
21 **But the incidents that led to the grounding of the 787 fleet worldwide, and the decision by Boeing on**
22 **Friday to temporarily halt all deliveries of the plane, have highlighted a troubling downside of these**
23 **energy-dense dynamos: their tendency to occasionally burst into flames.**

24
25
26 **FOR THE RECORD: Dreamliner batteries: An article in the Jan. 19 Section A on lithium ion battery**
27 **safety and the grounding of the Boeing 787 incorrectly described a fire in a Chevrolet**
28 **Volt automobile. The battery did not ignite spontaneously; instead it burned after a crash test**

1 damaged the vehicle's cooling system and the testcar was left parked with the battery fully charged,
2 eventually causing it to overheat. With investigators now working to determine the cause of the
3 incidents, one on a Dreamliner on a Boston runway, the other forcing an emergency landing of a
4 787 in western Japan, the larger question of lithium ion safety has snapped into focus.

5
6 "Every battery can burn and every battery can be flammable," said Mike Eskra, a Milwaukee-based
7 battery development scientist who also works as a battery fire investigator for insurers. "But
8 lithium ion batteries are more dangerous because they store more energy. It's like a firecracker
9 instead of a stick of dynamite."

10
11
12 The casualty list is long. In recent years, tens of thousands of laptop batteries have been recalled due
13 to the risk of fire or explosion. The 400-pound lithium ion battery on General Motors' cutting-edge
14 electric car, the Chevrolet Volt, burst into flames seemingly spontaneously while parked in 2011.
15 And investigators blamed a cargo hold full of lithium ion batteries for a fire that
16 caused a UPS-operated 747 to crash shortly after takeoff from Dubai in late 2010.

17
18
19 That crash, which killed both pilots, is one of more than 100 incidents recorded by the
20 Federal Aviation Administration linking lithium ion batteries to onboard fires over the last two
21 decades. This month, new rules took effect limiting the transport of lithium ion batteries in aircraft.
22 And the FAA had long prohibited use of the technology in commercial airplanes.

23
24
25 That changed in 2007, when it granted Boeing permission to use the batteries in the 787 under a
26 number of conditions to ensure safety. For Boeing the lithium ion advantage was clear.

27
28 Thanks to their chemistry, the rechargeable batteries can store as much energy as a nickel metal

1 hydride pack that's 50% heavier, while charging and discharging faster than other battery types.
2 That's madethem attractive for military applications such as the B-2 bomber and also for use on the
3 International Space Station and the MarsRover.

4
5 Lithium ion batteries enabled Boeing to swap out heavy hydraulic systems in the airframe for
6 lightweightelectronics and electric motors to operate systems like wing de-icers. That's a key reason
7 the Dreamliner burns 20% lessfuel than other wide-body aircraft.

8
9
10 The weight and power savings are exactly what made lithium ion batteries popularin other
11 applications. In excess of 95% of mobile phone batteries worldwide are lithium ion, and without
12 lithium ion,laptops couldn't run anywhere near as long as they do without a recharge.

13
14 "They completely dominate the consumer market," said Vishal Sapru, energy and
15 power systemsresearch manager at consulting firm Frost & Sullivan in Mountain View, Calif.. He
16 estimates that global sales of lithiumion batteries reached \$14.7 billion last year, up from \$9.6 billion
17 in 2009, a 53% increase. Sapru expects the market tosoar to \$50.7 billion by 2018. "No other
18 battery chemistries are growing at that rate."

19
20
21 But lithium ion also has downsides. The batteries tend to have shorter life spans thanolder, more
22 proven battery technologies. And although the price is falling, lithium ion is still more expensive than
23 otherbatteries. Although some carmakers have embraced the technology, others, such as Toyota,
24 have decided against it. Several makersof lithium ion auto batteries for electric vehicles have filed for
25 bankruptcy last year because of weak demand.

26
27
28 Safety experts also have concerns. Because lithium ion batteries can storemore energy, and

1 discharge it more quickly, than other batteries, lithium ion cells can get much hotter than
2 other technologies in the event of an overcharge or the external application of a heat source. Larger
3 applications, such as the 63-pound batteries on the 787, incorporate multiple cells and the heat can
4 spread rapidly from cell to cell, a chain reaction called "thermal runaway."

5
6 And while other types of batteries use a water-based electrolyte in each cell, lithium ion relies on a
7 highly flammable solvent. When heated up, that solvent tends to vaporize, spraying the burnable gas
8 into the surrounding air. As a result, lithium ion battery fires burn extremely hot, as high as 2,000
9 degrees Fahrenheit.

10
11
12 Those conditions were blamed for an explosion at a General Motors battery testing lab last April that
13 caused \$5 million in damage and sent one person to the hospital. GM said flammable gas had vented
14 from an experimental lithium ion battery that heated up during extreme testing.

15
16
17 "Lithium ion is very controversial in the safety engineering space," said Brian Barnett, vice
18 president for battery technology at TiAx, a technology firm in Lexington, Mass. He spoke last month
19 at a conference on battery safety in Las Vegas, where more than three-quarters of the presentations
20 focused on lithium ion batteries.

21
22 The cause of the fires in the two Dreamliners has still not been determined and neither Boeing nor the
23 Japanese company that made the batteries, GS Yuasa, have publicly commented on likely factors.
24 Boeing subjected the batteries on the plane to thousands of hours of testing and installed numerous
25 safety systems specific to the batteries.
26

27
28 "We have high confidence in the safety of the 787 and stand squarely behind its integrity as the

1 newest addition to our product family," Boeing Chief Executive im McNerny said Friday.

2
3 Barnett and others emphasize that it's not uncommon to see problems in relatively new technologies.
4 But they add that most lithium ion fires are caused by an external problem, such as a bad circuit or
5 a software glitch that leads to overcharging. Another common problem in consumer electronics is the
6 use of low-cost wiring and other components that can overheat and spark or catch fire next to the
7 battery itself.

8
9
10 Eskra, the battery fire investigator, said he's seen fires started by Chinese-made toys that use lithium
11 ion batteries hooked up to chargers designed for nickel cadmium r nickel metal hydride
12 batteries. Manufacturing errors, including allowing tiny metal particles to contaminate cells, can
13 cause dangerous shorts, although they are exceedingly rare.

14
15
16 "Somebody tried to cut corners somewhere," he said, noting that most lithium ion fires are caused by
17 a tiny part that malfunctioned somewhere along the line and are easily resolved. "It's a \$2 fix, but it
18 takes half a million dollars in research to
19 figure out what it is."

20
21 Sometimes the problem is more persistent. In 2006, Sony announced a global recall of more than 10
22 million lithium ion laptop batteries used in a variety of laptop computers after more than a dozen
23 fires, and two years later issued a second recall.

24
25
26
27 *"This is a battery type that is only one of hundreds of possible batteries but this particular type was pushed*
28 *by a few companies and investors so they could make money off it at the risk of public injury or death..."*

1
2 THIS IS AN ACTUAL BOEING BATTERY

3 **"2006 fire under NTSB scrutiny**

4 Carli Brosseau Arizona Daily Star

5
6 When a test of a lithium-ion battery charger turned into an inferno at Securaplane Technologies Inc. in
7 2006, temperatures reached as high as 1,200
8 degrees and three waves of firefighters failed to save the building. An employee of the Oro Valley
9 company blasted the flaming battery with a fire
10 extinguisher to no effect. Two hours later, the galvanized metal roof collapsed, and the 10,000 square-foot
11 building was a total loss.
12

13
14 It's a fire that federal safety regulators are taking another look at now, since Securaplane provides two key
15 battery components to the Boeing 787
16 Dreamliner, the start-power and battery-charger units. Records from local Golder Ranch Fire Department,
17 the first of three fire departments to respond to the blaze, describe "an uncontrolled thermal reaction (that)
18 caused the battery to vent and this venting caused the ignition to various items and fixtures throughout the
19 test lab area."
20

21
22 "The electrical technician who was performing a test on the battery when it exploded likened
23 the experience to being near a jet after-burner.

24 Electrolytes from inside the battery were shooting 10 feet into the air, the former Securaplane employee,
25 Michael Leon, said in an interview Friday. "The
26 magnitude of that energy is indescribable."
27
28

1 "The fire stands as a graphic illustration of the power stored within energy-dense lithium-ion batteries and
2 the potential consequences if something
3 goes awry. It also highlights the importance and delicacy of the quality-control measures applied to a novel
4 - and potentially explosive - technology, a
5 technology now allowed, under special conditions, to be used as the main and auxiliary power source of
6 certain aircraft.
7
8 The Boeing 787 Dreamliner, the company's newest and most energy-efficient plane, uses two lithium-ion
9 batteries. After two battery-related incidents in the past month, the 50 Dreamliners distributed so far have
10 been grounded."

11
12
13 ***"Whistleblower: Dreamliner LITHIUM ION Batteries Could Explode***
14

15
16 He says he was fired after warning about battery problems

17 By Christopher Freeburn, Investor Place Writer
18

19 Boeing's (NYSE:BA) new 787 Dreamliner could end up being a nightmare for the aircraft giant.

20 A former senior engineering technician at Securaplane Technologies, which makes the charging system for
21 the lithium-ion batteries used in 787 Dreamliners, told CNBC that the batteries are defective and liable to
22 explode if they overheat."
23

24
25 **"Lithium-ion batteries are heat intolerant, according to a potential whistleblower familiar with...**

26 Lithium-ion batteries are heat intolerant, according to a potential whistleblower familiar with their
27 technology. "Too much heat on those things,
28 they will go into a thermal runaway, they will explode." The informant, a former senior engineering

1 technician of Securaplane Technologies, was fired in 2007 for repeated misconduct, but he says it was in
2 retaliation for voicing concerns about the batteries. The NTSB acknowledges that the lithium-ion batteries
3 in Boeing's (BA) Dreamliner experienced a thermal runaway, but insists there's no connection between
4 the incident and the whistleblower's claims. "

5 "The Japan Transport Safety Board makes a number of interim points. This battery, unlike one that
6 burst into flames in a Japan Airlines 787 earlier in
7 January, did not actually ignite. It experienced a thermal runaway, as a result of a build up of heat, yet the
8 materials affected did not start burning. While the semantics might escape the casual observer the safety
9 investigator said:-
10

11
12 "The battery was destroyed in a process called thermal runaway, in which the heat builds up to the point
13 where it becomes uncontrollable.

14
15 "But it is still not known what caused the uncontrollable high temperature".
16

17
18 In simple language, uncontrollable rises in temperature will if uncontrolled most likely result in a fire,
19 including one that can burn through structural
20 composites and alloys, and prove almost uncontrollable by fire fighters, *even on the ground*.

21
22 It took a Boston airport fire brigade detachment 99 minutes to put out the Japan Airlines fire
23 using equipment unavailable if the airliner was hours away
24 from an emergency landing strip in the high arctic or north Pacific, which that particular flight had only
25 recently traversed before the fire broke out after
26 landing.
27
28

1 he Japan air safety investigator said the wire supposed to ground or discharge static electricity build ups in
2 the battery had been severed meaning
3 it had experienced abnormal levels of current.

4
5 However as also confirmed by the early stage of the US incident investigation into the Japan Airlines fire,
6 this large lithium-ion battery had not experienced a voltage surge, and had so far as flight data recordings
7 could tell, had been operating normally immediately before the emergency landing.

8
9
10 Expect the news release in Japan to cause more tension between those who want the 787s to fly again
11 pending a full understanding of the causes and cures in these incidents, and independent safety
12 investigators who will recommend to safety regulators like the FAA a continuation of the grounding"

13
14
15
16
17
18
19
20
21 **Death By Tesla**

22
23
24
25 By Susan Johnlo For Web Times (Based on actual events)

26
27 The sun glistened off the sleek futuristic body of the six figure Tesla sports car as it careened around the
28

1 next curve of the beautiful Malibu coastal highway.

2
3 Below, the Pacific Ocean spread out to the horizon in an endless carpet of blue, undulating waves and
4 sparklingwonder.

5
6 Nickleback was blaring from the speakers of the car, the driver's hair was tossed in the wind, his popped
7 collarwas flapping in the high speed rush of air and his Ray Bans barely hid his I-own-the-world feeling of
8 delight in the moment.

9
10
11 Then the gates of hell opened up...

12
13 The car suddenly swerved, it dived straight off the cliff. Did the driver smell the smoke, or see the flames
14 first? We may never be sure.

15
16
17 Was the, notoriously, hackable Tesla suddenly taken over by Chinese hackers, who had found his car IP
18 address on the internet? That is another question that has yet to be resolved.

19
20 What is certain, is the horrific death that then followed. As investigators, safetyengineers and fire officials
21 detail the sequence of events, the results require a warning to readers: **Do not read further if you have a**
22 **weak stomach –**

23
24
25 First, lithium ion battery number 862, in the floor pan of the car, experienced thecollapsing housing of the
26 lightweight aluminum box housing that surrounded it. The collapsing metal pierced the skin of the
27 firstbattery. This was caused by the first rock that the lower corner of the Tesla floor pan slammed into.

28

1 The rapid compression, and distortion of the 3 inch long Tesla battery caused that battery to buckle and
2 forced the metal compounds inside, the lithium ion core battery chemicals, to experience the force as a
3 pyrotechnic trigger. This, then caused that battery to release vapors, while at the same time, igniting those
4 vapors like a little hand-grenade.

5
6 This battery had just been struck, ignited and exploded, and in that fire and explosion it was releasing gases
7 which the driver was inhaling in his last moments of life. Those gasses have been publicly documented by
8 The FDA, OSHA, Panasonic, and hundreds of other laboratory-grade facilities, to be the cause of cancer,
9 liver damage, neurological damage, fetal damage and other deadly health issues.

10
11
12 If this driver had not been killed by the fire and explosions, he would have had a longer, slower set of lethal
13 issues to contend with.

14
15
16 Back to battery number 862; a few milliseconds after battery number 862 experienced the catastrophic
17 explosion, battery number 863, right next to it, experienced the same devastating failure. This was followed
18 by battery number 864, then number 865, then number 866, milliseconds apart. A chain reaction of self-
19 igniting thermal hell was underway and no fireman could stop it now, nor, could they stop it after the crash.

20
21 The unstoppable nature of this lithium ion battery fire, set Malibu Canyon, itself, on fire.

22
23
24 So these flashlight-type batteries, that every Tesla driver is sitting on top of, are going off like military
25 grade incendiary devices, during this crash, one-after-the-other.

26
27 These flashlight batteries were never made to be used in cars. Safety engineers say that Elon Musk's
28 decision to use these batteries, in this way, was based on rapid profit exploitation, and not on

1 properengineering.
2

3 Be that as it may, we are now mid-way through the slow motion movie of this crash. The batteries are
4 exploding, oneafter the other, the car is plowing through the rocks and debris as it dives off the cliff. But
5 the horror has only begun. How manybatteries do we have to watch explode in this single vehicle?

6 NEARLY 8000 EXPLODING BATTERIES.
7

8
9 Let us stop and consider this fact.
10

11 Where only one in 40 gasoline tanks, in each regular car accident, ever explodes. Here, in one car, you have
12 nearly 8000possibilities of an explosion AND each battery, that explodes, has an extremely high likelihood
13 of setting off, all the rest, in a chainreaction. Do you like those odds? You have a 400% better chance of
14 winning the lottery.
15

16
17 In our slow motion analysis, we have only crossed the half-way point in the accident. The front of the car is
18 crumpling, the heavy batteries are being thrown upwards, through the floor of the car, to cover the driver in
19 exploding lithium metalparticles, and the cockpit of the car is filling up with some of the most toxic fumes
20 you can legally produce.
21

22 *Still, the worst is yet to come.*
23
24

25 The special alloys, which Tesla decided to make its car out of, turn out to interact with theexploding
26 batteries to cause an effect called alloy conflagration. The very metal of the Tesla car has now been set on
27 fire by themassive heat from these exploding batteries. The car has turned into the public version of a
28 military phosphorous bomb, one of the mosthideous military weapons of all time. This burning metal

1 composition is worse than napalm, it can burn all the way through your face, your skull, and any bones in
2 your body. It is a fire that almost nothing can extinguish.

3
4 Molten, flaming metal is dripping on the driver and it is coming from every side of the car, surrounding
5 him in a fireball of deadly metal lava.

6
7
8 The car has finally come to a rest in a fireball. The driver is consumed in a nightmare of fire, dripping
9 molten metal and deadly toxic smoke. The pain is beyond comprehension.

10
11 He is, in the same moment, burned to death, asphyxiated and entombed in red hot liquid metal.

12
13 The resulting fire, in the Canyon, is, at first, unstoppable and threatens the entire community of homes.

14
15
16 The first responder's attempts to douse the car fire, only make it worse! Water, it turns out, makes lithium
17 ion batteries explode all over again. The car has been filled with a type of battery that mere bumps, and
18 water, can cause to explode. Let me repeat this for emphasis: WATER MAKES LITHIUM ION
19 BATTERIES EXPLODE. Not only does water *not* put out lithium ion fires, IT MAKES THEM WORSE!

20
21 Hours later, after the car has burned itself out, the first responders try to recover the body.

22
23
24 The problem is, they can't recognize a body. The driver has been burned into an unrecognizable lump of
25 melted plastic, molten metal and human flesh.

26
27 His lovely drive down the coast ended in a horror as awful as any nightmare midnight movie.
28

1 So this use, of this battery, in this way, was decided by the very Senators and billionaire campaign investors
2 who owned the stock in this battery. If you wonder why a deadly choice, like this, was made about a battery
3 that already had all of these dangers fully documented, on federal record; the answer can be found in one
4 word: Corruption.

5
6 This massive oversight, putting the public at such risk, took place because a kick-back scheme was created
7 by Mr. Musk, and his campaign finance partners. They chose greed, over scientific facts. Those chose
8 mining commodity deals, and expediency, over proper engineering. They chose corruption, over anything
9 else.
10

11
12 So, when you buy a Tesla, you need to think about your own safety and the safety of the American political
13 system. Consider not supporting corruption and consider supporting the safety of yourself and your family:
14 Buy an Audi!

15
16
17 *"One aspect that may confuse some people relates to the decision to use this particular type of*
18 *battery. The danger posed by it has been evident by a lengthy and documented list of disturbing events in*
19 *recent years. They include many thousands of batteries used in laptops being recalled, because of*
20 *determined risks of fire or explosion. General Motors were also placed in the battery limelight. In 2011, the*
21 *400 pounds Lithium ion battery in their Chevrolet Volt apparently was subject to spontaneous combustion*
22 *when it burst into flames, while reportedly in a parked vehicle. In 2010, a UPS-operated Boeing 747*
23 *crashed just after take-off from Dubai. Investigators placed the blame on a cargo hold that*
24 *contained Lithium ion batteries, for a fire that caused the incident."*

25
26
27 *A number of incidents of cell phones with lithium ion batteries blowing up in peoples pockets, notebook*
28 *computers blowing up in peoples briefcases and other shocking fires have been deeply documented.*

1
2 LITHIUM ION BATERIES BLOWING UP ON THEIR OWN

3
4 FISKERS CARS THAT BLEW UP AND BURST INTO FLAMES JUST BECAUSE THEIR
5 LITHIUMION BATTERIES GOT WET

6 **"Here is where they make some of these batteries, in forced labor**
7 **camp:**<http://www.thedailybeast.com/newsweek/2013/01/13/china-s-labor-pains.html> **Because, as**
8 **we all know, chinese prostitutes are the best choice to make the things that keep our airplanes in the**
9 **air and our cars on theroad. The silicon valley venture capital guys front these batteries because they**
10 **have such cheap labor to give them great profits..quality control? not so much..."**

11
12
13 What Went Wrong With The Electric Car Industry?

14
15 Only men seem to start car companies. Most psychologists say that this is because men see cars as
16 dick insecurity emblems.

17
18 Elon Musk is known to be a wildly insecure narcissist who feels that he must get every woman, that
19 he can find, pregnant in order to prove his manhood to his abusive father, who got his sister pregnant.

20 Musk embodies the ultimate expression of 'car-as-dick' thinking because Musk was not only
21 molded by his purse-swinging, kept-woman, mother, abusive father and crooked brother but also by the
22 Silicon Valley frat boy rape-culture.

23
24 Silicon Valley is, of course, the Eden of modern misogyny and tech-bro douche-baggery.

25 Musk dragged all of the biggest assholes from Silicon Valley, The DNC and Goldman Sachs into
26 his Tech Cartel. Together they created a temporary monopoly in the electric car industry by exchanging
27 stock market payola with Senators and White House staff who, in exchange, locked off the electric car and
28 space industries just for Musk.

1 But that scheme was not sustainable. It was amazingly crooked and lucrative but, it could not last. It
2 was Big Tech's Roman Empire and it was doomed to fail spectacularly.

3 Musk counted on Obama and Biden to stick with his original quid-pro-quo deal to trade government
4 cash for election rigging via his boyfriends at Google and Facebook. Tesla was the money conduit for a
5 bunch of political scammy.

6 Biden and his cheerleader actress front girl: Jennifer Granholm, bounced into office with a Wizard
7 of Oz promise to give everybody electric cars. They were so wrong about the pitfalls of their plan and they
8 hired so many idiot sex freaks and unicorn fart unaware fools that their scheme blew up...instantly and
9 literally.
10

11 Elon Musk and the Senators he owns: Pelosi, Harris and Feinstein, will lie, until their dying day
12 about these batteries that they all own stock in! -

13 --- Lithium ion batteries: Cause wars, rape and genocide in the Congo, Afghanistan and Bolivia
14 from the corrupt mining deals involved with mining lithium and cobalt; are insider trading-owned by ex-
15 CIA boss Woolsey and DOE Boss Chu; excrete chemicals that mutate fetuses when they burn; destroy your
16 brain, lungs and nervous system when they burn; kill the factory workers who make them; cause Panasonic
17 to be one of the most corrupt companies in the world; poison the Earth when disposed of; can't be
18 extinguished by firemen; poison firemen when they burn; are based on criminally corrupt mining schemes
19 like URANIUM ONE; Have over 61 toxic chemicals in them; come from an industry that spends billions
20 on internet shills and trolls used to nay say all other forms of energy; are insider-trading owned by corrupt
21 U.S. Senators who are running a SAFETY COVER-UP about their dangers.
22

23
24 ---- Apple products with lithium ion batteries have been exploding and setting people on fire; over
25 time the chemical dendrites inside each battery grow worse and increase the chances of explosion as they
26 age

27 - LITHIUM ION BATTERIES BECOME MORE AND MORE LIKELY TO EXPLODE AS
28 TIME GOES ON AND AS THEY AGE; "Bad Guys" have figured out how to make them explode

1 remotely; have their dangers hidden by CNN and MSM because pretty much only the DNC people profit
2 from them; are the heart of Elon Musk's stock market scam.

3 ---- The Obama Administration promised Silicon Valley oligarchs the market monopoly on lithium
4 ion batteries and the sabotage of fuel cells in exchange for campaign financing and search engine rigging;
5 United States Senators that are supposed to protect us from these deadly products own the stock market
6 assets of them so they protect them and stop the FDA, OSHA, DOT and NHTSA from outlawing them.

7 WRITE YOUR ELECTED REPRESENTATIVE AND DEMAND THAT LITHIUM ION BATTERIES
8 BE MADE ILLEGAL TO SELL! NiCAD and Hundreds of other battery chemistries DO NOT have all of
9 these problems but Lithium Ion batteries get a monopoly because of politician insider trading ownerships.
10

11 ---- A recent fire on U.S. Highway 101 near Mountain View, CA, burned the driver alive and killed
12 him. In Florida two kids died in a Tesla, burned alive, screaming in agony. A man died in agony in a Tesla
13 crash in Malibu that set Malibu Canyon on fire. A young woman, at the start of life, and her boyfriend were
14 burned alive in their crashed Tesla.

15 ---- There are many more deaths and crashes than you have heard about. The deaths and the cover-
16 ups are endless. Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates
17 own the stock in Tesla Motors and/or it's suppliers and mining companies and they cover-up and halt
18 investigations and laws designed to save the public. They, and their crony's, spend over \$1B a year to shill
19 and troll hype about lithium ion batteries and cover-up the dangers. Lithium ion EVs are more prone to
20 battery fires. Experts say that their lithium-ion batteries can fuel hotter fires that release toxic fumes and are
21 more difficult to put out.
22

23 ---- Lithium ion fires keep reigniting which explains why it takes so long and requires copious
24 amounts of water or foam (it is an electric fire, after all) to smother the flames. Tesla employee Bernard Tse
25 and his team warned Elon Musk about these dangers in 2008 and they got fired and/or warned to "say
26 nothing" by Musk. Three top Tesla engineers died in a plane crash next to Tesla offices in San Carlos after
27 two of them agreed to become whistle-blowers. Elon Musk exists because he bribed DNC politicians and
28

1 Senators Feinstein, Reid, Boxer, Harris, Clinton and Pelosi to give him free taxpayer cash and government
2 resources from the Dept. of Energy and the Calif treasury.

3 ---- DOE has been covering-up organized crime activities at DOE in which DOE funds are being
4 used as a slush-fund to pay off DNC campaign financiers and to pay for CIA/GPS Fusion-Class attacks on
5 Silicon Valley business competitors of those DNC campaign financiers who DOE staff share stock market
6 holdings with. Elon Musk is a criminal, a mobster, an asshole, a bald fake-hair wearing, plastic surgery-
7 addicted, douchebag, woman-abusing, sex addicted, tax evader.

8
9 ---- Musk exploits poor people and child slaves in the Congo and Afghanistan to mine his lithium
10 and Cobalt. Musk spends billions per year to hire Russian trolls, fake blogger fan-boys and buy fake news
11 self-aggrandizement articles about himself. Musk thinks he is the ‘Jesus’ of Silicon Valley. Fake News
12 manipulator Google is run by Larry Page and Larry is Musk’s investor and bromance butt buddy.

13 ---- Musk uses massive numbers of shell companies and trust funds to self-deal, evade the law and
14 hide his bribes and stock market insider trading. A huge number of Tesla drivers have been killed;
15 pedestrians and oncoming drivers have also been killed, and Musk covers it up.

16
17 ---- The DNC and the MSM refuse to allow any articles about Musk’s crimes to be printed because
18 they benefit from Musk’s crimes. Musk has been professionally diagnosed as a ‘psychotic narcissist.’ A
19 ‘Silicon Valley Mafia; cartel of frat boy sociopath venture capitalists like Steve Jurvetson, Tim Draper, Eric
20 Schmidt, et al; threaten those who do not support the cult of Tesla or their political candidates.

21 ---- In EVERY blog that you read that mentions ‘Musk’, at least 1/3 of the comments have been
22 placed their by Musk’s paid shills. Musk holds the record for getting sued for fraud by his investors, wives,
23 former partners, employees, suppliers and co-founders.

24 ---- Elon Musk has gone out of his way to hire hundreds of ex-CIA staff and assign them to “dirty
25 tricks teams” to attack his competitors and elected officials who Musk hates. Musk never founded his
26 companies. Musk’s “Starlink” satellites are domestic spy and political manipulation tools – never get your
27 internet from one. Musk stole Tesla in a hostile ownership take-over from Marty the true inventor of the
28

1 Tesla.

2 ---- The same kind of EMF radiation proven to cause cancer from cell phones exists in massive
3 amounts in a Tesla. Musk can't fix a car or build a rocket and has almost no mechanical skills. If you pull a
4 report of every VIN# of every Tesla ever built and cross reference that with insurance, repair and lawsuit
5 records you will find that the "per volume" fire, crash, death and defect rate is THE WORST of any car
6 maker in history!

7
8 ---- Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Sachs has a
9 dedicated team of 18 men who rig stocks and valuation bumps for Musk. Over 1000 witnesses can prove
10 every one of those claims in any live televised Congressional hearing! Senators Dianne Feinstein, Harry
11 Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla Motors and/or it's suppliers
12 and mining companies.

13 ---- That is why they criminally help cover-up investigations of Tesla! All of this was reported, in
14 writing, to James Comey, Patricia Rich and David Johnson at the FBI. The DNC bosses own the stock in
15 lithium, Solar and EV markets and use kickbacks from those markets (Especially via convoluted campaign
16 finance laundering via Elon Musk) to finance the DNC. The DNC bosses use character assassination as
17 their main political tool against any member of the public who speaks out against their felony stock market
18 scams and PizzaGate-like scandals.

19
20 ---- The Harvey Weinstein reports by Ronan Farrow show that they have teams of hired goons that
21 they pay to destroy people's lives. They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media,
22 Gizmodo Media, Media Matters, David Brock, Sid Blumenthal, NY Times, Google servers, Facebook
23 servers, Podesta Group, Perkins Coie, Covington and Burling and a host of "assassins".

24
25 ---- It should be a felony to hire character assassins in the USA. DEMAND A LAW and DEMAND
26 the termination of these attack services. IE: Gawker and Gizmodo Media sets-up the attack stories and, in
27 paid partnership with Google, Google kicks their attack links around the globe, in front of 8 Billion people,
28 forever. Google locks the attack articles of its enemies on the front top search results of Google search

1 results forever, on purpose!

2 ---- That is why Google is being terminated in the largest, most well resourced anti-corruption
3 public service take-down in history! Tesla and Musk are protected by shareholders Harris, Pelosi, Feinstein,
4 Brown and Newsom. Panasonic (indicted for bribery and Musk's partner) spends billions of dollars
5 annually cover-up lithium battery fires and battery defects.

6 ---- There are hundreds of millions of people in America. The same 120 of them are all involved in
7 operating the same crimes and corruption including: the Sony Pictures corruption; the Afghanistan rare
8 earth mine scandals operated through The Energy Department political slush fund that involves the lithium
9 battery cover-ups (headed by Elon Musk); the Big Tech Brotopia rape, sex trafficking, bribery,
10 exclusionism, racism and misogyny issues they were taught at Stanford University;

11 ---- The Facebook – Meta – Google – Alphabet – Netflix, et al, coordinated news manipulation and
12 domestic spying that they engage in; the hiring of Fusion GPS – Black Cube – Gizmodo/Gawker assassins;
13 the destruction of the housing market by their mass real estate manipulations; patent theft and industrial
14 espionage; and the bribery of almost every politician all the way up to the Oval Office.

15 ---- So, while the categories covered in this investigation may seem diverse. They are connected
16 through an enterprise of criminality and illicit, coordinated operations. We list, by name, the 120 most
17 complicit individuals organizing these crimes, in the evidence documents already submitted to the FBI,
18 FINCEN, DOJ, FTC, SEC, FEC, Congress, InterPol and other authorities. Digital financial tracking of
19 those persons and all of their family members should be assumed to have been under way for some time.
20 Wire-taps and device taps of those persons and all of their family members should be assumed to have been
21 under way for some time.
22

23
24
25 **Elon Musk's Electric Car Batteries Made By Forced Labor Overseas**

26 Increasing ties have been found between the origin of the batteries needed to power the technology
27 and forced labor in Chinese work camps.
28

1
2 [Jarryd Jaeger Vancouver, BC](#)

3
4 As many environmentalists push for a quick transition to electric vehicles and clean energy,
5 increasing ties have been found between the origin of the batteries needed to power the technology and
6 forced labor in Chinese work camps.

7
8 One province in particular, Xinjiang, is facing mounting criticism as more details emerge
9 surrounding working conditions for members of the Uyghur Muslim minority. [According](#) to the *New York*
10 *Times*, while China produces 75 percent of the world's lithium ion batteries, much of the raw material is
11 mined elsewhere. In recent years, however, the Chinese government has set their sights on controlling all
12 aspects of the supply chain.

13 In order to compete with other countries, China has ramped up production in the western province
14 of Xinjiang, home to the nation's Uyghur Muslim minority.

15 As the *Times* [reports](#), companies such as Xinjiang Nonferrous Metal Industry Group have partnered
16 with the Chinese government to move hundreds of Uyghurs from the south to the industrialized north
17 where they are put to work in mines, smelters, and factories producing lithium, nickel, manganese,
18 beryllium, copper and gold.

19
20 While such companies deny that their workers are mistreated, reports show that Uyghurs are subject
21 to what could easily be deemed to be forced labor.

22
23 Uyghurs who refuse to work in accordance with Chinese government policies are often sent to
24 internment camps, and in May it was [revealed](#) that many of those camps have a "shoot-to-kill" policy for
25 those who attempt to escape.

26 Thus, the official claim that "all employment is voluntary" is not supported.

27 In addition to forced labor, Uyghurs are also subjected to re-education, wherein government-
28 appointed "teachers" attempt to create loyal subjects to the nation and communist regime.

1 On June 21, a new law will go into effect in the United States called the "Uyghur Forced Labor
2 Prevention Act." As NPR [reports](#), it gives the US authority to seize goods produced in Xinjiang unless
3 companies can prove they did not engage in forced labor practices.

4 It's true that doing so will be resisted by Democrats who don't want to slow the deployment of solar
5 panels and electric cars in the US, and be resisted by free market Republicans, but the evidence is clear and
6 this is becoming a moral and national security imperative.

7 — Michael Shellenberger (@ShellenbergerMD) [June 20, 2022](#)

8 Environmental realist, author, and California gubernatorial candidate Michael Shellenberger is one
9 of many calling on the Biden administration to go one step further and ban the importation of all goods
10 from Xinjiang. He says the US should instead focus on manufacturing green technology at home.

11 As he points out, however, the decision would face pushback from both Democrats "who don't want
12 to slow the deployment of solar panels and electric cars in the US," and "free market Republicans."

13 The world has shone a spotlight on the Chinese government's treatment of the Uyghurs in Xinjiang,
14 but it remains to be seen whether the Communist Party and the companies to which it is so closely tied will
15 change their practices.

16 Blame Lithium Batteries for Samsung Note 7 And Tesla Motors Fires

17 A major recall of Samsung Galaxy Note 7 phones could also be a wakeup call for manufacturers and
18 consumers about lithium-ion (Li-ion) batteries.

19 "My brand new Note 7 exploded this morning while I was still asleep, it was plugged in and
20 charging." So begins a [Reddit post](#) from a user in Australia, detailing how a Samsung Galaxy Note 7 caught
21 fire in a hotel room -- causing \$1,800 in damage.

22 An image of a damaged Samsung Galaxy Note 7 shows that the overheating began at the center of
23 the Li-ion battery.

24 (Source: Reddit user -- Crushader)

25 The Reddit post, made in September, was the first noted case in Australia but it would be far from
26

1 the last in the world. According to the [US Consumer Product Safety Commission](#), beginning in mid-
2 September Samsung received 96 reports of Note 7 phones overheating, of those 13 resulted in burn injuries
3 and 47 in some type of property damage.

4 On Sept. 15, Samsung initiated a recall of the Note 7, offering to replace units for customers. But in
5 early October the Note 7 made its biggest headlines when a replacement model phone started [emitting](#)
6 [smoke](#) on a Southwest Airlines flight from Louisville to Baltimore. Airlines subsequently banned the Note 7
7 from flights and Samsung would go on to recall all of its Note 7 models, including the replacements --
8 a total of 1.9 million phones, according to the US Consumer Product Safety Commission.

9 Initially Samsung stayed quiet on what was causing the phones to overheat, but after dozens of
10 pictures of burnt out Note 7s were posted online, Internet sleuths were able to figure out the problem.
11 Noting where the burn marks appear, a technology reviewer on YouTube who goes by the name
12 JerryRigEverything deduced that the failure was happening with the phone's lithium-ion battery itself and
13 not with the charging port or any part of the motherboard, which were also potential points of failure.

14 South Korea-based Samsung has since acknowledged that the problem is with the battery but
15 hasn't gone deep into specifics. However, [Bloomberg](#) obtained documents from Korea's Agency for
16 Technology and Standards saying the overheating was being caused by a lack of insulation between the
17 battery's positive and negative electrodes, which created a short. Chris Robinson, research analyst at Lux
18 Research, told *Design News* that battery shorts like this are common, but there could be more to these
19 Samsung incidents. "A battery short is a common mode of failure, which results when electrical contact is
20 made between the positive and negative electrodes. This oftentimes is caused by a manufacturing defect,
21 such as a contaminant getting into the manufacturing process, but in this case there may be more to the
22 Samsung story," Robinson said via email. "The replacement batteries started catching fire, which could
23 indicate a larger problem with the design of the handset."
24
25
26
27
28

M easuring Battery Life in IoT devices. Many devices used in IoT applications must run on

1 battery power forextended periods of time. To support this, complex power management is required and
2 verifying the effectiveness of these techniquesrequires specialized testing techniques. Learn more at [ESC](#)
3 [Silicon Valley](#), Dec. 6-8, 2016 in San Jose, Calif. [Register here](#) for the event, hosted by *Design News*'
4 parent company, UBM.

5
6
7
8 Of course, the Note 7 is only the latest in what has been a series of recent lithium-ion-related issues
9 in consumer products. Back in 2012 the [Fisker Karma](#) was recalled because of battery overheating issues.
10 In 2013 a Tesla Model S [caught fire](#), revealing a design flaw in which the vehicle's battery pack
11 wasn't properly shielded against road debris that could potentially puncture it. And just last Christmas the
12 hottest item on the shelves -- the [hoverboard](#) -- had its hype train derailed when reports started surfacing
13 of shoddy knockoff products with defective lithium-ion batteries catching fire.

14
15 It really brings to question why we rely on such a potentially volatile solution for our battery needs.
16 But Robinson said that issues with lithium-ion batteries do not happen at random. "These incidents are
17 problems given how much we use electronic devices and the severity of the fires, but Li-ion batteries can
18 be made safe. However, with Li-ion battery fires there is almost always a reason why they catch fire -- it's
19 not just a random event," he said. "Considering the hoverboard fires, they were caused by mostly Chinese
20 Li-ion manufacturers with poor quality control and no established track record of making volumes of
21 batteries, who hoverboard manufacturers turned to as Li-ion demand increased ahead of rushing these
22 products to market ahead of the holiday season. Fisker battery fires were caused by coolant leaks which led
23 to batteries overheating, and several Tesla fires were related to external damaging of the battery from debris
24 or a crash."

25
26 **READ MORE ABOUT LI-ION BATTERIES ON DESIGN NEWS:**

- 27
28
- [Choosing Between Supercapacitors and Li-ion Batteries in Industrial Applications](#)

- [Thin-Film Coating Boosts Lithium-Ion Battery Performance](#)

1 "The key component which prevents shorting, a major failure mode of batteries, is the separator,"
2 Robinson said. "Many use a polymer separator, but ceramics have been of some interest to the industry for
3 improved safety and durability. However, these add weight and cost to the battery, which is why most
4 companies forego their use." He suggested that, moving forward, these types of separators may become
5 more attractive to companies looking to increase product safety. [Next-generation chemistries](#), things like
6 solid-state batteries, could also be an option. "This also could allow for improved energy density," Robinson
7 said. "But these batteries are not manufactured at the large scale required to supply cell phones, and also add
8 significant costs."
9

10
11 Right now, despite any risks, Li-ion batteries are still the best choice for consumer products and
12 electric vehicles since they offer the best balance of energy and power density and lifecycle.
13 "Previous chemistries, primarily NiMH batteries, could only offer about half of the performance relative to
14 size and weight that Li-ion batteries can provide." Robinson said.
15

16 However, as consumers demand products that are not only higher performing but also increasingly
17 light and thin, we may be putting a greater burden on OEMs as far as ensuring product safety. Cramming a
18 battery into a smaller and smaller space while still demanding more power and performance also opens the
19 door for the sort of incidents seen with the Note 7. The Note 7, for example, is Samsung's lightest and
20 thinnest Note model yet (by a small margin), but also has more sensors, a better camera, and more hard
21 drive storage space.
22

23 "As manufacturers push for lighter and thinner phones that does make both the battery and system
24 design more difficult," Robinson said. "Batteries must be kept fairly cool to prevent thermal runaway, which
25 leads to fires, and increasingly small space make this difficult. Furthermore, on the cell level,
26 manufacturers try to use the thinnest and cheapest separators as possible, since they add weight, volume,
27 and price to the cell."

WHY LITHIUM-ION BATTERIES CATCH FIRE

Lithium-ion batteries have been in the news recently with reports of some of Samsung's phones unexpectedly catching fire. Here, we examine how the batteries work and what can make them ignite.

HOW THEY WORK

Lithium-ion batteries often use lithium cobalt oxide (LiCoO₂) as the positive electrode and graphite as the negative electrode. When the batteries charge, lithium ions and electrons move from the positive to the negative electrode. When they discharge, the ions and electrons move from the negative to the positive electrode, powering phones and other devices. The ions move through an electrolyte, typically made of a lithium salt dissolved in an organic liquid.

SHORT-CIRCUITING

A porous separator keeps the battery electrodes apart. Charging the battery for long periods or inflicting a mechanical blow can damage the separator, causing the battery to discharge rapidly and generate a lot of heat.

OVERCHARGING

When overcharged, lithium cobalt oxide releases oxygen. This can react with the flammable electrolyte and also with cobalt oxide (Co₂O₃) left over after the release of oxygen. Co₂O₃ also increases the resistance of the battery, raising the risk of overheating.

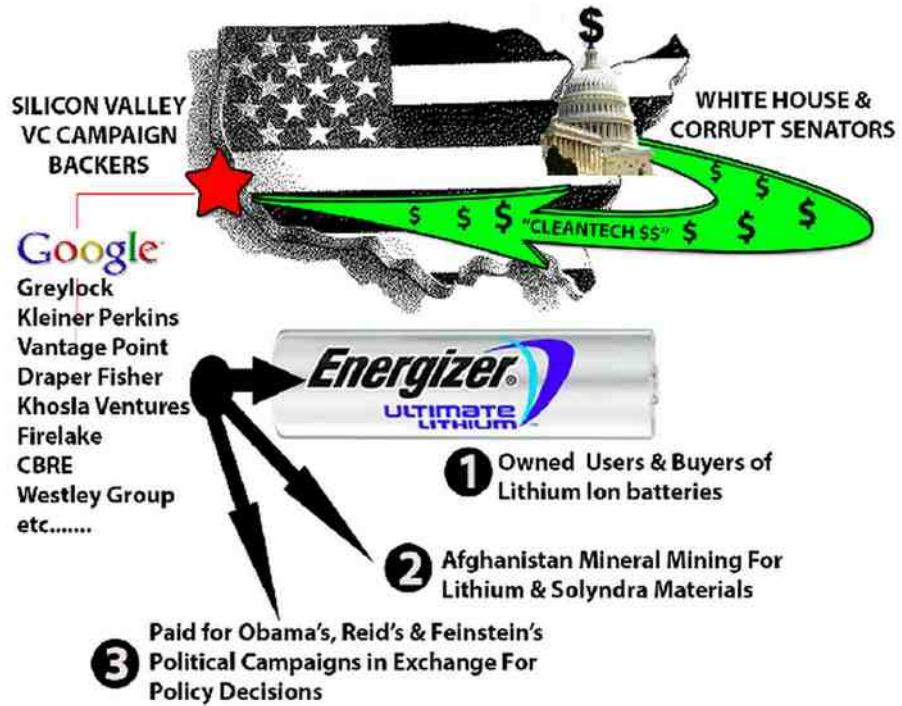

ELECTROLYTE BREAKDOWN

CCOC(=O)OC

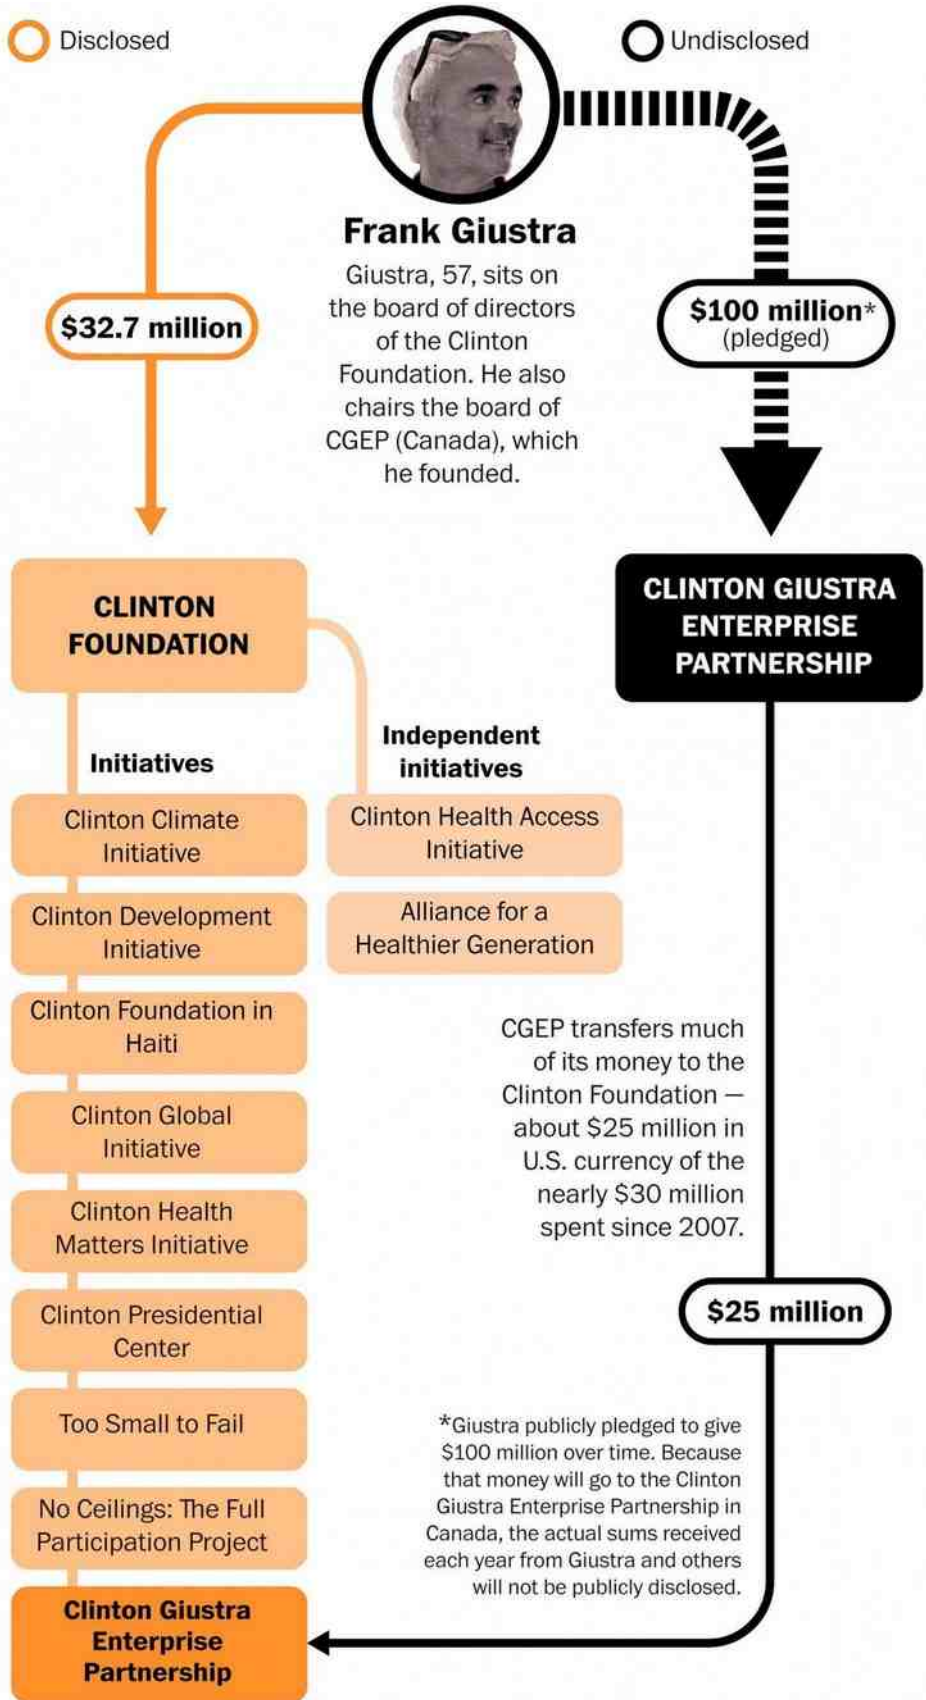

DIMETHYL CARBONATE
Common electrolyte substance

During charging, some of the organic molecules in the electrolyte can break down, forming carbon dioxide. Because the battery is sealed, this causes pressure to build up. If it gets high enough, the battery bursts, exposing the flammable electrolyte.

Prepared in cooperation with the Afghanistan Geological Survey and on the auspices of the U.S. Agency for International Development

Preliminary Assessment of Non-Fuel Mineral Resources of Afghanistan, 2007

The U.S. Geological Survey and Afghanistan Geological Survey estimate numbers of undiscovered deposits in Afghanistan by using geology-based assessment methodology. Estimates of known and undiscovered copper resources total nearly 50 million metric tons of copper. Resources of iron known deposits are more than 2,200 million metric tons of iron ore. Twenty mineralized areas were identified that merit further study and many contain resources amenable to rapid development.

OBAMA'S PAYOLA TO ELON MUSK AND THE SILICON VALLEY OLIGARCHS IN EXCHANGE FOR RIGGING THE ELECTION FOR HIM USING MEDIA MANIPULATION. THIS SAYS THE AFGHAN DEAL FOR DIRTY MINING WAS WORTH TRILLIONS...IT WAS A LIE, THOUGH. USAID WAS PUSHING A SCAM!

MINERAL SYMBOLS

▲ Adakite intrusives	○ Lignite
● Barite	○ Lead-poll.
○ Bauxite	○ Pyroclastic
○ Cobaltite	○ Fluorapatite
○ Quartzite	○ Sand and gravel
○ Clay	○ Sedimentary copper
○ Shale	○ Sedimentary iron
○ Sulfate	○ Sedimentary lead and zinc
○ Igneous-related copper	○ Zinc
○ Igneous-related iron	○ Silver
○ Igneous-related lead and zinc	○ Sulfur

Figure 1. Map of Afghanistan showing mineralized areas recommended for further study (rectangular areas), known non-fuel mineral deposits and prospects (small dots), and selected mineral deposits for which resources have been published in the past (various symbols).

Introduction

Afghanistan has abundant mineral resources, including known deposits of copper, iron, barite, sulfur, talc, chromium, magnesium, salt, mica, marble, rubies, emeralds, lapis lazuli, asbestos, nickel, mercury, gold and silver, lead, zinc, fluorapatite, bauxite, beryllium, and lithium (fig. 1). Between 2005 and 2007, the U.S. Agency for International Development (USAID) funded a cooperative study by the U.S. Geological Survey (USGS) and the

Afghanistan Geological Survey (AGS) to assess the non-fuel mineral resources of Afghanistan as part of the effort to aid in the reconstruction of that country. An assessment is an estimation or evaluation, in this instance of undiscovered non-fuel mineral resources. Mineral resources are materials that are in such form that economic extraction of a commodity is currently or potentially feasible. In this assessment, teams of scientists from the USGS and the AGS compiled information about known mineral deposits and then evaluated the possible occurrence of undiscovered deposits

of all types. Quantitative probabilistic estimates were made for undiscovered deposits of copper, mercury, rare-earth elements, sulfur, chromite, asbestos, potash, graphite, sand and gravel. These estimates were made for undiscovered deposits at depths less than a kilometer. Other deposit types were considered and discussed in the assessment, but quantitative estimates of numbers of undiscovered deposits were not made. In addition, the assessment resulted in the delineation of 20 mineralized areas for further study, of which several may contain resources amenable to rapid development.

How the Tesla Gigafactory Can Pollute The Air

Refinery air pollutants

- Ammonia gas**
Irritates tissues; low level can irritate eyes, nasal passages; high level can kill
- Benzene**
Carcinogen, may harm fetuses; can cause dizziness, sleepiness, convulsions, rapid pulse, coma or death
- Hydrogen sulfide**
"Rotten egg" gas; inhaling even a small amount can kill
- Nitrogen oxides**
Source of ground-level ozone, which can trigger asthma attacks, aggravate bronchitis, emphysema, other chronic respiratory diseases
- Volatile organic compounds**
Another source of ozone; linked to cancer, lung and immune system damage
- Sulfur dioxide**
Tiny particles linked to numerous respiratory problems; with water vapor, creates acid rain
- Microscopic particles**
Lodge deep inside lungs, can cause asthma, heart attack, premature death
- Carbon monoxide**
Gas from smokestacks, vehicle tailpipes; high amounts deprive brain of oxygen, can cause brain damage and death

WE THE PEOPLE ASK THE FEDERAL GOVERNMENT TO PROPOSE A NEW ADMINISTRATION POLICY:

Ban dangerous lithium ion batteries from U.S. regions as advised by thousands of experts

Created by S.R. on November 07, 2016

Sub-atomic issues and the highly explosive nature of lithium ion batteries cause them to explode all the time. Lithium ion batteries explode when they get wet, bumped, charged or cross certain types of high-energy fields. The lithium is mined in Afghanistan, Bolivia and other war-profiteering regions which are exploited by those very same campaign billionaires.

Federal investigators and federal MSDS records state that the thermal vapors from these batteries cause cancer, brain and liver damage, neurological damage and mutate the fetus in the womb. The FAA and the UN have published extensive new rules warning about the lethal dangers of lithium ion batteries. A large percentage of the factory workers, that make lithium ion batteries, become poisoned and often die from the poisoning.

The lithium craze explains only a portion of Potash's interest in taking over SQM. The Chilean company gets 58% of its revenue from fertilizers,

compared to 11% from lithium. But it's clear that investors are intrigued by SQM's rapidly expanding operations in the Atacama desert. Chile boasts at least ten more salars that have yet to be explored for lithium reserves. If GM is right and drivers are willing to pay a steep premium for lithium-powered cars, SQM could be poised for a windfall.

E-mails about clean-energy loans provide new details on White House involvement

By [Carol D. Leonnig](#) and [Joe Stephens](#), Published: August 8 | Updated: Thursday, August 9, 7:23 AM

President Obama's staff arranged for him to be personally briefed last summer on a loan program to help clean-energy companies, two months before the program was thrust into headlines by the collapse of its flagship, the solar company [Solyndra](#), records show.

About the same time, then-White House Chief of Staff [William Daley](#) resolved a dispute among administration officials over another project in the program, clearing the way for a \$1.4 billion loan, according to documents and sources familiar with the situation.

The documents, a series of e-mails among Energy Department staff members involved in managing the program, provide new details about the level of White House involvement in the controversial initiative. White House officials have said in the past that final decisions about which companies would receive the loan guarantees were made by career staff members at the Energy Department, not political appointees.

Administration officials said Wednesday that the e-mails show that the White House involvement was appropriate and that there was no pressure on agency officials.

That loan program, a signature piece of the Obama administration's effort to stimulate the economy, has become a major issue in this year's [presidential campaign](#). Republicans have charged that the program wasted critical stimulus money meant to create jobs, spending it instead on ill-advised projects that

Readers' Comments

Readers shared their thoughts on this article.

The previously unknown deposits — including huge veins of iron, copper, cobalt, gold and critical industrial metals like [lithium](#) — are so big and include so many minerals that are essential to modern industry that Afghanistan could eventually be transformed into one of the most important mining centers in the world, the United States officials believe.

An internal Pentagon memo, for example, states that Afghanistan could become the “Saudi Arabia of lithium,” a key raw material in the manufacture of batteries for laptops and BlackBerrys.

The vast scale of Afghanistan’s mineral wealth was discovered by a small team of Pentagon officials and American geologists. The Afghan government and

The problem with lithium

David Booth, National Post

Presented by

Pierre Verdy, AFP, Getty Images

How quickly we have forgotten. Yesterday's front-page headline is today's page 13 filler, consigned to the back of the newspaper as something sexier or more pressing forces its way to page one-- above the fold.

The subject I'm talking about is oil, the pressing story before all the world's stock markets decided to simultaneously implode. We used to worry about the price of oil and when it would run out, and even non-petrochemical engineers understood the concept of "peak oil." But, whether alternative energy is still big news or not, this much is clear: The world's oil supply is finite, fossil-fuelled vehicles pollute and the public outcry for an alternative is strong.

The leading alternative right now -- if you judge technology by the amount of press generated -- is electric cars. Electric cars don't pollute, electrons are relatively cheap and, perhaps most importantly, these vehicles seem to have captured the imagination of the American consumer, still the greatest economic engine in the world.

Naturally, there are issues. Electric cars don't have the range that current gasoline-powered cars enjoy. Replenishing the onboard energy supply is problematic, taking anywhere from 30 minutes (with special equipment) to all day. There's also the small problem of the battery having to power both the car's engine and its various ancillary and convenience devices -- someday soon you may have to decide what's more important, air conditioning or getting to your final destination.

Then there's the least talked about problem on our road to electric transportation -- the source of all that power. I don't mean the massive amounts of additional electricity needed to power the approximately seven million cars a very optimistic Carlos Ghosn, Nissan's CEO, estimates will be sold annually by the year 2020 but the actual batteries that will store all those portable electrons. Just as we already have a problem with peak oil having caused last year's massive price spike at the pumps, there may be a similar paucity in the world's capacity to produce lithium, the miracle metal key to so many automakers' future plans for hybrid and electric vehicles.

This lightest metal in the periodic table was used primarily in the production of ceramics and high-temperature glass, not to mention anti-psychotic drugs. But, about two decades ago, it started gaining prominence as a material used for battery production, thanks to the relatively high energy density and

The gas engine made petroleum the world's biggest commodity. The electric car could do the same for the third element on the periodic table.

© Diego Gaudin / Archiving / Redux for Forbes

Mounds of magnesium chloride ring SQM's mine, creating the illusion of snow in the ultra-arid *salar*.

The gas engine made petroleum the world's biggest commodity. The electric car could do the same for the third element on the periodic table.

Nothing grows in the heart of the Salar de Atacama, this ancient Chilean lake bed 700 miles north of Santiago may be the driest place on Earth, a wasteland strewn with salt-encrusted rocks that resemble cow pies. Annual rainfall on the *salar* (which in Spanish means "salt lake") rarely tops a few millimeters. The cloudless skies combine with the high altitude, 1.4 miles above sea level, to produce punishing solar radiation, capable of frying exposed flesh in minutes.

Tesla opens its Model S electric car factory

by [Wayne Cunningham](#)

Share 1

Tesla unveiled its sign over the old NUMMI plant, where it will build the Model S electric car. (Credit: James Martin/CNET)

On Wednesday, Tesla CEO Elon Musk and California Senator Diane Feinstein stood before the New United Motor Manufacturing Inc. (NUMMI) plant, shuttered since April, and announced its new beginning as the base for Tesla Model S production. The press conference was capped by the unveiling of a large Tesla sign over the plant.

Tesla Vice President for Manufacturing Gilbert Passin conducted a tour through the parts of the factory that will host production lines for the Model S. Passin boasted that acquiring NUMMI was a huge cost savings for Tesla, as building a new plant would cost hundreds of millions of dollars. Toyota sold the plant to Tesla for \$42 million.

Panasonic **Product Information Sheet**

Panasonic Batteries
 Panasonic Industrial Company
 A Division of Panasonic Corporation of North America
 5201 Tollview Drive, 1F-3
 Rolling Meadows, IL 60008
 Toll Free: 877-726-2228
 Fax: 815-455-6750

Product: Lithium-ion Batteries (Li-ion)
Applicable models/sizes: All Cylindrical and prismatic Lithium-ion Cobalt type

FIRE SAFETY

In case of fire, you can use dry chemical, alcohol resistant foam or carbon dioxide fire extinguishers. Cooling the exterior of the batteries will help prevent rupturing. Burning of these batteries will generate toxic fumes. Fire fighters should use self-contained breathing apparatus.

employees.
 Because all of our batteries are defined as "articles", they are exempt from the requirements of the Hazard Communication Standard, hence a MSDS is not required.

The following components are found in a Panasonic Lithium Ion battery:

Component	Material	Formula
Positive Electrode	Lithium Cobalt Oxide	LiCoO ₂
Negative Electrode	Graphite	C
Electrolyte	Ethylene Carbonate - Solvent	C ₄ H ₈ O ₃
	Diethyl Carbonate - Solvent	C ₈ H ₁₈ O ₃
	Lithium Hexafluorophosphate - Salt	LiPF ₆

The overall reaction is: LiC₆ + Li_{1-x}CoO₂ ↔ C + LiC₆x

DISPOSAL

All Panasonic Lithium Ion batteries are classified by the federal government as non-hazardous waste and are safe for disposal in the normal municipal waste stream. These batteries, however, do contain recyclable materials and are accepted for recycling by the Rechargeable Battery Recycling Corporation's (RBRC) Battery Recycling Program. Please call 1-800-8-BATTERY for information on recycling your used Lithium Ion battery or go to the RBRC website at www.rbrc.org for additional information.

TRANSPORTATION

Effective October 1, 2008 all Panasonic lithium ion batteries are not subject to the requirements of the Department of Transportation (DOT) Subchapter C, Hazardous Materials Regulations, shipped in compliance with 49 CFR 173.185 and Special Provision 188.

Currently all Panasonic lithium ion batteries can be transported under the International Civil Aviation Organization (ICAO) and the International Air Transport Association (IATA) under Special Provision A45. Effective January 1, 2009 Special Provision A45 will be replaced by Packing Instructions (PI) 965 (Batteries), PI 966 (Batteries, packed with equipment) and PI 967 (Batteries, contained in equipment).

Currently all Panasonic lithium ion batteries are regulated by the International Maritime Organization (IMO) under Special Provisions 188 and 230. These regulations will stay in effect until January 1, 2010 when Special Provisions 188 and 230 will be updated.

If you build any of our lithium cells into a battery pack, you must also assure that they are tested in accordance with the UN Model Regulations, Manual of Test and Criteria, Part II, subsection 38.3. If you plan on transporting any untested prototype battery packs contact your Panasonic Sales Representative for regulatory information.

Note: The information and recommendations set forth are made in good faith and are believed to be accurate at the date of preparation. Panasonic Industrial Company makes no warranty, expressed or implied.

Keywords: Lithium ion battery, ionic liquid, electrolyte, safety, thermal stability

1. INTRODUCTION

Lithium ion batteries have been widely used on personal computers and mobile phones for their high-voltage, high-energy-density characteristics [1-4]. Especially, the rapidly need for cleanly resource and crisis of energy, lithium ion batteries attract more attention as the power source of electric and hybrid electric vehicles. However, Lithium ion batteries have not been large-scale applied to electric vehicles for the safety issues, the volatile and flammable organic solvent organic solvents is the main components of electrolytes in lithium ion batteries, the cases of flaming, smoking or thermal runaway caused by electrolytes are the main reason for the safety problem. Therefore, electrolyte system, which has more stable features, is necessary to be found.

At this point, enough evidence has accumulated to clearly prove that a mining scam was underway involving trillions of dollars of lithium, which Tesla, John Doerr and the Silicon Valley Cartel, 1.) clearly acquired the monopoly ownership of, 2.) at exactly the right moment to time it to the Afghan War, 3.) and place their associate: Steven Chu in office, 4.) and arrange the Dept. of Energy exclusive cash give-aways and 5.) tie in with Goldman Sachs commodity rigging which every suspect has now been shown to have had an operational hand in, and financial & political benefit from.

Solyndra was staged to exploit indium and other related minerals from the same mining deal. Alas, the Afghan War failed, costing U.S. taxpayers (According to multiple news reports) over six trillion dollars, the Republicans found out about the "Cleantech Scam" and dissected it, almost all of the Cartel's pool of exploitation companies went out of business, the Russian portions went into cold war mode with their U.S. counter-parts and leaks from Dept. of Energy staff broke the cover-up. Senior Federal employees participated in, coordinated and benefitted from the crime.

How many Afghan farmers, soldiers and workers had to die to buy John Doerr his new mansion?

Why did federal employees get the profits from helping do this crime?

Huge mineral wealth discovered in Afghanistan

U.S. geologists have reportedly discovered nearly \$1 trillion worth of untapped mineral deposits in Afghanistan. The deposits, which include huge veins of iron, copper, gold, cobalt and lithium, are enough to turn the impoverished nation into one of the world's leading mineral centres.

Potential value of known and estimated resources in current prices (\$-billion)

Lithium deposits may be as large of those of Bolivia – currently has largest known reserves

Niobium:	81.2
Cobalt:	50.8
Gold:	25.0
Tungsten:	23.9
Others:	33.2

World's Mining Companies Covet Afghan Riches

By James Risen

June 17, 2010

WASHINGTON 🗨️ Mining companies around the world are eager to exploit Afghanistan's newly discovered mineral wealth, but executives of Western firms caution that war, corruption and lack of roads and other infrastructure are likely to delay exploration for years.

A few high-risk investors are sufficiently intrigued by the country's potential to take an early look. JP Morgan, for instance, has just sent a team of mining experts to Afghanistan to examine possible

SECTION FIVE – The Mobsters Of Big Tech And Their Senate Girlfriends

Plaintiffs lost tens of millions of dollars because the White House, the Department of Energy and their tech financiers defrauded Plaintiffs in order to profiteer on their own insider trading schemes, and then put a hit-job on Plaintiffs for reporting these crimes. Some state and federal officials are still covering this up and refusing to allow our case into a jury trial.

3 **DISCUSSION OF THIS SUB-SECTION**

4 Trillions of dollars of stock trades and direct payola bribes were exchanged using the White House
5 as a broker and the United States Department of Energy as a stock market manipulation platform.

6 That's right! Your public officials use federal agencies as dark-money laundering operations for
7 their friends.
8

9 If you are a taxpayer: You suffered damages!

10
11 If you are an American business: You suffered damages!

12
13 If you are Democracy: You were broken!

14 If you were a tech mobster: You made out like a bandit!

15
16 This is how it worked.

17
18 ***No public official wants these crimes to end because most of those officials profit from these***
19 ***crimes!***

20 Forget about any allegiance you might have to one political party over another. This is not about
21 parties, this is about racketeering crimes!

22 The Solyndra taxpayer, technology, financial and political disasters that began during the reign of
23 Steven Chu at the Department of Energy typified the overt, organized crime, corruption and crony
24 malfeasance of the public funds.
25

26 This trend was created via the back-door deals between 1.) the U.S. Department of Energy and
27 audacious kick-back schemes created by 2.) Silicon Valley campaign financiers and the 3.) White House.
28

1 This is the story of the racketeering schemes and scams that set out to steal trillions of dollars of taxpayer
2 cash, in plain sight, under the cover of a national “economic” or “health” emergency “stimulus” scam.

THE WHOREHOUSE LENDER

By [Bruce Krasting](#)

If you want to find out what happened with [Solyndra](#) you have to follow the money. I did. The half billion dollars of taxpayer dough that is probably lost in Sol came from the Federal Financing Bank (“FFB”). It’s worth a look at this bank to see what else is going on.

FFB is a bank that is owned and controlled by the US Treasury. The chairman of the Board is the TSec. ([Tim Geithner](#)). With the (big) exception of the Post Office all of the loans at FFB are guaranteed by government agencies. Technically speaking, FFB has no risks on loans guaranteed by an agency like the DOE. But I don’t think that should absolve Tim Geithner of any responsibility regarding the losses the country faces with Solyndra. If he, (*or anyone else at Treasury*) puts their pen to a ½ billion loan, **they better well know where the taxpayers money is going.** That didn’t happen.

FFB has been around for 40+ years. I believe it has always been a bank that has been used and abused by whoever happened to be running the show at Treasury. For example; from 9/30/2008 (*Pre - Tim and O*) to 9/30/3009 (*Post - Tim and O*) the FFB lent out \$17.1 billion to the nice folks at the National Credit Union Administration’s “**Liquidity Fund**”. NCU is the guarantor of the deposits in the country’s Credit Unions (similar to FDIC). They were up against it in 2009. They had no money left in the till to insure that those deposits would be safe. A bailout was needed to avoid a crisis. But rather than have a public debate about this, the FFB just borrowed some money and wrote a check to NCU. **Problem solved.**

The following are the balance sheet assets of the FFB for fiscal year end 2008 and 09. **Note that there**

1 were no outstanding loans guaranteed by the DOE in 08. But a year later the number had jumped up to
 2 nearly a Bil. It was clear back then that the FFB was rapidly becoming a policy tool of the new
 3 administration. By June 30th 2011 the DOE-guaranteed loans at FFB has grown to \$5.2B. Clearly the
 4 Administration is (was?) using the bank to facilitate its objectives.

FEDERAL FINANCING BANK
 Notes to Financial Statements
 September 30, 2009 and 2008
 (Dollars in thousands)

Loans receivable at September 30, 2009 and 2008, consist of the following:

Agency	2009	2008
Rural Utilities Service, Department of Agriculture	\$ 25,391,164	22,693,499
Credit Liquidity Fund, National Credit Union Administration	18,384,062	1,199,161
U.S. Postal Service	10,200,000	7,200,000
Rural Utilities Service, Department of Agriculture certificates of beneficial ownership	3,047,025	3,632,550
General Services Administration	2,037,215	2,097,731
Department of Energy	907,680	
Low Rent Public Housing, Department of Housing and Urban Development	586,378	691,412
Foreign Military Sales, Department of Defense	545,376	680,365
Historically Black Colleges and Universities, Department of Education	453,298	338,466
Ship Leasing, Department of Defense, Navy	-	16,623
Small Business Administration	5,379	10,046
Veteran Administration Transitional Housing Program	4,889	4,940
Federal Railroad Administration, Department of Transportation	1,786	2,035
Total loans receivable	\$ 61,564,851	38,476,868

Note: Red handwritten annotations in the original image include a circle around the 2008 value for 'U.S. Postal Service' and an arrow pointing to the difference between the 2009 and 2008 totals, labeled '+\$17b'.

15 The borrowers identified as the beneficiaries of the FFB's deep pockets include:

16 [Abound Solar](#)

17 **Arizona Solar – UNC**

18 **Beacon**

19 **Great Basin Transmission**

20 **Kahuku Wind Power**

21 **Solyndra**

22 **Solar Partner I**

23 **Solar Partner II**

24 **And Solar Partner(s) III – VIII**

25 The names on this list are the problems-to-be for the DOE. (I can't wait to find out who we are partnering
 26
 27
 28

up with on the I – VIII deals)

The FFB/DOE has also been lending big bucks to some well know names.

Fisker Automotive, Inc.

Tesla Motors, Inc.

Ford Motors

These successful companies owe the FFB a total of \$3.8 billion. There is one company that I don't recognize. But they got \$35mm in May at a real fine rate:

GOVERNMENT-GUARANTEED LOANS					
DOE-ADV TECHNOLOGY VEHICLES MFG					
Tesla Motors, Inc.	3/03	\$1,634,718.00	9/16/19	2.355%	Qtr.
Tesla Motors, Inc.	3/03	\$5,735,723.00	9/15/22	2.860%	Qtr.
Vehicle Production Group	3/15	\$34,979,308.00	3/15/18	1.932%	Qtr.
Ford Motor Company	3/18	\$341,300,000.00	6/15/22	2.581%	Qtr.
Ford Motor Company	3/18	\$64,600,000.00	6/15/22	2.551%	Qtr.
Tesla Motors, Inc.	3/18	\$1,369,012.00	9/16/19	2.129%	Qtr.
Tesla Motors, Inc.	03/18	\$6,330,349.00	9/15/22	2.520%	Qtr.
Fisker Automotive, Inc.	3/24	\$9,265,000.00	4/24/17	1.798%	Qtr.

Who's VPG? Nice rate on 35 mil!

The Post Office has \$12.9 large out with FFB. The PO has a debt limit of \$14b. They will hit that in 2012 (and then go broke). The FFB has been funding the operating deficits at the PO for years. When O took office it was \$7b. Playing, "Hide the losses at the PO" is a very old game in D.C.

The FFB also has an active role in providing the much needed lucre for Foreign Military Sales. As of June 30 there was \$349mm of IOUs. (I wonder who those "I"s are. Probably stable governments, right?) If you're keeping score, the amount outstanding when Bush left office was 50% higher than today.

\$33 billion (61% of FFB's book) is out to Rural Electrics. It would appear that many parts of the country

1 don't have adequate utilities. Nor do they have the resources to fix the problems. The solution has been to
 2 lend them dirt-cheap money with functionally no maturity. This is just a silly accounting game to avoid
 3 recognizing that needed infrastructure expense(s) should have been in the budget long ago. This is a close-
 4 up of a section of the FFB report:

RURAL UTILITIES SERVICE					
People's Coop. Svcs #2694	5/23	\$1,500,000.00	12/31/43	3.948%	Qtr.
Sumter Elec Coop. Inc. #2554	5/23	\$38,500,000.00	12/31/43	3.784%	Qtr.
East Kentucky Power #2322	5/24	\$1,813,000.00	12/31/40	3.829%	Qtr.
East Kentucky Power #2531	5/24	\$12,668,000.00	12/31/40	3.829%	Qtr.
East Kentucky Power #2768	5/24	\$24,000,000.00	1/03/45	3.942%	Qtr.
• High Plains #2924	5/24	\$9,300,000.00	1/02/46	3.813%	Qtr.
• Lake Region Elec. #2921	5/24	\$5,000,000.00	1/02/46	3.968%	Qtr.

I wanna go!

11 Note the long maturities and % rates. 35-year money for **Lake Land** (*sounds like a nice place*) at
 12 Treasuries +30. The following is a pic of all the re-financings for May and June. I shrunk it because it
 13 would just clutter the page; *it's that long*. Blow it up on your own or go to the [FFB site](#) and look up Press
 14 Releases. **This goes on every month of the year.** This stinks of boondoggle and pork. What are the
 15 administrative costs to oversee this? **There has to be a better way.**

17 I'm all for education. We're dead in the water without it. I think there is a role for the government
 18 to assist in this. **But the FFB?** *Why are they making loans?* Is this just another way to avoid an expense?
 19 What are these guys in D.C. thinking? Is everything "*on the arm*" down there? Again, a close up and the
 20 totals for two months. This is silly, right?

22 A minor bad loan is the \$493mm of Hope Now Bonds. A good chunk of this is still in cash. But not
 23 for long. Treasury is going to use some of this money for the big mortgage ReFi that is in the offing. When
 24 that happens there will be hope of repayment of the Hope Bonds.

26 There is one more attractive feature for the Chairman of the FFB. With the exception of the notes
 27 from the PO, it's all off balance sheet. When the "Debt to the Penny" calculation is made by the Treasury,
 28 the (net of PO) \$33b at FFB borrowings are excluded.

In Wall Street terms, that makes the FFB a SPIV and it's a whorehouse.

Note: I've written about the FFB before. I smelled trouble with this bank. My nose was working,

Above -John Doerr and his partner Ellen Pao. He arranged much of the Cleantech Scam. She later sued him in a famous sex abuse lawsuit. John Denniston swapped

Quid Pro Quo. Maxine Ghislane worked the crowd.

KPCB venture capital has been charged with a massive number of financial crimes, bribes and stock market manipulations. Police records show that their offices were broken into, physically and digitally, by high end hackers who acquired very incriminating data. Their executives have horrific links to sex and abuse scandals (as shown on pacer.gov and private investigation files). They bribe Stanford University to get good grades for their snot nose kids. John Denniston from the firm was under surveillance by a “major entity”. Tom Perkins, from KPCB, became a whistle-blower (to us) just before he died. Doerr is one of the

1 biggest promoters (and beneficiaries) of lithium batteries and one of the biggest covert attackers of fuel
2 cells, the competing technology. Doerr is one of the “Godfathers” of the “Silicon Valley Mafia”.

3 KPCB pretty much only retains front office interns and receptionists that look like Victoria’s Secret
4 models. It is said that the Rosewood Hotel, across from their offices, was created at the behest of KPCB
5 executives for them to trot over to for sex.
6

7 KPCB brought the Russians to Silicon Valley and promoted Russian “business-man” involvement
8 in U.S. political campaign PACS and tech companies. KPCB played both sides of the fence with contacts at
9 the Russian FSB and the American IN-Q-Tel spy agencies. KPCB was instrumental in getting IN-Q-Tel to
10 open an office on Sand Hill Road just walking distance from the KPCB offices.
11

12 In leaked DNC emails and communications, KPCB and the Doerr’s are acknowledged as some of
13 the biggest financiers of the Obama and Biden campaigns.

14 The news media reports that “Every millionaire from Silicon Valley”: *“Cheats on their taxes; Has
15 either a mistress, gay sex rent boys or cheats on their spouse; Hires hookers on a regular basis; Lies about
16 who actually created their company; Bribes politicians; Has a fake charity to hide from taxes; Screws their
17 interns and nannies; Is an alcoholic; Is addicted to drugs and can't pass a full-range drug test; Is a
18 narcissist; Is a sociopath; Has lobbyists, lawyers and staff, who are actual criminals, that do their dirty
19 work; Hates anyone who is black or brown; Abuses their staff; Is a latent homosexual; Treats women like
20 tools; Has a sex addiction involving using sex to control others; Hates Laurene Powell Jobs because she
21 intimidates them; Wears khaki's because they want to appear "humble"; Has had weird sex at the
22 Rosewood Hotel or the Palo Alto Four Seasons; Still buys more stuff than they can afford so that they
23 leverage themselves out; Is entirely focused on superficial appearances; Uses fake and exaggerated
24 "mugging" facial expressions and reactions when interacting in public; Won't do business with anyone
25 outside of the Yale/Stanford frat boy circuit; Was trained by asshole parents to be an asshole; Is
26 brainwashed by the media; Only gets married so their "optics" will superficially fit it to their frat boy
27
28*

1 social bubble; Feels compelled to join exclusionary "mens clubs"; Gets an expensive car to make up for
2 their feelings of sexual inadequacy..."

3 So far, the reality of Silicon Valley seems to prove all of that to be true!

	August	<ul style="list-style-type: none"> Amidst falling PV prices, analysts worry that Solyndra cannot compete. DOE refuses to restructure the loan a second time.
	September	<ul style="list-style-type: none"> Solyndra declares bankruptcy. Closes manufacturing facility and lays off 1,100 workers.

Illustration 6: Timeline To Hell - Solyndra

Illustration 7: Can You Say Conflict-Of-Interest?

THE SOLYNDRA DUE DILIGENCE LIE

How could the biggest, most expensive, most "thorough investigation" in DOE history have resulted in all of the biggest failures in DOE history unless Solyndra, and the rest, were entirely just campaign finance kickback scams? Steven Chu allowed Solyndra to lie so he could pay off Obama's financiers. DOE knew, from Day One that Solyndra was a sham!

U.S. Department of Energy Page 1 of 2

United States Department of Energy
Office of Public Affairs
Washington, D.C. 20585

News Media Contact(s): **For Immediate Release**
(202) 586-4940 March 20, 2009

Obama Administration Offers \$535 Million Loan Guarantee to Solyndra, Inc.
Investment Could Lead to Thousands of New Jobs

Washington, DC – Energy Secretary Steven Chu today offered a \$535 million loan guarantee for Solyndra, Inc. to support the company's construction of a commercial-scale manufacturing plant for its proprietary cylindrical solar photovoltaic panels. The company expects to create thousands of new jobs in the U.S. while deploying its solar panels across the U.S. and around the world.

"This investment is part of President Obama's aggressive strategy to put Americans back to work and reduce our dependence on foreign oil by developing clean, renewable sources of energy," Secretary Chu said. "We can create millions of new, good paying jobs that can't be outsourced. Instead of relying on imports from other countries to meet our energy needs, we'll rely on America's innovation, America's resources, and America's workers."

Secretary Chu is moving aggressively to accelerate important Department of Energy investments that can create jobs and transform the way America uses and produces energy. This allows the Department of Energy to offer its first loan guarantee within the first two months of the Obama Administration. This loan guarantee will be supported through the President's American Recovery and Reinvestment Act, which provides tens of billions of dollars in loan guarantee authority to build a new green energy economy.

Solyndra's photovoltaic systems are designed to provide the lowest installed cost and the highest solar electricity output on commercial, industrial and institutional roof tops, which are a vast, underutilized resource for the distributed generation of clean electricity. Solyndra's proprietary design transforms glass tubes into high performance photovoltaic panels which are simple and inexpensive to install. By replacing power generated from fossil fuel sources, the electricity produced from the solar panels will reduce emissions of greenhouse gases.

Based in Fremont, CA, Solyndra is currently ramping up production in its initial manufacturing facilities. Once finalized, the DOE loan guarantee will enable the company to build and operate its manufacturing processes at full commercial scale.

Solyndra estimates that:

- The construction of this complex will employ approximately 3,000 people.
- The operation of the facility will create over 1,000 jobs in the United States.
- The installation of these panels will create hundreds of additional jobs in the United States.
- The commercialization of this technology is expected to then be duplicated in multiple other manufacturing facilities.

Secretary Chu is offering the loan guarantee by signing a "conditional commitment" today, following approval this week by the Department of Energy's Credit Review Board. Just as homebuyers who have been approved for a loan are

<http://www.igprogram.energy.gov/print/032009.html> 5/19/2009

U.S. Department of Energy

Page 2 of 2

required to meet certain conditions before closing, the conditional commitment will require Solyndra to meet an equity commitment as well as other conditions prior to closing. Today's action signals the Department's intent to move forward on Solyndra's application for \$535 million loan guarantee provided the company meets its obligations.

Before offering a conditional commitment, DOE takes significant steps to ensure risks are properly mitigated for each project prior to approval for closing of a loan guarantee. The Department performs due diligence on all projects, including a thorough investigation and analysis of each project's financial, technical and legal strengths and weaknesses. In addition to the underwriting and due diligence process, each project is reviewed in consultation with independent consultants.

Secretary Chu initially set a target to have the first conditional commitments out by May – three months into his tenure – but today's announcement significantly ~~outpaces that aggressive timeline~~. Secretary Chu credited the Department's loan team for their work accelerating the process to offer this conditional commitment in less than two months, demonstrating the power of teamwork and the speed at which the Department can operate when barriers to success are removed.

The Department of Energy's Disastrous Management of Loan Guarantee Programs

STAFF REPORT
U.S. HOUSE OF REPRESENTATIVES
112TH CONGRESS
March 28, 2012

THE U.S. CONGRESS REPORTED:

"After conducting a substantial review of the Department of Energy's (DOE) loan guarantee program, it is clear that the significant losses absorbed by taxpayers as a result of Solyndra's collapse is just the beginning. The investigation conducted by the House Committee on Oversight and Government Reform has uncovered numerous examples of dysfunction, negligence and mismanagement by DOE officials, raising troubling questions about the leadership at DOE and how it has administered its loan guarantee programs. ... DOE has overseen a process wrought with misdirection, changing and expanding requirements, unexplained delays, gross mischaracterizations, and a never-ending cycle of excuses. Not only does it appear that DOE purposely directed taxpayer funds at a failing enterprise, DOE's action robbed taxpayers of genuine investment toward renewable energy."

Bridging the gap between academic ideas and real-world problems

TESTIMONY

ASSESSING THE DEPARTMENT OF ENERGY LOAN GUARANTEE PROGRAM

VERONIQUE DE RUGY

Senior Research Fellow

In his famous book *Economics in One Lesson*, economist Henry Hazlitt wrote, "Government encouragement to business is sometimes as much to be feared as government hostility."¹

In 2009, renewable energy company Solyndra received \$535 million through the federally backed 1705 loan guarantee program of the Department of Energy (DOE). Two years later the firm filed for bankruptcy and had to lay off its 1,100 employees, leaving taxpayers bearing the cost of the loan.

For obvious reasons, more than any other recent events, the waste of taxpayers' money due to Solyndra's failure has attracted much attention. However, the problems with loan guarantees are much more fundamental than the cost of one or more failed projects. In fact, the economic literature shows that (1) every loan guarantee program transfers the risk from lenders to taxpayers, (2) is likely to inhibit innovation, and (3) increases the overall cost of borrowing. At a minimum, such guarantees distort crucial market signals that determine where capital should be invested, causing unmerited lower interest rates and a reduction of capital in the market for more worthy projects. At their worst, they introduce political incentives into business decisions, creating the conditions for businesses to seek financial rewards by pleasing political interests rather than customers. This is called cronyism, and it entails real economic costs.²

Yet, these loan programs remain popular with Congress and the executive. That's because in general most of the financial cost of these guaranteed loans will not surface for many years. That means that Congress can approve billions of dollars to benefit special interests, with little or no immediate impact to federal appropriations in the short term, because they are almost entirely off-budget.

HOW DO THESE LOAN GUARANTEES WORK?

The DOE Loan Programs Office (LPO) administers three separate loan programs: (1) Section 1703 loan guarantees, (2) Section 1705 loan guarantees, and (3) Advanced Technology Vehicle Manufacturing (ATVM) loans. Here are descriptions of the three loan programs, as explained by DOE:³

1. Henry Hazlitt, *Economics in One Lesson*, in Chapter VI Credit Diverts Production, Laissez-Faire Books, Benicia, CA, 1946, p. 27.

2. Matt Mitchell, *The Pathology of Privileges* (working paper, Mercatus Center at George Mason University, July 2012).

3. United States Department of Energy, accessed June 13, <https://lpo.energy.gov/>.

The ideas presented in this document do not represent official positions of the Mercatus Center or George Mason University

- Section 1703 of Title XVII of the Energy Policy Act of 2005 authorizes the U.S. Department of Energy to support innovative clean energy technologies that are typically unable to obtain conventional private financing due to high technology risks.
- Advanced Technology Vehicles Manufacturing (ATVM) loans support the development of advanced technology vehicles (ATV) and associated components in the United States. They also meet higher efficiency standards.
- The Section 1705 Loan Program authorizes loan guarantees for U.S.-based projects that commenced construction no later than September 30, 2011 and involve certain renewable energy systems, electric power transmission systems, and leading edge biofuels.

According to LPO's website, DOE's loan guarantee authority originated from Title XVII of the Energy Policy Act of 2005 (P.L. 109-58).⁴ Under Section 1703, the federal government can guarantee 80 percent of a project's total cost. The American Recovery and Reinvestment Act of 2009 (P.L. 111-5) amended the Energy Policy Act of 2005 by adding Section 1705.⁵ Section 1705 was created as a temporary program, and 1705 loan guarantee authority ended on September 30, 2011.

The dollar volume of loans that can be guaranteed under DOE's authority is predetermined by congressional appropriations that oversee the program. A simple way to explain how these loans work is the following: If a recipient defaults on its loan, the federal government pays the remainder of the debt to the lenders and repossesses all of the assets from the unfinished projects.⁶

As with other loan programs, to prevent taxpayers' exposure, the federal government has established a credit subsidy fee. In this case, the cost of the fee is determined by DOE, with guidance from OMB. The lenders usually charge the up-front guarantee fee to the borrower after the lender has paid the fee to DOE and has made the first disbursement of the loan.

This is not the case for 1705 loans, however. Under the stimulus bill, DOE received appropriated funds to pay for credit subsidy costs associated with Section 1705 loan guarantees, which, after rescissions and transfers, was \$2.435 billion. As the Congressional Research Service rightly puts it, "Section 1705 loan guarantees were very attractive as they provided an opportunity to obtain low-cost capital with the required credit subsidy costs paid for by appropriated government funds."⁷

DOE does not provide loans directly. Instead, borrowers have to apply to qualified finance organizations. These lenders are expected to perform a complete analysis of the application. Then DOE reviews the lender's credit analysis rather than conducting a second analysis. DOE still makes the final credit and eligibility decision.

DO LOAN GUARANTEES DO WHAT THEY CLAIM TO DO?

Leaving aside the question of whether the government should encourage the production of certain goods or services, the economic justification for any government-sponsored lending or loan guarantee program must rest on a well-established failure of the private sector to allocate loans efficiently (meaning that deserving recipients could

4. Section 1703 of the Energy Policy Act of 2005 (P.L. 109-58).
 5. Section 1705 of the Energy Policy Act of 2005 (P.L. 109-58); Section 1705 was created by amending the Energy Policy Act of 2005 through the American Recovery and Reinvestment Act of 2009 (P.L. 111-5).
 6. However, the Office of Management and Budget has calculated that only 55 percent of loan can be recouped from the sale of assets.
 7. Phillip Brown, "Solar Projects: DOE Section 1705 Loan Guarantees," (Congressional Research Service, October 25, 2011), accessed June 13, 2012, [http://fop.bna.com/erw.nsf/id/jstn-8mzsy/\\$File/CRSSolar.pdf](http://fop.bna.com/erw.nsf/id/jstn-8mzsy/$File/CRSSolar.pdf).

not have gotten capital on their own). Absent such a private-sector deficiency, the DOE's activities would simply be a wasteful at best, politically motivated at worst subsidy to this sector of the economy.

Yet, many argue that some public policy objectives require the sacrifice of marketplace efficiency. It is an accepted feature of modern American government that some public interests or social policy gains outweigh economic losses. In the case of green energy, the government's lending programs could fulfill specific public policy objectives that the marketplace on its own would not otherwise serve or would supply at suboptimal levels. But do they?

In describing its role in the economy, the DOE proclaims that its loans help save the planet⁸ by helping to secure funding for the earlier-stage technologies or the later commercialization stage—known as the manufacturing “Valley of Death.”⁹ It also claims that the loan recipients will generate economic growth and “green” jobs that otherwise would not appear. DOE can thus be judged on its ability to meet these public policy goals—namely, to fill the supply-and-demand gap in the clean energy loan market, particularly for startups.

To measure the DOE results, I looked at the flow of DOE credits to evaluate who receives them and whether the DOE is meeting its stated policy objectives of promoting new startups and encouraging the creation of green jobs.

A close examination demonstrates that neither stated DOE policies nor its actual lending patterns provide evidence that its loan guarantees serve any of its defined public policy purpose.

FOLLOWING THE 1705 LOAN GUARANTEE PROGRAM MONEY

Since 2009, DOE has guaranteed \$34.7 billion, 46 percent of it through the 1705 loan program, 30 percent through the 1703 program, and 14 percent through the ATVM.¹⁰

Loan Guarantees by Program

The 1705 (under which Solyndra received funding) authorized loan guarantees for programs for “certain renewable energy systems, electric power transmission systems and leading edge biofuels projects that commence construction no later than September 30, 2011.” This program is a product of the economic stimulus bill of 2009. As mentioned before, this program offered borrowers better terms than the 1703—in some cases the government paid for a substantial fee out of appropriated funds, one that is the borrower’s responsibility under the 1703. Also, many 1703-eligible projects were also eligible under the 1705.

The data shows that:

8. Mike King and W. David Montgomery, “Let’s Reset Our Energy Policy Starting with Loan Guarantees,” in *Pure Risk: Federal Clean Energy Loan Guarantees*, ed. Henry Sokolski (Nonproliferation Policy Education Center, 2012)

9. Sustainablebusiness.com, “Clean Energy: Crossing the Valley of Death,” June 2010, <http://www.sustainablebusiness.com/index.cfm/go/news.display/id/20544>.

10. U.S. Department of Energy, Loan Programs Office: https://lpo.energy.gov/?page_id=45

panies with vast resources. This includes loans such as the \$90 million guarantee granted to Cogentrix, a subsidiary of Goldman Sachs. Currently, Goldman Sachs ranks number 80 on the list of America's Fortune 500 companies.¹¹

This probably means that if there were an actual gap between the supply and demand for loans for energy companies, startups, or others, this program wouldn't be filling it. In fact, most of these loans look like government transfers of the worst kind: subsidies to very large corporations very much resembles cronyism.

Third, there seems to be an even more troubling trend of "double dipping" by large companies that received loan guarantees from the DOE program. Many of the companies that have benefitted from subsidized loans under the 1705 guarantee program also received additional grants under the American Recovery and Reinvestment Act (ARRA). For example, Prologis (which benefitted from \$1.4 billion in subsidized loans) received a grant for \$68,000 for the purpose of "rent for warehouse space" under the Recovery Act.

Green Mountain Energy, a company of NRG Energy, received two grants under the ARRA in the second quarter of fiscal year 2011. Likewise, Reliant Energy and Reliant Energy Tax Retail LLC, two other NRG Energy companies, reported receiving at least 37 grants under the ARRA. These grants augmented the \$3.8 billion in loan guarantees for NRG Energy distributed under the Section 1705 Loan Program.

NRG will also be eligible to receive \$430 million from the Department of the Treasury.¹² In addition, many companies benefited from the Department of Treasury 1603 grants.¹³

Quoted in the *New York Times* recently, NRG's chief executive, David W. Crane, explained how his company and its partners have secured \$5.2 billion in federal loan guarantees, plus hundreds of millions in other subsidies for four large solar projects. "I have never seen anything that I have had to do in my 20 years in the power industry that involved less risk than these projects," he said in a recent interview. "It is just filling the desert with panels."¹⁴

Examples of companies benefitting from multiple assistance programs initiated during this period abound. For instance, in addition to the \$538 million it received under the 1705 loan program, Solyndra benefited from a \$10.3 million loan guarantee that the Ex-Im Bank extended to a Belgian company (described in the Ex-Im deal data as "Zellik Ii Bvba") to finance a sale of Solyndra products.¹⁵

Solyndra isn't alone. First Solar's Antelope Valley project received a \$646 million 1705 loan in 2011 through its partner Exelon, and per my calculation from the Ex-IM Bank FOIA deal data information for FY2011,¹⁶ the company also scored \$547.7 million in loan guarantees to subsidize the sale of solar panels to solar farms abroad.

More troubling is the fact that some of the Ex-Im money went to a Canadian company named St. Clair Solar, which is a wholly owned subsidiary of First Solar.¹⁷ St. Clair Solar received a total of \$192.9 million broken into

17. Tim Carney, Firm Sells Solar Panel to Itself – Taxpayers Pay. *The Washington Examiner*, March 18th 2010, <http://campaign2012.washingtonexaminer.com/article/firm-sells-solar-panels-itself-taxpayers-pay/434251>.

two loans to buy solar panels from First Solar. In other words, the company received a loan to buy solar panels from itself. Incidentally, First Solar also received a \$16.3 million loan from the government in 2010 to expand its factory in Ohio.¹⁸

This double-dipping by energy companies isn't new, unfortunately. While there is no doubt that the deals are lucrative for the companies involved, taxpayers have a lot to lose. Further, double-dipping provides evidence that businesses will be tempted to steer away from productive value creation for society and instead work on narrowly serving political interests for financial gain.

THE CASE AGAINST CLEAN ENERGY LOAN GUARANTEES

A great deal of attention has been focused on Solyndra, a startup that received \$528 million in federal loans to develop cutting-edge solar technology before it went bankrupt, had to lay off over a thousand workers, and left taxpayers to foot the bill. Obviously, the considerable waste of taxpayers' money is upsetting. But it is only one aspect of the fundamental problems caused by loan guarantee programs in general, and DOE's clean energy loan programs in particular.

1. Socialized Losses and Privatized Gains

Historically, loans guaranteed by the government have had a higher default rate than the loans issued by the private sector without government guarantee. For instance, the Small Business Administration (SBA) has a long-term default rate of roughly 17 percent.¹⁹ This compares to 4.3 percent for credit cards and 1.5 percent for bank loans guaranteed by the Federal Deposit Insurance Corporation.

Also, the Congressional Budget Office has calculated that the risk of default on the DOE's nuclear loan guarantee program, for example, is well above 50 percent.²⁰ In 2011, the CBO updated its study and replaced the embarrassing default rate with a list of variables affecting the rate.²¹ While it doesn't provide a specific rate, the report asserts that higher equity financing of these projects would reduce the risk of default. However, this is rarely the case, as most loan guarantee programs cover 80 percent of their financing through debt rather than equity.

Moreover, according to the CBO, when the federal government extends credit, the associated risk of those obligations is effectively passed along from private lenders onto taxpayers who, as investors, would view this risk as costly. In other words, when the federal government encourages a risky loan guarantee it is "effectively shifting risk to the members of the public."

Also, if the loan isn't repaid, then the cost of the investment is to taxpayers. However, if the loan is repaid as expected, the lender will benefit from all the interest payments it collected thanks to a fairly risk-free loan, and the borrower will collect the fruit of its successful business venture. In other words, loan guarantee programs are yet another way that the federal government socializes losses while privatizing benefits.²²

21. Congressional Budget Office (CBO), "The Cost-Effectiveness of Nuclear Power for Navy Surface Ships," (May 12, 2011), <http://www.cbo.gov/publication/41454>.

22. Russ Roberts, "Gambling with Other people's money" *Mercatus Center at George Mason University*, April 28, 2010, accessed June 13, 2012, <http://mercatus.org/publication/gambling-other-peoples-money>.

2. Moral Hazard

Federally backed loans create a classic moral hazard. Because the loan amount is guaranteed, banks have less incentive to evaluate applicants thoroughly or apply proper oversight. In other words, the less skin the lender has in the game, the less likely the lender will effectively vet the quality of the project. Also, the company that borrows the money has less skin in the game than it would if its loan weren't guaranteed. In addition, each time the government bails out a firm or has to shoulder the cost of a loan guarantee that got into financial trouble, it reinforces the signal to borrowers and bankers alike that it's OK to take excessive risks.

In a March 2012 report, the Government Accountability Office (GAO) found that the DOE loan guarantee program was riddled with program inefficiencies, putting the fairness of decisions about what firms receive loan guarantees into question.²³ When GAO requested data from the DOE on the status of the applications, the DOE did not have consolidated data readily available and had to assemble these data over several months from various sources. Inadequate documentation and out-of-date review processes reduce the assurance that the DOE has treated applicants consistently.

These findings do not prove the ability of the DOE to fully assess and mitigate project risks. Moreover, while in the absence of government intervention the private sector builds the infrastructure to assess risk, the federal government has neither the expertise nor the incentive to build such a safety net. This increases the likelihood that loan guarantees will be awarded based on factors other than the ability of the borrower to repay the loan, such as political connections and congressional interest in local pork.²⁴

The moral hazard of loan guarantees increases when rules intended to prevent the program from being a pure giveaway to companies are removed. This is the case, for instance, when as part of the stimulus bill of 2009, the government lifted the subsidy fees for 1705 loans. This move increases the cost to taxpayers and attracts high-risk companies.

3. Mal-investments

Loan guarantee programs can also have an impact on the economy beyond their cost to taxpayers.

Mal-investment—the misallocation of capital and labor—may result from these loan guarantee programs. In theory, banks lend money to the projects with the highest probability of being repaid. These projects are often the ones likely to produce larger profits and, in turn, more economic growth. However, considering that there isn't an infinite amount of capital available at a given interest rate, loan guarantee programs could displace resources from non-politically motivated projects to politically motivated ones. Think about it this way: When the government reduces a lender's exposure to fund a project it wouldn't have funded otherwise, it reduces the amount of money available for projects that would have been viable without subsidies.

This government involvement can distort the market signals further. For instance, the data shows that private investors tend to congregate toward government guarantee projects, independently of the merits of the projects, taking capital away from unsubsidized projects that have a better probability of success without subsidy and a more viable business plan. As the Government Accountability Office noted, "Guarantees would make projects [the

23. Government Accountability Office [GAO], DOE Loan Guarantees: Further actions are needed to improve tracking and review of applications, (March 2012), accessed June 13, 2012, <http://www.gao.gov/assets/590/589210.pdf>.

federal government} assists financially more attractive to private capital than conservation projects not backed by federal guarantees. Thus both its loans and its guarantees will siphon private capital away.²⁵

This reallocation of resources by private investors away from viable projects may even take place within the same industry—that is, one green energy project might trade off with another, more viable green energy project.

More importantly, once the government subsidizes a portion of the market, the object of the subsidy becomes a safe asset. Safety in the market, however, often means low return on investments, which is likely to turn venture capitalists away. As a result, capital investments will likely dry out and innovation rates will go down.²⁶

In fact, the data show that in cases in which the federal government introduced few distortions, private investors were more than happy to take risks and invest their money even in projects that required high initial capital requirements. The Alaska pipeline project, for instance, was privately financed at the cost of \$35 billion, making it one of the most expensive energy projects undertaken by private enterprise.²⁷ The project was ultimately abandoned in 2011 because of weak customer demand and the development of shale gas resources outside Alaska.²⁸ However, this proves that the private sector invests money even when there is a chance that it could lose it. Private investment in U.S. clean energy totaled \$34 billion in 2010, up 51 percent from the previous year.²⁹

Finally, when the government picks winners and losers in the form of a technology or a company, it often fails. First, the government does not have perfect or even better information or technology advantage over private agents. In addition, decision-makers are insulated from market signals and won't learn important and necessary lessons about the technology or what customers want. Second, the resources that the government offers are so addictive that companies may reorient themselves away from producing what customers want, toward pleasing the government officials.

4. Crowding Out

To some (for example, those lucky enough to receive the loan guarantee), government money may seem to be free. But it isn't, of course. The government has to borrow the money on the open market too. This additional borrowing comes from Americans' savings, as does the money that Americans invest in the private sector's growth. There comes a point when there just aren't enough savings to satisfy both masters. In other words, when government runs a deficit to finance its preferred projects, it can affect private sector access to capital, and lead to a reduction in domestic investment.

Economists use the term "crowding out" to describe the contraction in economic activity associated with deficit-financed spending.³⁰

In addition, the competition between public and private borrowing raises interest rates for all borrowers, including the government, making it more expensive for domestic investors to start or complete projects.

Over time, this could mean that American companies will build fewer factories, cut back on research and develop-

ment, and generate fewer innovations. As a result, our nation's future earning prospects will dim, and our future living standards could suffer.

5. Cronyism

In a 2003 speech to the National Economists Club in Washington, D.C., then-Federal Reserve Governor Edward M. Gramlich argued that loan guarantee programs are unable to save failing industries or to create millions of jobs, because—he explained—the original lack of access to credit markets is caused by serious industrial problems, not vice versa. If an applicant's business plan cannot be made to show a profit under reasonable economic assumptions, private lenders are unlikely to issue a loan. And they would be right not to.

Then why is the federal government still guaranteeing loans? One reason is it serves three powerful constituencies: lawmakers, bankers, and the companies that receive the subsidized loans.

Politicians are able to use loan programs to reward interest groups while hiding the costs. Congress can approve billions of dollars in loan guarantees with little or no impact to the appropriations or deficit because they are almost entirely off-budget. Moreover, unlike the Solyndra case, most failures take years to occur, allowing politicians to collect the rewards of granting a loan to a special interest while skirting political blame years later when or if the project defaults. It's like buying a house on credit without having a trace of the transaction on your credit report. It is also easy to understand why companies and company executives benefit from these loans and may seek them out. However, this shouldn't obscure the fact that this preferential treatment comes at the expense of the taxpayer, and ultimately at the expense of our market and political system.

But another potential beneficiary of these loans is the financial institutions that issue them. With other loan programs such as the SBA, there is evidence that lenders may have an incentive to favor borrowers that qualify for a loan with a government guarantee over those that do not. When a small business defaults on its obligation to repay a loan, bankers do not bear most of the cost; taxpayers do. Meanwhile, lenders make large profits on SBA loans by pooling the guaranteed portions and selling investors trust certificates that represent claims to the cash flows. How profitable is this? Testifying before Congress in April 2006, David Bartram, the president of the SBA Division of U.S. Bancorp, the nation's sixth-largest financial services company, explained that "return on equity of SBA loans can exceed 70 percent."³¹ A 70 percent return on equity (RoE) is remarkably high. Right now, the five-year average RoEs for the two biggest banks in America—Citigroup and Bank of America—are 16.2 percent and 14.5 percent, respectively.

More study is required to determine whether a similarly outsized return to financial institutions occurs with the DOE program, but the parallels between the DOE and SBA programs suggest this is a possibility.

CONCLUSION:

The Department of Energy's loan guarantee programs have been the focus of much public attention since energy company Solyndra went bankrupt last year, leaving taxpayers with a \$538 million bill. Of equal concern to the significance of this waste, however, is the distortion and incentives experienced by both lenders and companies that participate in the government loan program, as well as the distortion of market signals. Further looking at where the money is going, the evidence seems to go solidly against the idea that they are achieving their goals. And the systematic economic harm done by rewarding companies that forgo value creation in favor of pursuing financial benefit through the political system creates long term consequences for our economy and our country.

6

7
8 **The Department of Energy’s Disastrous Management of Loan Guarantee Programs**

9 **STAFF REPORT - U.S. HOUSE OF REPRESENTATIVES - 112TH CONGRESS**
10

11 **Executive Summary**

12 *After conducting a substantial review of the Department of Energy’s (DOE) loan guarantee*
13 *program, it is clear that the significant losses absorbed by taxpayers as a result of Solyndra’s*
14 *collapse is just the beginning. The investigation conducted by the House Committee on Oversight*
15 *and Government Reform has uncovered numerous examples of dysfunction, negligence and*
16 *mismanagement by DOE officials, raising troubling questions about the leadership at DOE and how*
17 *it has administered its loan guarantee programs.*
18

19 By the expiration of § 1705 program in September 2011, the DOE had approved 27 projects
20 totaling more than \$14.5 billion in guaranteed loans. Inexplicably, DOE management has turned a blind
21 eye to the risks that have been glaringly apparent since the inception of the program.
22

23 This report will demonstrate how DOE loan commitments exposed taxpayer funds to excessive
24 risk as a result of DOE’s bias toward approving loans without regard to warning signs.
25
26

1 The Committee identified many cases where the DOE disregarded their own taxpayer
2 protections, ignored lending standards and eligibility requirements and, as a result, amassed an
3 excessively risky loan portfolio. After review of internal emails, staff have identified instances
4 demonstrating that when DOE faced barriers that placed loan approvals at risk, DOE staff simply
5 sought to justify and overcome the barriers, rather than giving the barriers due consideration.
6

7 DOE has overseen a process wrought with misdirection, changing and expanding requirements,
8 unexplained delays, gross mischaracterizations, and a never-ending cycle of excuses. Not only does it
9 appear that DOE purposely directed taxpayer funds at a failing enterprise, DOE’s action robbed
10 taxpayers of genuine investment toward renewable energy.
11

12 **Key Findings**

13 · The Committee has identified a pattern indicative of poor management and a bias toward
14 unconstrained lending that resulted in the creation of a high risk, speculative and undiversified loan
15 portfolio that could ultimately result in substantial loss of taxpayer dollars. (pg. 3)
16

17 · From the very inception of the program, warnings signs existed pointing to a likely loss of
18 taxpayer dollars that went ignored by Administration officials. (pg. 7)
19

20 · DOE invested a disproportionate amount of its funds into solar technology leaving taxpayers
21 vulnerable by overemphasizing a single technology. 16 of the 27 1705-backed projects employed solar
22 technology – that represented 80 percent of DOE’s funds. (pg. 7)
23

24 · The billions of dollars in loan guarantees and cash grants directed at a Spanish firm, Abengoa,
25 reveal the excessive risks associated with directing that volume of subsidy to a single firm. Abengoa
26 managed to obtain a DOE loan commitment for the lowest rated project across the entire DOE Junk
27

1 portfolio – which received an extraordinarily low CCC rating and was still approved by DOE for a
2 direct loan to the project. This over-investment in this single firm will likely cause substantial harm to
3 the taxpayer. (pg. 12)

4 · DOE’s failure to diligently oversee costs and set prudent limitations on executive
5 compensation while it distributed billions of dollars in loan commitments has created a significant
6 moral hazard that has created enormous risks for DOE and taxpayer funds. (pg. 14)

7
8 · Beacon Power Corp, the second recipient of a § 1705 loan guarantee, paid three executives
9 more than a quarter million dollars in bonuses in March 2010. Eighteen months later, Beacon declared
10 bankruptcy – leaving taxpayers to repay the loan. (pg. 13)

11
12 · BrightSource Energy, recipient of a \$1.6 billion loan guarantee to build a solar generation
13 facility, has spent more than \$56 million on a desert tortoise relocation program. BrightSource has
14 indicated that the exploding cost of tortoise relocation program threatens to derail the entire \$1.6 billion
15 project – leaving taxpayers on the hook for the enormous sums of money spent on construction thus
16 far. (pg. 14)

17
18 · DOE has engaged in a disturbing pattern of suspending the approval of a credible project that
19 adheres to all stated standards, only to later approve massive funding for a project proven to be
20 nowhere nearly as far along in the process as DOE purported. DOE’s favoritism significantly harmed
21 numerous companies that had relied on the promise of 1705 financing. The perception is that DOE
22 actively misleads applicants about the status of their loan application, thereby encouraging these firms
23 to misallocate capital, which has led to financial harm. (pg. 17-19)

24
25 · DOE loan commitments exposed taxpayer funds to excessive risk as a result of DOE’s bias
26

1 toward approving loans without regard to warning signs. The Committee identified many cases where
2 the DOE disregarded their own taxpayer protections, ignored lending standards and eligibility
3 requirements and, as a result, amassed an excessively risky loan portfolio. After review of internal
4 emails, staff have identified instances showing that when DOE faced barriers that placed loan
5 approvals at risk, DOE staff simply sought to justify and overcome the barriers, rather than giving the
6 barriers due consideration. (pg.22)

7
8 · Substantial evidence indicates that in two cases officials in the Loan Programs Office
9 deliberately mischaracterized substantively identical technologies as dissimilar. Additionally, there is
10 evidence that applicants, with the encouragement of department officials, intentionally
11 mischaracterized their projects as “innovative” in an effort to access the Federal Financing Bank and
12 defeat these prudential requirements. (pg. 23-28)

13
14 · There appears to be a significant amount of evidence indicating that DOE manipulated
15 analysis and strategically modified evaluations in order to issue loans to First Solar that would qualify
16 under the statutory guidelines. An application that should otherwise fail, but instead passes under
17 improper influence and through manipulation of analysis, results in the defrauding of taxpayers and
18 misappropriation of assets. (pg. 32)

19
20 · DOE Violated the Statutory Requirement that Projects Commence Construction September 30,
21 2011. (pg. 32)

22
23 · In almost every public statement about its loan guarantee program, DOE touts job creation.
24 DOE’s Loan Programs Office webpage proudly proclaims that DOE expects the loans and loan
25 guarantees to “employ” over 60,000 people. The site also breaks down the number of jobs created or
26

1 saved by each loan or loan guarantee, and issues press releases for specific projects discussing job
2 creation. These figures are misleading and attempt to pass off jobs that already existed as new jobs. (pg.
3 37-40)

4 · Solopower accepted \$40 million of Oregon taxpayer money in addition to DOE’s approval of
5 a \$197 million loan via the Federal Financing Bank (FFB). They received this federal assistance despite
6 a rather dire prediction of Solopower’s prospects by Standard & Poor’s (S&P) which predicted that
7 Solopower will fail to meet its debt obligations. (pg. 47)

8
9 · Despite warnings from both S&P and its own internal analysis regarding risky business
10 models, DOE proceeded with a \$25 million grant for Beacon Power. In April 2010, S&P evaluated the
11 loan guarantee project and assigned it a dismal CCC+ credit rating noting that “Beacon is currently an
12 unprofitable start-up” and that “significant exposure to commodity price volatility” could significantly
13 hurt the company. S&P ran two default scenarios, both of which demonstrated that taxpayers would
14 lose millions. (pg. 49)

15
16 · Fitch Ratings evaluated the Abound Solar project, which was approved for a \$400 million
17 conditional loan guarantee, and assigned it a junk credit rating. Fitch gave the project a credit rating of
18 “B” (worse than Solyndra’s) with a recovery estimate of only 45%. Fitch labeled the project “highly
19 speculative” and described Abound as lagging in technology relative to its competitors, failing to
20 achieve stated efficiency targets, and expecting that Abound Solar will suffer from increasing
21 commoditization and pricing pressures. Abound Solar announced on March 1 st that it would stop
22 producing solar panels and would fire 180 employees, even though it has already received \$70 million
23 from DOE. (pg. 50-51)

1 · On June 15, 2010, DOE announced that it would conditionally issue a \$98.5 million partial
2 loan guarantee to Nevada Geothermal Power Company. The loan did not finance any new construction
3 and therefore did not help to create a single new job. Yet, in the press release for the project, Secretary
4 Chu and Senate Majority Leader Harry Reid touted Blue Mountain’s potential, with Senator Reid
5 stating, “I am glad to see economic recovery funding being used to put Nevadans to work on a project
6 that will help us achieve energy independence...” DOE’s awarding of this loan guarantee raises
7 questions about why DOE was investing significant taxpayer resources in an entity with well-
8 established financial difficulties. Nevada Geothermal has a well documented history of major financial
9 problems. By the time DOE conditionally approved the loan guarantee, Nevada Geothermal had
10 already violated contract terms and debt covenants relating to financing from its primary lender, TCW.
11 According to Nevada Geothermal’s financial statements, the firm would not avoid default without the
12 benefit of a loan guarantee. (pg. 53-54)
13

14
15 **I. Introduction**

16 **A. A History of Federal Government Loan Guarantees**

17
18 For decades federal loan guarantees supported a variety of policy objectives, “including home
19 ownership, university education, small business growth, international development, and others.”

20 1 In 1976, the Congressional Budget Office (CBO) defined loan guarantees as “a loan or
21 security on which the federal government has removed or reduced a lender's risk by pledging to repay
22 principal and interest in case of default by the borrower.”
23

24 2 Loan guarantees supporting “clean” energy-related projects began in the 1970s as a response
25 to the perception of record high oil prices for the foreseeable future and the notion that the country was
26

1 in the midst of an “energy crisis.”

2 3 The Energy Security Act of 1980 authorized \$20 billion for the development of a synthetic
3 fuels industry via a new government enterprise, the U.S. Synthetic Fuels Corporation (SFC).

4 4 Loan guarantees were among the public finance tools available to SFC. The Great Plains coal
5 gasification project was the only one of the five SFC projects to utilize a loan guarantee. The Great
6 Plains project (located in Beulah, ND), “which converts lignite coal into pipeline-quality methane (the
7 primary component of natural gas), received a \$2 billion federal loan guarantee(approximately \$1.5
8 billion of the loan guarantee was actually used) to construct the plant.”

9 5 Because the value proposition of the project hinged on gas prices remaining high for a long
10 period of time, in 1985, when gas prices dropped below the level at which Great Plains was cost
11 competitive, the project “was not able to meet debt service requirements and subsequently defaulted on
12 its loan obligations.”

13 6 The Office of Alcohol Fuels at DOE, created by the Energy Security Act of 1980, had the
14 authority to issue \$265 million in loan guarantees for projects related to alcohol fuels.

15 7 Three projects received loan guarantees. Of them, “one had to refinance its loan, one
16 experienced technology performance complications, and one ceased operations.”

17 8 After the failures of loan guarantees via the Energy Security Act of 1980, clean energy loan
18 guarantees were not again funded until the American Recovery and Reinvestment Act of 2009.

19 9 A recent report from the Congressional Research Service points out that in 1976 the
20 Congressional Budget Office (CBO) identified inherent problems with loan guarantees that were

relevant then and are still relevant today. The background paper, titled “Loan Guarantees:

PHILLIP R. BROWN, CONGRESSIONAL RESEARCH SERVICE, LOAN GUARANTEES FOR CLEAN ENERGY TECHNOLOGIES: GOALS, CONCERNS, AND POLICY OPTIONS (Jan. 17, 2012), available at <http://www.crs.gov/pages/Reports.aspx?PRODCODE=R42152&Source=search>, [hereinafter Brown]

CONGRESSIONAL BUDGET OFFICE, LOAN GUARANTEES: CURRENT CONCERNS AND ALTERNATIVES FOR CONTROL (Aug. 1978). Brown, supra note 1.

Title XVII of the Energy Policy Act of 2005 created the renewable energy loan guarantee program at the Department of Energy but did not provide funding for loan guarantees. See generally 42 U.S.C. §§ 16511-16514. Current Concerns and Alternatives for Control,” explains that loan guarantees disorient risk evaluation:

When commercial lenders originate loans that are guaranteed by the government, these lenders may be more concerned with the adequacy of the loan guarantee agreement than by the actual risk of the project. As a result, projects may not receive an adequate amount of due diligence by the lender, therefore increasing the federal government's risk exposure. The CBO also notes that “while such guarantees reduce the risk of loss to lender and borrower, they cannot reduce the project's risk of economic failure.” Furthermore, the paper explains that loan guarantees can be attractive to Congress because the costs, on paper, appear small but fail to fully account for unforeseen risks. 12 Failing to heed these warnings has led to widespread taxpayer losses from loan guarantees, from Great Plains in 1985 to Solyndra and Beacon Hill in 2011.

B. An Overview of the DOE Section 1703 and 1705 Loan Programs

1 Congress first authorized the Department of Energy’s Loan Guarantee Program under title XVII
2 of the Energy Policy Act of 2005. 13 The program purportedly incentivizes energy innovation by
3 making it easier for companies to secure loans for projects that employ new technologies to promote
4 energy efficiency, renewable energy, and advanced transmission. Section 1703 specifically authorizes
5 the Secretary of Energy to make loan guarantees for projects that employ innovative technology to
6 reduce greenhouse gas emissions. To date, the DOE has conditionally approved three projects under §
7 1703, totaling \$10.4 billion in guaranteed loans.
8

9 The American Recovery and Reinvestment Act of 2009 significantly expanded the Secretary’s
10 loan guarantee authority under a newly-created § 1705. 17 This section authorized the Secretary to
11 issue loan guarantees for renewable energy projects – including those employing non-innovative
12 technologies – that commenced construction no later than September 30, 2011. Additionally, in
13 contrast to loan guarantees issued under § 1703, the project sponsor did not have to pay for the cost of
14 the loan guarantee because the government covered the credit subsidy

42 U.S.C. § 16516(a)

costs. The short time-frame for eligibility and the congressional appropriation of the credit subsidy cost reflect § 1705’s primary purpose: economic stimulus. The DOE issued its first § 1705 loan guarantee solicitation on July 29, 2009. By the expiration of § 1705 program in September 2011, the DOE had approved 27 projects totaling over \$14.5 billion in guaranteed loans. The DOE’s Loan Programs Office awards and administers loan guarantees under three sets of official rules: the statutory requirements of §1703 and 1705, the departmental regulations issued pursuant to statute, and the department’s formal solicitations for loan guarantee applications. Naturally, these rules describe the eligibility requirements with increasing specificity. The redundancy and specificity of these criteria testifies to their importance; such prudential regulations make the difference between responsible stewardship of the program and a taxpayer-financed earmark.

This initial report focuses on the Department of Energy’s portfolio of loan guarantees issued under § 1705 of Title XVII. These loan guarantees were issued under two solicitations which differed in their eligibility requirements and financing method. The first solicitation

targeted projects that employed innovative technologies. Under this solicitation, the project sponsor could acquire the underlying loan from U.S. government through the Federal Financing Bank. The second solicitation created the “Financial Institution Partnership Program.” This program accepted projects that employed non-innovative (i.e., already commercialized) technology, but required the project sponsor to acquire the underlying loan from a private financial institution. Committee staff

1 evaluated renewable energy projects that received loan commitments from DOE or from private
2 lenders partnering with DOE. Staff identified a pattern indicative of poor management and a bias
3 toward unconstrained lending that resulted in the creation of a high risk, speculative and undiversified
4 loan portfolio. In this report, we consider all aspects of loan commitments in the context of the broader
5 marketplace to reveal the extent of the risk taxpayers face as a result of competition within the
6 domestic energy industry and the global renewable energy industry.

UNDER THE FIN . INST . P’ SHIP PROGRAM (Oct7, 2009) [hereinafter FIPP Solicitation].

Innovative Solicitation, supra note 14.

FIPP Solicitation, supra note 23.

The Advanced Technology Vehicle Manufacturing (ATVM) Program was created in 2008 as part of § 136 of the Energy Independence and Security Act of 2007. 28 According to the U.S. Department of Energy (DOE), the purpose of the ATVM Program is to provide “direct loans to support the development of advanced technology vehicles and associated components in the United States.” 29 The Energy Independence and Security Act set aside \$25 billion for direct loans and appropriated another \$7.5 billion to support these loans. To qualify for a direct loan under the ATVM Program, the project and the sponsoring company must meet several criteria.

First, in order to be eligible for a loan a company must either manufacture an advanced technology vehicle (ATV) or manufacture components for ATVs. Companies must also be “financially viable without the receipt of additional federal funding for the proposed project other than the ATVM loan.” 31 DOE defines “advanced technology vehicle” as a light duty vehicle that meets Clean Air Act regulations established by the U.S. Environmental Protection Agency (EPA) and is 125 percent of the average of the Corporate Average Fuel Economy (CAFE) for similar vehicles. The loan must finance the reequipping, expanding, or establishing of a manufacturing facility in the United States or the costs of engineering integration performed in the United States.

As of February 2012, the ATVM Program loaned \$8.3 billion to five projects. Most notably, two of the largest companies in the country, Ford Motor Company and Nissan North America, received over \$7.3 billion to retool and upgrade manufacturing facilities for vehicles that were deemed ATVs by

1 DOE. 35 Fisker Automotive and Tesla Motors received \$529 million and \$465 million, respectively,
2 from the ATVM program. 36 Fisker produces plug-in hybrid electric vehicles in a manufacturing plant
3 in Delaware. 37 Its first vehicle, the Karma, costs well over \$100,000 to purchase. 38 Tesla produces
4 three models of plug-in electric cars at its manufacturing plant in California. Finally, The Vehicle
5 Production Group LLC received a \$50 million loan to support the creation of a factory-built wheelchair
6 vehicle that runs on compressed natural gas. 39 DOE had conditionally granted a loan of \$730 million
7 to Severstal North America, a steel subsidiary of OAO Severstal, a multi-billion dollar Russian
8 company, to produce

10 advanced high strength steel (AHSS) used to make component parts for ATVs. Almost 200
11 companies have applied for loans through the program; however, an overwhelming majority still await
12 a decision from DOE on the status of their applications.

13 **II. The DOE Portfolio of Loan Commitments**

14
15 DOE committed to issuing 27 loans or loan guarantees under the § 1705 program. These loan
16 commitments total in excess of \$16 billion. At the outset, the ratings agencies rated 23 of these loans as
17 non-investment grade categories, also known as “Junk,” due to their poor credit quality, while the other
18 four were rated BBB, which is at the lowest end of the “investment” grade of categories. Overall,
19 DOE’s 1705 portfolio’s initial unweighted average rating was BB-, which is considered “Junk grade.”
20 According to Fitch, a ‘BB’ rating is speculative and indicates an elevated vulnerability to default risk.
21 Accordingly a BB- is on the low end of what are considered to be “speculative investments,” barely
22 escaping the classification of “highly speculative” investments.

Within the range of non-investment grade credit risk, six of the Junk loans were rated at the lower tiers of the range. Specifically, these six projects or loans received ratings within either the “B” or “CCC” categories under the Fitch or Standard and Poor’s classifications.

Despite lending to highly speculative and troubled projects, the government only charged those green energy firms its own cost to borrow money. In other words, the government sought no profit or

1 compensation for credit risk. Given the extent of losses already apparent, the failure to seek any
2 compensation for credit risk inevitably means the taxpayer will lose substantial funds. This is
3 distinguishable from normal business practices, where banks or investment firms charge a premium or
4 require more upfront capital as a condition for agreeing to finance riskier projects; thus, if the project
5 were to go completely under, the banks would have some capital to show for the losses.

6
7 **A. DOE’s High Risk Loan Portfolio**

8 At an October 2011 press conference, after the collapse of Solyndra, President Obama
9 commented on the 1705 loan portfolio saying that “we knew from the start that the loan guarantee
10 program was going to entail some risk, by definition. If it was a risk-free proposition, then we wouldn’t
11 have to worry about it. But the overall portfolio has been successful.”
12

13 However, the risk conceded by President Obama is larger than he or Secretary Chu have
14 publicly acknowledged. Left unsaid is the continuing and mounting risks taxpayers face with each
15 additional disbursement of funds.
16

17 As this report reveals, it appears that taxpayer losses associated with Solyndra are just the tip of
18 the iceberg. Clues warning of this risk have been apparent from the inception of the program. This does
19 not bode well for the future of DOE’s loan portfolio. Moreover, most of the energy projects funded
20 under 1705 continue construction or just plan to begin construction. As projects proceed and spend
21 their capital, additional weaknesses will be exposed and more loan recipients will begin to fail.
22

23 Secretary Chu has done very little to mitigate these risks. In the first instance, DOE failed to
24 abide by the number one investment rule of thumb – diversify your portfolio. Instead of making
25 investments in a broad range of emerging technologies, DOE sunk 80% of its funds into either solar
26

1 manufacturing or solar generation projects. This overemphasis on one type of technology leaves
2 taxpayers vulnerable to changes in the market for solar energy. After Solyndra collapsed, Energy
3 Secretary Steven Chu claimed that “this company and several others got caught in a very, very bad
4 tsunami” and then blamed China and the recession in Europe. Secretary Chu neglected to mention the
5 extraordinarily clear warning by Fitch Ratings (Fitch) prior to DOE’s commitment. Specifically, Fitch
6 stated:

7
8 *[C]hanges in business or economic conditions center upon the intermediate and longer term*
9 *pricing of PV solar panels which are now under extreme competitive pressures. Fitch expects PV*
10 *pricing pressures throughout the term of the DOE loan and this factor will be the largest challenge*
11 *facing Solyndra and the largest credit risk incurred in repayment of the Fab 2 loan according to its*
12 *terms.*

13
14 As the above excerpt reveals, prior to approving Solyndra, Fitch warned DOE that extreme
15 competition within the solar panel market threatened pricing of solar panels in the coming months and
16 years and that this was the greatest risk to Solyndra’s survival. Even

solyndra-loan.html.

Solyndra rating report letter to Wilbeur Stover, FitchRatings, p.1 (August 7, 2009).

knowing this, DOE chose to invest billions of taxpayer dollars despite the clear warning - 16 of the 27 section 1705-backed projects employed solar technology, the very technology that experts were warning about. These loans for solar projects totaled more than \$13 billion – more than 80% of the total portfolio. DOE also concentrated its investments in two solar companies in particular, Abengoa and First Solar, to such an extent that financial troubles with either company would affect a significant portion of the loan portfolio. In addition to over investing in solar, the Federal government also permitted “double dipping,” wherein a company received multiple federal grants and loans to cover the cost of a project, thereby reducing the company’s “skin in the game.” DOE also allowed large and financially sound parent entities to under capitalize their loan guarantee projects, which effectively shifted the risk away from the company to the taxpayer. It appears that for most DOE loan recipients, a low cost loan, in and of itself was insufficient to attract private investors.

In compiling this report, staff considered many troubling issues that deserve attention, yet, because of the magnitude of problems associated with this program, only a share of the concerns could be investigated. Committee staff, therefore, considers this an initial report. The following sections examine the various actions that DOE took while building its financially vulnerable portfolio that jeopardizes billions in taxpayer funds.

B. Major Risk Factors to the Loan Portfolio

1. Falling Natural Gas Prices Hurt Renewable Projects

In addition to the poor credit risk determinations of 1705 recipients, the falling price of natural

1 gas poses a material risk to the sustainability of these renewable energy projects. This section of the
2 report attempts to explain how the market for natural gas has evolved and how it interacts with the
3 market for renewable technologies.

4 Advances in hydraulic fracturing (“fracking”) technology over recent years dramatically
5 improved domestic natural gas and natural gas liquids production. Over the past few months, in
6 particular, this increase in production resulted in an extraordinary decline in the domestic price of
7 natural gas, substantially widening the efficiency gap between fossil fuels and renewable technologies.
8
9 48 In other words, natural gas has become so cheap that other energy technologies are having difficulty
10 competing, even after federal subsidies.

11
12 The high price of oil incentivizes fracking for natural gas liquids, which supply valuable raw
13 materials to oil refiners. 49 In areas where fracking produces both natural gas and gas liquids, frackers
14 often produce natural gas at a loss, but, in the aggregate, profit due to the high price of gas liquids. 50
15 This unique result reduces the responsiveness of natural gas producers to the price

9
10 of natural gas. This ability to continue to profit from the premium price of gas liquids changes
11 the economics of natural gas production enabling a secular decline in natural gas prices.

12 The resulting low natural gas price reduces the market price for power generation in most areas,
13 as natural gas fired generators usually set the market clearing price. Below is a chart reflecting natural
14 gas prices since 1992. 51 Today's low prices for natural gas have not been seen since the 1990's and,
15 when adjusted for inflation are at historically low levels. While this is good news for consumers of
16 electricity who will benefit from lower rates, this is bad news for the renewable energy industry.

17
18
19 **a. Low Natural Gas Prices Reduce Power Purchase Agreement Revenues for Renewable**
20 **Projects**

21 As natural gas powered generation provides the market clearing price in most regions within the
22 United States, the recent drop in natural gas prices lowered market prices for power.

23
24 These falling power prices reduce the expected value of anticipated Power Purchase
25 Agreements (PPAs), which are agreements that provide power purchasers, such as utilities and

1 suppliers of energy, such as renewable energy generators, with certainty over future prices. The energy
2 industry relies on PPAs to manage risks associated with the purchase and sale of power. The pricing of
3 PPAs largely depends on expectations with regard to future power prices. The recent

4 *Federal Reserve Bank of St. Louis, Economic Data, Natural Gas Price: Henry Hub,*
5 *Louisiana, available at <http://research.stlouisfed.org/fred2/series/GASPRICE>*
6

7 collapse in natural gas prices reduced the potential revenue for PPAs that have not yet been
8 executed.

9
10 Lower natural gas prices increase the risks of renewable energy projects that have not yet
11 entered into long term contracts to sell the power they expect to generate because buyers of their
12 product now have cheaper options. Project Amp and other projects that fail to meet benchmarks
13 necessary to maintain a PPA, suffer the risk that they cannot negotiate agreements sufficient to support
14 the cost of the renewables project, even with the benefit of multiple substantial subsidies.

15
16 Accordingly, it is reasonable to expect utilities to seek an exit from expensive PPAs whenever
17 the renewable company fails to meet certain benchmarks, whether those benchmarks relate to
18 commercial operation date, insufficient output, reliability or other variables. In other words, given the
19 falling price of power in areas where natural gas is the marginal supplier, it is reasonable to expect
20 revenues from risky renewables projects to be at risk to these falling power prices. If a PPA with a solar
21 producer reflects a price based on markets where \$4.00 per million British thermal unit (MMBtu) of
22 natural gas was prevalent, the utility paying for that solar power might act on any opportunity to
23 renegotiate or exit the unprofitable PPAs now that natural gas prices are below \$3.00. Specifically, as
24 DOE-backed projects come online over the next few years, any failure to meet the production or
25

1 capacity requirements stated in the PPA may enable the power purchaser to exit or renegotiate the
2 contract, subjecting the renewable project to lower power prices, and thus lower revenues for the
3 company than was predicted at the time DOE negotiated the loan agreement.

4 In other words, given that power prices have fallen since these projects executed PPAs, there is
5 substantial risk that the power purchasers will find a way out from the PPAs they entered into with the
6 renewable projects. A PPA provides the renewable project security that it will earn a specific amount of
7 revenue. If a party, such as a Utility, that is purchasing power from the renewables project can find a
8 way out of the PPA, this places the revenue of the project at risk.

9
10 If the renewable projects are forced to renegotiate at current market prices, they will suffer a
11 substantial loss of revenue.

12
13 This is particularly concerning in the case of newer technologies, where many of these projects
14 may fail to achieve target operation dates, or may not generate as much power as the contract requires
15 simply as a matter of not having enough experience with the newer technology. Given this risk, many
16 of these projects face the danger of losing the benefit of a higher priced PPA.

17
18 One good example comes from the recent reports that First Solar’s solar panels are suffering
19 higher failure rates in the desert. This unexpected underperformance will reduce the output of their
20 plants. Such output is a key performance variable considered in the PPA.

21
22 **b. Low Gas Prices Reduce Demand for Solar Panels**

23 Falling market prices for power as described above impacts all aspects of renewable projects.
24 Despite solar panel prices, the demand for solar panels declines as the relative economic benefits of
25 their installation fall. Solar companies currently suffer from excessive competition in panel
26

1 manufacturing, and also likely face decreasing demand as a result of the competition from cheaper
2 natural gas generation. To the extent low natural gas prices persist, 15this represents a sea-change that
3 threatens the viability of all solar manufacturing investment that DOE and Treasury subsidized.

4 **2. DOE’s Failure to Diversify**

5
6 a. DOE Overinvests in Solar Manufacturing despite Ample Warnings DOE should have averted
7 some of the risks it created in its portfolio by diversifying its investments across renewable energy
8 technologies. DOE’s investment in multiple solar manufacturers added to a heated global competition
9 that was already creating an excessive supply of solar panels. These manufacturers were forced to
10 compete both against each other and other solar companies worldwide. As a result, the average selling
11 price per watt for solar panels has continued its decline.
12

13 Despite Solyndra’s fall, there remains excessive competition in the manufacturing of solar
14 panels. Just this past month, both Abound Solar and First Solar cut solar panel production globally,
15 reflecting this excessive supply and heated competition. 52 While U.S. solar generation projects can
16 take advantage of falling panel prices to offset a share of the impact of reduced power prices, it appears
17 solar manufacturers that suffer both supply and demand shocks can only survive through continued
18 provision of subsidies. Unfortunately for these manufacturers, there is growing evidence that the
19 subsidies are drying up.
20

21 With regard to subsidies on a global scale, Germany, the leader in solar subsidies, having
22 invested over \$130 billion to date, is now giving up the habit. According to news reports:
23

24 Germany once prided itself on being the “photovoltaic world champion”, doling out generous
25 subsidies—totaling more than \$130 billion, according to research from Germany’s Ruhr University—to
26

1 citizens to invest in solar energy. But now the German government is vowing to cut the subsidies
2 sooner than planned and to phase out support over the next five years. What went wrong?

3 Using the government’s generous subsidies, Germans installed 7.5 gigawatts of photovoltaic
4 capacity last year, more than double what the government had deemed “acceptable.” It is estimated that
5 this increase alone will lead to a \$260 hike in the average consumer’s annual power bill.
6

7 According to Der Spiegel, even members of Chancellor Angela Merkel’s staff are now
8 describing the policy as a massive money pit. Philipp Rösler,

17 *time-in-decade-feeding-glut-energy.html*
18

19 Germany’s minister of economics and technology, has called the spiraling solar subsidies a
20 “threat to the economy.” The ratings agencies fully informed the DOE of their expectations for falling
21 panel prices due to excessive global competition. Both Germany and the U.S. appear to be phasing out
22 subsidies over the coming years, and this should eventually help reduce the excessive supply; however,
23 it does so at the expense of the subsidized solar firms. In other words, the apparent cure to the
24 oversupply is the outright shuttering of a large share of solar panel manufacturers worldwide.
25
26

b. DOE Overinvested in Abengoa and First Solar Projects

As DOE failed to diversify the portfolio sufficiently across industries, DOE also failed to diversify across award recipients. A single Spanish firm, Abengoa, received an aggregate \$2.45 billion in loans and loan guarantees plus \$818 million in Treasury cash grants. 54 This reveals excessive risk and subsidies provided to a single firm via multiple subsidiaries. Abengoa has a credit rating of BB, which is considered Junk, thus making this concentration of investment in one company speculative and highly questionable. Exemplifying the risk DOE took in the case of Abengoa, Abengoa managed to obtain a DOE loan commitment for the lowest rated project across the entire DOE Junk portfolio; Abengoa Bioenergy Biomass of Kansas received an extraordinarily low CCC rating and yet the DOE approved a direct loan to the project.

Bjørn Lomborg, Germany is cutting solar-power subsidies because they are expensive and inefficient, S LATE , Feb. 18, 2012, available at

http://www.slate.com/articles/news_and_politics/project_syndicate/2012/02/why_germany_is_phasing_out_its_solar_power_subsidies_.html

See FitchRatings credit report for Mojave Solar, LLC, dated July 27, 2011, where DOE committed to an \$862 million loan and Treasury committed to a \$340 million grant; FitchRatings credit report for Abengoa Solar, Inc.'s

Solana Generating Station, dated December 2, 2010, where DOE committed to a \$1.445 billion loan guarantee and the Treasury committed to a \$455 million grant; and, FitchRatings credit report for Abengoa Bioenergy Biomass of

1 *Kansas, dated August 26, 2011, where DOE committed to a \$130 million loan and Treasury*
2 *committed to a \$23 million grant.*

3 *See FitchRatings credit report for Abengoa Bioenergy Biomass of Kansas, dated August 26,*
4 *2011.*

5
6
7 Abengoa’s prospects look dim due to its investments in Europe, particularly Spain, and suffer
8 the risk of declining subsidies as Spain contends with its own declining credit quality and the potential
9 need for a bailout of its own government in the coming months or years. Now that Germany and Spain
10 cut back solar subsidies, this will undoubtedly harm the European renewable investments of Abengoa.
11
12 56 Even if Abengoa investments initially appeared attractive to DOE, overinvestment in this single
13 firm will likely cause substantial harm to the taxpayer. DOE similarly overinvested in First Solar, as we
14 describe in Section III; the taxpayer will undoubtedly suffer losses from that investment as well.

15
16 ***3. DOE Allowed “Double Dipping” – Multiple Subsidies to Single Projects***

17 The junk quality loan portfolio of loan guarantees amassed by DOE reflects funding that
18 substantially exceeds the amounts loaned by DOE. To understand the full extent of funds invested into
19 these renewable firms, all state and federal subsidies need to be considered. For example, most of the
20 1705 projects benefitted from multiple enormous subsidies, such as grants that covered a third of the
21 cost to build a generation facility, low interest DOE loans, state subsidies, beneficial access to power
22 grids and mandates that require renewable production

11
12
13 known as renewable portfolio standards. Such mandates result in premium pricing for power
14 generated by renewable technologies.

15 Even with the benefit of these massive government subsidies, DOE continues to hold a portfolio
16 of “Junk” grade loans and commitments. This defies the natural assumption that layer upon layer of
17 government subsidies, and billions in costless equity should at some point cause an entity to become
18 profitable; however, given the poor quality of the DOE portfolio, this has failed to occur.
19

20 ***4. DOE Allowed Large Energy Companies to Undercapitalize Projects and Shifted Risk to***
21 ***Taxpayers***

22
23 Even when a company had significant assets to cover a project, DOE put the taxpayer at a
24 greater risk because of the way they structured the guarantee. In four cases among the 27 loan
25 guarantees and Federal Financing Bank (FFB) loans, the parent or project sponsor that sought the
26

1 benefit of a loan guarantee or FFB loan had a credit rating significantly above that of the project itself.

2 In other words, in four cases, the borrower undercapitalized the project and refused to extend a parental
3 guarantee.

4 As a result, the taxpayer takes on greater risk, despite the borrowers’ ability to increase funding
5 to the project. The most egregious use of this technique was in the case of Record Hill, LLC, where
6 AAA rated Yale University created a project with a rating of only BB+. The idea that Yale would take
7 a substantial taxpayer subsidy and still seek to protect its remaining assets from the liabilities of Record
8 Hill reflects Yale’s view of the Record Hill project and its disregard for taxpayers. It is inconceivable
9 that any normal bank would take these kinds of risk when loaning money. Banks traditionally insist on
10 a number of provisions to “protect” their investment. Yet DOE and Treasury did just the opposite, and
11 essentially let these companies dictate terms favorable to them and not to the taxpayer. The result is
12 when the company defaults on their obligations, the taxpayer is left with little to no remedy.
13
14

15 **3. Systemic Risks from “Crony Capitalism” and Wasteful Spending**

16 There is evidence a number of loan guarantee recipients have engaged in clearly profligate
17 spending. Such wasteful spending threatens the financial viability of the recipient companies, creating
18 risks to both the DOE’s loan commitment portfolio and taxpayer dollars. It is particularly troubling that
19 this waste often takes the form of large cash bonuses to company executives – such payments feed the
20 perception that taxpayer funds are being used to line the pockets of green energy executives. Beacon
21 Power Corp, the second recipient of a § 1705 loan guarantee, paid three executives more than a quarter
22 million dollars in bonuses in March 2010. 58 Eighteen months
23
24
25
26

1 *See M.J. Beck Consulting LLC, Renewable Portfolio Standards, available at*
2 *http://mjbeck.emtoolbox.com/?page=Renewable_Portfolio_Standards (“With few exceptions, utilities*
3 *are allowed to recover the additional cost of procuring renewable power.”); see also Katerina*
4 *Dobesova, Jay Apt, and Lester B. Lave, Are Renewable Portfolio Standards Cost-effective Emission*
5 *Abatement Policy? (Carnegie Mellon Electricity Industry Center, Working Paper CEIC-04-06),*
6 *available at*
7 *http://wpweb2.tepper.cmu.edu/ceic/pdfs/CEIC_04_06.pdf.*

9
10
11 later, Beacon declared bankruptcy, leaving taxpayers to repay the loan. Adding insult to this
12 injury, these bonuses were explicitly linked to the executives securing the DOE loan guarantee.

13
14 Similarly, bankruptcy records show Solyndra doled out executive payments just months prior to
15 its late August collapse and early September bankruptcy. In Solyndra’s case, former executives have
16 stated that DOE explicitly allowed federal funds to be used to pay out executive bonuses.

17
18 The Department appears to recognize the unacceptability of this crony capitalism. DOE has
19 stated, “We take our role as stewards of taxpayer dollars very seriously, and as such, we will make
20 clear to loan recipients our view that funds should not be directed toward executive bonuses when the
21 rest of the company is facing financial difficulty.” The DOE has not explained why they waited three
22 years into the program to finally take this view, or what – if any – concrete steps they will take to
23 protect taxpayer monies.

24
25 Good government groups have severely criticized the DOE’s administration of the loan
26 guarantees with respect to executive compensation. Citizens Against Government Waste has stated that

1 “[g]iving a bonus to the executives under these circumstances is rewarding failure with our money with
2 no chance of getting it back. Taxpayers need some representation here.

3 They didn't really get it.” Wasteful spending is not limited to executive compensation alone.
4 BrightSource Energy, recipient of a \$1.6 billion loan guarantee to build a solar generation facility, has
5 spent more than \$56 million on a desert tortoise relocation program. 62 Furthermore, BrightSource will
6 build 50 miles of intricate fencing, at a cost of up to \$50,000 per mile, designed to prevent relocated
7
8 tortoises from climbing or burrowing back into the solar generation facility. BrightSource has
9 indicated that the exploding cost of tortoise relocation program threatens to derail the entire \$1.6 billion
10 project – leaving taxpayers on the hook for the enormous sums on money spent on
11
12 construction thus far.

13 The DOE’s failure to diligently oversee costs and set prudent limitations on executive
14 compensation while it distributed billions of dollars in loan commitments created a significant moral
15 hazard that has created enormous risks for DOE and taxpayer funds.

17 **C. Harm Posed to Our Economy**

18 The DOE loan guarantee and ATVM loan programs may harm capital formation within the
19 capital markets. As the government makes low cost loans available, private capital cannot compete
20 with the subsidized low interest loans. As a result, many private investors and lenders cease to compete
21 in the same space or may choose to invest in those subsidized firms that anticipate government loans.
22 As intended, government subsidies redirect capital to less efficient
23

24 *Ronnie Greene and Matthew Mosk, Green Firms Get Fed Cash, Gives Execs Bonuses, Fail,*

3 *Julie Cart, Saving desert tortoises is a costly hurdle for solar projects, L.A. TIMES*, Mar. 4,
4 2012.

5
6 industries, causing a misallocation of capital. To the extent investors target subsidized firms,
7 those funds that would have sought a more profitable opportunities that would have yielded greater
8 efficiencies and benefits for the economy, instead invest in relatively less profitable industries, where
9 the government subsidy compensates for the lost profit.

10
11 To the extent government loans programs proceed, the government must maintain the highest
12 integrity in the allocative process. If government fails to impose a fair and impartial loan process that
13 prioritizes genuinely eligible borrowers, then the government further misallocates capital within the
14 subsidized industry, increasing economic harm. Relatively better businesses may suffer losses while
15 waiting for subsidies that never materialize. Lower quality firms, with strong political ties, may
16 succeed in gaining government support with inferior products, reflecting a multi-factored misallocation
17 of capital.

18
19 The failure to maintain integrity and abide by the law when implementing the DOE loan
20 program significantly impacts those that failed to receive subsidies as well.

21
22 On February 28, 2012, Bright Automotive announced it was shutting down operations. In a
23 poignant and blunt letter to the Secretary, Bright Automotive’s management team laid the blame
24 squarely on the unprofessionalism and mismanagement of the DOE loan

25
26 guarantee program. Bright Automotive described a process wrought with misdirection,

1 changing and expanding requirements, unexplained delays, gross mischaracterizations, and a never-
2 ending cycle of excuses:
3

15 ***Today Bright Automotive, Inc will withdraw its application for a loan under the ATVM***
16 ***program administered by your department. Bright has not been explicitly rejected by the DOE;***
17 ***rather, we have been forced to say “uncle”. As a result, we are winding down our operations.***

18
19 ***Last week we received the fourth “near final” Conditional Commitment Letter since***
20 ***September 2010. Each new letter arrived with more onerous terms than the last. The first three were***
21 ***workable for us, but the last was so outlandish that most rational and objective persons would likely***
22 ***conclude that your team was negotiating in bad faith. We hope that as their Secretary, this was not***
23 ***at your urging.***

24
25 ***The actions – or better said “lack of action” -- by your team means hundreds of great***

1 *manufacturing and technical jobs, union and non-union alike, and thousands of indirect jobs in*
2 *Indiana and Michigan will not see the light of day. It means our product, the Bright IDEA plug-in*
3 *hybrid electric commercial vehicle, will not provide the lowest total cost of ownership for our*
4 *commercial and government fleet customers, saving millions of barrels of oil each year. It means*
5 *turning your back on a bona fide step forward in our national goal to wean America away from our*
6 *addiction to foreign oil and its implications on national security and our economic strength.*

7
8 *In good faith we entered the ATVM process, approved under President Bush with bi-partisan*
9 *Congressional approval, in December of 2008. At that time, our application was deemed*
10 *"substantially complete." As of today, we have been in the "due diligence" process for more than*
11 *1175 days. That is a record for which no one can be proud.*

12
13 *We were told by the DOE in August of 2010 that Bright would get the ATVM loan "within*
14 *weeks, not months" after we formed a strategic partnership with General Motors as the DOE had*
15 *urged us to do. We lined up and agreed to private capital commitments exceeding \$200M – a far*
16 *greater percentage than previous DOE loan applicants. Finally, we signed definitive agreements*
17 *with state-of-the-art manufacturer AM General that would have employed more than 400 union*
18 *workers in Indiana in a facility that recently laid-off 350 workers. Each time your team asked for*
19 *another new requirement, we delivered with speed and excellence.*

20
21 *Then, we waited and waited; staying in this process for as long as we could after repeated, yet*
22 *unmet promises by government bureaucrats. We continued to play by the rules, even as you and your*
23 *team were changing those rules constantly – seemingly on a whim.*

24
25 *Because of ATVM's distortion of U.S. private equity markets, the only opportunities for 100*

1 *percent private equity markets are abroad. We made it clear we were an American company, with*
2 *American workers developing advanced, deliverable and clean American technology. We*
3 *unfortunately did not aggressively pursue an alternative funding path in China as early as we would*
4 *have liked based on our understanding of where we were in the DOE process. I guess we have only*
5 *ourselves to blame for having faith in the words and promises of our government officials.*

6
7 *The Chairman of a Fortune 10 company told your former deputy, Jonathan Silver, that this*
8 *program “lacked integrity”; that is, it did not have a consistent process and rules against which*
9 *private enterprises could rationally evaluate their chances and intelligently allocate time and*
10 *resources against that process. There can be no greater failing of government than to not have*
11 *integrity when dealing with its taxpaying citizens.*

12
13 *It does not give us any solace that we are not alone in the debacle of the ATVM process.*
14 *ATVM has executed under \$50 million of transactions since October of 2009. Going back to the*
15 *creation of the program, only about \$8 billion of the approved \$25 billion has been invested. In the*
16 *meantime, countless hours, efforts and millions of dollars have been put forth by a multitude of*
17 *strong entrepreneurial teams and some of the largest players in the industry to advance your*
18 *articulated goal of advancing the technical strength and clean energy breakthroughs of the*
19 *American automotive industry. These collective efforts have been in vain as the program failed to*
20 *finance both large existing companies and younger emerging ones alike.*

21
22 *Our vehicle would have been critical to meet President Obama's stated goal of one million*
23 *plug-in electric vehicles on the road in 2015 and his commitment to buy 100 percent alternative*
24 *fueled vehicles for the Federal Fleet. So, we are not the only ones who will be disappointed.*
25

1 *The ineffectiveness of the DOE to execute its program harms commercial enterprise as it not*
2 *only interfered with the capital markets; it placed American companies at the whim of approval by a*
3 *group of bureaucrats. Today at your own ARPA-E conference, Fred Smith, the remarkable leader of*
4 *FedEx, made the compelling case to reduce our dependence on oil; a product whose price is*
5 *manipulated by a cartel which has caused the greatest wealth transfer in our history from the*
6 *pockets of working people and businesses to countries, many of whom are not our allies. And yet,*
7 *having in hand a tremendous tool for progress in this critically strategic battle -- a tool that drew the*
8 *country's best to your door -- you failed not only in the deployment of funds from ATVM but in*
9 *dissipating these efforts against not just false hope, but false words. For us, this is a particularly sad*
10 *day for our employees and their families, as well as the employees and families of our partners. We*
11 *asked our team members on countless occasions to work literally around the clock whenever yet*
12 *another new DOE requirement came down the pike, so that we could respond swiftly and accurately.*

13
14
15 *And, we always did.*

16 *Sincerely,*

13
14 process could be accomplished within the required timeframe.” Relying on these statements and
15 assurances, U.S. Geothermal took action to advance the project and ensure full readiness and
16 compliance with DOE’s stated requirements. The company incurred numerous expenses, including fees
17 to legal counsel and engineers, as well as resources devoted to the completion of engineer reports and a
18 term sheet. 66 Most significantly, consistent with a DOE requirement for priority treatment within the
19 1705 program, U.S. Geothermal executed a 25 year PPA. U.S. Geothermal has taken every step to
20 ensure that the San Emidio project embodies the “quality” and “readiness” requirements DOE has
21 emphasized. The project, which “would be one of the smaller and more straight-forward transactions,”
22 was ready to enter the credit approval process by May 2011, only to be abruptly notified that DOE
23 decided to suspend work on this loan guarantee.
24

25 DOE, in a draft letter to U.S. Geothermal, stated “there are a number of projects that are closer
26

1 to the conditional commitment stage than yours, and we expect these projects, if they

2 reach financial close, to utilize all of our remaining appropriation.” In this draft letter, Jonathan
3 Silver further provided that “the decision does not reflect the merits of the project, but rather the timing
4 and funding constraints of the program.” This claim is dubious at best. As is revealed in Section III of
5 this report, Project AMP failed to meet the eligibility requirement relating to commencement of
6 construction; nonetheless, it received a \$1.4 billion FIPP-based DOE loan guarantee commitment on
7 September 30, 2011. Antelope Valley Solar Ranch failed to meet the “innovativeness” requirement and
8 the “one technology per sponsor rule.” Despite this, Antelope Valley succeeded in gaining a \$646
9 million FFB direct loan commitment. These two projects consumed an enormous share of DOE’s
10 appropriation yet clearly were not “closer to the conditional commitment stage.”
11

12
13 According to its letter, U.S. Geothermal suffered substantial harm as a result of DOE’s decision
14 to violate the terms of its own program in providing loan commitments to ineligible projects. The
15 company incurred significant expenses in its efforts to meet DOE’s standards and secure the financing
16 it needed to proceed. The greatest harm will result from the PPA U.S.
17

18 Geothermal entered into in reliance on DOE statements, which now contractually obligates
19 them to provide power for 25 years or suffer penalties. 71 According to U.S. Geothermal’s letter, in the
20 absence of a DOE loan guarantee, the terms of the PPA create a significant obstacle to obtaining
21 commercial financing for their project going forward.
22

23 **Rentech**

24 *Letter, Daniel Kunz, U.S. Geothermal President & CEO, to Jonathan Silver, U.S. Dep’t of*

4

5
6 ***Letter, Daniel Kunz, U.S. Geothermal President & CEO, to Jonathan Silver, U.S. Dep’t of***
7 ***Energy Loan Program Office, Executive Director (May 11, 2011).***
8

9
10 Rentech submitted a proposal for financing for its Northwest Florida Renewable Energy Center
11 Project (NWFREC). Like Bright Automotive and U.S. Geothermal, Rentech had progressed according
12 to plan and adhered to DOE’s prescribed schedule. In coordination with DOE staff, Rentech had taken
13 such steps as signing sponsor payment letters, setting up necessary infrastructure, and entering the due
14 diligence process.
15

16 Despite making every effort to fulfill all the requirements DOE laid out, DOE, again,
17 unexpectedly suspended the approval process for the NWFREC Project. Given the steps Rentech took
18 to ensure all requirements were being fulfilled, DOE seems to have made a decision based on
19 favoritism rather than the law, choosing to fund larger, ineligible projects over a number of more
20 suitable alternatives.
21

22 Tenaska
23

24 Tenaska sought financing for Imperial Solar Energy Center South (IESC South), a solar power
25 project in Imperial County, California. Like the others, this company also received a letter from DOE
26

1 suspending the loan approval process, indicating that other projects were closer to the conditional offer
2 stage. Even the steps Tenaska appears to have taken prior to the suspension, this is unlikely.

3 Prior to receipt of DOE’s letter, Tenaska had been working in coordination with DOE staff and
4 was finalizing the execution of the required term sheet. 76 Additionally, the company was progressing
5 through the due diligence stage and expected its preliminary Credit Assessment from Fitch in the very
6 near future. It appears that, once again, DOE suspended the approval of a credible project adhering to
7 all stated standards and working closely with DOE staff, only to later approve massive funding for a
8 project proven to be nowhere nearly as far along in the process as DOE purported. DOE’s favoritism
9 significantly harmed yet another company that had relied on the promise of 1705 financing.
10

11 The similarity of concerns and claims made by Bright Automotive, U.S. Geothermal, Rentech
12 and Tenaska make clear that DOE actively misled applicants about the status of their
13

14 loan applications, thereby encouraging these firms to misallocate capital, which has led to
15 financial harm. When considered in the context of the excessively large loan guarantees provided to
16 Abengoa, First Solar and ProLogis, and the outright violations associated with Antelope Valley and
17 Project AMP, the claims of these companies bring to light the extent of harm that can result when a
18 regulator fails to maintain integrity and allows inappropriate bias and influence to distort its decisions.
19

20 To the extent that political connections and lobbying efforts influenced the DOE loan program,
21 this increases the potential harm to our capital markets and our economy. The large
22

8

9 number of troubling relationships between industry and government officials reflects an
10 environment where fair impartial loan determinations did not occur, resulting in poor decisions.

11 For example, First Solar gained a unique advantage relative to its peers by mastering its
12 relationship with government as we describe in Section III. Just six months after DOE provided First
13 Solar three loan commitments totaling \$2.4 billion, the Committee learned that DOE's prized
14 achievement under the First Solar scheme, First Solar's Mesa solar panel manufacturing plant, will
15 delay its startup and cut jobs while cutting back global production by 60%. We also learned Abound
16 Solar, a solar panel manufacturer that received a \$400 million DOE loan commitment, has since failed.
17

18 Following Solyndra, such a rapid pace of failure for solar projects, including the industry leader
19 First Solar, leads us to expect many more solar projects will follow. As a result of these failures, we
20 should also expect supply disruptions to solar generation projects, breaches of supply contracts, job
21 loss, and dislocation to harm other taxpayer-backed solar firms. Based on these projections, it appears
22 the DOE loan program, in the aggregate, will place a drag on the entire economy as investors in these
23 firms and taxpayers face losses and bankruptcies.
24

D. The “Independent” Review of the Loan Guarantee Program

In October 2011, the White House ordered that an independent review be conducted by outside consultants in response to emerging problems, uncovered by the Solyndra scandal, with DOE’s Loan Guarantee Programs. 78 The review, led by an “independent consultant,” former Obama Administration Assistant Secretary of the Treasury, Herbert Allison, found serious systemic problems related to DOE management and issuance of loan guarantees. Among the findings, Allison reported that DOE’s loan program office suffers from structural weaknesses.

The report finds:

- **A lack of clarity in the lines of authority within the loan program office;**
- **A lack of balance between those with governmental experience and those with “substantial private sector experience and skill in project management and finance;”**
- **A lack of clear guidance regarding DOE’s standard of “reasonable prospect of repayment;”**
- **A lack of clarity with regard to DOE’s goals and tradeoffs with respect to financial goals versus policy goals; and**
- **The fees charged to companies to administer the program are not adequate to last through the duration of the loan guarantees.**

While the institutional and managerial recommendations from the independent review are

1 appropriate and helpful, the report falls short because it fails to consider whether political pressure
2 played a role in the decision-making process at DOE. Additionally, the review does not

6
7 ***<http://www.whitehouse.gov/sites/default/files/docs/>***
8 ***report_on_doe_loan_and_guarantee_portfolio.pdf***

9
10 provide much insight into taxpayer risks – the independent review looks at “credit subsidy
11 costs,” which represent the net present value of the expected lifetime cost to taxpayers of these loans.
12 Credit subsidy costs, however, do not fully capture the risks to which taxpayers are subjected.
13 According to the non-partisan Congressional Research Service, the independent review “did not
14 calculate expected losses that may be realized by the project portfolio, and the report states that
15 eventual losses cannot be predicted [using the accounting methods adopted by the review].” In other
16 words, unforeseen risks exist within DOE’s portfolio which may have future budgetary implications
17 but are incalculable using governmental accounting methods.

18
19 Furthermore, it has been widely reported that the independent review found the cost to
20 taxpayers of the loan programs to be lower than originally projected. This reading of the report neglects
21 to explain how these calculations came about. The independent review evaluated loans and loan
22 guarantees, broken down into three categories created by the independent consultant: utility-linked
23 loans and loan guarantees (“projects for the generation or transmission of alternative sources of energy”
24); Non-utility-linked loans and loan guarantees (generally, projects that bear greater technological risk;
25)

1 Beacon Power and Solyndra would fall into this category); and Ford and Nissan loans (loans to these
2 two companies were broken out because these “projects are more typical of traditional secured
3 corporate loans”).

4 When looked at in the aggregate, the costs of the program have, in fact, decreased since the
5 DOE’s estimates at the time of origination. 83 However, this optimistic outlook is driven largely by the
6 third category of loans and loan guarantees – those given to Ford and Nissan. The costs of the first two
7 categories – utility-linked loans and non-utility-linked loans – increased by 14 percent and 71 percent,
8 respectively, while the estimated cost of the Ford and Nissan loans decreased by 95 percent. The large
9 drop in the cost of the loan to Ford and Nissan was largely driven by these two companies receiving
10 credit ratings substantially greater than what DOE believed they merited at the time of DOE’s loan
11 origination. Looking just at utility-linked and non-utility-linked loans and loan guarantees, the expected
12 cost to taxpayers has markedly increased. The Allison report glosses over this pertinent fact.
13
14

15 Lastly, the review excludes costs associated with Beacon Power and Solyndra when it calculated
16 taxpayer liabilities. This is a significant omission, as Beacon Power had drawn down 91 percent of its
17 loan guarantee at a cost to taxpayers of \$39 million, while Solyndra had drawn

17 down 98 percent, or \$527 million. This is \$566 million in costs to taxpayers from the loan
18 guarantee program that are completely ignored by the independent review.

20 **III. DOE Violated Statutory, Regulatory, and Prudential Requirements**

21 The Committee investigation and analysis reveals that, among many other concerns, DOE loan
22 commitments exposed taxpayer funds to excessive risk as a result of DOE’s bias toward approving
23 loans without regard to warning signs. In some cases it appears the bias may stem from DOE’s
24 susceptibility to effective lobbying efforts, conflicts of interest present in the Administration, or from

1 its overriding policy preference for renewable technology. The Committee identified many cases where
2 the DOE disregarded their own taxpayer protections, ignored lending standards and eligibility
3 requirements and, as a result, amassed an excessively risky loan portfolio. After review of internal
4 emails, staff have identified instances when DOE faced barriers that placed loan approvals at risk, DOE
5 staff simply sought to justify and overcome the barriers, rather than giving the barriers due
6 consideration.

7
8 **A. DOE Repeatedly Violated Requirements Intended to Ensure Innovation and Manage**
9 **Risk**

10 **1. Regulatory Requirements**

11
12 The Energy Policy Act specifies that the Secretary may only make loan guarantees under §1703
13 for projects that employ “new or significantly improved technologies.” 86 DOE’s implementing
14 regulation defines this as an energy technology “that is not a Commercial Technology, and that has
15 either (1) Only recently been developed, discovered, or learned; or (2) Involves or constitutes one or
16 more meaningful and important improvements in productivity and value, in comparison to Commercial
17 Technologies in use in the United States. . . .” 87 In applying this definition, it is important to bear in
18 mind the congressional intent underlying title XVII: to incentivize innovative technologies. The Loan
19 Program Office’s (LPO) first solicitation, issued on July 29, 2009, targeted innovative projects that
20 satisfied the statutory and regulatory requirements of §1703. 89 Projects approved under this
21 solicitation could access 100% financing through the Federal Financing Bank.

22
23
24 The LPO’s second solicitation, issued on October 7, 2009, created the Financial Institution
25 Partnership Program (FIPP) under § 1705. 90 This loan guarantee solicitation was An example of

1 evidence indicating a strong ideology: Jonathan Silver, the former Director of the Loan Program Office
2 (LPO) stated in an email to Matthew Winters dated June 9, 2011, in relation to a Treasury review of
3 First Solar cost estimates, “Well done. Sorry you have to deal with all this. Hope the real story of how
4 those folks tried to kill deals that would have moved the needle and created jobs because of a slavish
5 attachment to a flawed and limited world view comes out.”
6

12
13

14 open to non-innovative (i.e., already commercialized) projects, but the project sponsor had to
15 secure the loan itself from a private lender. This structure reflects a reasonable and prudent application
16 of the Department’s loan guarantee authority: a project that employs commercialized technology would
17 only need a federal loan guarantee if it was an inherently high-risk venture.
18

19 The Department prudently sought to mitigate this risk by requiring that it be shared with a
20 private financial institution.
21

22 A second requirement in the Code of Federal Regulations only allows for “one technology per
23 project sponsor.” 9Section 609.3(a) states that a Project Sponsor or Applicant may only submit one
24 Pre-Application or Application for one project using a particular technology. The rule prohibits an
25 Applicant from submitting a Pre-Application or Application for multiple projects using the same
26

1 technology. This common-sense requirement mitigates the risk to taxpayer dollars by ensuring
2 diversity, while increasing the potential for innovation within the Department’s loan guarantee
3 portfolio.

4 Nonetheless, in issuing these loans, DOE disregarded these constraints, often with the explicit
5 encouragement of department officials. Substantial evidence indicates that, in two cases, officials in the
6 Loan Programs Office deliberately mischaracterized substantively identical technologies as dissimilar.
7 In other cases, DOE labeled a technology as “innovative” when it clearly should have been classified as
8 a “proven technology” merely because the particular model had not been sold in the United States.
9 Additionally, there is evidence that applicants, with the encouragement of department officials,
10 intentionally mischaracterized their projects as “innovative” in an effort to access the Federal Financing
11 Bank and defeat these prudential requirements.
12

13 **2. The First Solar Scheme**

14 **a. Overview**

15 First Solar manufactures thin film cadmium telluride solar panels and also provides
16 prefabricated solar plants, where buyers can purchase a ready to run solar generation facility that uses
17 First Solar’s cadmium telluride panels. 94 First Solar sought to create four turnkey projects with the
18 assistance of DOE loan guarantees and direct loans. Contrary to the law governing DOE loans, these
19 four projects relied on virtually identical solar technology. Accordingly, First Solar’s use of the same
20 technology across the four projects resulted in potential violations of federal regulations and the
21 underlying loan solicitations. Specifically, through DOE’s funding of three First Solar projects, DOE
22 and First Solar may have violated regulations imposing the innovativeness requirement 95 and violated
23
24
25
26

1 the regulation that allows only one technology per project sponsor.

7
8
9 The Energy Policy Act specifies that the Secretary may only make loan guarantees under §1703
10 for projects that employ “new or significantly improved technologies.” 42 U.S.C. § 16513(a)(2).
11 DOE’s implementing regulation defines this as an energy technology “that is not a Commercial
12 Technology, and that has either (1) Only recently been developed, discovered, or learned; or (2)
13 Involves or constitutes one or more meaningful and important. First Solar submitted applications for
14 two of the projects, Topaz and Desert Sunlight, under the DOE’s FIPP solicitation that allowed for non-
15 innovative projects. The other two projects, Agua Caliente and Antelope Valley Solar Ranch, sought
16 and succeeded in gaining an advanced position in the application process by purchasing existing
17 projects from Nextlight Renewable Power (“Nextlight”) that previously filed applications with DOE.
18 However, the projects purchased from Nextlight had applied under the DOE’s “innovative” solicitation.
19

20
21 First Solar always intended to use the same technology across all four projects. However, given
22 the innovativeness requirement that applied to Agua Caliente and Antelope Valley Solar Ranch, as a
23 result of Nextlight’s original applications, these projects still needed to be deemed innovative.
24 Additionally, the two projects needed to comply with the one technology per project sponsor
25 requirement. This latter requirement meant that the two “innovative” projects also needed to be
26

1 differentiated from each other to qualify.

2 First Solar’s Agua Caliente and Antelope Valley Solar Ranch received funding despite the fact
3 that each project may have violated the regulations described above. In the next section, we describe
4 these violations in greater detail, provide the motives of DOE and the Administration, and offer
5 documentation indicating DOE manufactured evidence of compliance with these rules while internally
6 conceding their failure to adhere to the law.
7

8 **b. The Manufacturing Plant that Motivated Action on All Four First Solar Projects**

9 While DOE publicly talked about the merits of each First Solar project individually, internal
10 DOE emails indicate that DOE favored First Solar projects and viewed them collectively because DOE
11 sought to enable First Solar to build a new manufacturing plant in Arizona. The logic was simple: four
12 solar generation projects would provide sufficient demand to justify and support locating a new First
13 Solar manufacturing plant in Arizona. The White House planned to use this new manufacturing plant
14 and the jobs that it supported as evidence of the indirect benefits of DOE loan guarantees for the
15 economy.
16

17 Documents and e-mails obtained by the Committee offer unique insight on how decisions were
18 made. In an e-mail from Jonathan Silver, Executive Director of the Loan Programs Office at DOE, to
19 Deputy Energy Secretary Daniel Poneman in May of 2011 demonstrates DOE’s plan to group the First
20 Solar deals as a package. Silver wrote that “First [S]olar deals need to be considered as a package since
21 they support the building of a manufacturing plant to service their collective needs.” 99 The White
22 House supported this packaging idea. In an email to other DOE officials from June 2011, Matthew
23 Winters, Senior Advisor for Loan Programs at DOE, wrote:
24
25

1 We have often talked about how the 3 FSLR [First Solar] projects were are (sic) considering
2 will support the building of a manufacturing facility in Arizona. Can improvements in productivity and
3 value, in comparison to Commercial Technologies in use in the United States...”

15 and give the location, size, and expected construction date of the mfg facility? This will go into a
16 document for the White House that describes the manufacturing impact of the projects in our pipeline.
17 100 (emphasis added)

18
19 **c. The Collective Application of First Solar**

20 The DOE’s treatment of the First Solar applications during the credit review process
21 demonstrates the Department realized the projects all employed the same non-innovative technology.
22 DOE considered packaging three First Solar projects as one vote in front of the DOE credit review
23 board (the Antelope Valley, Topaz, and Desert Sunlight projects), despite the projects coming from
24 different solicitations (innovative versus commercial). Margot Anderson, a Senior Advisor at DOE,
25

1 wrote an email on June 25, 2011, before the DOE credit review board voted to grant conditional
2 guarantees to three First Solar projects (Antelope Valley, Topaz, and Desert Sunlight), asking
3 “[S]hould it be three separate votes or one vote for all three projects?” 101 While the credit review
4 board appears to have voted separately for all three projects, this conversation reinforces the mindset
5 within DOE that all First Solar projects represented a package and not individual projects.

6
7 Despite ultimately approving credit individually for each project, the next email shows the
8 extent to which DOE wanted “all of the deals to look exactly alike”:

9 Our question is simply “is there an issue if we bring all of the First solar projects including the
10 various IEs (Luminate and Burns and Roe) into the same room to discuss the terms of the deals?”
11 Essentially, we want all of the deals to look exactly alike. First Solar has suggested the meeting so they
12 are on board the Ies are OK with it but one brought up the [Non-Disclosure Agreement] issue and I
13 want to get that resolved. Jonathan want[s] the meeting to happen this week or early next, to get these
14 projects going.

15
16 With this plan to package the First Solar deals, DOE granted conditional loan guarantees to four
17 First Solar projects that used First Solar’s cadmium telluride photovoltaic solar panels. DOE describes
18 this technology as “commercially proven” and “deployed since 2001.” 104 Yet, DOE was classified
19 two of First Solar’s projects as innovative and ignored the “one sponsor per technology per
20 solicitation.”

21

10
11
12 This scheme coincidentally improved the financing terms of the programs by enabling the
13 government to provide a 100% direct loan as opposed to an 80% loan guarantee. Specifically, those
14 entities approved under the innovative path received direct federal loans from the Federal Financing
15 Bank (FFB) for 100% of the sought after amount. Had these entities gone through the commercial path,
16 they would need to borrow from a private lender who would then First Solar’s Acquisition of
17 NextLight's Projects to Enable All Four Projects to Proceed Together To understand why DOE
18 manipulated the First Solar applications one must understand how these projects came to pass. First
19 Solar purchased NextLight Renewable Power in a deal that included NextLight’s two pending DOE
20 loan guarantee projects—Agua Caliente and Antelope Valley Solar Ranch—in April of 2010. 106 DOE
21 had invited both NextLight projects into the due diligence level in the loan application process, 107
22 indicating that both continued to progress successfully towards ultimate approval. NextLight had
23 applied for innovative loan guarantees for both projects. Under Nextlight’s applications, the Agua
24
25
26

1 Caliente project would use amorphous silicon technology, and the Antelope Valley project would use
2 crystalline silicon solar technology.

3 When First Solar purchased NextLight, it planned to switch to its own proven – and non-
4 innovative - technology relying on cadmium telluride panels for both projects. However, First Solar
5 wanted to keep both projects in the innovative technology queue. First Solar faced two challenges to
6 keep both projects in the innovative queue. First, the company had to prove that both projects used
7 innovative technology; while using First Solar cadmium telluride panels for the projects that would not
8 qualify as innovative. Second, First Solar had to ensure that both projects used different “innovative”
9 technologies, otherwise the projects would violate the DOE rule that one company could only sponsor
10 one project using a specific innovative technology under the innovative technology solicitation.
11

12
13 **e. Failure to Prove Innovativeness; Resorting to Falsification**

14 First Solar planned to qualify both projects for the innovative solicitation by incorporating
15 relatively minor new technologies into the solar plants. The Agua Caliente project would use standard
16 First Solar cadmium telluride panels, but would use an inverter “fault ride-through and dynamic
17 voltage regulation” technology 109 that would help the plant stay operational even if the sun did not
18 shine constantly on a particular day. 110 First Solar relied on this inverter receive at most an 80%
19 guarantee. Therefore, the non-innovative entities benefitted from the false “innovative” designation in
20 that they received fully guaranteed funding, as opposed to partially guaranteed, reducing their cost of
21 borrowing. The other two First Solar projects received partial loan guarantees as part of the Financial
22 Institution Partnership Program.

10 [caliente-solar-project.](http://energy.gov/articles/department-energy-finalizes-967-million-loan-guarantee-support-agua-caliente-solar-project)

11 *U.S. Dep’t of Energy, Internal Memo, “Next Light Antelope Valley Technical Eligibility Re-*
12 *Evaluation” (July 21, 2010); See also email from Cathy Grover, Luminate, to Robin L Sampson,*
13 *U.S. Dep’t of Energy (Mar. 30, 201, 1 3:39 PM EST), which stated, “The Project’s inverter that we*
14 *show currently specified is an SMA 630CP ... From a design perspective, switching to the 720CP*
15 *(from the 630CP, if this is in fact what First Solar is doing), has no real impact on the electric energy*
16 *production values.”*

17 to qualify the Agua Caliente project as innovative. 111 However, the innovativeness of this
18 inverter technology is highly questionable based on the following issues identified through the review
19 of email communications and internal DOE reports.

1 An email between DOE staff describes the lack of innovativeness of this inverter technology,
2 stating, “The Project’s inverter that we show currently specified is an SMA 630CP ... From a design
3 perspective, switching to the 720CP (from the 630CP, if this is in fact what First Solar is doing), has no
4 real impact on the electric energy production values.” A DOE whitepaper reveals that more than 200 of
5 these allegedly “innovative” inverters had been in use in Germany, Italy and Spain since September
6 2010. 113 While, according to the rule, foreign commercial use of a technology is not a bar to deeming
7 domestic use innovative, the broad commercial use in Europe reflects the disrespect DOE applies to the
8 actual innovativeness requirement.
9

10 Directly calling into question any determination that this technology is innovative, the DOE
11 whitepaper provides that these inverters are “commercially ship[ped] today in the United States as
12 well.” 114 The report explains that “the technology being implemented is not new as compared to
13 traditional turbine-based generators” and is commercially manufactured in Colorado. These facts
14 emailed among DOE staff undermine any determination of innovativeness and clearly indicate that
15 Agua Caliente failed to satisfy the requirements designed to spur development of new technologies.
16 First Solar also planned to use this inverter technology to make the Antelope Valley project innovative;
17 however, even if the technology were innovative with regard to Agua Caliente, its second application
18 to Antelope Valley would violate the one technology per project sponsor requirement. To overcome
19 this obstacle, First Solar added a “single axis tracking” system for the Antelope Valley project to
20 differentiate it. This system simply allowed the panels to track the sun – a technology that has been
21 around for decades. Additionally, First Solar1

22
23 ***Dong Kim, U.S. Dep’t of Energy Memo, “First Solar (Next Light) Antelope Valley Solar***
24 ***Ranch One Technical Eligibility Re-Evaluation”(Aug. 4, 2010).***

1 only planned to install this system on 50 MW of the plant’s 230 MW capabilities, less than 25%
2 of the plant. Rather than force First Solar’s Antelope Valley project to step out of the innovation queue,
3 DOE quickly created a memo that allegedly justified the project remaining “innovative.”

4 The memo claimed that the Antelope Valley project would use three different innovative
5 technologies: Fault Ride-Through Technology, Dynamic Voltage Regulation, and single axis tracking.
6
7 120 Internal DOE emails reveal a rushed process that left certain DOE officials questioning the validity
8 of the analysis. 121 DOE officials also heavily edited the memo to deemphasize First Solar’s other
9 pending projects and the fact that the Antelope Valley project used the same “innovative” technology
10 as the Agua Caliente project. More importantly, on June 23, 2011, Dong Kim, Director of the
11 Technical and Project Management Division, (who had edited the DOE memo on Antelope Valley’s
12 innovativeness referenced above) wrote an email indicating that the allegedly innovative tracking
13 technology did not constitute innovativeness, was not considered innovative originally, and also
14 pointed out that others continuously revised documents to incorrectly reflect that the trackers were
15 “innovative.”
16

17 Kim wrote:

18
19 *Someone keeps changing [Antelope Valley Solar Ranch] Technical slides to include single axis*
20 *trackers as an innovation. Be clear that this not an innovation. The record will show that we did not*
21 *grade this as innovative during intake review. It will not stand up to scrutiny if compared with CVSR*
22 *[California Valley Solar Ranch] trackers. Whoever continues to make this change needs to understand*
23 *that Technical does not support the 20 percent of the CVSR field with trackers as an innovative*
24 *component. 123 (emphasis added) The apparent cover-up that led to Kim’s stern email indicates that*
25

1 *DOE staff sought to maintain a false finding of “innovative” for the single axis trackers.*

2 DOE’s August 4, 2010, memo claimed that the Antelope Valley project used three innovative
3 technologies. However, DOE’s Director of the Technical and Project Management Division revealed
4 that the single axis trackers did not qualify as innovative and DOE’s own press release demonstrated
5 that the Agua Caliente project already used both the fault ride-through and the dynamic voltage
6 regulation technologies. 124 Since Agua Caliente had already received a loan guarantee using this
7 “innovative” technology, Antelope Valley was barred from relying on the same technology for its
8 innovativeness-based application. As a result, Antelope Valley provided

3 ***caliente-solar-project.***

4
5
6 no innovative technology that would justify its eligibility for a DOE loan. DOE should have
7 deemed First Solar's Antelope Valley project ineligible under the innovativeness solicitation.

8
9 f. Persistent Pressure to Approve the First Solar Projects and Achieve the Master Plan of
10 Building a Manufacturing Facility First Solar kept pressure on DOE to approve the three projects in the
11 final weeks leading up to DOE's issuance of conditional loan guarantees. On May 18, 2011, Jens
12 Meyerhoff, an executive at First Solar, wrote a letter to Jonathan Silver implicitly threatening that First
13 Solar might not commit to completing construction on the Arizona manufacturing plant if DOE did not
14 approve all three First Solar loan guarantees.

15
16 Meyerhoff wrote:

17 *A failure to receive DOE and U.S. government agency approvals for these projects or missing*
18 *the September 30 statutory deadline under the 1705 program would seriously jeopardize the financing*
19 *for the Agua Caliente, Antelope Valley Solar Ranch, Desert Sunlight and Topaz projects. As you know,*
20 *a major reason for choosing to build the manufacturing plant in Mesa, AZ was to provide solar*
21 *modules to these large and important U.S. projects.*

22
23 *We will invest more than \$300 million in the factory, put people in Mesa to work at a long-*
24 *dormant industrial site that once was home to an automotive testing facility, and create high tech green*
25 *jobs that did not exist before...*

1 ...First Solar consciously made the decision to build a new U.S. manufacturing center to
2 support and recycle economic benefits created by favorable U.S. political support for renewable
3 energy, including the 1703 and 1705 DOE loan guarantee programs.

4 The DOE loan programs provide an important financing ‘bridge’ at a time when the U.S.
5 private debt markets have little or no experience financing first-of-their-kind utility-scale solar projects,
6 and the capital markets remain constrained in the wake of the global financial crisis. If FirstSolar’s
7 project applications are not approved, or if they’re delayed beyond September 30, we believe it could
8 jeopardize our ability to close financing (both debt and equity), jeopardize construction of 1,620
9 megawatts of solar capacity and, frankly, undermine the rationale for a new manufacturing center in
10 Arizona.
11

12
13 First Solar also tried more friendly persuasion. Nikolas Novograd, Vice President at First Solar,
14 sent Bill Pegues at DOE a picture of the construction taking place at First Solar’s Arizona plant. Pegues
15 planned to use the construction picture to help persuade members of the credit review board to vote for
16 the First Solar projects. He forwarded the picture to several DOE officials, commenting, “[H]ere’s a
17 photo of the construction
18
19
20

21 ***Letter from Jens Meyerhoff, First Solar, to Jonathan Silver, Director of Loan Programs***
22 ***Office, U.S. Dep’t of Energy (May 18, 2011) (emphasis added).***
23

24 progress on the FSLR mfg plant in Mesa, Arizona as of Tuesday 6/14. I’ll bring several copies
25 to CRB [Credit Review Board] just in case we need them.” Additionally, Rob Gillette, CEO of First
26

1 Solar, arranged a phone call with the Deputy Energy Secretary on June 24, 2011, only days before the
2 Credit Review Board met to decide whether to grant conditional loan guarantees to the three First Solar
3 projects.

4 By June 22, 2011, several days before the Credit Review Board approved conditional loan
5 guarantees for the projects, Secretary Chu’s office had already planned a press release to announce the
6 conditional loan guarantees for the First Solar projects that relied upon job creation numbers from First
7 Solar itself. 128 Secretary Chu’s office carefully coordinated the media strategy for the approval of the
8 conditional loan guarantees for the three First Solar projects. Sonia Taylor at DOE wrote in an email on
9 June 28, 2011, that

10
11 *SI’s office hopes to offer an advanced story to a national reporter on all three First Solar deals*
12 *later today, with a story to run tomorrow along with the press release...*

13
14 *...If you haven’t already, can you all please notify the appropriate people from First Solar and*
15 *the other companies that the deal is official? I have been working with First Solar (under the guise of*
16 *‘should the deal be approved’), and they do not plan on writing a press release. Can you all please see*
17 *whether the banks plan on issuing a release? If so, we’ll need to review it. 129 (emphasis added)*

18
19 On June 30, 2011, DOE issued a press release that announced the conditional loan guarantees
20 for the three First Solar projects for around \$4.5 billion. 130 The six paragraph announcement only
21 mentioned First Solar once and described the Antelope Valley project as featuring “a utility-scale
22 deployment of innovative inverters with voltage regulation and monitoring technologies that are new to
23 the U.S. market.” The press release did not mention the trackers on the Antelope Valley project.

24
25 DOE would eventually issue final loan guarantee offers to First Solar’s Antelope Valley and

1 Desert Sunlight projects on the final day of the 1705 loan guarantee program (September 30, 2011).

2 132 Despite the issues surrounding the innovative nature of the Antelope Valley project, DOE finalized
3 a 100% loan guarantee worth \$646 million for the allegedly “innovative” project. Ultimately, DOE did
4 not finalize First Solar’s Topaz

1 project, but a subsidiary company of Warren Buffett’s Berkshire Hathaway purchased the
2 project from First Solar.

3 **g. First Solar’s Financial Problems since the Loan Guarantees**

4
5 Since DOE finalized First Solar’s three loan guarantees (for over \$3 billion), First Solar has
6 encountered serious financial problems that put the DOE funded projects in jeopardy. First Solar’s
7 stock declined the greatest compared to of any S&P 500 companies in 2011 and has lost over \$100 per
8 share over the past year. 134 First Solar has cut production of its solar panels worldwide. 135 Based
9 upon the company’s financial troubles, First Solar fired its CEO October. 136 Additionally, in March
10 2012, the Securities and Exchange Commission announced an investigation into whether First Solar
11 had improperly disclosed information about whether the First Solar Topaz project would receive a loan
12 guarantee from DOE.
13

14 More recently, First Solar has revealed problems that directly impact its three DOE loan
15 guarantee projects. First Solar’s Antelope Valley project had problems getting a permit and has yet to
16 receive any DOE funding. 138 First Solar announced in late February that it would postpone
17 manufacturing solar panels at its Mesa Arizona plant, which is still under construction, because of
18 financial problems. 139 First Solar intended for the Mesa facility to provide panels to the four First
19 Solar projects. This delay means that the indirect jobs that the White House wanted to create with the
20 three loan guarantees will likely never materialize, and raises questions about whether First Solar will
21 have problems supplying solar panels to its DOE loan guarantee projects. Additionally, First Solar has
22 revealed that it has needed to replace millions of dollars worth of its solar panels under warranty
23 because they did not last in hot climates. Considering all three of First Solar’s DOE-based solar
24
25
26
27
28

1 generation projects are located in hot desert climates, this issue raises serious concerns about whether
2 the panels will work properly long term.

3 **h. Conclusion**

4
5 There appears to be a significant amount of evidence, based on documents received by the
6 Committee and supplied by DOE and others, indicating that **DOE manipulated its analysis** and
7 strategically modified evaluations in order to issue loans to First Solar that would qualify

22
23
24 under the statutory guidelines. This is cause for serious concern. An application that should
25 otherwise fail, but instead passes under improper influence and through the manipulation of analysis,

1 results in the defrauding of taxpayers and misappropriation of assets. Furthermore, any advantage to an
2 applicant disadvantages other applicants and improperly diverts DOE resources.

3 ***B. DOE Violated the Statutory Requirement that Projects Commence Construction by***
4 ***September 30, 2011***

5
6 The Recovery Act states that the Secretary may only make loan guarantees under § 1705 for
7 projects “that commence construction not later than September 30, 2011.” 142 This provision is
8 designed to effectuate the rapid deployment of renewable energy projects. Furthermore, § 3(b) of the
9 Act mandates that the Secretary expend appropriated funds “as quickly as possible consistent with
10 prudent management,” so as to achieve the Act’s stated goal of economic stimulus. 143 This “shovel-
11 ready” requirement also helps to mitigate risks associated with too many unknown variables.

12
13 The DOE knowingly violated this explicit statutory mandate. The Department’s FIPP loan
14 guarantee solicitation from October 7, 2009, defined “commence construction on before September 30,
15 2011” to mean that (i) the Borrower has completed all pre-construction engineering and design, has
16 received all necessary licenses, permits and local and national environmental clearances, has engaged
17 all contractors and ordered all essential equipment and supplies as, in each case, can reasonably be
18 considered necessary so that physical construction of the Eligible Project may begin (or, if previously
19 interrupted or suspended, resume) and proceed to completion without foreseeable interruption of
20 material duration and (ii) such physical construction (including, at a minimum, excavation for
21 foundations or the installation or erection of improvements) at the primary site of the Eligible Project
22 has begun (or resumed).

23
24
25 On September 30, 2011 – the last day of the program – the Secretary approved a \$1.4 billion

1 loan guarantee for Project AMP. Project AMP intends to install solar panels on the rooftops of many of
2 ProLogis’ extensive real estate holdings. However, as the September 2011 application approval
3 deadline approached, Project AMP was nowhere near prepared to commence construction, in part
4 because it failed to secure contractual commitments to purchase energy from its proposed solar
5 generation facilities. 144 Construction cannot begin for any phase of Project AMP until parties agree to
6 a Power Purchase Agreement (PPA), which helps to ensure sufficient revenue to justify an installation
7 of solar panels. As of March 6, 2012, Project AMP
8

16
17 *Email from Eric Mogilnicki, WilmerHale, counsel to Bank of America, the lead lender for*
18 *Project AMP (Mar. 6, 2012) (on file with author).*

19
20
21 had not signed any PPAs, had not purchased any solar panels, and had not begun construction at
22 any locations. Consistent with Project AMP’s lack of preparedness to commence construction, Fitch
23 Ratings imposed a “framework” methodology to rate the credit risk of Project AMP. Fitch explained
24 that, due to a lack of negotiated prices, a lack of known product suppliers, and a lack of PPAs, Fitch
25

1 could not model cash flows or consider the credit quality of the businesses the project would transact
2 with. For this reason, Fitch mandated the use of a framework approach that imposed minimum credit
3 quality requirements and other controls to ensure adequate credit quality relating to future transactions.
4 148 Fitch also required that Project AMP return to Fitch to receive ratings for each phase prior to
5 seeking DOE loan disbursements consistent with the framework approach. As of March 6, 2012,
6 Project AMP had not sought ratings for any phase of Project AMP. This further clarifies the extent of
7 Project AMP's failure to commence construction.
8

9 While the credit rating methodology appears appropriate given the circumstance, the need to
10 apply this approach reflects Project AMP's failure to meet the specific requirements of the law.
11 Nonetheless, DOE approved Project AMP's loan guarantee for \$1.4 billion dollars. DOE approval of
12 this project on the final day with pressure from Secretary Chu reflects improper influence and
13 recklessness that led to an extremely large and inappropriate loan commitment. As we describe in
14 Section D below, following DOE's approval of Project AMP, natural gas prices fell dramatically,
15 resulting in substantially lower power prices in areas where natural gas generation provides the
16 marginal supply of power. Lower market prices for power reduce potential revenue for all PPAs – in
17 other words, solar power directly competes against natural gas fired generation. Had Project AMP
18 locked in PPAs at the time DOE approved its loan, this loss of potential revenue would have been
19 avoided. Given the lag between approval and PPA negotiation, price risk materialized, likely reducing
20 the aggregate value of Project AMP as a **direct consequence of Secretary Chu's inappropriate**
21 **approval.**
22

24 Had DOE rejected Project AMP due to its failure to commence construction, the government
25 and participants in the project would have avoided misallocating capital to a project that was
26

1 premature.

2 **C. DOE Violated the Statutory Requirement of “Superiority,” Illegally Benefiting Banks**
3 **at the Expense of Taxpayers**

4
5 When it created the loan guarantee program, Congress took several steps to protect taxpayer
6 funds and limit the DOE’s risk exposure. These restrictions are recited in § 1702 of the

21
22
23 Energy Policy Act and by statute apply to all loan guarantees issued under title XVII. 152 One
24 of the most important risk-limiting provisions requires the Secretary to secure a superior claim to any
25 assets in the event of a default. 153 The statute unequivocally requires that these rights must be

1 “superior to the rights of any other person.” This common-sense rule ensures that if the U.S.
2 government is on the hook to pay off creditors, it should be able recover at least some of its losses.

3 This right to superiority over collateral is appropriate given that taxpayers enabled the
4 transaction through provision of a subsidy. Given the substantial risk associated with DOE loan
5 guarantees and the lack of any potential for the taxpayer to profit, the law required that the DOE at least
6 maintain a superior position with respect to collateral to protect taxpayers in the event that a project
7 failed. Private banks stand to profit if a project succeeds, while also avoiding substantial downside risk
8 if a project fails. Given these clear benefits to lenders, Congress determined that lenders should not also
9 gain parity with the DOE on the rights of collateral and inserted the “superiority” provision to prevent
10 weakening the taxpayer’s position.
11

12
13 In what can only be considered a preemptive bailout for banks, DOE eliminated taxpayer
14 protections by agreeing to share its rights in the collateral of failed projects with private lenders.

15 Notwithstanding the clarity of the statutory requirement and the policy basis for it, the DOE
16 enacted regulations that allowed banks to gain parity with the United States with regard to collateral.
17 While this may have increased its lending authority, it did so by weakening the taxpayer’s protections.
18

19 A review of the seven Financial Institution Partnership Program based loan guarantees reveals
20 that DOE agreed to share its collateral rights with the lenders for all FIPP loans issued after enactment
21 of the DOE regulations. Instead of selectively sharing collateral for the safest projects, DOE instead
22 applied this approach to all FIPP loans, irrespective of the highly varying deal terms, credit quality and
23 loan amounts. 157 In no case did DOE withhold this benefit from banks to protect taxpayers. In effect,
24 DOE behaved as if its new interpretation of the law mandated that banks be placed on par with
25

1 taxpayers.

2 **1. Superiority of Rights vs. Pari Passu Sharing**

3
4 In the event of a default, a loan guarantee provides assurances to banks and other lenders that
5 they will recover 80% of the money loaned to the renewable energy project. This money comes from
6 the American taxpayer. Under the system designed by Congress, while taxpayers

7
8
9 *42 U.S.C. § 16512 (“... the Secretary shall make guarantees under this or any other Act for*
10 *projects on such terms and conditions as the Secretary determines, after consultation with the*
11 *Secretary of the Treasury, only in accordance with this section).*

12
13
14 *42 U.S.C. § 16512(g)(2)(B) (“The rights of the Secretary, with respect to any property*
15 *acquired pursuant to a loan guarantee or related agreement, shall be superior to the rights of any*
16 *other person with respect to the property”).*

17
18
19 *74 Fed. Reg. 63,544 (Dec. 4, 2009) (to be codified at 10 C.F.R. pt. 609). See “Terms and*
20 *Conditions relating to loan agreements for all DOE-backed FIPP projects agreed to after December*
21 *4, 2009” (on file with author).*

22
23
24 *See 42 U.S.C. § 16512(c) (stating “a guarantee by the Secretary shall not exceed an amount*
25 *equal to 80% of the project cost of the facility that is the subject of the guarantee...”).*

1
2 are on the hook for at least 80% of the loan in case of default, they will at least be in first
3 position to try to recover their investment based on the sale of the defaulting company' assets.
4 However, under the contracts awarded under § 1705, DOE included pari passu terms, which puts a
5 lender in a position equal to the taxpayer with respect to rights to collateral.
6

7 The Department of Energy's approach ignores the plain letter of the law. Section 1702(g)(2)(B)
8 contains the Superiority of Rights provision ("Superiority"). 160 Superiority provides that "[t]he rights
9 of the Secretary, with respect to any property acquired pursuant to a guarantee, shall be superior to the
10 rights of any other person with respect to the property." The statute clearly requires that DOE maintain
11 superiority with regard to assets acquired as a result of a guarantee, and, as a result, precludes sharing
12 the collateral with other creditors. Such sharing of collateral also flies in the face of the FIPP program
13 requirements, which mandate loan guarantees to cover no more than 80% of any loan.
14

15 Consider the following hypothetical example:
16

17 DOE guarantees 80% of a billion dollar loan, which defaults. Upon default, the DOE pays \$800
18 million to the senior creditor protected by the DOE loan guarantee. Assume the leftover assets are
19 worth \$500 million. Under this Administration's pari passu construct, DOE shares its senior rights to
20 the recovery with the senior lenders, who already received \$800 million from the loan guarantee.
21 Therefore, DOE recovers 80% of the \$500 million recovery, or \$400 million; the non-guaranteed
22 lenders recover an additional 20% of the \$500 million, which equals \$100 million.
23

24 Recall that the lenders already recovered \$800 million for their guaranteed portion. This means
25 that in the aggregate, the private lenders that received the DOE loan guarantee recovered \$900 million
26

1 of the total billion dollar loan or 90%. Yet the law intended for taxpayers to be in first position with
2 respect to the full \$500 million in this hypothetical. Accordingly, Pari Passu terms directly violate the
3 FIPP solicitation requirements.

4 **2. Congress Specifically Considered and Rejected Changes to the Superiority**

5
6 Provision that Would Have Allowed for Pari Passu Credit Terms Supporters of pari passu credit
7 terms for DOE loan guarantees sought to change the law to allow for such credit structures. On July 16,
8 2009, Senate Bill S. 1462, which would have modified Title XVII to allow for pari passu credit terms
9 by disabling the Superiority provision, was passed by the Senate Energy and Natural Resources
10 Committee, but failed to pass the full Senate. 161 Also, in the last Congress, the House of
11 Representatives passed “Cap and Trade,” under H.R. 2454. That bill had an identical provision to
12 disable Superiority under Title XVII.
13

14 H.R. 2454 also failed to become law. The time invested in drafting a bill and seeking to pass it
15 in both the Senate and the House reflects the effort and analysis that many lawmakers put into this
16 issue. This is the clearest evidence that Congress does not recognize the DOE’s authority to provide §
17 1705 loans
18

19 *See 42 U.S.C. § 16512(g)(2)(B).*

20 *See S. 1462, 111th Cong. § 103(b)(3) available at*

21 *http://energy.senate.gov/public/_files/s1462pcs1.pdf.*
22

23 with pari passu terms. Rather, the law requires Superiority to apply to any property acquired
24 pursuant to the original guarantee or binding agreement to provide a guarantee.
25
26

3. The Department of Energy Knowingly Violated the Law

1
2 Notwithstanding Congress's rejection of these bills that were designed to weaken taxpayer
3 protections, on December 4, 2009, the DOE issued final regulations to allow for pari passu treatment of
4 DOE loan guarantees. 162 By these actions, the DOE disregarded the law and Congress. The specific
5 approach used in both S. 1462 and H.R. 2454 highlights the fact that the law currently does not allow
6 for pari passu treatment specifically due to the Superiority provision. DOE's awareness of Congress's
7 failure to change the law indicates DOE understood it may be violating the law when it provided loan
8 guarantees with pari passu credit terms.
9

10 The Committee raised these concerns in a letter to the Secretary dated December 7, 2011.
11

12 The Department of Energy responded by asserting that § 1702(g)(2)(B) only "governs post-
13 default rights of the Secretary, rather than conditions that must be met at the time th Secretary
14 determines to make a loan guarantee." 164 Under the DOE's interpretation of the statute, "[o]nce the
15 Secretary has actually acquired property through the Secretary's right of subrogation in a post-default
16 situation, the statute provides that, as a matter of law, the Secretary's rights in that acquired property
17 are superior to any other claimant with respect to that requirement."
18

19 The Department's interpretation is lacking on three levels. First, the Secretary can only secure
20 his superior of rights in collateral before entering in a loan guarantee contract. To say §1702(g)(2)(B)
21 only applies after a default renders the provision useless. Second, the preceding quotation from the
22 DOE's response letter evinces the circularity of its logic: once the Secretary has actually acquired
23 property through the right of subrogation, there is no need to provide for a superiority of rights: he has
24 already acquired the property. Finally, the Department's interpretation ignores Congress' clear
25

1 pronouncements of its understanding that § 1702(g)(2)(B) prohibits pari passu terms. The DOE has
2 never addressed these clear statements of congressional intent.

3 **IV. DOE Has Artificially Inflated Job Creation Statistics**

4
5 One characteristic of "green jobs" often touted by the Obama Administration is that green
6 industries rely heavily on manpower, a trait that "makes them especially alluring when it comes to
7 government-led job creation" measured in terms of jobs "created or saved." In studies heralding the
8 creation of large numbers of jobs in green jobs programs, there is a consistent preference for
9 inefficiency. This is contrary to the fundamental economic principle that high

25 *all-those-green-jobs.*

***Witnesses Provide Various Definitions of Green Jobs Before House Workforce Panel,
DAILY LABOR REPORT , Apr. 4, 2009 at 60.***

labor productivity is a measurement of an efficient and healthy economy. The DOE’s 1705 Loan Guarantee Program follows this flawed principle precisely. According to a leading expert, an economy based on “high paying, low-productivity jobs ... would require an economic structure unknown in human history.”

While the energy sector is a very large source of employment, it is a mistake to treat it as a government jobs program. Dr. David Montgomery, Senior Vice President at NERA Economic Consulting and a former CalTech professor, has explained:

It is a fundamental error in policymaking and economics to design or justify federal support for new energy technologies as a jobs program. It subverts the entire purpose of government involvement in R&D, and is the greatest single cause of the continued failure of energy technology programs

However, even accepting the premise that it is appropriate to base a jobs program on green energy development, the Administration fails at this objective.

In almost every public statement about its loan guarantee program, DOE touts job creation. DOE’s Loan Programs Office webpage proudly proclaims that DOE expects the loans and loan guarantees to “employ” over 60,000 people. 171 The site also breaks down the number of jobs created or saved by each loan or loan guarantee, and issues press releases for specific projects discussing job

1 creation. These figures are misleading. In reality, the 60,000 number includes jobs that existed at one
2 time, but have since been eliminated; jobs that exist independent of the loan program; and jobs that
3 already existed, but are now considered “green jobs.”

4 One example of DOE’s misrepresentation of jobs figures relates to a DOE loan guarantee to
5 Ford Motor Company. DOE proclaims that this project, funded through the ATVM program, accounts
6 for 33,000 of the 61,383 jobs. However, these jobs, which DOE represents to be “permanent jobs
7 created or saved,” already existed. Upon closer examination, it appears that DOE reports that the DOE
8 loan “converted” existing jobs to green energy jobs. Had no loan occurred, presumably, the factory
9 would continue to produce non-green energy vehicles; there is no evidence that Ford planned to lay off
10 33,000 employees if the company had not received the loan. This jobs statistic is also misleading given
11 the statements of David Frantz, Acting Executive Director Loan Program Office and Acting Director
12 ATVM to Committee staff. Mr.

14

15
16 Frantz stated during a phone interview, “[ATVM] is not a jobs program. [Job creation] is not a
17 governing factor when we do a deal. It’s only a matter of record.”

18 DOE also includes failed projects and a project that refused DOE funding in its job creation
19 numbers. Despite Solyndra going bankrupt and firing all of its employees, as of February 20 th , 2012,
20 DOE still lists Solyndra as creating 3,000 construction jobs (see figure below). While those jobs may
21 have briefly existed, touting jobs for a defaulted project that lost hundreds of millions in taxpayer
22 dollars and including those jobs in a total jobs count prominently displayed on DOE’s website is
23 inappropriate and misleading.
24

Interview with David G. Frantz Acting Director ATVM Program Jan. 13, 2012.

DOE continues to include in its list of projects a \$105 million loan guarantee it finalized with POET, LLC to build an ethanol plant. According to DOE's website, POET, LLC's loan guarantee will create 40 permanent jobs and 200 construction jobs. However, POET announced on January 23, 2012, that it had decided not to accept the DOE loan guarantee because it had acquired private financing. 174 Despite POET declining DOE's money, as of February 20, 2012, DOE had continued to include it in its job creation numbers (see figure below).

DOE also includes 180 jobs that Abound Solar announced, on February 29, 2012, it will be laying off due to a "retooling" of manufacturing facilities. Abound struggles to compete with Chinese manufactures that provide a comparable solar panel for a more competitive price. When asked about the layoffs, Abound's CEO, Craig Witsoe, stated, "We hate to have any job loss in the company. But it was the right decision for the business." 175 Of the \$400 million DOE loan guarantee received by Abound, the company had already drawn down \$70 million at the time of the layoffs.

Timothy Gardner, Ethanol maker POET declines U.S. government loan aid, R EUTERS , Jan. 23, 2012 available at <http://www.reuters.com/article/2012/01/23/us-usa-ethanol-loanaid-idUSTRE80M20K20120123> .

2 *[workers/story?id=15816806](http://abcnews.go.com/Blotter/about-solar-lays-off-180-workers/story?id=15816806).*

3
4
5 DOE also incorporates jobs figures for Fisker Automotive (Fisker), which announced a 26
6 employee layoff on February 6, 2012, at their Wilmington, Delaware plant, as well as for Beacon
7 Power Corp, which filed for Chapter 11 bankruptcy in October 2011, eliminating 34 construction and
8 permanent jobs.

9
10 In addition to misleading the public regarding the number of permanent jobs created by the loan
11 program, DOE obfuscates the number of jobs “created” by combining temporary and permanent jobs.
12 For each listed loan and loan guarantee project, DOE provides a figure for permanent jobs and
13 construction jobs. As loan projects generally require significant construction, these projects
14 predominantly create temporary construction jobs, which terminate upon a project’s completion. For
15 example, solar generation projects require few permanent employees to maintain and operation the
16 facility. In the case of Antelope Valley Solar Ranch, DOE’s posting reflects 350 temporary
17 construction jobs and only 20 permanent jobs.

18
19 Nonetheless, DOE reports the number of jobs “saved or created” as 370, even though 95% are
20 temporary.

21
22 **V. The Broken Process for Awarding Loan Guarantees**

23 **A. External Pressures on the Program**

24
25 DOE’s Inspector General explained that the administration of Recovery Act funds proved to be
26

1 “more challenging that many had originally envisioned,” and specifically asserted that “the loan
2 guarantee program could not always readily demonstrate through documentation how it resolved or
3 mitigated relevant risks prior to granting loan guarantees.” 177 In addition to these

4 concerns, the Committee has also discovered the existence of a revolving door of persons who
5 worked at green energy investment groups only to later be hired by the Administration, which present
6 significant conflicts of interest. These connections raise the specter of undue influence over the loan
7 guarantee process.
8

9 **THE REVOLVING GREEN DOOR PAYOLA SCAMS**

10 **Google**

11 Over 300 Google staff were placed in the White House and adjacent agencies after Google
12 provided Green Energy search engine news rigging and cash to the Obama Campaign. Google VC’s
13 and executives skimmed billions in contracts, jobs, and stock perks from the program.
14

15 **Nancy Ann DeParle**

16 Nancy Ann DeParle, the current Deputy Chief of Staff for Policy in the White House, had a
17 financial stake in the success of Granite Reliable, which received \$168.9 million loan from DOE. Prior
18 to joining the White House, DeParle was a Managing Director of multi-billion dollar private equity
19 firm CCMP and she both had a financial interest in and sat on the Board of Directors for Noble
20 Environmental Power, LLC. 178 Noble owned Granite Reliable, a wind

2
3 energy project. Prior to her departure, her position on Noble’s board of Directors positioned her
4 to understand the most confidential and material aspects of Noble Environmental and its subsidiary
5 Granite Reliable. DeParle misrepresented her relationship with Noble Energy, claiming on disclosure
6 forms that her interest had been divested, when in fact it had merely been transferred to her 10 year old
7 son. During her time at the White House, Granite Reliable sought and, in September 2011, obtained a
8 partial guarantee of a \$168.9 million loan. 181 Granite Reliable’s application for a DOE loan guarantee
9 was made at least by early 2010, and probably earlier than that, according to signed documents relating
10 to the loan application. Noble sold Granite Reliable in December 2010 to Brookfield Asset
11 Management, just 6 months prior to the conditional approval of the DOE loan guarantee and deep into
12 the application process. The DOE loan guarantee was conditionally approved on June 2011 and
13 finalized in September 2011. DeParle’s ownership stake in Noble, which owned Granite Reliable, a
14 beneficiary of a DOE loan, represents a clear conflict of interest.

15 Michael Froman

16 Michael Froman currently serves as the Deputy Assistant to the President and Deputy National
17 Security Advisor for International Economic Affairs. 182 He was a friend of President Obama’s from
18 law school, 183 and supported his political career by bundling over \$200,000 for his 2008 presidential
19 candidacy. Prior to his arrival at the White House, Froman was the Managing Director of Alternative
20 Investments at Citigroup, 185 where he managed infrastructure and sustainable development
21 investments. 186 Citigroup became a major investor in SolarReserve, 187 which ultimately received a
22 \$737 million loan guarantee in September 2011.

23 Steve Westly

24 Steve Westly co-founded the Westly Group, a clean energy venture capital firm that, according
25 to DOE records, has reaped over \$600 million in DOE loans for its portfolio of investments. One

1 recipient company was Tesla Motors, a premium electric vehicle manufacturer to which DOE awarded
2 a \$465 million loan guarantee in January 2010. Westly also sat on Tesla’s Board of Directors in the
3 company’s early days. Westly is a personal friend of President Obama and bundled over \$500,000 for
4 his 2008 campaign. Since the election, Westly has visited the White House multiple times for both
5 business and pleasure, and has privately dined with the President in small group fundraising settings.

6 After President Obama’s election, Westly was rumored to have been a primary candidate for
7 Energy Secretary. When Secretary Chu received the appointment, Westly was given the opportunity to
8 serve on an advisory board to the DOE, “a pivotal [sic] advisory committee that made
9 recommendations to the secretary on alternative energy policies.” One committee initiative included a
10 recommendation to modify federal rebates for electric cars, a change that would benefit companies
11 such as Westly Group’s Tesla. E-mails released by the White House also indicate that Westly’s
12 advisory role gave him access to Obama’s top advisors and senior White House officials, including
13 advisor Valerie Jarrett.

21
22 David Sandalow currently serves as the Assistant Secretary for Policy and International
23 Affairs at DOE, where he acts as Secretary’s Chu’s principal adviser on energy policy as well as
24 coordinates DOE’s foreign policy involvement. Sandalow’s ties to the White House date back to the
25 Clinton Administration, during which he worked with President Clinton on environmental issues. After

1 having gained this experience, Sandalow became the influential Chair of the Energy & Climate
2 Working Group of the Clinton Global Initiative. 201 He went on to advise President Obama’s
3 presidential campaign in 2008. 202 Prior to joining the Obama Administration, Sandalow was a senior
4 advisor to Good Energies, Inc., an energy-focused venture capital firm. 203 Good Energies is an
5 investor in SolarReserve, 204 a solar power company that received a \$737 million loan guarantee from
6 DOE in September 2011. 205

7 Sanjay Wagle

8 Sanjay Wagle has most recently served as Renewable Energy Advisor to DOE under Secretary
9 Chu, where he helped oversee the \$11 billion renewable energy program under the Recovery Act. 206
10 Wagle was an Obama fundraiser for the 2008 presidential campaign, garnering much of his support
11 through his Clean Tech for Obama group. Another venture capitalist that has acquired an influential
12 role at DOE, his industry colleagues believed that Wagle, among others, “would help ensure
13 commercial successes from ‘the steady flow of dollars coming out of DC.’”

14 Prior to arriving in Washington, Wagle was a principal at Vantage Point Venture Partners
15 (Vantage Point), a cleantech venture capital firm whose investments received \$2.4 billion in taxpayer
16 funds. 208 Among them were Brightsource, which received \$1.6 billion for solar generation; Tesla
17 Motors, which received \$465 million for electric car manufacturing; and

18
19 Mascoma, which received \$80 million for an ethanol plant. 209 Wagle left Vantage Point and
20 moved to DOE shortly after Obama’s election, “just as the administration embarked on a massive
21 program to stimulate the economy with federal investments in clean-technology firms.” His former
22 firm and the companies it invested in, therefore, had a large stake in then financing decisions being
23 made by DOE at the time.

24 Steve Spinner

25 Steve Spinner served as an advisor to Secretary Chu from April 2009 to September 2010. In
26

1 that position, Spinner helped oversee the strategic operations of the clean energy loan guarantee
2 program under the Recovery Act. 212 Spinner was previously an energy-focused venture capitalist and
3 high-tech consultant. 213 He is also an Obama bundler, having raised over \$500,000 for the President
4 in 2008, 214 and over \$200,000 thus far for 2012. Spinner’s wife, Allison Berry Spinner, is a partner at
5 Wilson Sonsini Goodrich & Rosati, the law firm that represented Solyndra on matters related to the
6 DOE loan. According to federal records, the firm received at least \$2.4 million in federal funds for
7 legal fees related to the representation.

8 White House e-mails released late last year indicate that Spinner was influential in securing the
9 \$528 million loan to now-bankrupt Solyndra. Many of those emails were written just days after he
10 signed an ethics agreement pledging that he would “not participate in any

11 discussion regarding any application involving” his wife’s law firm. In one message to a DOE
12 official on August 28, 2009, Spinner wrote, “*How hard is this? What is he waiting for? . . . I have OVP*
13 *and WH breathing down my neck on this.*” *The e-mail went on to demand that the DOE official “walk*
14 *over there and force [the official working on the Solyndra evaluation] to give [him] an answer.*” After
15 just being contacted by Solyndra, Spinner inquires in another e-mail, “Any word on OMB? Solyndra’s
16 getting nervous.” The e-mail correspondence occurring in the final days before the Solyndra loan
17 closed in September 2009 centers heavily on Spinner’s

16 efforts to coordinate plans for either the President or Vice President to announce the first loan
17 approval at a scheduled visit to Solyndra.

18 Peter Weeks

19 Peter Weeks currently serves as Clean Energy Advisor at DOE, a position to which he was
20 appointed in March 2009. 223 To be clear, there is no apparent connection between Mr. Weeks and a
21 project that received a loan from DOE. However, his profound lack of experience in the renewable
22 energy arena before being named as a top DOE advisor causes some concern.

23 Prior to joining the Administration, Weeks’s resume consisted primarily of Democratic
24 campaign positions with groups such as Obama for America, Maine Democratic Party, Kerry for
25 President, and Gephardt for President. His prior experience was limited to communications and

1 politics, and includes no record of any energy policy expertise.

2 According to Weeks, his work at DOE has included helping to “develop due diligence and
3 procurement plans of 200 awards worth over \$10 billion,” as well as “manage two multi- billion dollar
4 energy tax programs.” Additionally, Department e-mails also indicate that Weeks participated in
5 meetings with and had access to high-level officials, including Ron Bloom, giving him the opportunity
6 to participate in decisions and exert some degree of influence. Weeks’s position at DOE appears to
7 involve highly technical issues with high stakes and great sensitivity.

8 It is puzzling how someone without any prior energy, project management, or finance
9 experience would be appointed to a position with responsibilities of this magnitude and particular
10 nature. A private sector institution responsible for due diligence for billions of dollars in loans would
11 never trust someone with only campaign experience to be involved with such technical issues. Given
12 Weeks’s consistent history of strong support of the Democratic Party and President Obama, his
13 appointment adds to the perception that many of the Administration’s decisions have been driven by
14 politics as opposed to any viable, coherent, energy policy.

15 There are a vast list of other revolving door conflicts-of-interest and apparent job payola
16 positions.

17 VI. Concerns Relating to Section 1705 Loan Guarantee Recipients

18 A. Solopower at CCC+ Setting the Standard for Inappropriate Loan Commitments

19
20 Peter Weeks, Linked In, Profile available at <http://www.linkedin.com/in/weekspeter>.

21
22 E-mail from Peter Weeks, Clean Energy Advisor, U.S. Dep’t of Energy, to Brandon Hurlbut,
23 Udai Rohatgi, Peter

24
25 Gage, Tom Reynolds, and Rachel Tronstein (Feb. 23, 2011, 6:36 PM EST) (on file with
26

1 author).

2
3 Solopower is a European firm that seeks to build a solar factory in Oregon. Solopower accepted
4 \$40 million of Oregon taxpayer money in addition to DOE’s approval of a \$197 million loan via the
5 Federal Financing Bank (FFB). 229 They received this federal assistance despite a rather dire
6 prediction of Solopower’s prospects by Standard & Poor’s (S&P). According to internal documents
7 obtained by the Committee, S&P warned DOE that:

8 We believe that [average selling price (ASP) per watt] could decline to \$1 or less within the
9 next 1-2 years. From the output provided by the DOE, we concluded that even if SoloPower achieves
10 the efficiency and yield projections of the DOE’s base case, an ASP of \$1 or less would severely strain
11 SoloPower’s ability to meet its debt service obligations. In other words, S&P predicted that Solopower
12 will fail to meet its debt obligations.

13 Additionally, the loan’s already extremely poor S&P rating of CCC+ appears to depend on
14 lender protections that prevent loan disbursements unless benchmarks are met:

15 It is to lenders’ advantage that the company will not have access to the credit facility until it
16 constructs and operates Line 1A at expected levels of performance. Similarly, the company cannot
17 make the first or subsequent draws unless 30% of installed capacity is under contract to be sold.
18 According to S&P, these lender protections enable S&P to provide a CCC+. In short, the primary
19 protection against losing \$197 million of taxpayer money is the small chance that Solopower will ever
20 get the money. Without these protections, it can only be presumed that the credit rating would fall to
21 levels reflecting default.

22 The story of Solopower reflects a very concerning form of waste that creates substantial
23 uncertainty as a byproduct, tying up private investor capital and federal funds until the entity fails (or
24 succeeds) to achieve targeted benchmarks. If Solopower fails to achieve success sufficient to receive
25 DOE funds, then those private investors anticipating the benefit of DOE loans will suffer substantial
26

1 loss, resources will have been wasted, and employees will be let go after a short time. However, if
2 Solopower meets the requirements for disbursement, then the likelihood for failure and loss to the
3 taxpayer are significant as the base case for the panel manufacturer’s production costs does not reflect
4 expectations for sufficiently competitive pricing.

5 What Solopower lacked in economic value, it made up for in political connections.

6 Unlike other 1705 loan guarantee recipients, Solopower exerted bipartisan political influence on
7 DOE through strong ties to both the Bush and Obama Administrations. Solopower itself built the ties to
8 the Obama Administration.

23 National Committee’s “Obama Victory Fund” in 2008. 235

24 Lou DiNardo

1 ...who served as interim CEO 236 and now serves as Chairman of the Board of Directors,
2 previously worked as a General Partner at VantagePoint Venture Partners where DOE stimulus advisor
3 Sanjay Wagle worked. Solopower, based in San Jose, California, developed an ally in Democratic San
4 Jose Mayor Chuck Reed. Mayor Reed sent letters to DOE and talked with DOE’s Jonathan Silver in
5 person to advocate for and attempt to speed up Solopower’s loan guarantee.

6 Hudson Clean Energy Partners, the biggest investor in Solopower, had strong ties to the Bush-
7 era DOE. Craig Cornelliuss, a member of the Board of Directors at Solopower and Managing Director at
8 Hudson Clean Energy Partners, and Alexander Karsner, a member of the Hudson Clean Energy
9 Partners Advisory Board, both worked in renewable energy positions for DOE during the Bush
10 Administration. Another Managing Partner for Hudson Clean Energy Partners, Neil Auerbach,
11 donated tens of thousands of dollars to Republicans in 2008. Hudson Clean Energy Partners also
12 retained BlueWater Strategies to lobby both branches of Congress and the White House. According to
13 BlueWater Strategies’ website, Andrew Lundquist, founder and Managing Partner, “led George W.
14 Bush’s transition team for the Department of Energy” and “served as a senior advisor and strategist on
15 energy issues for the President and Vice President.”

16 With its ties to DOE officials in both the previous and current Administrations, Solopower had
17 people on both sides of the political aisle that could use their influence to pressure DOE into issuing
18 and finalizing Solopower’s loan guarantee.

15

16 both S&P and its own internal analysis regarding risky business models, DOE proceeded with a
17 deal that will cost taxpayers millions in losses.

18 Before its demise, Beacon Power relied on funding from the federal government. DOE gave
19 Beacon Power over \$25 million in grants. However, the largest investment came when DOE announced
20 a conditional \$43 million loan guarantee to Beacon Power on July 2, 2009, to create a “20 megawatt
21 flywheel energy storage plant” in Stephentown, New York. 247 In April 2010, S&P evaluated the loan
22 guarantee project and assigned it a dismal CCC+ credit rating, even though the rating incorporated the
23 benefit of the \$43 million loan guarantee. The S&P rating noted that “Beacon is currently an
24 unprofitable start-up” and that “significant exposure to commodity price volatility” could significantly
25 hurt the company. S&P ran two default scenarios, both of which demonstrated that taxpayers would
26

1 lose millions. 250 DOE conducted its own risk analysis and also assigned Beacon Power a junk CCC+
2 rating. DOE, however, ignored these warnings and finalized the loan guarantee in August 2010. As
3 predicted, Beacon Power continued to remain unprofitable and burn through money at a rapid rate. In
4 the weeks leading up to its bankruptcy, Beacon Power began spending hundreds of thousands of dollars
5 on law firms. When Beacon Power went bankrupt, DOE tried to minimize the bad publicity by arguing
6 that it had required “many protections for the taxpayer” in the loan guarantee contract. However, as
7 Beacon Power continues to go through the bankruptcy process, DOE now admits that taxpayers will
8 likely lose millions on this bad investment. 255 DOE could have avoided these loses by taking the
9 warnings of S&P and its own analysis seriously and not risking over \$39 million on a company
10 destined for failure.

18 [files-bankruptcy.html](http://www.businessweek.com/news/2011-10-31/beacon-power-backed-by-u-s-loan-guarantees-files-bankruptcy.html).

19
20 Letter from David Frantz, Acting Executive Director of Loan Program Office, U.S. DOE, to
21 Hon. Darrell Issa, Chairman, H. Comm. on Oversight and Gov't Reform, Feb. 14, 2012 (Stating “the
22 DOE stands to recover more than 70 percent of the taxpayer’s investment.” However, even if DOE
23 recovered 80 percent of its investment, taxpayers would still lose millions).

24
25 On July 3, 2010, President Obama announced during his weekly radio address that DOE would
26

1 again invest hundreds of millions of dollars in a risky solar panel manufacturer. Much like Solyndra,
2 Abound Solar manufactures solar panels using unproven technology, received a dismal credit rating for
3 its loan guarantee, and has strong Democratic political connections. In fact, DOE finalized Abound
4 Solar’s loan in the same month that DOE worked to restructure the failing Solyndra’s loan.

5 In between DOE issuing Abound Solar its \$400 million conditional loan guarantee and
6 finalizing it in December 2010, Fitch Ratings evaluated the project and assigned it a junk credit rating.
7 Fitch gave the project a credit rating of “B” (worse than Solyndra’s) with a recovery estimate of only
8 45%. 256 Despite including the benefit of the DOE loan guarantee in the rating (which likely made the
9 rating more favorable), Fitch labeled the project “highly speculative” and described Abound as lagging
10 in technology relative to its competitors, failing to achieve stated efficiency targets, and expecting that
11 Abound Solar will suffer from increasing commoditization and pricing pressures. 257 In addition to
12 these concerns, Fitch worried that Abound Solar needed to raise more private money to build its new
13 facilities and that, if it could not, Abound Solar could default on its DOE loan.

14 Recently, Abound Solar began encountering the financial problems that Fitch predicted.

15 In line with Fitch’s prediction, Abound Solar has recently struggled to raise additional capital,
16 causing DOE to stop disbursing loan payments to the company. 259 More troubling, Abound Solar
17 announced on March 1 st that it would stop producing solar panels and would fire employees, even
18 though it has already received \$70 million from DOE. Abound Solar continues to claim publicly that it
19 does not have serious financial problems and will survive;

20
21 Letter from Jason Paraschac, Senior Director, Fitch Ratings, to Steve Abely, Chief Financial
22 Officer, Abound Solar, Nov. 4, 2010 (on file with author).

23
24 *“Abound’s lagging conversion efficiency negatively impacts the panel’s installed costs which*
25 *should negatively impact expected panel [average selling prices]. In addition, Fitch expects further*
26

1 *price pressures in this market over the next 3-5 years...”*

2 *“Abound has not provided an explanation as to why gains in [solar panel] conversion*
3 *efficiency have not materialized as expected...”*

4 *“[Average selling price] assumptions in the new model are significantly below the prior plan.*
5 *While this may in part reflect the lower conversion efficiency of [Abound’s] solar panel, it is largely a*
6 *reflection of severe price contractions in the [solar photovoltaic panel] market over the past 24*
7 *months.”.*

8 *“Abound must raise additional equity to fund the completion of its planned manufacturing*
9 *facilities. An inability to access equity markets could force an early default of the loan before*
10 *construction is complete but also before the loan is fully drawn down.”.*

19 [loan-guarantee-halts-production/](http://www.forbes.com/sites/toddwoody/2012/03/01/abound-solar-recipient-of-400-million-federal-loan-guarantee-halts-production/).

20
21 however, its inability to raise capital and meet DOE’s requirements likely indicate serious
22 troubles ahead for the company, as predicted by Fitch.

23 Abound Solar has ties to Democratic politicians at the federal level and the state level in
24 Colorado. Bohemian Companies, LLC, founded by Pat Stryker, became an early investor in Abound
25 Solar (at the time AVA Solar) in October, 2008. In addition to the initial funding, the CEO of Bohemian
26

1 Companies, Joseph Zimlich, has served as both a director and a board member of Abound Solar. Pat
2 Stryker is a major Democratic donor who Forbes included on its 2011 list of top liberal spenders. In
3 2008, Stryker donated \$50,000 and bundled \$87,500 for President Obama’s 2009 inauguration, and has
4 given \$35,800 to the 2012 Obama Victory Fund. Abound Solar also developed ties to Congressional
5 Democrats. The company hired then Democratic Congressman Paul Kanjorski’s nephew Russell as its
6 vice president for marketing. Abound Solar supported the 2009 cap and trade bill in the House of
7 Representatives and funded an advertisement thanking then-Colorado Democratic Congresswoman
8 Betsy Markey for her vote in favor of the bill. At the state level, then-Democratic Colorado Governor
9 Bill Ritter strongly supported Abound Solar and its application for a DOE loan guarantee. When
10 Energy Secretary Chu visited Colorado, Governor Ritter handed Secretary Chu a letter urging him to
11 approve Abound Solar’s loan guarantee because it would allow the company to expand and hire new
12 workers.

Illustration 12: Dept Of Energy Is A Political Money Laundering Operation

1
2 The combination of Abound Solar’s junk credit rating, financial problems, and the company’s
3 political connections raise serious concerns about whether DOE based the decision to invest \$400
4 million on merit and whether taxpayers could again lose millions on a dubious solar manufacturing
5 project.

6 D. Ormat Nevada: Strong Ties to Harry Reid

7 Senate Majority Leader Harry Reid

8 ...announced on September 23, 2011, that DOE finalized a \$350 million partial loan guarantee
9 for three geothermal power plants owned by Ormat Nevada, Inc. 269 Ormat also benefitted from the
10 \$98.5 million loan guarantee to Nevada

15
16 Press Release, Reid Announces Finalized Loan Guarantee for Ormat Geothermal Projects,
17 United States Senator Harry Reid, Sept. 23, 2011, available at [http://reid.senate.gov/newsroom/](http://reid.senate.gov/newsroom/pr_092311_geothermalloan.cfm)
18 [pr_092311_geothermalloan.cfm](http://reid.senate.gov/newsroom/pr_092311_geothermalloan.cfm).

19
20 Geothermal (see below) as Ormat received an almost \$80 million engineering, procurement,
21 and construction contract to build Nevada Geothermal’s Blue Mountain plant. Meaningful ties exist
22 between the Senator and Ormat. Two of Ormat’s federal lobbyists previously worked for Senator Reid.
23 Ormat’s outside lobbyist, Kai Anderson of Cassidy and Associates, served as Senator Reid’s Deputy
24 Chief of Staff up until 2005. Anderson lobbies both the House of Representatives and the Senate for
25 Ormat. Anderson has given close to \$90,000 to Democratic candidates and campaign committees over
26

1 the past three cycles, including thousands to Senator Reid. Ormat’s company lobbyist, Director of
 2 Policy and Business Development Paul Thomsen, served as a “Regional Representative” for Senator
 3 Reid through 2005. Thomsen gave thousands in political contributions to Senator Reid. During Senator
 4 Reid’s 2010 reelection campaign, Thomsen starred in a campaign ad for Senator Reid to advertise the
 5 benefits of Ormat’s loan guarantee for Nevada. In addition to Anderson and Thomsen, Ormat’s
 6 President, Yoram Bronicki, gave thousands in political contributions to Senator Reid. The strong ties
 7 between the company and the Senate Majority leader raise questions about whether the DOE acted in
 8 the best interests of the American people when it approved the loan guarantee.

9 E. Nevada Geothermal’s Blue Mountain Project

10 On June 15, 2010, DOE announced that it would conditionally issue a \$98.5 million partial loan
 11 guarantee to Nevada Geothermal Power Company (Nevada Geothermal). This loan enabled Nevada
 12 Geothermal to refinance the Blue Mountain Geothermal Project (Blue Mountain) through John
 13 Hancock Financial Services (John Hancock). In other words, the DOE Nevada Geothermal Application
 14 for DOE

21
22 ***Press Release, Energy Department Offers Conditional Commitment to Support Nevada***
23 ***Geothermal Development with Recovery Act Funds,U.S. Dep’tt of Energy, June 15, 2010, available***
24 ***at: <https://lpo.energy.gov/?p=805>.***

1 loan paid back a prior financial obligation of Nevada Geothermal. This was the first of DOE’s
2 “Financial Institution Partnership Program” (FIPP) loan guarantees, under Section 1705, where private
3 investment groups worked with DOE to provide financing to energy projects. 279 Less than three
4 months after the conditional approval, DOE finalized this loan guarantee, enabling Nevada Geothermal
5 to refinance a loan from TCW through John Hancock. The loan did not finance any new construction
6 and therefore did not help to create a single new job. DOE’s awarding of this loan guarantee raises
7 questions about why DOE was investing significant taxpayer resources in an entity with well-
8 established financial difficulties.

9 In the press release for the project, Secretary Chu and Senate Majority Leader Harry Reid
10 touted Blue Mountain’s potential, with Senator Reid saying that, “I am glad to see economic recovery
11 funding being used to put Nevadans to work on a project that will help us achieve energy
12 independence. Northern Nevada is the Saudi Arabia of geothermal energy and I thank Secretary Chu
13 for recognizing the Silver State’s enormous job-creating potential to produce plenty of clean and
14 affordable energy.” 281 It was known to him at that time, however, that the loan would not create a
15 single job, but instead simply refinance an existing loan, despite DOE’s claim that it would create over
16 200 jobs.

17 1. Misuse of the DOE Loan Guarantee as a Tool to Bailout Creditors

18 Nevada Geothermal has a well documented history of major financial problems. By the time
19 DOE conditionally approved the loan guarantee, Nevada Geothermal had already violated contract
20 terms and debt covenants relating to financing from its primary lender, TCW.

21 According to Nevada Geothermal’s financial statements, the firm would not avoid default
22 without the benefit of a loan guarantee.

23 On October 2, 2011, The New York Times ran a story about the financial difficulties of Nevada
24 Geothermal, relying partially on a September 2011 Deloitte & Touche audit of the company which
25 stated “significant doubt about the company’s ability to continue as a going concern.” 283 In response,
26

1 DOE dismissed the financial problems of Nevada Geothermal and instead pointed to the alleged
2 financial health of Blue Mountain to argue that the loan guarantee would be repaid. Given that Nevada
3 Geothermal’s principal operation is Blue Mountain’s Faulkner I Power Plant, such a distinction has
4 questionable merit.

22 available at http://www.nevadageothermal.com/i/pdf/Annual_Financials_2010.pdf.

23
24 As noted above, at the time DOE approved the conditional loan guarantee, Nevada Geothermal
25 had already violated terms to the loan agreement with its primary creditor, TCW.

1 Based on financial disclosures, Nevada Geothermal avoided default as a result of TCW's
2 granting a waiver and extension in anticipation of the John Hancock financing backed by the DOE loan
3 guarantee. The resulting DOE bailout of Nevada Geothermal was planned out in advance, as made
4 clear by Nevada Geothermal's March 31, 2010 Financial Statements:

5 *The Company has engaged John Hancock to provide long term debt up to \$95 million which*
6 *will be used to pay down the TCW loan and to fund additional drilling. However, this potential John*
7 *Hancock loan is subject to due diligence and final credit committee approval by John Hancock. There*
8 *is no certainty that the anticipated debt financing through John Hancock will be obtained. Failure to*
9 *obtain the John Hancock loan, or a similar loan from another lender, and/or unsuccessful drilling may*
10 *result in a default under the terms of the TCW loan agreement. In the event of a default TCW may elect*
11 *to call the loan and execute upon the security, which would result in a material adverse effect on the*
12 *Company, including delay or indefinite postponement of operations and further exploration and*
13 *development of our projects with the possible loss of such assets. (emphasis added)*

14 The story continued to unfold in Nevada Geothermal's June 30, 2010 Financial Statements,
15 where the plan to bailout their lender, TCW, was successfully executed by DOE:

16 As at June 30, 2010, the Company was not in compliance with the terms of the TCW loan. The
17 non-compliance results from the Company having exceeded the maximum loan amount of \$180
18 million, and having exceeded the drilling expenditure budget by more than \$3.8 million, as well as
19 some instances of technical non-compliance with other loan terms As a result, for balance sheet
20 purposes, the TCW long-term loan has been classified as a short-term liability. On November 20, 2009,
21 TCW agreed in principle to waive the non- compliance until March 31, 2010 in return for 4.5 million
22 NGP Inc. Warrants exercisable at CAD 1.50 (Note 21(f)). Subsequently, TCW agreed to extend the
23 agreement in principle, without change, until the John Hancock loan [guaranteed by DOE 287] closed.
24 The John Hancock loan was closed on

1 Nevada Geothermal Power, Inc., Consolidated Financial Statements, Mar. 31, 2010, at 11,
2 available at http://www.nevadageothermal.com/i/pdf/Q3_March_31_2010.pdf.

3

5 available at

6 http://www.nevadageothermal.com/i/pdf/Annual_Financials_2010.pdf
7

8 (Explaining the John Hancock loan guaranteed by DOE: “On October 13, 2009 the Company
9 [Nevada Geothermal] announced that it appointed John Hancock Life Insurance Company (“John
10 Hancock”) to be the exclusive debt provider for up to \$95 Million 20-year term loan. Further to the
11 above, on October 7, 2009, the DOE announced its Financial Institutions Partnership Program
12 (“FIPP”), a program supported by the 2009 ARRA. The FIPP program is designed to facilitate long
13 term financing for renewable development projects using commercial technology and applies to up to
14 80 percent of the loan amount. John Hancock, as Lender for the Blue Mountain 'Faulkner 1' geothermal
15 project, made an application to the DOE for a Loan Guarantee under the FIPP. The loan guarantee was
16 conditionally approved on June 15, 2010, and the loan closed on September 3, 2010....At the closing of
17 the John Hancock/DOE loan after paying associated fees and funding reserve accounts for drilling,
18 interest and plant maintenance the Company paid the TCW loan down to approximately \$86.9 million.
19 The Company plans to apply for a second ARRA grant based upon work, to September 3, 2010, and a
20 repayment of \$81,076,669 was made on the TCW loan. 288 (emphasis added)

21 Confirming this troubling misdirection of taxpayer funds, the Summary of Proposed Terms and
22 Conditions for the Conditional Loan Guarantee, signed by Secretary Chu, provides that the “proceeds
23 of the Guaranteed Obligation will be used for the following: (i) Partial repayment of intercompany loan
24 from HoldCo [Blue Mountain], in the amount of approximately 80 million;...” 289 This intercompany
25 repayment would ultimately flow to TCW as described above. The remaining amount of the loan went
26

1 to the posting of cash collateral to NV Energy, Inc., funding a debt service reserve account, funding a
2 maintenance reserve account, funding a drilling expenditure account (which included already incurred
3 costs), and other fees. As these numbers total to around \$98 million, it appears that little, if any, of the
4 loan went to fund newdrilling or new construction.

5 2. This Bailout Appears to Violate the American Recovery and Reinvestment Act of 2009

6 Not only does it appear that DOE purposely directed taxpayer funds to a failing enterprise,
7 DOE’s action robbed taxpayers of genuine investment toward renewable energy.

8 This loan guarantee bailed out lenders (TCW) and provided no assurance that TCW would
9 apply the money that it recovered toward the economy or jobs as required by the American Recovery
10 and Reinvestment Act of 2009.

11 Title XVI, Section 1602 of the American Recovery and Reinvestment Act of 2009, requires that
12 “recipients shall also use grant funds in a manner that maximizes job creation and economic benefit.”
13 291 Paying off a creditor clearly does not maximize job creation and economic benefits. Rather, it
14 provides an opportunity for private industry to exit an investment, deleverage and transfer the
15 extraordinarily high default risk to taxpayers.

16 increase power production, subsequent to the first grant that will be partially funded by the John
17 Hancock/DOE loan.”).

18
19 Loan Guarantee LGPO Loan Number: F1001, U.S. Dep’t of Energy, June 15, 2010 at. 4 (on file
20 with author).

21
22 Nevada Geothermal Power, Inc., Conditional Loan Guarantee, U.S. Dep’t of Energy, Summary
23 of Terms and Conditions at 4 Summary of Terms and Conditions (Stating “USE OF PROCEEDS: The
24 proceeds of the Guaranteed Obligation will be used for following:

- 25 (i) Partial repayment of intercompany loan from HoldCo in the amount of approximately \$80
26

1 million;

2 (ii) Funding security requirements under the power purchase agreement signed on August 18,
3 2006 with NV

4 Energy, f/k/a Nevada Power Company (“PPA”), either by posting cash collateral, cash
5 collateralizing

6 one or more letters of credit, or otherwise in accordance with the PPA in amount of \$3.8 million

7 (the

8 “PPA Credit Support”);

9 (iii) Funding of the Debt Service Reserve Account in the amount of approximately \$5.5 million,

10 Major

11 Maintenance Reserve Account in the amount of \$125,000, and Drilling Expenditure Account in

12 the

13 amount of approximately \$8,400,000 (less amounts applied to reimburse the Borrower for

14 Project

15 Costs incurred prior to the Closing Date in connection with the Additional Wells (as defined

16 below));

17 (iv) The payment of certain fees and transaction expenses associated with the Guaranteed

18 Obligation which are

19 permitted to be paid with such proceeds under the Solicitation as set forth in Schedule 1; and

20 (v) Initial funding of the Operating Account with all remaining proceeds of the Guaranteed

21 Obligation.”).

22
23 American Recovery and Reinvestment Act of 2009 §1602, Pub. L. No. 111-5.

24
25 For this reason, it appears DOE, in its very first FIPP section1705-based loan guarantee,

26
27 485

28

1 violated the spirit and, quite possibly, the letter of the law.

2 3. Given the “Pari Passu” Deal Terms and the Required Consent of all Lenders to Reorder
3 Priority, the Terms of the DOE Loan Guarantee Appear to Violate the Requirement of Superiority
4 under Title XVII, Section 1702(g)(2)(B)

5 The Summary of Terms and Conditions in the Conditional Loan Guarantee signed by Secretary
6 Chu that relates to the Blue Mountain loan guarantee, at page 8, provides for a pari passu and pro-rata
7 right of payment for senior creditors. This means that the unguaranteed senior lender, John Hancock,
8 stands equal to taxpayers in terms of recovering a share of their loss in the event of default. The
9 Summary of Terms also requires the consent of all Lenders in the event that DOE seeks to “change to
10 the priority of payment in the payment waterfall.” The combination of the pari passu credit terms,
11 which ranked John Hancock as an equal to taxpayers, with DOE’s inability to reorder priority in case of
12 a default, disables the ability of DOE to rely on its superiority as required under Section 1702(g)(2)(B).

13 4. Nevada Geothermal’s Continuing Problems

14 Since DOE finalized Nevada Geothermal’s loan guarantee in September 2010, the project
15 continues to have operational and financial problems. The project has an ongoing problem with
16 electrical fires. In January 2010 (before the loan guarantee), part of the Blue Mountain plant was
17 damaged after electrical cables were placed too close together and burned; a significant amount of
18 cable was destroyed and had to be replaced. 294 In October 2011, another fire occurred because the
19 seal on one of the pumps failed, causing part of the plant to go offline for major repairs. 295
20 Operational problems at the Blue Mountain project resulted in revenue being less than estimated the
21 last four months of 2011. 296 Additionally, in November 2011, one of Nevada Geothermal’s major
22 creditors considered placing Nevada Geothermal in default because of a late payment, 297 and Nevada
23 Geothermal lost \$3.9 million in the fourth quarter. 298

24 F. Granite Reliable

25 In September 2011, Granite Reliable Power, LLC, a wind generation company owned by the
26

1 Brookfield family of companies, received a partial guarantee for \$168.9 million loan from DOE. 299

2 The funds will finance Granite Reliable Power Windpark, a wind generation project in

24 Coos, New Hampshire. Unlike other loan recipients, Granite Reliable was a very profitable
25 company without any demonstrated need to obtain a loan subsidy in order to secure private financing.

1 301 A deeper look into the players and circumstances surrounding this decision suggest that politics
2 may have led DOE to approve the loan. Until 2011, Granite Reliable was owned and controlled by
3 Noble Environmental Power, Inc. Noble sold that 75% interest to BAIF Granite Holdings, Inc., just
4 prior to the project’s loan approval in September 2011. 302 BAIF Granite Holdings (BAIF) was created
5 by Brookfield Renewable Power, a subsidiary of the \$3.2 billion company Brookfield Asset
6 Management (BAM). 303 Brookfield Renewable Power financed the creation of BAIF from its
7 Brookfield Americas Infrastructure Fund, which reportedly has assets totaling \$2.7 billion. 304 The
8 remaining minority interest is owned by Freshet Wind Energy, LLC, which partnered with BAIF on the
9 project. 305 Given the solid financial background from which Granite Reliable was formed, it is
10 unclear why DOE determined that the company needed a \$168.9 million loan guarantee.

11 1. Investors

12 Brookfield’s Company Background: Board Members, Holdings, and One reason DOE
13 determined a loan guarantee may have been necessary may lie in the inner workings of the BAM
14 family of companies and the companies’ strong Democratic ties.

15 BAM owns BAIF, which owns Granite Reliable, as well as Brookfield Office Properties (BOP).
16 BOP’s Board of Directors is chaired by John Zuccotti, the man for whom New York City’s Zuccotti
17 Park is named, and includes Diana Taylor, New York City Mayor Michael Bloomberg’s long-time
18 girlfriend. George Soros and Martin J. Whitman, both prominent Democratic donors, are both heavily
19 invested in Brookfield. Moreover, Heather Podesta, sister-in-law of Obama’s influential White House
20 transition director John Podesta, and the Podesta Group served as the lobbyists for BAIF.

10
11 Nancy Ann DeParle: Obama’s Deputy Chief of Staff for Policy and Noble Interest Holder As
12 described in Section V, Part B of this report, Nancy DeParle suffered a conflict of interest during her
13 time in the Administration. As indicated on her financial disclosure forms, prior to joining the White
14 House, Nancy DeParle was one of five managing directors of a multi- billion dollar private equity firm
15 CCMP 309 While with CCMP, she sat on the board of directors for Noble Environmental Power, LLC,
16 one of CCMP’s investments. 310 She served as a board member of Noble for about two years and quit
17 in March of 2009. 311 Noble owned Granite Reliable.

18 Coinciding with her tenure at the White House, DOE considered a loan guarantee for Granite
19 Reliable. The Granite Reliable project was well underway by late 2009. Noble then sold Granite
20 Reliable in December 2010 to Brookfield Asset Management, just 6 months prior to the conditional
21 approval of the DOE loan guarantee and deep into the application process. The DOE loan guarantee
22 was conditionally approved in June 2011 and finalized in September 2011.

23 The ultimate approval of the DOE loan guarantee that followed the sale of Granite Reliable is
24 tainted by DeParle’s position within the White House and her financial interest in Noble. DeParle’s
25 position in the Administration could have been used to influence the successful sale by ensuring or

1 increasing the likelihood of ultimate approval of the DOE loan guarantee. The loan guarantee would
2 increase the value of the Granite Reliable, improving the sale price and, thereby, improving the
3 investment of DeParle’s son.

4 G. Record Hill Wind: DOE Uses the First Solar Precedent to Speed Through Another
5 Questionably “Innovative” Technology

6 DOE relied on the First Solar precedent to approve Record Hill Wind’s \$102 million loan
7 guarantee project as “innovative,” despite the project using commercial technology. DOE knew that the
8 Record Hill project did not use significantly innovative technology. The Standard & Poor’s credit
9 rating for the project that DOE received clearly indicates the commercial (and non-innovative) nature
10 of the project:

11
12 Record Hill has entered into a Turbine Supply Agreement for the shipment of 22 Siemens

10
11 turbines to be installed at the site. The SWT-2.3-93 turbine has been in operation in Europe
12 since 2005, and the first turbines in the US were installed and began operations in 2006. Currently,
13 there are a total 1,374 SWT-2.3-93 turbines operating worldwide.....Due to harsh winter conditions in
14 Maine, the project plans to install a cold weather package on all turbines, which will keep the turbines
15 running in cold temperatures. Siemens' cold weather packages are currently in use on turbines in
16 Canada, Norway, and other cold areas, and have performed to expectations. Along with a cold weather
17 package, the project expects to make use of Siemens proprietary Turbine Load Control (TLC)
18 technology...Given that the technology is software- based, however, and is not considered a
19 fundamental component in the performance of the turbine, the TLC could be shuttered without
20 damaging the turbine if it does not work properly. In this case, the turbines would continue to run
21 similar to Siemens' existing fleet. (emphasis added)

22 Much like First Solar's "innovative" projects, the Record Hill Wind project attempted to
23 categorize minor modifications to existing commercial technology as "innovativeness." DOE
24 eventually agreed with Record Hill Wind's questionable reasoning. On December 14, 2010, Todd
25 Shrader of DOE sent an email to several DOE personnel with the subject line "Eligibility Interpretation

1 (sic)” that read:

2 An eligibility issue arose during the technical evaluation of Ocotillo Express (FIPP—F1033).
3 This project is utilizing Siemens SWG- 2.3-101 wind turbine generators. It is claimed to be a
4 commercial technology based on the wide spread use (including in this country) of the closely related
5 Siemens SWG-2.3-93 turbines, which are essentially the same just with smaller blade lengths (101 feet
6 vs. 93 feet). Without looking deeper into the design differences (which will occur at due diligence), I
7 concur with the applicant that this is a commercial technology. However, for Record Hill, which is
8 using SWG-2.3-93 turbines, it is claimed that this is a new and innovative technology, partially based
9 on no use over 5 years in the US for these turbines. I also believe there were some differences in
10 internal controls. However, the 101 and 93 units are essentially the same technology. Can the same
11 technology be innovative under the Renewables Solicitation and Commercial under the FIPP’s
12 solicitation? (emphasis added)

13 Later in the day, Ruth Ku of DOE replied that the same question had occurred before with a
14 different project and that the *“project was asked whether it could obtain alternative financing in the
15 private market...the project was able to get alternative financing (e.g., with John Hancock) and I think
16 the recommendation was for it to move its application to FIPP...don’t know where Record Hill is in its
17 process for it to be*

18

20
21 Email from Todd Shrader, U.S. Dep’t of Energy, Dec. 14, 2010 (on file with author).

22
23 *feasible for it to apply under FIPP at this point.” Ruth Ku forwarded her email to Douglas
24 Schultz, a Program Manager at DOE’s Loan Programs Office. Douglas Schultz replied, “Record hill is
25 well into due diligence with [D]avid [S]chmitzer. No reason to transfer at all. In terms of precedent of
26*

1 *innovative and not look no further than first solar where there [sic] panels are both innovative and*
2 *noninnovative given the inverter used.” (emphasis added)*

3 Ruth Ku agreed with Douglas Schultz but worried that submitting two project applications
4 using the same technology as innovative and not innovative could cause a “*policy issue for OMB.*” She
5 wrote back to Douglas Schultz stating “[I]t cld [sic] be a policy issue for OMB if record hill followed
6 Ocotillo. Think it’s probably less of an issue if record hill was first then Ocotillo.” 318 After scheming
7 about how to get the two applications through OMB without problems, DOE allowed the Record Hill
8 Wind project to continue as an “innovative” project. 319 DOE would eventually finalize a \$102 million
9 loan guarantee (guaranteed 100% by the federal government) in August 2011.

10 H. Genesis Solar: An Expedited Approval Process Now Threatens Entire Project

11 On August 20, 2011, DOE awarded NextEra Energy Resources LLC (NextEra) a partial loan
12 guarantee for \$825 million to fund the Genesis Solar Energy Project (Genesis). A planned 250-
13 megawatt plant to lie on 1,950 acres of federal land located outside Blythe, California, Genesis plans to
14 power more than 187,500 homes by 2014. 320 Standard & Poor’s gave NextEra a BBB+ rating, highly
15 dependent on a long term Power Purchasing Agreement (PPA) with Pacific Gas & Electric (PG&E),
16 and a Construction Completion Agreement with NECH, noting that if either’s credit ratings were
17 downgraded in the interim, it would hurt Genesis’s rating as well. S&P emphasizes that the loan
18 guarantee would only support the project for up to a six month delay. Additional delays would restrict
19 Genesis’s ability to meet the PPA and jeopardize the success of the project. An accelerated state and
20 federal site approval process allowed the project to gain DOE approval, but the hasty work may now
21 endanger the entire project. Genesis’s original site resided on a section of Ford Dry Lake, which
22 archeologists suspected contained ancient cremation sites. To minimize delays, NextEra moved the
23 project two miles north to a new site, still on federal land. DOE’s application process requires extensive
24 vetting of project sites for a variety of environmental factors. However, to expedite site approval,
25 NextEra opted for a less thorough process developed by the state energy commission (The

1 Commission) and the Bureau of Land Management (BLM) that would “streamline the time necessary
2 to produce the

17
18 joint cultural resources analyses...foregoing potentially lengthy investigations to evaluate the
19 historical significance of the cultural resources found.”

20 The Commission did warn Genesis of the potential consequences associated with the site
21 approval process in August 2011, stating, “This approach however has the real potential to result
22 in...delays in construction start-up, increase in requisite construction monitoring, and cost.” As part of
23 the process, NextEra dug 500 test pits 3feet deep and found no artifacts, allowing them to proceed with
24 construction.

25 After DOE granted final approval to the project and construction began, grading equipment

1 unearthed grinding stones lying on a bed of charcoal, indicating possible evidence of human
2 settlements. This discovery caused work to halt on 400 acres of the Genesis site while
3 the company and regulatory agencies discuss various options. The hasty approval process that
4 prevented the earlier discovery has compromised the construction schedule and put Genesis in serious
5 jeopardy of not satisfying its obligations under the PPA. NextEra has admitted that these delays may
6 have serious consequences for the project; according to a NextEra Senior Vice President, “the project
7 could become uneconomical.”

8 In addition to these problems, the new site also encroached on the habitat of the endangered Kit
9 Foxes, native to the California desert. NextEra used “passive hazing” techniques approved by state and
10 federal biologists to remove the foxes prior to site grading of the area. Essentially, NextEra sprayed
11 coyote urine around dens and removed food sources.

12 Two dead foxes were found on site in October 2011, which died from Distemper, a disease
13 similar to Rabies spread by bodily fluids, never previously recorded in Kit Foxes. Ultimately, seven
14 foxes died from NextEra’s removal process.

15 I. General Electric’s Broad Access to Loan Guarantees: Caithness Shepherds Flat, 1366
16 Technologies and Kansas City Southern Railway Company

17 General Electric (GE) sponsored a project called Caithness Shepherds Flat (Caithness), and also
18 supplied the project with 338 wind-turbines. High level Administration officials expressed concern that
19 the project was receiving an excessive amount of public subsidy, and that private parties did not have
20 sufficient “skin in the game.” In a Memorandum for the President (“Summers’ Memo”) dated October
21 25, 2010, Carol Browner, Ron Klan and Larry Summers revealed concerns regarding excessive over-
22 subsidization of the Caithness project, where grants, tax credits and loan guarantees provided 65% of
23 the funding for the project.

24 Because of the excessive subsidy, the memorandum reveals expectations of a 30% return to the
25

17 <http://www.whitehouse.gov/administration/advisory-boards/jobs-council/about> (Stating it shall,
18 “Report directly to

19
20 government-backed transactions have occurred. First, the poorly rated 1366 Technologies,
21 sponsored in part by GE, 328 received a direct \$150 million loan commitment from DOE for its solar
22 manufacturing plant. 329 Second, on February 22, 2012, the Federal Railroad Administration (FRA)
23 loaned \$54.6 million to Kansas City Southern Railway Company (KCSR) under the Federal Railroad
24 Administration-administered Railroad Rehabilitation and Improvement Financing (RRIF) Program to
25 purchase thirty new General Electric ES44ACdiesel-electric locomotives.

1 Regarding KCSR’s purchase of GE locomotives, the railroad’s filings with the Securities and
2 Exchange Commission (SEC) reveal a twenty-five year, \$54.6 million loan at 2.96%. KCSR received
3 this loan despite reporting strong earnings. For the year 2011, KCSR reported operating income of
4 \$612 million on \$2.1 billion in revenues, a 26% increase over the prior year – not the picture of a
5 company in need of assistance in the form of a \$54.6 million loan. As a result of this subsidized loan,
6 the highly profitable KSCR gained a competitive advantage over its freight rail competitors.

7 VII. Breakdown of Problems with ATVM Loans

8 Each of the “Big Three” auto manufacturers, Ford, General Motors, and Chrysler, along with
9 Nissan, applied for loans under the ATVM Program. Ford and Nissan are the only major manufacturers
10 that received an ATVM loan. The companies received \$5.9 billion and \$1.4 billion respectively. Both
11 General Motors and Chrysler withdrew their applications after waiting over a year for responses from
12 DOE. Initially, financial viability was the primary roadblock that kept GM and Chrysler out of the
13 running for Department of Energy loans. Some speculated that the entire program had been put on hold
14 in order to give these two manufactures time to prove their financial viability and qualify for loans that
15 would have drained the President on the design, implementation, and evaluation of policies to promote
16 the growth of the American economy...”).

5
6 the program of remaining funds. 336 In the end, both companies withdrew their applications,
7 choosing instead to seek private financing. The other loan recipients are Fisker, Tesla, and The Vehicle
8 Production Group, receiving \$529 million, \$465 million, and \$50 million, respectively. 337 To date,
9 the ATVM Program has loaned \$8.339 billion to five auto manufacturers for the production of ATVs.

10 It is unclear whether DOE has a set of objective standards by which it judges the relative merit
11 of applicants. Based on materials obtained by the Committee, it appears that DOE applies inconsistent
12 standards to each applicant, leaving innovative car companies in a state of perpetual uncertainty over
13 how they will be treated under the process. These concerns are apparently shared by Senator Diane
14 Feinstein, who wrote DOE complaining that, “On multiple occasions, the department has missed
15 internal deadlines for initial decisions, term negotiations, final decisions and loan closure.” This
16 haphazard administration of the ATVM Program creates confusion in the advanced technology vehicle
17 market and may have actually hurt President Obama’s goal of fostering a new generation of vehicles.

18 Despite an apparent lack of discernible objective criteria to judge the relative merit of loan
19 applicants, it does appear that ties to the Obama Administration were important for those companies
20 securing an ATVM loan early on in the process. Both Ford Motor Co. and Nissan were heavily
21 engaged in negotiations with the Administration over fuel economy standards for model years 2012-
22 2016 at the time DOE was considering their applications. Both companies eventually expressed
23 publicly their support for these standards, which the Administration described as the “Historic
24 Agreement.” In addition to this curious timing associated with the approval of Ford and Nissan’s loan,
25 the other recipients each enjoyed close ties to the Administration. For example, Fisker was backed by
26

1 Kleiner, Perkins, Caufield & Byers, which has significant ties to the Administration. One of the senior
2 partners at Kleiner Perkins is former Vice President Al Gore. Another partner, John Doerr, serves on
3 Obama’s Council on Jobs and Competitiveness. In the case of Tesla, board member Steve Westly was
4 a major Obama campaign bundler and a frontrunner for the position of Secretary of Energy.

16
17 Case Studies:

18 There has been very little activity in the ATVM loan program over the last three years, as DOE
19 has only approved one loan since April 2010. Moreover, the Committee has yet to receive a response
20 from DOE to its February 10, 2012, letter asking for additional information about the loan application
21 process. Even so, the Committee has gleaned some information about the companies that DOE has
22 considered for ATVM loans. These stories reveal the haphazard manner in which DOE is administering
23 the program and how ever-changing goal posts and broken promises have promoted the misallocation
24 of scarce resources and pushed some innovative companies into bankruptcy.

25 Aptera

1 Aptera first applied for an ATVM loan in December 2008, looking for money to fund the
2 production of the Aptera 2e, a three-wheeled vehicle capable of nearly 200 miles per gallon. Although
3 DOE rejected Aptera’s original application for a loan because a three-wheeled vehicle did not meet the
4 criteria of a Section 136 loan, Congress amended the program in October 2009, and Aptera resubmitted
5 its application in January 2010 for both the 2e and a four-wheeled vehicle. By late 2010, DOE
6 determined that the 2e would not be able to pay back capital costs. Accordingly, Aptera shifted its
7 focus to the 4e, a four door electric sedan, that DOE believed would be more suited to an ATVM loan
8 program. After numerous negotiations with DOE, in September 2011, Aptera received a letter from
9 DOE offering them a conditional loan commitment of \$150 million if the company was able to raise
10 \$80 million privately.

11 Aptera shut down on December 2, 2011, citing the inability to raise additional private capital,
12 having exhausted a bridge loan that was supposed to last through the time DOE made a final decision
13 on the loan. At this point, Aptera’s investors had funneled \$40 million of their own money into the
14 project. Former Aptera CEO Paul Wilbur and former marketing Vice President Marques McCammon
15 have publically asserted that the prolonged timeframe spent engaging with DOE to secure a loan
16 ultimately consumed their cash reserves. Wilbur stated that a “bright shiny object disease”
17 characterized the ATVM Program and suggested in retrospect, “We should have raised the money
18 ourselves rather than relying on DOE.” However, the loans given to Fisker and Tesla gave Aptera
19 hope that DOE would eventually act on their application. More importantly, since the DOE continued
20 to engage with the company

9
10 throughout the time period, management was convinced that DOE was interested and willing to
11 provide financing for the company. 3

12 Bright Automotive

13 Bright Automotive was an Indiana company that developed a plug-in hybrid delivery vehicle
14 that it planned to market to fleet customers. On February 28, 2012, Bright sent DOE a scathing letter
15 announcing that they “have been forced to say uncle” and that it would withdraw from the ATVM
16 application process.

17 Bright applied for an ATVM Loan in December 2008 and its application was deemed
18 “substantially complete” at that time. DOE continued to review the application for an additional 1,175
19 days. According to the company, Bright secured letters of support sent to Secretary Chu from large
20 fleet vehicle users such as Cox, Comcast, and Best Buy, and had order letters from Duke, Vectren, and
21 Snap On.

22 According to documents obtained by the Committee, on March 2, 2012, Lachlan Seward, then
23 the Director of the ATVM Program, indicated to Bright that a loan for less than \$300 million would be
24 quickly approved. In DOE’s next communication, DOE suggested that Bright partner with a large
25 OEM in order to speed up the loan process, intimating that conditional approval would occur in

1 “weeks, not months.” Pursuant to this advice, Bright entered into a strategic partnership with GM in
2 July 2010. At that time, DOE officials informed Bright that they would receive a conditional loan
3 agreement within two months.

4 Two months later, DOE came back to Bright and directed the company to satisfy six additional
5 loan pre-conditions. By January 2011, Bright received a “near final” conditional agreement for a \$314
6 million loan. It was reviewed by the DOE credit team for five months when on May 18, 2011, DOE
7 determined that it would not consider Bright’s loan based on a volume consideration report generated
8 by DOE, one that Bright had asked DOE to reassess. DOE contractors, A.T. Kierney, conducted a new
9 volume study, which led to Bright’s reconsideration for a loan by DOE in June 2011. DOE once again
10 assured Bright that just as soon as the company’s credit package went through the interagency process,
11 it would receive an offer of

25 Close, N.Y. T IMESAutoblog, Feb. 29, 2012.

1
2 Letter from Rueben Munger, Chairman and CEO Bright Automotive, and Mike Donoughe,
3 Chief Operating Officer Bright Automotive, to Hon. Steven Chu, Secretary, DOE, et. al. Dec. 27, 2011
4 (on file with author).
5

6 conditional agreement no later than October 2011. However, instead of an agreement, in
7 October 2011, DOE told Bright to raise additional equity and perform other financial changes to bolster
8 its balance sheet and credit. This last demand caused Bright to withdrawal from the ATVM loan
9 process. In February 2012, the company closed down.

10 In their letter to the DOE, Bright’s CEO Rueben Munger and COO Mike Donoughe flatly stated
11 that the ATVM process distorted the U.S. private equity markets, effectively making DOE the only
12 way for ATV companies to receive funding. According to Munger and Donoughe, DOE then used this
13 position to submit the applicants to the control and “whim” of government bureaucrats. As the letter
14 points out, the ATVM program, as DOE is administering it, contravenes the purpose of the program
15 because it stymies rather than advances technology within the automotive market. After spending
16 millions of dollars to comply with DOE’s endless finish line and consuming nearly three years of time,
17 Bright withdrew its application from the ATVM Program, closing the company and its idea.

18 Severstal

19 While DOE was stringing along potentially innovative auto manufacturers, they were working
20 to approve a conditional loan agreement for a business that did not appear to qualify at all for the
21 ATVM Program. In June 2011, DOE conditionally approved a \$730 million loan to steel company
22 Severstal North America, a subsidiary of OAO Severstal, and a multibillion-dollar Russian steel and
23 mining corporation. The ATVM loan would have financed Severstal’s expansion and re-equipment of a
24 Dearborn, Michigan, steel plant, located within Ford’s manufacturing campus, to produce advanced
25 high strength steel (AHSS). Chairman Issa challenged the appropriateness of this loan for several
26

1 reasons: Severstal applied for a loan to produce AHSS, a material, not a “component part” as required
2 under Section 136; 371 and it did not appear that the company needed public funding to “bring its
3 product to market” as it was a subsidiary of a multi-billion dollar Russian corporation. Moreover,
4 Severstal had already made significant strides towards completing the Dearborn project through private
5 financing, even before receiving any money from DOE. 372 In its initial response to the Committee,
6 DOE defended its due diligence and decision-making on the Severstal loan, touting the market
7 strength of the company’s product. On January 6, 2012, DOE reversed its position and denied
8 Severstal’s loan. When asked why it has changed its mind, DOE informed Committee staff “We [DOE]
9 could not get

1 with author).

2
3 comfortable with apparent discrepancies and potential of fluctuation in steel prices,” and
4 therefore would not offer the loan to Severstal. This explanation is curious, as DOE offered the
5 conditional loan agreement based on a forecasted increase in market demand for AHSS. 375 DOE had
6 originally projected Severstal to be the market leader in domestic AHSS production, even as other
7 companies entered the American AHSS market. DOE decided not to give a final loan to Severstal and,
8 in so doing, questioned the company’s ability to repay the loan. Based on the apparent contradiction
9 between DOE’s analyses, it is obvious that DOE has no clearly established standard it uses to
10 evaluate ATVM loan applicants.

11 Fisker

12 One of DOE’s original loans has been suffering severe setbacks in production, and many have
13 predicted its eventual collapse. In April 2010, DOE issued an ATVM loan of nearly half a billion
14 dollars to Fisker. DOE froze the loan in February 2012, halting the issuance of any further money,
15 because the company failed to meet DOE’s benchmarks. Fisker’s woes began with with regulatory
16 issues and delays in production of the Karma, Fisker’s \$100,000 luxury sedan. Fisker has since
17 engaged DOE to renegotiate its loan agreement and renegotiate benchmarks. Due to the financial
18 troubles, including DOE’s freezing of the loan, Fisker has laid off 23 employees from its Delaware
19 manufacturing plant and 40 employees and contractors in its California plant. In addition, Fisker
20 recently announced that it was replacing founding CEO Henrik Fisker with Tom LaSorda, a former
21 executive at both Chrysler and GM. Furthermore, the Fisker Karma that Consumer Reports purchased
22 to review broke down after less than 200 miles of operation and had to be towed 100 miles back to the
23 dealer because the car would not even start. Based on this reshuffling and DOE’s actions, Fisker
24 appears to be a volatile company with a questionable future. Fisker’s current problems raise serious
25 questions about DOE’s decision-making and an inconsistent standard in the ATVM Program.

6
7 giving billions of dollars to two large auto manufacturers and to companies with strong political
8 connections to the Obama Administration. However, hundreds of other companies wait in DOE’s loan
9 queue. At least two of these companies have declared bankruptcy after engaging with DOE for a
10 number of years, believing, based on representations from the Department, that they would eventually
11 receive a government loan. Meanwhile, DOE conditionally approved a loan for a company that did not
12 meet threshold requirement to be in the program. DOE’s haphazard and inconsistent administration of
13 the loan program has created significant uncertainty within the advanced vehicle manufacturing
14 community and has potentially retarded progress on the next generation of automotive technologies.

15 Report Conclusion

16 The findings regarding the DOE loan programs discussed in this report tell only part of a much
17 greater story—a story of mismanagement, waste and abuse symptomatic of reaching too far, working
18 too fast, and spending too much to achieve unrealistic objectives. There are significant concerns about
19 DOE’s management and administration of the weatherization, 1705, and ATVM programs. And a
20 management structure unprepared and incapable of dealing with the challenges it faced when pressed to
21 push out the door tens of billions of dollars in a short period of time. In the days ahead, the Committee
22 will continue its investigation and examine DOE’s record on a loan-by-loan basis, with the continued
23 hope that spotlighting these shortcomings will provide Congress and the American people with the
24 insight they need to assess the true value—or cost—of these types of programs.

Illustration 15: Taxpayers Lost Billions Of Dollars On The DOE Payola Scams

WHY THE GOVERNMENT SHOULD STAY OUT OF “GREEN ENERGY”

by Brian Sussman

In the realm of solar power, there has never been more fanfare for a startup than in the case of Solyndra. Founded in 2005, the company’s rooftop-mounted solar panels were immediately touted as “the next big thing” in alternative energy.

Headquartered in the San Francisco Bay Area, Solyndra has been a magnet for venture capital cash from the Silicon Valley.

However, just before Solyndra’s promising glow of success began to fade, the last big investor stepped into the boardroom: The Obama Administration. And man, did the American taxpayer get played.

As a local I watched Solyndra successfully raise nearly a billion dollars in private equity financing between 2005 and 2009. Simultaneously, I witnessed the company go on a wild infrastructure spending spree, throwing hundreds of millions into an over-the-top, designer-rich, state-of-the-art manufacturing facility—which is not inexpensive to do in the Bay Area. Real estate prices remain the highest in the country there, and construction costs are exorbitant too. Simply constructing a shell to house a manufacturing plant costs at least \$300 per square foot (Solyndra’s was likely much more); and that figure doesn’t include the specialized manufacturing equipment needed to build Solyndra’s proprietary solar panels. By locating the plant next door in Nevada they could have reduced their construction costs by at least 50 percent.

After Solyndra built the first phase of its plant, it began spending another \$733 million on phase

1 two: a 600,000-square-foot addition. That’s where Team Obama stepped in.

2 Solyndra received a government guaranteed loan procured from Stimulus funds for half a
3 billion dollars. The money was to be plowed into the new construction.
4

5 In announcing the deal, on September 4, 2009, Vice-President Joe Biden told Solyndra
6 employees and associates, “By investing in the infrastructure and technology of the future, we are not
7 only creating jobs today, but laying the foundation for long-term growth in the 21st-century economy.”
8 Biden was joined by Secretary of Energy Steven Chu who said, “This investment is part of a broad,
9 aggressive effort to spark a new industrial revolution that will put Americans to work.”
10

11 Yeah, right. Usually, before one enters into any investment, the risk of that venture must be
12 identified and quantified. It’s called “due diligence.” The propeller-heads in the Administration—who
13 have never worked in the real world—simply picked a feel-good, high-profile green company, and
14 poured tons of taxpayer money into it.
15

16 As a guy who’s raised money for a startup in the Silicon Valley, my thought was, if Solyndra
17 remains such a great investment, why aren’t the big fund managers jumping in to put up the additional
18 half billion dollars? Additionally, as a conservative I saw this as another example of an overreaching
19 federal government that chooses to ignore Article 1, Section 8 of the Constitution. Meantime, the smart
20 financiers saw where Solyndra was headed—into trouble.
21

22 In May, Solyndra was visited by President Obama, who proclaimed that the Stimulus money
23 spent on the new addition to the campus would be worth every penny. “When it’s completed in a few
24 months,” Obama said, “Solyndra expects to hire 1,000 workers to manufacture solar panels and [to] sell
25 them across America and around the world.”
26

1 An Initial Public Offering of stock had been planned for Solyndra in June, but those plans were
2 suddenly scrapped. In July, its CEO and founder, Chris Gronet, quit. Then, quite conveniently, on the
3 day after the elections, we learned that Solyndra, the great green hope, was going to shutter its original
4 manufacturing plant and scale back plans for those thousand jobs that Obama had heralded just a few
5 months prior. The problem? Fierce competition from rival manufacturers in China and in states where
6 the business climate is more agreeable.
7

8 “Solar has become incredibly competitive,” David Miller, a Solyndra spokesman, told The
9 Mercury News.

10 So, instead of having the 1,000 extra workers Obama said it would hire, Solyndra is laying off
11 175 people and will cap its workforce at fewer than 1,000.
12

13 Some say Solyndra might eventually pull through, but not anytime soon; there is no guarantee
14 that the company will be able to get its manufacturing costs down, and no one is sure when they will
15 finally turn a profit.
16

17 And get this: rumors in the Silicon Valley are that Solyndra had been asking for a second
18 government loan.

19 In order for the government loan guarantee program to properly work (i.e., to have the
20 government paid back with interest), the Administration needs to pick winners. Thus far their track
21 record is awful (GM and Chrysler immediately come to mind).
22

23 ***If Solyndra bombs out, you and I are on the hook.***

ACCORDING TO A GOVERNMENT INSIDER

1
2
3 In the waning period of the Bush Administration, The Bush White House saw one last chance to
4 grab a major war-chest of cash before the Democrats took over. George Bush hired Lachlan Seward,
5 from Chrysler’s negotiation team, to re-route part of the money, the part that was going to the
6 Department of Energy.
7

8 Seward’s instructions were to pass along a portion of the money per an inside deal with the
9 CEO’s of Detroit’s 3 biggest car companies. The 3 Detroit CEO’s met together, planned together and
10 hard-wired the money together via Mr. Steve Rattner.
11

12 A few other people found out about this deal, in the transition period between Bush and Obama,
13 and other due-diligence-free inside deals were made to shut them up. Seward hires a secretary and an
14 intern from IBM named Brent Petterson. Brent has orders to set IBM up, under multiple front names to
15 act as a “car company reviewer”. IBM creates, and then buys, fake consulting companies in order to
16 support the kickback scheme. IBM consulting was ordered to stall, delay, delete, lose, fake results and
17 change test metrics for any applicant who was not tied to Detroit or White House Silicon Valley
18 campaign financiers. IBM was fired as a reviewer when the dirty deeds started to unravel.
19

20 Since every company that did get money, now either has: gone bankrupt, had a worthless
21 technology, a Russian mob connection (Ie: US Uranium mining deals and Afghan lithium ion mining
22 deals) or had no way to compete with the other applicants if those applicants got a chance, this proves
23 that the “due diligence” was fake and for appearances only. Chu directed his people to do no actual due
24 diligence on the chosen few and to just hand them money and kill or stall the other competing
25

1 applicants who didn't pay-to-play.

2 Then the Obama Administration moves in and Steve Rattner, Rahm Emanuel, David Axelrod
3 and Robert Gibbs see how the scam is running and they say, "hey, we want to take that over!" ... "We
4 are still going to do the scam but as prizes for our benefactors instead of yours".

5
6 Venture capital guys from Kleiner, Westley, Khosla and a little group of Silicon Valley VC's
7 say: "Hey Obama, you want the big bucks? Put our guy Chu in the top spot and we will guarantee to
8 slide contract cash and search engine rigging in your direction!"

9
10 The little group of VC's says to Chu: "Lean it our way and we will fix you up for life after you
11 retire and buy you your own personal reactor".

12 Steve Rattner cuts a deal with the 3 Detroit CEO's and Silicon Valley to make sure that nobody
13 who can compete with them gets any of the money. Seward creates what is now known as the "stall
14 plan" to keep any other applicant from getting through the DOE funding review. Every bank in
15 America spends 2 weeks on commercial loan applications yet DOE has stalled all applicants for years.
16

17 Later in the Obama administration top White House staff are notified that they are under
18 investigation and that the jig is up. Rattner is then indicted in NY for securities fraud and the other 3
19 mysteriously leave their top-of-your-career jobs for no apparent reason at about the same time because
20 they have been caught and deals have been cut. A turf war begins which only then becomes partisan.
21 Some enforcement groups are trying to protect and some are trying to prosecute.
22

23 So how did people make money: the last two weeks of the 60 Minutes feature called THE
24 CLEANTECH CRASH gave you part of the story: The insider trading story on 60 minutes was part of
25 it; Abramoff and his step-by-step tips were how the other part worked; The other part was even trickier:
26

1 the deal packagers took fees off the top of each deal and then walked away with their
2 finder/factoring/incentive/VC or whatever-you-call-it-fee to forget about the company and allow it to
3 languish.

4 The VC guys (KPCB, Greylock, etc.) bet on the companies to fail and made margin when they
5 did. Nobody checked on the companies, not DOE, not the bundlers: nobody. So the CEO's of those
6 companies also stole money because: *nobody was watching the taxpayer's money except the corrupt*
7 *senators who were laundering it through the stock market and then putting it right in their pockets!*
8

Solyndra in Grand Jury Crosshairs: Documents

FBI agent carry dozens of boxes of evidence from Solyndra headquarters in Fremont, Calif., Sept. 8, 2011. (Paul Sakuma/AP Photo)

A grand jury has been convened in what appears to be the next significant step of the federal criminal investigation into Solyndra, the politically-connected and now bankrupt solar firm that received a half-billion dollar loan guarantee from the government, according to court documents.

The role of the grand jury was revealed in documents filed in bankruptcy court last week by K&L Gates, a law firm retained by Solyndra reportedly just weeks after the [FBI raided Solyndra's California headquarters](#) in September. The documents give a daily account of K&L Gates' employees activities in reference to Solyndra and often refer to communications concerning a "grand jury subpoena".

THE SENATOR FEINSTEIN CORRUPTION

1
2
3 ...born **Dianne Emiel Goldman**^[1] (^[1][fanstam/](#); born June 22, 1933), is the [senior United States](#)
4 [Senator](#) from California. A member of the [Democratic Party](#), she has served in the Senate since 1992.
5 She also served as 38th [Mayor of San Francisco](#) from 1978 to 1988.

6 Born in San Francisco, Feinstein graduated from [Stanford University](#) in 1955 with a [B.A.](#) in
7 history. In the 1960s she worked in city government, and in 1970 she was elected to the [San Francisco](#)
8 [Board of Supervisors](#). She served as the board's first female president in 1978, during which time the
9 [assassinations](#) of Mayor [George Moscone](#) and City Supervisor [Harvey Milk](#) drew national attention to
10 the city. In an interesting set of personally fortuitous coincidences, Feinstein succeeded Moscone as
11 mayor when he was murdered. During her tenure as San Francisco's first female mayor she oversaw the
12 [1984 Democratic National Convention](#).

13
14 After a failed gubernatorial campaign in 1990, she won a 1992 special election to the U.S.
15 Senate. Feinstein was first elected on the same ballot as her peer [Barbara Boxer](#).

16
17 Feinstein was the author of the 1994 [Federal Assault Weapons Ban](#) which expired in 2004. In
18 2013 she introduced a new assault weapons bill, which failed to pass. Feinstein formerly chaired the
19 [Senate Rules Committee](#) (2007–09) and has chaired the [Select Committee on Intelligence](#) since 2009.
20 She is the only woman to have presided over a [U.S. presidential inauguration](#).^{[3][4]} The CIA has
21 broken into her computers, in a very public battle between the CIA and Feinstein. Journalist Glenn
22 Greenwald and Whistle-blower Edward Snowden have published many critical reviews of Feinstein.

23
24 At the age of 82, Feinstein is the oldest [currently serving United States Senator](#).

25 Corruption Charges In The Cleantech Crash Case:

In Bullet-point, the charges against the Feinstein Family Cartel, in the Cleantech Crash

Corruption Case include:

Feinstein was the promoter, lobbyist and beneficiary of the side-by-side (on the same plot of land) Tesla and Solyndra government hand-out funding scandal. Feinstein's daughter, Kathryn, documented illicit actions by her mother, while in social habitation with the applicants

While in the Mayor's office, Bruce Brugman, publisher of the top San Francisco weekly newspaper: *The San Francisco Bay Guardian*, documented and published nearly 100 corruption charges against Feinstein. Local law enforcement efforts, against Feinstein were nearly impossible, at the time, according to *Bay Guardian* staff because local politicians and authorities had been paid off by James Bronkema, David Rockefeller's "bag man" and John Molinari, the local mob "bag man". *Ex-Guardian* staff have suggested that associates of one of those two Feinstein financing clans had, possibly arranged the George Moscone assassination in order to position Feinstein for higher office

Herb Newman, of Sausalito, California; Feinstein's relative, was awarded the staffing contracts for Tesla and Solyndra based on Feinstein's say-so, in direct conflict of interest

Feinstein, and her Chief of Staff, warned applicant's about attempting to use the NUMMI auto factory, which she was covertly placing Tesla in and Solyndra next to. Tesla had already publicly rejected the NUMMI building as "unusable" in the press, yet Feinstein talked Tesla into using it so that her husband's company could profit from it and so she could arrange kick-backs to Tesla, more easily

1 Feinstein worked with Senator Harry Reid on the Cleantech Scams. Together, by helping White
2 House staff and financiers manipulate the program, they made over \$50 Million in personal
3 profits at taxpayer expense

4
5 Feinstein staff worked for and were compensated by, Tesla and Solyndra. In some cases
6 Feinstein staff and Tesla staff were interchangeable, in direct conflict-of-interest

7
8 Feinstein's husband had financial interests in the railroad property adjacent to the Tesla and
9 Solyndra buildings. Feinstein later got him the entire California high speed rail contract

10
11
12 The Feinstein family owned the construction company which Tesla and Solyndra, used. They
13 were given no-bid contracts

14
15 Feinstein, and her husband worked with White House staff under Rahm Emanuel and Silicon
16 Valley campaign financier John Doerr and associates involved with Kleiner Perkins to conduit
17 bribes, and campaign financing, as stock warrants and positions

18
19
20 Feinstein associate: Roger Boas, was arrested for involvement in a child prostitution ring for
21 political pedophiles, and for embezzling money for the Moscone Convention Center
22 construction

23
24
25 The Feinsstein Family held war profiteering contracts in Afghanistan, Bolivia and other regions

1 which held the exclusive mining contracts for Solyndra and Tesla chemicals

2
3 After Solyndra was raided by the FBI and went bankrupt, costing taxpayers over half a trillion
4 dollars in losses, the Feinstein Cartel used the tax write-off losses to make a profit, via tax form
5 manipulations on the tax-write-off losses from the Solyndra crash

6
7 Feinstein, and her staff, sabotaged other applicants who were competing for the same funds as
8 Tesla and Solyndra

9
10
11 Even after Solyndra went bankrupt, the Feinstein family continued to profit off of the Solyndra
12 scandal by re-leasing the buildings and collecting real estate profits

13
14 Feinstein's family ran the property sales and leasing contracts for the Tesla and Solyndra
15 buildings

16
17
18 Gary D. Conley, a Bay Area solar and Hydrogen company CEO, whistle-blew on the corruption
19 at Tesla and Solyndra and was later found with a bullet in his head behind a Northern California
20 Air Force base. His family, and friends, charge that is death was “suspicious”

21
22 Feinstein's family and associates held stock in Tesla, Solyndra and other “Clean Tech”
23 companies, which they acquired at key pre-announcement points, most likely based on insider
24 information and the payola from bribes provided as stock warrants

1
2 Feinstein, and her staff told Fremont, California city officers to not engage in discussions with
3 competing applicants
4

5 Although other, competing, applicants had been in written discussions, and negotiations, with
6 senior executives at Toyota for the use of the NUMMI plant, Feinstein warned Toyota that only
7 Tesla would be supported for the use of the plant. This was before anyone from Tesla had
8 contacted anyone from Toyota, the owners of the plant, and after Elon Musk had been
9 published in the press saying that Tesla could have no use for the building.
10
11

12
13 **Conclusion:**

14 The facts, evidence, testimony and surveillance clearly prove that Dianne Feinstein used her
15 public office to stage a corruption program to provide public cash and resources to herself and her
16 family for covert profits at taxpayer expense. She used her office to assist in the attacks and sabotage of
17 U.S. companies who were competing for the same funds that she was manipulating.

Feinstein’s gang owns parts of Tesla and Tesla’s suppliers

Elon Musk, a billionaire, has now received billions of free taxpayer dollars in out-right cash hand-outs, tax waivers, free or low-cost resources, stock pumps and federal NASA contracts. Musk’s companies would not exist today if not for taxpayer hand-out cash. No other living person has received this much taxpayer money from the Obama administration. No other living person has given so much money to the Obama administration through his companies, investors and partners, like Google. No other living person has had the Obama administration sabotage, terminate or rule against so many of his competitors. Federal records demonstrate this to be one of the most overt examples of a political campaign kick-back scheme in this decade. In Musk’s carefully orchestrated, self-aggrandizing, media campaigns, all mention of his true financial connections, extensive fraud lawsuits, and employee distrust is carefully expunged.

Elon Musk’s Space Dream Almost Killed Tesla

By Ashlee Vance | FOR BLOOMBERG

The Greentech VC Influence Over Washington

By [Katie Fehrenbacher](#) Aug. 18, 2010, 8:28am PDT [No Comments](#)

Buzz [_0](#)

There've been a couple articles in the past few weeks pointing to President Obama as the ["clean tech investor in chief"](#) and the [presidential VC with bets on clean energy](#). The real trend is that venture capitalists focusing on greentech seem to have had an unprecedented influence on U.S. federal policy and allocations of the stimulus package.

When I attended the Department of Energy's (DOE) first [ARPA-E conference](#) (Advanced Research Projects Agency-Energy) earlier this year in Washington D.C., I was struck by how many venture capitalists were there. I shared a cab back to the airport with some familiar Silicon Valley faces, and was told if your firm didn't have a dedicated person in Washington — in some circles they call them lobbyists — maneuvering grant and loan programs, you weren't able to be competitive.

Just look at the figures from the stimulus package (which I am fully in support of): somewhere between \$50 billion and \$80 billion into clean power and energy efficiency initiatives ([depending on](#)

U.S. stock markets are rigged, says author Michael Lewis

NEW YORK | BY JOHN MCCRAIK

A Wall Street sign is pictured outside the New York Stock Exchange in New York, October 23, 2012. REUTERS/CARLO ALLEGRI

(Reuters) - The U.S. stock market is rigged in favor of high-speed electronic trading firms, which use their advantages to extract billions from investors, according to Michael Lewis, author of a new book on the topic, "Flash Boys: A Wall Street Revolt."

High-frequency trading (HFT) is a practice carried out by many banks and proprietary trading firms using sophisticated computer programs to send gobs of orders into the market, executing a small portion of them when opportunities arise to capitalize on price imbalances, or to make markets. HFT makes up more than half of all U.S. trading volume.

The trading methods and technology that make HFT possible are all legal, and the stock exchanges HFT firms trade on are highly regulated. But Lewis said these firms are using their speed advantage to profit at the expense of other market participants to the tune of tens of billions of dollars.

"They are able to identify your desire to buy shares in Microsoft and buy them in front of you and sell them back to you at a higher price," Lewis, whose book is available on Monday, said on the television program "60 Minutes" on Sunday.

"This speed advantage that the faster traders have is milliseconds, some of it is fractions of milliseconds," said Lewis, whose books include "The Big Short" and "Moneyball."

Those milliseconds can be valuable, making it possible to send around 10,000 orders in the blink of an eye.

Consumer Reports' Tesla Model S P85D breaks—before testing begins

A broken power door handle is one of the most common Tesla problems

Last updated: May 16, 2015 02:15 PM

Find Ratings
Hybrids/EVs
[See Dealer Pricing](#)

A new car shouldn't have problems when you've owned it for less than a month. Yet Consumer Reports' brand-new \$127,000 Tesla Model S P85 D, with the fancy retractable door handles refused to let us in, effectively rendering the car undrivable. (Read "Why We Bought a Tesla Model S.")

After we'd owned the P85 D for a mere 27 days, with just over 2,300 miles on the odometer, the driver-side door handle failed. The door handles in the Model S retract electrically so they nest flush with the sides of the car when they're not in use. Walk up to the car with the key fob in your pocket, and the handles move out

to allow you to grip them.

Except this time, the one on the driver's door of our P85D didn't pop out, leaving us no way to open the door from the outside. And significantly, the car wouldn't stay in Drive, perhaps misinterpreting that the door was open due to the issue with the door handle. We have observed other vehicles likewise prohibiting driving with a door open.

We're far from the first Tesla owners to experience this problem. Our car reliability survey shows that doors, locks, and latches are the biggest trouble areas with Teslas and that the Model S has far higher than average rates of such problems.

Driver's door handle is stuck.

Capitalism 2015: In corporate finance today, the theme is "Go where the money is." For Elon Musk, CEO of Tesla, SolarCity and SpaceX, the place to hunt for cash isn't Wall Street or even Silicon Valley. It's Washington, D.C.

HOW THE DEMOCRATS ATE THEIR OWN CHILDREN

1
2
3 When U. S. Senators Harry Reid and Dianne Feinstein realized they could each make billions of
4 dollars, personally, via their family stock holdings and campaign funds, they didn't waste a minute
5 stabbing their own constituents in the back to get at that cash.

6
7
8 California and Nevada Green Car Companies, Solar Companies, Energy Technology Companies,
9 Green Builders and Transit Companies were hacked off at the knees because they competed with the
10 stock assets that Reid and Feinstein had acquired in their kick-back deals.

11
12 These other applicants were all "GREEN COMPANIES": supposedly the Democrat's favorite things. It
13 doesn't matter, though, how green your company was, if it was in the path for the green cash from
14 Tesla or Solyndra. Two of the favored companies who paid the kick-backs to federal officials.

15
16
17 Is the arguement from Feinstein's office that: "there just wasn't enough money left at the Department of
18 Energy" true? No, it is a 100% out-right lie. The Federal GAO, the people that watch for corruption,
19 state that there has always been, and still is, billions, and billions and billions of dollars, set aside
20 EXCLUSIVELY for these companies, that was never used. In Fact, there was always more than
21 enough money to fund every single applicant.
22
23
24
25
26

1 Staff from ZAP Motors, Redwood Solar, Aptera and dozens of other companies have specifically stated
2 that Harry Reid, Dianne Feinstein and their Cheif's of Staff, personally wrote to them, spoke with them
3 and lied to them.

4
5 Under Eric Holder, Feinstein and Reid buddy Eric Holder, refused to take any action. Now it is Lynch's
6 turn.

7
8
9 Harry Reid sabotaged the applicants for Department of Energy Funds if they competed with Kleiner
10 Perkins companies who were funding the campaigns of Reid and Feinstein.

11
12 Further, Recent disclosures, such as the following, shed disturbing light on the depths of this criminal;
13 behavior:

14
15
16 Did the LA TIMES Article actually disclose an organized crime operation involving some very famous
17 people? SHOCKER THEORY!!!

18
19 The LA TIMES just ran an article which exposes Elon Musk's funding system, based on Government
20 hand-outs. Musk rushed to hold a press conference to claim the amount of taxpayer cash, he has
21 received, was "just a pittance". Few, though, find over FIVE BILLION DOLLARS of tax waivers,
22 credits, employment freebies, buildings, exclusive contracts, and other taxpayer provided goodies, to be
23 "a pittance" in these tough times.
24

1 While it is true that Musk has now received more taxpayer hand-outs, than any individual in American
2 history, one could argue that he is just a lucky business man.

3
4 But, just for the purpose of theoretical discussion, what if some of the darker theories about Musk's
5 coincidental windfalls have some merit?

6
7 Let's jump right to the most sinister interpretation of things.

8
9
10 One of the whispered rumours, on the web holds that in 2007, right when Musk's silent partners, Eric
11 Schmidt and John Doerr started, practically, living at the White House in a lobbying frenzy, the
12 Democrats finally acknowledged that they really were the party of the poor, because they were flat
13 broke. So some of them came up with the idea of creating a Department of Energy fund called the
14 "ATVM Fund", loading it up with \$25 Billion kick-back dollars of taxpayer cash, awarding it only to
15 Schmidt/Doerr/Musk related companies, and shutting out all of their competitors.

16
17
18 Indeed, history shows that the fund actually was created. It really got \$25 Billion, in a unique legal
19 manner, which made the \$25 Billion irrevocable. Schmidt/Doerr/Musk's buddy: Steven Chu, was put in
20 charge of it. He hired their friends to staff his office.

21
22 See where this is going?

1 So, per this theory, Musk is actually a kick-back conduit, protected by the White House, to spiff the
2 DNC campaign funds...according to this theory. Which is just a theory. It couldn't really happen, right?
3 The White House wouldnt prop up a guy just to keep him quiet and keep kick-back cash flowing..
4 right?

5
6 So this theory is kind of ironic because, in an amazing coincidence, everything that Musk get's
7 involved in, is exactly stuff that the White House is promoting.
8

9
10 In an even more bizarre coincidence, to pull a scam like this off, the Schmidt/Doerr/Musk Cartel would
11 need the help of U.S. Senators Reid and Feinstein, the most beloved American politicians in history.

12 This whole theory must have come out of the fact that Reid and Feinstein made billions of dollars off
13 of Schmidt/Doerr/Musk Cartel stock investments and campaign contributions, but, that was, of course
14 just another funny coincidence. They even ran, and built, some of the properties that these Department
15 of Energy winners" companies sat upon. But, again, coincidence!
16

17
18 The main reason one might cast doubt on this theory is that there are so many hard facts to prove it, that
19 it is just too good to be true) right?

20
21 These internet crazies)these theorizers" point to actual facts like the one where all of the profitable
22 chemicals that Tesla and Solyndra were going to buy and sell in volume were controlled by the
23 investors in Kliener Perkins and commodity-managed by their partners: Goldman Sachs. Thats just
24 another funny coincidence.
25

1
2 The theorizers" point to the fact that Musks companies have poor business volume, but show a profit
3 whenever there is bad news thanks to Kleiner rushing out to Flash Boy" purchase Tesla stock, with an
4 automated stock buying system, in order to pump the stock. Federal, and private investigator, records
5 show that this actually happened. It has also been proven that only Google, Reddit and the other
6 Kleiner-controlled web-news-media mask all negative Musk/Tesla news in perfect synchronization
7 with the stock pumps, when no other publications on the planet do. Again, these are just coincidences.
8
9 If people were consciously doing those kinds of things it would be mobster-ism on a Godfather-class
10 scale. But, that couldnt have happened.

11
12 Then..get this; “rumour people”, who seem to just be ecstatic about all of these coincidental, highly
13 suspect things, go off on yet another “FACT”. They point out that originators of the scam, from the
14 White House side, had to be Emanuel, Plouffe, Axelrod, Rattner and Gibbs. Then they go on to point
15 out that Emanuel, Plouffe, Axelrod, Rattner and Gibbs suddenly quit the White House at the peak of
16 their career for reasons that dont make sense. The fact that one of them was indicted for stock market
17 fraud only goes to strengthen their case, but, again)these things happen.

18
19
20 So, even if this really had happened, the brave and fearless protector of ethics and morality: Mr. Eric
21 Holder, would have cracked right down on his friends here, who he knew personally, and had dinner
22 with, and had the same lawyers with- oh,.. well.. but anyway. Eric would have jumped on them, right?
23
24 The White House wouldn't order the Justice Department and the FBI to ignore Elon Musk, John Doerr
25 and the Silicon Valley Cartel as a kick-back protection order, now would they?
26

1
2 Mobsters kill people. Rajeev Motwani, David Bird, Gary D. Conley, 3 Tesla engineers and a large
3 bunch of others did, certainly, die under mysterious circumstances, and they were all people that this
4 cartel would want dead, but to say that these billionaires are off murdering their adversaries using
5 mysterious CIA stealth murder tricks is overly intriguing.

6
7
8 Of course, as we all now know, every single one of those companies in the ATVM Fund scam grabbed
9 the cash, paid their CEO and Goldman Sachs insiders off-the-top, and immediately went bankrupt in
10 the largest government-funded sequential business-failure suite in history. While some argue that a
11 secret GOP Task Force discovered the plot and forced all of the Kleiner Cartel DOE Winners" to
12 collapse, in punishment, this is probably another coincidence.

13
14 Here is the main argument against this theory, Mobsters are big greasy looking guys with bulbous
15 broken noses and slicked back pompadours. These Musk and Kleiner people wear khakis and black
16 turtlenecks. KHAKIS for god-damn sakes!! You never saw a mobster in khakis, right?

17
18 They shouldnt have used a Federal agency as the scam front. They should have used a family
19 foundation, like Hillary did. But none of this happened. So, who cares?

20
21 So we have clearly crushed another internet rumour from those damn bloggers. Whew!

22
23
24 Based on published federal and media investigations, it appears that White House Staff and Silicon
25 Valley billionaires engaged in a racketeering operation to manipulate hundreds of billions of dollars of

1 taxpayer funds into their own pockets via TARP and Department of Energy funding programs created
2 for the purpose of running this scam. The individuals involved, are charged with organized crime
3 activities, by investigators, but major regulatory agency executives have participated in delays, and
4 cover-ups, in order to prevent effective prosecution of the parties involved.

5 All of the parties involved in the swindle have now had their communications, meetings, money
6 paths, beneficiary routes and competing interest attacks tracked, documented and verified.

7 Major banking and corporate entities participated in the crimes and, while all of the banks have
8 been charged with other crimes, they have yet to be prosecuted for this crime.

9 Any jury trial evidence presentation opportunity can now clearly document the crimes, the
10 players and the facts of this case.

11 The many investigators, journalists and members of the public, who participated in the
12 assembly of this evidence, challenge all parties to come forward in a live, televised, open public
13 hearing to confirm, or deny, these facts.

14 If you were in the Senate and you had been involved in corruption things, you would want to try
15 to get yourself on the Senate Intelligence Committee so you could use, and monitor, agency
16 information and resources to make sure nobody found out about the corruption things you and your
17 husband were doing. Let's take Dianne Feinstein and her husband Richard Blum and his CBRE and
18 vast other stealth companies and funds.

19 When she was mayor of San Francisco, the San Francisco newspapers were rife with charges of
20 corruption and cronyism about her. Her associate, Roger Boas, went to federal prison for corruption in
21 City Hall AND for child prostitutes. Police reports show that he used child prostitutes plus sent
22 prostitutes out to buy favors for City Hall corrupt winner/loser rigged selections.

1
2 She personally interceded in getting Solyndra funded from taxpayer dollars and getting them to build
3 the Solyndra buildings where it benefited her husbands business connections. Her Family made profits
4 off of Solyndra getting picked as a DOE funding winner".
5

6 She personally interceded in getting Tesla funded from taxpayer dollars, and getting them to acquire
7 buildings (physically next to Solyndra in the boondocks of Fremont, California) and equipment where
8 it benefited her husbands business connections. Her Family made profits off of Tesla getting picked as
9 a DOE funding winner".
10

11
12 Guardian staff report that her husband has made multiple trips to Mongolia transporting cash for deals
13 and now holds business interests there on mining companies that make materials for electric car
14 batteries and other interests that she fought for bill or budget passage on. They have airport records,
15 travel expense reports and photographs of him in Mongolia meeting with sketchy Chinese and Asian
16 Business men. They state that he took suitcases full of cash to Mongolia. Why did Feinstein not
17 properly document this in her disclosures? What intelligence did Blum get near, or to, China?
18
19

20 Richard Blum got a group of Silicon Valley VCs to buy votes, get out the vote for her and push votes to
21 get her on Committee when she was hanging by a thread from previous near-catches of their misdeeds
22 according to a former reporter from ValleyWag.
23

24
25 Feinstein wrote laws regarding the Regents of California which benefited her husband.
26

1
2 If you web search their names and "Corruption" or "Crony" you will find a vast number of stories about
3 all kinds of kickbacks that the Feinsteins/Blums have been charged with.

4
5 And a person like this has access to all the secret files?

6
7
8 When you chart out all of the front companies, fake family trusts under other trusts, Blum offshore
9 accounts in Belize, The Caymans and other interesting places, companies behind other companies
10 between her and Mr. Blum, you have a facade of misdirection and phoney business names that would
11 make any spy envious. Feinsteins bills and budgets tie back to more false front organizations that
12 benefit her family interests than almost any other person in the Senate per the latest research from The
13 Guardian.

14
15
16 If you were someone like that you would certainly try to get yourself on the intelligence committee so
17 you could have the first clue when you were about to get caught and to steer investigations away from
18 your crony deals. You would certainly support domestic phone-tapping because you would order such
19 taps on your public-interest agency enemies like the ACLU and BigGovernment.com and The
20 Schweizer team in order to keep an eye on them. Of course she is fighting on behalf of ongoing
21 domestic spying. It is how she covers her ass.

22
23
24 Here is a teeny, tiny selection of the many corruption charges against Feinstein:

1 [https://www.sodahead.com/united-states/dianne-feinstein-the-most-corrupt-person-in-congress-routes-](https://www.sodahead.com/united-states/dianne-feinstein-the-most-corrupt-person-in-congress-routes-even-more-money-to-husbands-firm/question-3651127/)

7
8 <http://dcclothesline.com/2013/01/25/why-america-can-not-trust-the-motives-of-dianne-feinstein/>

9
10
11
12 Greenwald asks: "What is the relationship between Feinstein's husband's company: CBRE; and the
13 Tesla, Solyndra and other Green Loan Real Estate deals?"

14
15 Demand Answer he says.

16
17
18 How many times has Richard Blum been to Mongolia and what did he take with him that he did not
19 return with and what did he return with that he did not take with him?

20
21 Why did Feinstein and her staff sabotage other companies trying to use NUMMI?

22
23
24 What is the relationship between the Comptroller of Fremont California, the Mayor and Feinsteins
25 staff?

26
27 583
28

1
2 Elon Musk is on public record, published and recorded in national media, saying that NUMMI is no
3 good for Tesla and a bad choice for Tesla. Why did Feinstein make him flip flop?
4

5 What is the relationship between NUMMI, the properties adjacent to NUMMI, The adjacent Solyndra
6 property and the real-estate company owned by Feinsteins husband: CBRE?
7

8
9 Why do the Feinstein staff that helped get TESLA its taxpayer money now work FOR TESLA? Isn't
10 that illegal? Isn't that unethical?
11

12 Do the CIA, The NSA and federal investigators have recordings of Feinstein breaking the law? Did
13 Snowden get some of that data in his cache? Is that why Snowden and Greenwald are so comfortable
14 mouthing off to Feinstein?
15

16
17 What is going on in that meeting with the City of Fremont insiders that Feinstein's chief of staff headed
18 up and who recorded that on their cell phone? It sounds suspicious.
19

20 Why did TOYOTA and GENERAL MOTORS say that NUMMI was a "failed plant"?
21

22 What was the fire and explosion that the Fremont fire department responded to at the Tesla Nummi
23 plant?.... no, not the second one where the hot metal burned the workers, the earlier one?
24
25

1 Why did Feinstein met with UAW representatives and promise them NUMMI jobs if they supported
2 requested issues and then how many UAW jobs did Musk actually keep on site? Why does LinkedIn
3 show a huge number of Tesla H1-B lawyer hires advertised when all workers were supposed to be
4 American's per the U.S. tax dollar funding?

5
6 There are many more questions the federal investigators are asking, let's keep an eye on this...

10 **A Massive Surveillance State": Glenn Greenwald Exposes**

11 GLENN GREENWALD: I think Dianne Feinstein may be the most Orwellian political official in
12 Washington. It is hard to imagine having a government more secretive than the United States. Virtually
13 everything that government does,)
14 democracynow.org/2013/6/7/a_massive_surveillance_state_g)

15
16
17 Now Feinstein is trying to cover her tracks and act like she thinks spying on Americans who were
18 trying to end cronyism was unacceptable". Dont buy her sudden change of tone. It is all a cover, just
19 like all of her husbands vast network of cover organizations and secret VC kickback networks. If you
20 want to do really big crimes in Washington, you get Feinstein to watch the databases to make sure
21 nobody gets wind of it. It is like the one bank robber that sits in the car to listen to the police scanner
22 during the bank robbery.

1 **Husbands Business Ties to China Dog Feinstein Los Angeles**

2 For years, international financier Richard C. Blums vast business portfolio has persisted as a nettlesome
3 issue for his wife, Sen. Dianne Feinstein (D-Calif.), a vocal proponent of increased China trade. Three
4 years ago, he vowed to turn over any profits from his China investments to)

11 **Feinstein MILCON Corruption Scandal**

12
13 Last week California Senator Diane Feinstein abruptly resigned her position as the chairman
14 and ranking member of the Senate Military Construction Appropriations Subcommittee
15 (MILCON).The MILCON subcommittee is in charge of supervising military construction. The
16 committee also oversees "quality of life" issues for veterans, which includes building housing for
17 military families and operating hospitals and clinics for wounded soldiers.During her six years as
18 MILCON leader Senator Feinstein had a conflict of interest due to her husband Richard C. Blum's
19 ownership of two major defense contractors, who were awarded billions of dollars for military
20 construction projects that were approved by Senator Feinstein.That's Billion with a capitol B. My very
21 own California Senator Diane Feinstein may have just hit one out of the park folks. By directing
22 Billions of dollars of our tax dollars to her husbands companies, DiFi may have have set a new record
23 for corruption.According to a report compiled by MetroActive a San Francisco area newspaper Diane
24
25
26

1 Feinstein used insider information to direct billions of dollars of military construction projects to
2 companies, URS Corporation and Perini Corporation, that were owned or controlled by her husband.

3 While setting MILCON agendas for many years, Feinstein, 73, supervised her own staff of
4 military construction experts as they carefully examined the details of each proposal. She lobbied
5 Pentagon officials in public hearings to support defense projects that she favored, some of which
6 already were or subsequently became URS or Perini contracts. From 2001 to 2005, URS earned \$792
7 million from military construction and environmental cleanup projects approved by MILCON; Perini
8 earned \$759 million from such MILCON projects.
9

10 792 million and 759 million works out to 1.551 Billion dollars. And what portion of this billion
11 and a half dollars did DiFi and her husband pocket?

12 In 2005, Roll Call calculated Feinstein's wealth at \$40 million, up \$10 million from just a year
13 earlier. Reports show her family earned between \$500,000 and \$5 million from capital gains on URS
14 and Perini stock. From CB Richard Ellis, her husband earned from \$1.3 million to \$4 million.
15

16 Public records show Blum's company paid \$4 a share for controlling interest in Perini, and later
17 sold about three million shares for \$23.75 each.

18 The report also showed URS' military construction work in 2000 was only \$24 million, but the
19 next year, when Feinstein took over as MILCON chair, military construction earned URS \$185 million.
20 Additionally, its military construction architectural and engineering revenue rose from \$108,000 in
21 2000 to \$142 million in 2001, a thousand-fold increase.
22

23 In late 2005, Blum sold 5.5 million URS shares, worth \$220 million

24 So a US Senator has used insider information to direct billions of tax payer dollars to her
25 husband's companies and yet I have not seen one word of this in a single antique media outlet. Where is
26

1 the outrage, where is the indignation, where are CNN, Fox, MSNBC, NBC, ABC, CBS news? And
2 even more importantly where is an investigation by the Senate Rules Committee? Oh wait, Difi is the
3 newly appointed chairman of the Rules Committee so I guess we can rule out an investigation there.
4

5 So after pocketing over as much as 300 million dollars as a direct result of her involvement with
6 the MILCON committee DiFi just walks away unscathed?

7 Where is the investigation and where is DiFi's resignation followed shortly by her indictment?
8 Or does that only happen to Republicans?

We are most interested in having Elon Musk answer these, and other questions, in front of the U.S.

Congress during a live broadcast:

Deposition Draft 2.7 (compiled by reporters & public submissions)

- Would Tesla Motors exist today, if Senators, DOE and campaign staff had not been bribed in 2007, 2008 and 2009?

- Has your company, or anyone associated with your company, ever hired multitudes of fake bloggers to post fake positive reviews about Tesla motors in order to create a fake perception of interest?

1
2
3
4
5
6
7
8
9
10
11
12
13
14
15
16
17
18
19
20
21
22
23
24
25
26
27
28

- Has Tesla Motors ever compensated a publisher, or industrial rating company, for contrived positive reviews or ratings?

- Does Tesla Motors believe that the coordinated manipulation of the public perception of a company, trading on the stock market, via the dissemination of inaccurate data, by the company spokespeople, is not stock fraud and a not a violation of SEC laws?

- What percentage of Tesla Motors do Google's investors, staff and executives own cumulatively?

- How much money did those Tesla/Google investors contribute to election campaigns from 2007 to today? Which campaigns? Did the winners in any of those campaigns award U.S. taxpayer funds to the portfolio companies of those investors? How much money?

- When Tesla Motors applied for the Department of Energy funds Elon Musk stated that Tesla was in exceptional financial health, yet now Elon Musk, and his senior staff, have been recorded stating that the company was nearly bankrupt then. In light of these more recent revelations, is that not a felony violation of the federal "Section 136 Law" which states that 'a company cannot be on the verge of bankruptcy or it shall not receive Department of Energy funds'? New disclosures show that Tesla stated information in it's federal application which Tesla's founders and staff have stated they knew was false at the time. Should Tesla be prosecuted

1 for this?

2
3 - Did Deloitte, under contract to Tesla, arrange false accounting via the Tesla Wells Fargo bank
4 account while Deloitte was also acting, in conflict of interest, as the Department of Energy reviewer of
5 applicants?

6
7
8 - Does Tesla Motors have a confidential relationship with a national group of reporters, from different
9 publications, who have agreed to release Tesla-positive news spin stories on a synchronized basis, at
10 the same time, in order to coverup Tesla investigation disclosures and artificially accelerate stock
11 market vales? Has Tesla Motors arranged with Google to have negative Tesla Motors stories down-
12 ranked while having positive Tesla stories up-ranked? Would that be considered stock fraud?

13
14 - How many Senators and their families, that you are aware of, own stock in Tesla Motors?

15
16
17 - Was Elon Musk promised any NASA contracts, in advance of the closure of a portion of NASA, in
18 exchange for campaign funding from Tesla and Google investors?

19
20 - How many Senators, their families and Google-related investors, that you are aware of, hold stock in
21 lithium-ion battery related companies?

22
23
24 - Has Steven Chu, the former head of the Department of Energy, ever had a personal relationship with
25 any Tesla staff or investors?

26
27 591

17
18
19
20
21
22
23
24
25
26
27
28

- Has Senator Dianne Feinstein, or her family, ever had a personal relationship with any Tesla staff or investors?

- Why are Tesla and Solyndra on the same physical plot of land?

- Has anyone from Senator Dianne Feinstein's office also worked for Tesla Motors and/or Solyndra?

- Did Dianne Feinstein's husband, Richard Blum, ever travel to Mongolia to arrange for resource deals beneficial to Tesla's investors?

- Has anyone associated with Senator Dianne Feinstein's family, named Herb Newman of Sausalito, California, ever supplied staffing to Tesla Motors?

- Has anyone associated with Senator Dianne Feinstein's family had any relationship with the real estate transactions involving Tesla and/or Solyndra real estate?

- Now that the CIA has hacked into Dianne and Kathryn Feinsteins computers and all of Richard Blum's personal and business computers, do you think they found anything incriminating? Do you think the NSA phone and email records from 2007, to today, show anything incriminating?

1 - Federal whistle-blowers have stated that Tesla Motors was involved in a felony funding kick-back
2 scheme with Dianne Feinstein. Is that true?
3

4 - If these charges are true, did you think you would never be caught because the same people who put
5 Eric Holder and Steven Chu in office are paying for the cover-up? Now that Steven Chu has been
6 terminated and Eric Holder is facing multiple charges of contempt, are still feeling so cocky?
7

8
9 - Communications between The California, Fremont City Administrators, Dianne Feinstein's senior
10 staffer (M. Nelson) and the general management of NUMMI indicate that economic and political
11 pressure was used to manipulate a deal structure. What is your comment on these revelations?
12

13 - Panasonic, your battery partner, has been charged with organized crime, dumping, price fixing, the
14 deaths of thousands of battery workers from toxic poisoning and with building lethal battery factories
15 that destroyed all of the towns near them. Is that a problem?
16

17
18 - You said, in writing, in your DOE application documents that the car to be produced with the DOE
19 money was all designed and engineered, yet every aspect of the released model S was designed and
20 engineered AFTER you received the DOE money! Did you lie on your application?
21

22 - Do your battery packs release toxic and/or cancer causing fumes when they burn?
23

24
25 - What was your relationship with Eric Strickland, the head of the
26

1 National Highway Transportation safety agency who quit his job 48 hours after being notified that the
2 toxic Tesla report he knew about was going public?

3
4 - Did you falsify lithium-ion safety reports?

5
6 - Bernard Tse, your battery program director, and 7 other senior staff, provided your company with
7 numerous severely concerning lithium-ion safety reports which were never presented to the Department
8 of Energy. Were these reports covered up because the Senators and Investors of Google and Tesla all
9 have ownership interest in the lithium-ion industry?
10

11
12 - Has Elon Musk ever spied on his own employees and competitors?

13
14 - Has Elon Musk ever undertaken sabotage programs against his competitors?

15
16
17 - Did your SEC filings use tax credits from the White House to make Tesla look like it had profits?

18
19 - Did Elon Musk actually found Tesla or did Martin Eberhard found Tesla and Elon Musk then came in
20 later and stole it from him in a hostile takeover?

21
22 - You said there were no chances of fire yet you have had two recalls in order to install fire prevention
23 systems AFTER there were fires. Why is that?
24

1 - What was Tesla's debt ratio at the time that Tesla applied for the DOE loan? Why do you think Tesla
2 had the worse debt ratio of any applicant yet Tesla was awarded funds with almost no review?
3

4 - Why has Tesla spent billions, and a decade, to only sell a few cars when all of your competitors have
5 done 20 times better on less money and in less time? Why are over 200 technical problems with the car
6 documented online by Tesla owners yet you say nothing about those problems? Why are you being
7 sued for fraud under the Federal "Lemon Law"?
8

9
10 - Why were your cars \$100,000.00 over budget PER CAR, at the time of your Department of Energy
11 loan application, yet nobody at the DOE commented about that in their review notes?
12

13 - Did Steven Chu's senior staff: Matt Rogers and Steven Spinner have any relationship with Tesla-
14 related investors prior to Chu hiring them at the DOE? Was it coincidental that McKinsey Consulting,
15 the company they worked for, produced all of the pitch documents for the White House and Congress,
16 which were used to steer the Federal funds to Tesla Motors?
17

18
19 - Was Tesla Motors funded as a gift to campaign investors?
20

21 - Did you lie about asking the NHTSA to conduct a safety study on your car when, in fact, the NHTSA
22 first asked Tesla for a study after fires were reported? Did you then bribe NHTSA officials to halt the
23 request for an investigation after you plea-bargained to install a "titanium safety shield" which, in fact,
24 only solves a small portion of the potentially lethal dangers from your battery pack? Is your battery
25

1 pack made up of "non-automotive" batteries which are being used in the wrong way relative to what
2 they were built for?

3
4 - Are you trying to build a battery factory not far from Mexico in order to take advantage of Mexican
5 workers? Are you concerned that most battery factory workers in China were poisoned with toxins?

6 Are you concerned that your battery factory will ENCOURAGE immigration abuse and devastate our
7 border?

8
9
10 - The founders ex-partners, investors, buyers, suppliers, employees and ex wives have sued Elon Musk
11 for fraud? What does that say about Mr. Musk?

12
13 - How many of your employees have been burned alive at your factories? Has OSHA ever fined you?

14
15
16 - If somebody puts a bunson burner or torch under a Tesla, will it blow up? If hackers hack the easily
17 hacked Tesla, can they make the battery charging system overload and blow up? If so, did you inform
18 the NHTSA of this in writing? When?

19
20 - Did California State Officials, in Sacramento, California, ever manipulate tax laws and decisions to
21 exclusively benefit Tesla Motors in exchange for perks?

22
23
24 - What percentage of your buyers have killed members of the public with their Tesla Vehicles? Why is
25 that number, in relative terms, higher than any other car company?

26
27
28

- What percentage of your buyers have crashed their Tesla's while driving drunk, destroying public property, homes and Tesla's? Why is that number, in relative terms, higher than any other car company?

- Have White House staff agreed to protect Tesla, at all costs, in order to keep Mitt Romney's prediction from coming true and to cover campaign funding billionaires?

- Did Tesla representatives meet with Rahm Emanuel, David Axelrod, David Plouffe or their campaign staff prior to the Election of President Obama?

- Is it not true that you have sold 4000% less cars than you told the U.S. Government, in writing, you would sell by this date, in your DOE application documents?

- Why did you switch your factory plans between 5 different cities, during the DOE loan process, when you told everyone that your factory location was already a done deal?

- Do your VC investors pump the stock market rating by buying their own Tesla stock when bad news comes out about Tesla in order to create a synthetic cover-story short term stock rise? Would that be considered part of a stock fraud activity?

1 - What is the relationship between Tesla's investors, Google's investors and the VC funds of Richard
2 Blum, Dianne Feinsteins husband?

3
4 Any reporter who can get a legitimate set of responses to these very important questions, is encouraged
5 to post those responses
6

7
8
9 **Anatomy of A Civic Corruption Case- San Francisco- The Bridge To Sin**

10
11 THE COLD CASE THAT IS NOW VERY HOT! INVESTIGATORS NOW HAVE THE FINAL
12 PIECES OF THE PUZZLE!

13
14 Part 1- The Golden Days

15
16
17 See how the Golden Gate Bridge and a little bridge between two buildings at Embarcadero Center
18 connected to an organized crime and child sex abuse ring for billionaires in A billion dollar real estate
19 political kickback scam, by San Francisco "elites", to create an owned and controlled Senator.

20
21 Interesting that one has posted pictures of them-self dancing and hugging very young girls on
22 Facebook, one was arrested and indicted for running an underage prostitution ring for billionaire
23 campaign backers and San Francisco "elites", One (A senior public official) had their daughter
24

1 removed from their home by the police because she was sexually abused (Police reports available) and
2 one was charged with hiring underage prostitutes.

3
4 You would think it would be hard to be indicted for BOTH running a child prostitution ring for Pacific
5 Heights billionaires AND helping to embezzle government funds for Moscone Convention Center
6 AND Embarcadero Center but one managed to do both, on behalf of the others.

7
8
9 James Bronkema was known as David Rockefeller's "Bag Man" on the West Coast. He looked exactly
10 like the greedy little "Monopoly Man" Billionaire on the game-board and even sported the same
11 mustache and vest just to make the point that he was not only corrupt, he was BAD ASS CORRUPT
12 and he would get the Rockefellers on your ass if you messed with him!

13
14 When a real estate or political policy action needed to be greased, Bronkema or Coblenz showed up
15 with the cash for the Supervisors, inspectors and public policy-types. Bronkema was one of the creators
16 of "Flower" and ran the cash into John Molinari's Mayoral campaign. He put his girl-friends in
17 executive city jobs as payoff for services rendered. Their hope was to move Molinari from Mayor, to
18 Senator to Governor and on up... but that didn't work out..... when the FBI showed up on some
19 doorsteps.

20
21
22 Bronkema ran the Business Bureau, The Golden Gate Bridge, Embarcadero Center and Rockre, a
23 "private business operations group" for the Rockefellers. He funneled kickbacks, crony deals and
24

1 special favors from San Rafael to Oakland to City Hall. When his manipulations went international, he
2 cooked his own goose.

3
4 They got a different party to play Senator and Molinari was forgotten but not forgiven for his false
5 campaign district address, tax form creativity and family police incidents. A bug was placed in
6 Molinari's Classic Jaguar and feds got quite a bit of dirt on old-school San Francisco corruption off of
7 Molinari's North Beach idle chatter. Molinari then turned State's evidence.

8
9
10 Once Molinari ate it in the elections, they plowed all of the cash into Feinstein.

11
12 A key associate (Goudie, aligned with Molinari) was a top Presidential appointee and campaign funder
13 who was arrested and indicted for federal funds fraud in the Christopher Columbus Scandal which
14 emulated the Golden Gate Bridge Scandal with the same consultants. (Check out his old Facebook
15 page).

16
17
18 In a special event scam, that Molinari and Bronkema schemed up, (that was a bigger Disaster than the
19 recent SF America's Cup), quite a bit of taxpayer cash went sideways.

20
21 Said Marin County activist, Gene Pratt: "The Golden Gate Bridge District is a bunch of Crooks"

22
23
24 The new Silicon Valley Prostitution cases have opened up the Old San Francisco child prostitution
25 cases, as girls reveal decades of abuse and finally tell reporters what really happened back then. Which

26
27 600
28

1 Silicon Valley and SF Venture Capitalists, who you see quoted in the news lately, were founders of
2 "Flower" the top secret San Francisco underage sex ring for billionaires , held in the billionaires hotels
3 so surveillance security could be totally controlled, (With SF, NYC and Silicon Valley Branches),
4 which is, apparently, still operating? Why are they so excited about all of the underage girls coming
5 over the border in the Mexican child border crisis? Why are Silicon Valley CEO's and VC's so
6 supportive of "child Immigrants"?

7
8
9 Paying a bribe for real estate exclusives was often done with cash and hookers, known as "pink cash"
10 in SF.

11
12 Why was NAMBLA allowed to thrive in San Francisco at the time, Including being given San
13 Francisco Public Libraries, On Potrero hill and in other locations, to hold their secret "how to abuse
14 children" meetings? (See FBI reports on NAMBLA)

15
16
17 Which San Francisco billionaire VC, in the news lately for other reasons, has a regular weekly
18 appointment to have six nude girls come over and read him books from his library while he pleasures
19 himself?

20
21 Which one is under investigation regarding a murder and an attempted murder?

22
23
24 Which one ordered a "hit" on someone?

1 Part of Kubrick's film: "Eyes Wide Shut" was based on "Flower". The cost for a young virgin started at
2 \$50,000.00. Taking her virginity was called: "picking a flower".
3

4 Run all of the names on your database and draw the financial, business and personal connections and
5 see how interesting this case REALLY is!
6

7 Who was the bigger real estate guru: Blum, Rockefeller or Shorenstein?
8

9
10 What do Dianne Feinstein, Richard Blum, James Bronkema, Roger Boas, John Molinari and David
11 Rockefeller all have in common? All them reported to WHO?
12

13 Nobody can now say they "didn't know what was going on!" The evidence overtly implicates all of the
14 players.
15

16
17 Was there a different reason, than we were told, that Mayor George Moscone was killed? Dan White
18 said he was "drugged up on Twinkies", was he drugged up on something else so he could carry out his
19 "kill orders" from on high?
20

21 Who went to federal prison and who didn't?
22

23
24 Who ordered the case shut down, but who kept working on it because they thought there was a major
25 cover-up going on?

1 When you make a chart of all of these people and their political, personal and business connections,
2 almost everything is revealed . / Says David: "The greatest fun you will ever have, in your life, is
3 dropping these names into a Federal Cross-Checker, like XKEYSCORE, FCCPS, or NCVS, and
4 watching the results! Afterwards, add "Feinstein", or "Saxeena", and try it again. Wow! Epic!"

5
6 David T. is a Federal Special Investigator. Says David: "The greatest fun you will ever have, in your
7 life, is dropping these names into a Federal Cross-Checker, like XKEYSCORE, FCCPS, or NCVS, and
8 watching the results! Afterwards, add "Feinstein", or "Saxeena", and try it again. Wow! Epic!" David
9 also stated that: "John Goudie's (Of Christopher Columbus Anniversary Fame) stand-alone case files,
10 by themselves, are a week of Ludlum-class reading. He was so old-school"

11
12
13 The most interesting lines of connection in the organized crime databases go from David Rockefeller to
14 Tony Blair To Rakesh Saxeena (Tony Blair interceded in Saxeena's trial in England over Blackwater
15 gun running, a case that ties back to Senator Leland Yee's arrest) to Wendy Deng to Rupert Murdoch.
16 Said David: "Sierra Leone is the most out of the way, tiny, sad little country but the mega-billionaires
17 will do anything to get the raw gemstones and mineral ore buried under it..... Rakesh Saxeena is the
18 most dashing, undercover, mysterious, amazing spooky guy you will ever meet in your life. Rockefeller
19 may think he is bad-ass but he is in kindergarten compared to Rakesh. Is he evil, Is he secretly saving
20 countries or secretly destroying them?...hard to say..... Oh, and by the way, The Illuminati never, ever,
21 call themselves "The Illuminati"..... There are five groups of "businessmen s clubs" who get together to
22 plan laws, purchases and contracts that will increase their stock value and profits. They do share
23 common beliefs but not all five share the same beliefs so they are always in a subtle war. From time-to-

1 time some jump ship from one group to another. It's as simple as that..... They love the myth of the
2 "Illuminati" because it creates confusion and disinformation. The "Illuminati" are a bullshit myth. The
3 businessmen clubs are the real deal and you can see them at work in the headlines every week. The
4 'ceremonies' at the Grove and the Masons and the other outfits are simple psychological reinforcement
5 tactics to make them all feel more bonded and "above it all". It works."

6
7
8 Goudie was trying to copy the financial skimming scam that the Golden Gate Bridge directors were
9 using for their Golden Gate Bridge Anniversary scheme to fund campaigns and personal hobbies.

10 Goudies business partners ratted him out, though, first claiming he killed his wife, by bludgeoning, to
11 get the attention of the feds. Goudie went to prison but various murder claims never stuck.

12 Part 2- The Investigation Deepens

13
14 Now that key players are either dead, indicted, arrested or otherwise interdicted, the rest of the story
15 can be revealed.

16
17
18 Rockefeller and Bronkema came up with a plan to build the downtown version of The Bohemian
19 Grove; A financial district compound which was totally under their control and that could cut off the
20 "little people" of the outside world unless they were needed to deliver sandwiches or run errands. All of
21 the Bohemian Grovers and cartel planners could be in the same buildings, keep their girls in the
22 adjacent condo's and it would be one big happy, corrupt, family. You will find, in records searches, that
23 almost everyone from the spooky Bohemian Grove sex and monopoly planning club, also had offices
24 in the Embarcadero Center compound.
25

1
2 A walk around San Francisco's Embarcadero Center reveals a Q-Sensitive militaristic facade of
3 concrete bunker-like structures where you can never walk without 3 cameras on you at all times. Metal
4 sign-plates in the ground remind you that you are not in the outside world and that you better watch
5 your P's and Q's. An ideal configuration for a modern version of the Speak-Easy, ready to hide dirty
6 deeds upon a "Cheese it, The Cops" internal announcement signal. There is only one way in and one
7 way out for the entries, all carefully guarded and monitored.
8

9
10 Bronk, a builder, was trained by the Rockefellers in "private governments". He honed his skills running
11 the Golden Gate Bridge, it's own private government suspended in a no-mans land between San
12 Francisco and Marin Counties, but accountable to no one. It was supposed to stop charging tolls once
13 the bridge was paid for but the cash flow from taxpayer to bridge director pockets was so good, they
14 figured, "why kill the golden cow". Many bridge directors have now faced the law over "accounting
15 discrepancies. Bridge Directors are now pretty much under permanent 24 hour digital law enforcement
16 surveillance because they tend to be so naughty.
17

18
19 The entire foundation of the house circled on the right was built from stolen Golden Gate Bridge
20 steel, paid for by taxpayers money, and looks right in the window of another Golden Gate Bridge
21 executives home (the house circled on the left).
22

23
24 Then the operation moved up. Big Office complexes with their own bridges between buildings (So you
25 never had to interact with the commoners) and fancy hotel chains that were hidden behind layers of
26

1 trusts, assumed names, holding companies, corporate facades and inter-level contracts were the new
2 private government.

3
4 This was the perfect layout to evade law enforcement. Not only could you trot parades of hookers in,
5 and out and ditch the video, you could have all kinds of secret sketchy meetings. The Pacific Union
6 Club, (The Original Bohemian Grove Urban Compound) on top of Nob Hill, has a little Victorian
7 house across the street. (next to the parking garage) from it on California Street. That house has a
8 tunnel under the street to the Pacific Union Club for bringing the Hookers in; according to Tommy, the
9 former car lot attendant. That pales in comparison to the Bronkema/Rockefeller scheme.

10
11
12 After each sex party, or sketchy meeting, they would order all of the security cameras to have a Lois
13 Lerner-like hard drive crash. They believed this destroyed all of the evidence. They controlled all of the
14 buildings and all of the security, they could do as they please...they thought. Some former security
15 guards saw the profit potential in hanging onto some of those tapes and hard-drives before they got
16 wiped.

17
18
19 The recent death-by-hooker of the ultra high tech Google executive shows that even the most savvy
20 ultra-rich geeks can't hide from surveillance camera interdiction.

21
22 The cool thing about cameras is that they turn all audio and video into a signal, the interesting thing
23 about that is that any signal can be intercepted, even before it reaches the security office. Let's repeat:
24 Somebody else can ALWAYS get the signal before it gets to where the bad guys think it is going to go!

1 Private activists now have Bohemian Grove under personal drone surveillance, camera interdiction and,
2 the wilder ones, have pre-climbed Redwood trees, in advance of the retreat, and placed hidden micro-
3 tiny chip cameras high up in the bark of the redwoods... this will be interesting.

4
5 But, this was part of the downfall. Those who believe they are immune from the law finally make
6 pretty big mistakes. Their ego and power mania's always bring them down.

7
8
9 When Bronk and his Rockre associates started meeting with NGO's, Nigerian Oilfield barons, The
10 notorious Rakesh Saxeena (Look him up) and middle east mining heads; Interpol, GCHQ and all kinds
11 of law enforcement people became interested.

12
13 To his dying day, James Bronkema denied that he was "A Bohemian Grove Grand Wizard", or "West
14 Coast Grand Master of the Illuminati" or anything "creepy or mysterious". "I am merely a humble
15 servant to the world's needs", he said in one of his last communications with a reporter...

9 **WHEN YOUR SENATOR TAKES STOCK MARKET INSIDER TRADING BRIBES**
10

11 Her daughter, Kathryn used to tell stories, in social groups, about her mom that were not
12 flattering. At one point, she and her Mom were on the outs. Some San Francisco Bay Guardian, and SF
13 Weekly, newspaper staff were Kathryn’s same age, traveled in the same circles, and were privy to
14 some of these conversations. This put an early watch on Feinstein.
15

16 When the current mayor was conveniently murdered in his office, Feinstein was in the,
17 strangely, perfect spot to take over as Mayor, without an election.

18 Feinstein got a man named John Molinari, a character known to have ties to the old North
19 Beach mob in San Francisco, placed as head of the Golden Gate Bridge District and her campaign
20 financier, James Bronkema, known in the local media as “David Rockefeller’s bag man on the West
21 Coast” (for his constant bribes for real estate permits), placed as co-head. These two ran the Golden
22 Gate Bridge district, and its anniversary party, into what network news broadcasts’ called a “morass of
23 corruption, cronyism and failure”. In the meantime, Feinstein prepared her Senate plans. She had set
24
25
26

1 Molinari up to take over, for her, as her Mayor, with her administrator: Roger Boas, as the back-up plan
2 mayoral candidate.

3 Both of her candidates not only lost, but Roger Boas went to federal prison for corruption,
4 racketeering and prostitution scandals and John Molinari was removed from politics and placed under
5 federal surveillance. His daughter filed a police report against him for abuse, and she had to be
6 removed from his home and taken to a secure children’s center, on California Street in San Francisco,
7 for protection. Molinari was also found to have lied about his place of residence during his campaign.
8 Boas was charged with involvement in an under-age prostitution ring for San Francisco elites. The
9 British “Hydrant” investigations into a global political elite pedophile ring, have now tracked back to
10 Senator Dennis Hastert, campaign backer Jeffrey Epstein, Senator Graham, Nick Denton (Who
11 interacted with the British suspects in BOTH the British “Hydrant” and British “Tabloid Phone
12 Hacking” investigations), and other members of Congress. A recent Chinese hack of ALL federal
13 employee background checks, has put the sexual interests of all of Congress at risk.
14

15
16 When the Toyota NUMMI plant was going to go out of business, Feinstein’s Chief of Staff
17 contacted anyone who tried to use the building and warned them to “back off” and/or threatened other
18 California competitors with “political problems” if they got in the way.

19 Feinstein sabotaged any outside efforts to use the NUMMI factory, or to make competing
20 energy systems to Tesla, or to compete with Tesla in any way because her family had already made
21 campaign finance deals with the NUMMI, Tesla Motors and Solyndra people and she owned the
22 construction company (Penini), employment service (via her relative Herb Newman), leasing company
23 (CBRE) and adjacent railroad property rights contracts for Tesla and Solyndra. Over 40 California
24 technology companies were damaged by Feinstein’s sabotage.
25

1 Feinstein and her family funds, trusts and PACS made billions on the Cleantech deals. She has
2 also been charged with rigging postal property deals, railroad deals, U.C. Regents appointments and
3 hundreds of other political actions for her VC Husband: campaign financier and White House
4 “advisor”: Richard Blum. Solyndra was raided by the FBI, when the first major signs of corruption
5 were exposed by investigators, but Feinstein buddy: Attorney General Eric Holder, never allowed the
6 full Solyndra investigation to be released, because it was soon discovered to lead right back to top
7 White House staff, including Gibbs, Plouffe, Emanuel, Axelrod and others. The records of the entire
8 Solyndra investigation will cost famous people their careers, names and historical positions.
9

11 **ELON MUSK, NANCY PELOSI AND DIANNE FEINSTEIN SCHEMED TOGETHER**

13 Elon Musk is a campaign financier for Feinstein, Reid and Obama. Elon Musk was partnered
14 with John Doerr to control the Lithium Ion Battery industry based around the Afghan Lithium ion
15 mining contracts and control of the electric car market. Recent news stories have revealed that his
16 business is based on White House taxpayer hand-outs, as kick-backs, for acting as conduit for John
17 Doerr’s campaign finance deals. Feinstein got him his California factory and Reid got him his Nevada
18 factory.
19

20 Elon Musk hated fuel cells, ultra-capacitors, gasoline, diesel and anything that competed with
21 Lithium ion, which he, Steven Chu, Feinstein and John Doerr had invested in. They all participated in
22 sabotage campaigns, against all of those other fuels, using fronts like “EV WORLD”, “PLUG-IN
23 AMERICA”, “THE FOOL” and other shill groups they controlled. Lithium ion technology turned out
24 to blow up for no apparent reason; needs to come from countries that need to be invaded; gives off
25

1 vapors that cause cancer, brain damage and kidney damage; loses its energy life span and has over a
2 hundred other problems with it. It has set senior citizens, children, Apple stores, homes and offices on
3 fire and crashed multiple airplanes, killing the passengers.

4 When you smell smoke in your passenger airplane, it is usually a lithium ion cell phone battery
5 “going thermal” and releasing fumes. Greed over-came proper scientific oversight in deploying lithium
6 ion in the way that Musk did. When Musk went to Russia, he met mobster businessmen who pitched
7 him a mining deal for Afghan lithium fields. In fact, investigators now know, that Steven Chu,
8 strangely, gave U.S. Taxpayer DOE cash to Russian controlled Ener1, Severstal and other companies
9 when the Section 136 law said the money was only to be used to help American businesses in need.
10 The Musk/Russian-mob connection seems to have been hot, then soured, when his lithium mining and
11 rocket engine deals fell apart, the killing of which was facilitated by GOP operatives.

12 When Musk took Tesla away from its founder: Martin Eberhard, in a hostile take-over, (Musk
13 never “founded” Tesla) he had to build the car in a very expensive way. He and Doerr ordered their
14 friend: Steven Chu, to sabotage every applicant, for DOE money, which tried to make affordable cars.
15 An affordable alternative energy car would kill off Tesla almost over-night. History has now proven
16 that the metrics that Tesla used were disastrous, in that they have now spent more money, to sell less
17 cars, than any company in history, while making an electric car that should have been easy to build.
18 Tesla missed every single milestone, dramatically, that it proposed in its original DOE application
19 documents, yet Steven Chu ordered the DOE to look the other way in order to protect the White House
20 deal.
21

22 Historical facts have now proven that every applicant for DOE advanced vehicle money was
23 sabotaged and rejected, particularly if their car was affordable, and accessible, to the American public.
24
25

1 Tesla couldn't survive an affordable electric competitor, at the time. Tesla investors bought most of the
2 first Tesla's in order to inflate sales numbers. Musk was caught sending potential customers an email
3 asking them to put a deposit in, before the SEC filing date ran out, so he could claim the deposits were
4 completed "sales" in order to inflate SEC filing sales numbers. He also booked government hand-outs
5 as "sales" in his SEC filings.

6 A Congressional investigation proved that Tesla had lied to get its loan and that his friend:
7 Secretary of Energy Steven Chu, had assisted in the scam at the same time that others had applied with
8 a superior set of application metrics. Tesla's "debt ratio" was the worst of any applicant, they had no
9 final design, their car did not work, they were 2000% over budget, and they were using the funds to
10 buy buildings for Richard Blum, even though the DOE Section 136 Law said: don't do that. Treasury
11 said that Tesla had a bad credit rating and every other applicant beat Tesla on metrics. Yet Tesla still
12 got the cash, along with hand-held walk-throughs, in the DOE process, from crony: Steven Chu. It was
13 a lie that Tesla could have survived without the loan. Musk was caught on camera saying that Tesla
14 was "on the verge of bankruptcy" when they applied to DOE, a violation of the federal Section 136
15 law. If this went through a court hearing, Musk and Chu would face felony fraud charges in violation of
16 Section 136 law. Eric Holder would never let DOJ even consider such an action, in order to protect
17 White House financiers.

18 Google worked with Musk to delete any negative mentions about Musk, or his projects, off the
19 internet. Most of the internet is Google- controlled. Google would "top-page-lock" any attack articles
20 that Gawker was ordered to generate, on Musk's competitors so that no outside IT service could get
21 those attack articles removed from the top position. This made them stay on the top lines of Google's
22 search pages forever. Even when lawyers wrote to Google to demand removal of the character
23
24
25
26

1 assassination “lock-in’s: on the top of Google’s search pages, they were told: “Get a subpoena and then
2 we might think about it..”. This “lock-in tactic” destroyed the life, and reputation of a famous wrestler,
3 which may lead to Gawker’s final down-fall, in exchange for destroying so many other lives, out of
4 shear spite.

5
6 Musk has been proven to have lied, mismanaged and engaged in a commodity trading scheme
7 with Goldman Sachs. Goldman Sachs has already been hauled before Congress once, to start the
8 investigation of this commodity monopolization scheme.

9
10 The rogue spy firm attack services group: In-Q-Tel, provided staff to Musk. In-Q-Tel staff now
11 help run his Space X company. Space X was given most of NASA, Ames Moffet Field, and free
12 private jet fuel as a gift in exchange for conduit-ing campaign funding.

13 Musk was forced to give his patents away for free, because they were not only found to have no
14 value, but to also accidentally disclose, within the very text of the patents themselves, the fact that
15 Musk’s batteries could be lethal and destructive in spontaneous explosions, according to the Tesla
16 engineers who wrote the patent, three of whom suddenly, and strangely, died in the same airplane
17 crash.

18
19 A large number of employees, customers, partners, wives and investors have sued Musk for
20 fraud. Clinical psychologists have openly analyzed Musk, in the media, as a sociopath. Musk has
21 bought hundreds of magazine articles and TV shows about himself due to his narcissistic nature.
22 Musk is now working on a railroad project called the “Hyperloop”, with Dianne Feinstein’s railroad-
23 kingpin husband’s company, in order to seek to acquire more federal cash. All three of Musk’s
24 companies would not exist without nearly \$10 Billion dollars of federal kick-back cash and “favors”
25

1 Musk has received. The State of California has given him nearly 80 million tax dollars via the
2 Controller: Lockyer and other State Officials. California Attorney General Kamala Harris refuses to
3 investigate due to campaign connections.

4 Surrounded by private jets, fashion “models”, and other corrupt billionaires, and with the
5 protection of the United States Secretary of Energy, The U.S. Attorney General, The California State
6 Attorney General and the President (All of whom have now been Sunshine disclosure-proven to have
7 been placed in office by Doerr’s “Silicon Valley Cartel”), Musk and Doerr believed themselves to be
8 “untouchable” (Just like Al Capone)and able to get away with anything, without consequences. All of
9 the above data appears in many journals outside of the U.S. but it is never allowed to appear on Cartel
10 owned: Reddit, Google, Hearst Publications, Facebook or other Cartel controlled U.S. media
11 (Doerr/Schmidt/Musk Cartel groups now control almost 75% of U.S. digital media)

Illustration 22: JOHN MOLINARI - San Francisco "Bag Man" for Feinstein deals. His daughter was removed from his home, per San Francisco Police Department Reports, for "child abuse".

THE WORST CASE CORRUPTION SCENARIO

The theory says that Silicon Valley Venture capital companies including Kleiner Perkins, Draper Fisher, Greylock and their friends came up with a scheme to rig the Presidential election, and a few Senate elections, in exchange for a commitment to only give them the Department of Energy funds.

1 They got the Obama campaign to agree to the deal and the deal started happening but then
2 Congress got wind of it and took the whole plan apart.

3 Indeed, those VC's are almost all of the only beneficiaries of the Cleantech scheme.

4 As a fact, all of their competitors suffered set-backs, lies, stone-walling, denials and attacks that
5 were manifested through either those VC's or Department of Energy officials associated with those
6 VC's

7 That group of men were the campaign financiers of the Obama campaign and they control the
8 only search engines and database systems that COULD rig an American election.

9 While the idea may be "far fetched", the fact is that the odds of that same tiny group of people
10 all being the financiers, beneficiaries and intermediaries are astronomical unless they conspired to
11 create the circumstances in an illicit cartel scheme.

12 White House and Energy Department officials engaged in a kickback financing campaign using
13 state and federal taxpayer funds. Only campaign financiers were allowed to receive per-arranged funds
14 and all of their competitors were sabotaged, stonewalled and black-listed if they were not Obama
15 campaign financiers on a per-approved covert list. Senators Dianne Feinstein and Harry Reid facilitated
16 the crimes. The U.S. Department of Energy was used as a "slush fund" to pay off campaign financiers
17 and to attack and delay those campaign financiers competitors. While the corrupt public officials have
18 tried to play the whole thing off as "just a case of the D.O.E. having stupid people on the staff", the
19 truth is that the matter was a haphazard cover-up of a poorly executed and organized crime that sent
20 "the rats scrambling" when it fell apart. Historical facts have now proven that "only Obama campaign
21 financiers received the cash, contracts, revolving door jobs and stock benefits of the program and their
22 competitors and non-campaign financiers were attacked and obstructed.
23
24
25
26

1 Victims had global character assassination and propaganda-media defamation reprisal attacks
2 operated against them by White House staff and their political financiers: Elon Musk, Larry Page,
3 Steve Jurvetson, Eric Schmidt, Steve Westly, John Doerr, et al. Jury and FBI-compliant evidence
4 proves this as fact.

5 Victims were attacked because 1.) they helped law enforcement investigate the attackers, 2.)
6 They competed with the attackers that attacker's products and the Silicon Valley Cartel attackers chose
7 to "cheat rather than compete". Jury and FBI-compliant evidence proves this as fact.
8

9 The attackers spent over \$30M, part of that using taxpayer resources, attacking the victims as
10 proven in the financial transaction records from Google, Gawker, Gizmodo, Jalopnik, Media Matters,
11 Fusion GPS, et al. Jury and FBI-compliant evidence proves this as fact.

12 Victims had been previously funded by the U.S. Government and had a multi-decade
13 relationship with the highest offices of the Government, which provided them with deep knowledge of
14 the crimes that were committed. Jury and FBI-compliant evidence proves this as fact.
15

16 The U.S. Department of Energy is used as a political slush fund to pay back campaign finance
17 millionaires while blockading the competitors of those millionaires from reaching the market or
18 receiving funding. Jury and FBI-compliant evidence proves this as fact.

19 The only entities who participated in the global character assassination and propaganda-media
20 defamation reprisal attacks were those entities owned and controlled by the attackers. Jury and FBI-
21 compliant evidence proves this as fact.
22

23 Through corrupt rare-earth mining scams and control of federal contracts and grants, attackers
24 had planned to acquire at least one trillion dollars in unjust gains and illegal profiteering. Jury and FBI-
25 compliant evidence proves this as fact.
26

1 This amount of money they sought, and the "Mafia-like" structure they adopted, caused the
2 suspects to engage in the most extreme crimes, including murder and "Deep State" coup attempts. Jury
3 and FBI-compliant evidence proves this as fact.

4 A significant number of person's who were in conflict with the attackers have died in suspicious
5 manners. Jury and FBI-compliant evidence proves this as fact.

6 The suspects have hired the largest numbers of lobbyists and corporate manipulation lawyers in
7 U.S. history in order to manipulate political decisions. Jury and FBI-compliant evidence proves this as
8 fact.

9
10 The suspects have spent more money on political bribes than any group of men has spent in the
11 last century. Jury and FBI-compliant evidence proves this as fact.

12 The suspects placed top federal law enforcement and agency bosses (ie: Michelle Lee, Steven
13 Chu, Kamala Harris, James Comey, et al) from their own Cartel, into top government positions, with
14 orders to run cover and protection schemes for them. Jury and FBI-compliant evidence proves this as
15 fact.

16
17 California State officials including the Governor, Controller, The Senators, Secretary of State
18 and regional officials participated in these crimes and pocketed the initial profits from these crimes in
19 covert investment banking. Jury and FBI-compliant evidence proves this as fact.

20 Tesla Motors, Google, Netflix, Facebook, LinkedIn, Amazon and other tech Cartel members
21 operate with a common goal of psychological mass ideology manipulation and monopolistic
22 profiteering based on government sponsored anti-trust violations and server control exclusivity. Jury
23 and FBI-compliant evidence proves this as fact.

24
25 The attempted cover-ups of these crimes continues to this day. Jury and FBI-compliant

1 evidence proves this as fact.

2 The program was used by the Obama Administration to provide crony payola kick-backs to
3 financiers and friends of the Obama Administration and to attack the competitors of the Silicon Valley
4 financiers of the Obama Administration.

5 As of 2019, the U.S. Department of Energy claims that they "overhauled" and "re-did" the
6 ATVM program and it's sister program: the Loan Guarantee Program. In fact, that is false.

7 When you peel back the onion-skin of corruption around the covert stock market and
8 investment bank holdings of Eric Schmidt, Dianne Feinstein, Nancy Pelosi, Elon Musk, etc.; you find
9 that they are invested in something called "rare-earth mining". Rare earth mines are generally in third
10 world nations and use child slave labor. These toxic corrupt operations are responsible for more
11 murders, beatings, rapes and genocides (over control of these "blood minerals") than anything on Earth.
12 These minerals are used in the electric cars, cell phones and solar panels that Silicon Valley has
13 attempted to control. So, you see, it isn't about "*saving the environment*"; it is about greed, bribes and
14 corruption on an epic scale.
15

16 The program continues today as a political slush-fund and it is as corrupt as ever. It has NOT
17 been "cleaned-up"! It is STILL a cesspool of corruption! Obama hold-overs and corrupt insiders, with
18 personal conflict-of-interest stock and revolving door career deals, still control the funds and steer the
19 monies exclusively to their friends.
20

21 The program has not funded any company who is not a campaign-finance friend of the Obama
22 Administration. The DOE program attacked, lied to, stalled, delayed, gate-keeper blocked and harmed
23 any Applicants who competed with Tesla, Fisker and the Obama financiers. Through the Silicon Valley
24 control of the *facade group: "The National Venture Capital Association"*, DOE ensured that NO car
25

1 company or solar company in America could get funded, by any private means, without Silicon Valley
2 oligarch approval. The DOE is a corrupt organization operated by corrupt insiders for corrupt purposes!

3 DOE's two main manipulation tricks are: 1.) **STONE-WALLING** - Where DOE staff throw
4 outsider Applicant's filings in a box and forget about them for many years in a Lois-Lerner'd review
5 process that takes any commercial bank only 2 weeks to complete. DOE spends years doing hyperbolic
6 nothings in order to delay campaign financiers competitors, and 2.) **INTERPRETIVE LYING** -
7 Where DOE staff make up things that Applicant's never said and twist the Applicant's words into
8 anything BUT what the Applicant's intended, in order to manipulate non-favored Applicant's into
9 negative interpretations. DOE staff never even called outsider Applicant's for clarity discussions of any
10 key data. They did not want to hear the truth, they couldn't handle the truth! They only wanted their
11 crony's to win the funding!
12

13 Every applicant who applied, who was not a crony insider, hard-wired, Obama bagman was
14 **DEFRAUDED, LIED TO, STONE-WALLED** and used as a smoke-screen to hide the true nature of
15 the crony payola scheme operated by Secretary of Energy bosses Chu, Moniz and Perry. They are owed
16 money to pay for their damages from tort-based interference in their businesses and other fraud-related
17 DOE-operated causes-of-action.
18

19 Silicon Valley oligarchs hired "Lobbyists" (who are political operatives who offer bribes to
20 politicians without ever using the word "bribe") to take-over the program. Silicon Valley insider
21 McKinsey staffed the DOE department while working for the Silicon Valley oligarchs. In a typical
22 corruption example: Steve Spinner worked at DOE handing out money to Solyndra which his wife
23 Alison Spinner worked at as Solyndra's lawyer, while the DNC mailer referred to each of them as the
24 "top West Coast fund-raisers for the DNC".
25
26

1 Originally Obama's "car Czar" Steven Rattner (indicted for stock market securities fraud),
2 working from the West Wing of the White House, had offered a portion of the money to Detroit Auto
3 Unions if the Detroit Unions ordered all of their members to vote for Obama in exchange for bail-outs.
4 Obama insiders David Plouffe (indicted for payoffs to Rahm Emanuel), David Axelrod, and Robert
5 Gibbs extended the deal to the Silicon Valley oligarchs in exchange for global search engine
6 manipulation favoring Obama

7
8 A "Silicon Valley Mafia" (AKA - "The PayPal Mafia") exists and is populated by the Bay Area
9 technology oligarchs, their operatives and the West Coast Senators, all of whom profit illicitly off of a
10 combined monopoly and stock market cartel that they control. FBI Director James Comey was fired for
11 protecting his friends in this cartel.

Illustration 23: You Can't End Corruption If All Of The Senators Are Doing Corruption

CHARGES AGAINST THE DEPARTMENT OF ENERGY THAT ARE SUPPORTED BY THE FACTUAL EVIDENCE

- DOE officials told Applicant's they had to pay tens of thousands of dollars in order to apply for the LGP monies but with-held responses until after the dead-line had passed in order to cut non-Obama financiers out of the running.

- Google provided the staffing for the agencies involved, the media manipulation for the politicians involved, and was the beneficiary for some of the funds in a 4-way conflict of interest in which Google staffed the largest contingent of Obama White House staff.

- Steven Chu handed massive amounts of DOE cash to Russian billionaires from Ener1, Severstal and other Russian connections even though they were foreign billionaires who had no need of U.S. taxpayer subsidies. If one wants to look at dirty Russian collusion, they need look no further than Steven Chu, the architect of the failed Iran Nuclear deal and corrupt Uranium One deal. Steven Chu and Rahm Emanuel ordered DOE's Sandia Livermore Labs and Argonne Labs (who they were both connected to) to manipulate Applicant data in order to only favor campaign financiers companies.

- DOE abuses of process defrauded non-insider Applicants out of billions of dollars of their savings and investor monies yet DOE never offered those that it harmed and recompense.

- DOE officials owned stock market stock and revolving door job promises in the very companies that they were supposed to be conducting "due diligence" on.

- Tesla Motors and SpaceX were staged as campaign finance dark money conduits to transfer taxpayer cash from government treasuries to private parties and then into campaign funds without transparent public disclosure.

- The Obama Administration promised an exclusive on Afghanistan mining deals to Frank

1 Guistra and the Silicon Valley oligarchs for lithium, indium, cobalt and rare-earth metals mining after
2 USAID pitched ([http://2.bp.blogspot.com/_VyTCyizqrHs/TBaffwKixYI/AAAAAAAAAH74/Wee8LTQfo3k/s1600/
3 afghanminerals.jpg](http://2.bp.blogspot.com/_VyTCyizqrHs/TBaffwKixYI/AAAAAAAAAH74/Wee8LTQfo3k/s1600/afghanminerals.jpg)) manipulated reports from McKinsey Consulting saying that "*Afghanistan was*
4 *the Saudi Arabia of lithium and had trillions of dollars of lithium*" to dig up. It turned out to be a lie to
5 get oligarchs to support Obama's Afghan invasion. (<http://pubs.usgs.gov/fs/2007/3063/pdf-page.jpg>)
6
7 DOE helped sell this lie because the Russians had already scoured Afghanistan and found it to be fairly
8 worthless as a mining potential. Elon Musk bought into this for his battery monopoly. This is why
9 Steven Chu gave so much money to Russians at Ener1 and Severstal. DOE staff were fully aware of
10 this. (<http://www.mining.com/1-trillion-motherlode-of-lithium-and-gold-discovered-in-afghanistan/>)
11

12 - Google, a Tesla investor and bromance buddy with Elon Musk, hired more lobbyists for DOE
13 influencing than anybody had ever hired before in U.S. history. Google hides all negative news stories
14 about Musk and Tesla and only shows fake news hype about Musk, Tesla and SpaceX because Larry
15 Page and Elon Musk share an apartment and financial programs.
16

17 - The DOE ATVM and LGP programs are based on arbitrary metrics which are not even
18 followed by DOE evaluation staff. There is a secret black-list in operation to keep companies who are
19 competitors to Obama's financiers from ever getting funded. Even though many Applicant's beat every
20 "winner" in Obama's DOE handouts, they were excluded, denied and discriminated against simply for
21 competing with Obama's Silicon Valley oligarchs.
22

23 - Steven Chu, after getting thrown out of office, went to work for the very people he was
24 supposed to have been conducting due diligence on. Chu is considered to be one of the most criminally
25 corrupt public officials ever in charge of an agency aside from his peer, who also made corruption
26

1 history: Eric Holder, who helped Comey cover-up the crimes.

2 - The DOE ATVM and LGP programs resulted in: ***THE LARGEST DISTRIBUTION OF***
3 ***TAXPAYER CASH TO THE MOST COMPANIES THAT THEN WENT IMMEDIATELY WENT***
4 ***BANKRUPT IN THE HISTORY OF AMERICA!*** Not only has the DOE ATVM and LG program
5 been NOT A SUCCESS, they have been a disaster!

6 - Goldman Sachs and Deloitte engineered INTENTIONAL bankruptcies so that their Silicon
7 Valley oligarch clients could claim windfall tax write-offs which the U.S. Treasury said resulted in
8 "unjust gains" for those oligarchs. In other words, the tech oligarch billionaires took U.S. taxpayer
9 subsidies, which they did not need, and then bankrupted their own companies so that they could reap
10 profits in tax write-offs. On top of this Goldman Sachs skimmed "fees" off-the-top for arranging these
11 deals, at taxpayer expense, and then ALSO profited from the "bumps" to the stock market valuations in
12 pump-and-dump crimes. **TO BE CLEAR: MANY OF THESE BANKRUPTCIES WERE TAX**
13 **SKIMS CREATED TO FAIL! After realizing this, Applicants and Congressional insiders forced**
14 **ALL of the kick-back funded companies into bankruptcy as payback for the corruption and**
15 **abuse of their resources. Said one Senator: "If they want bankruptcies, we will give them**
16 **bankruptcies..."**

17
18
19 - Lachlan Seward, one of the DOE money laundering insiders, threatened Applicant's that if
20 they "made trouble" they "would never be funded by DOE as long as they lived".

21 - When Tesla Motors got their DOE money approved they had NO DESIGN AND WERE
22 PLANNING TO BUILD A FACTORY. Both of which were against the so-called Section 136 Rules.
23 Tesla used the DOE money to hire engineers to design the car from scratch as proven by the engineers
24 that were hired. Tesla was running all over the country trying to stage a real estate scam with Dianne
25

1 Feinstein's Husband's company CBRE. Tesla even got sued for these real estate scams. DOE stated that
2 the "rules" said you already had to have a factory and a design, which the other applicants had. So,
3 against the "rules" Tesla got the money and figured out the car LATER and did not use a pre-existing
4 factory until they were later forced to follow the rules.

5 - For the same kind of commercial loans, Bank of America and Wells Fargo take 4 weeks to
6 approve loans this large. DOE staff were either too stupid to review loans in less than 3 years or were
7 intentionally stone-walling every applicant who was not an Obama crony.

8 - As shown by this letter: [https://news.wttw.com/sites/default/files/Letter%20from%20Bright
9 %20Automotive%20to%20US%20Dept%20of%20Energy.pdf](https://news.wttw.com/sites/default/files/Letter%20from%20Bright%20Automotive%20to%20US%20Dept%20of%20Energy.pdf) ...and hundreds of Congressional
10 reports, DOE staff proved themselves to be liars and scumbag political manipulators at every turn.

11 - The public has not seen the entire FBI and SEC investigation records on the FBI raid and
12 investigation of Solyndra because the records point straight back to the White House Oval Office!

13 - A Congressional report on the ATVM and LG programs exposed layers and layers of crony
14 payola.

15 - The only Judges who got to rule on the cases were "Obama Judges" appointed by or beholden
16 to the Obama Administration.

17 - A CBS News 60 Minutes segment called: "*The Cleantech Crash*" revealed that many of the
18 assets of the ATVM and LGP disasters had been funded by the taxpayers and then sold to China in
19 deals that benefited Diane Feinstein's family and financiers. Later Dianne Feinstein was found to have
20 Chinese spies and insiders on her staff. The Feinstein family owned the stock, staffing services,
21 construction company and services companies at Tesla and Solyndra, which Feinstein got the federal
22 cash for. Her staff then went to work at Tesla and Solyndra.

1 - Although felony-class crimes occurred, no DOE officials have ever been charged with
2 crimes..although multiple FBI officials have been charged with covering up those crimes.

3 - Vice President Al Gore, John Doerr and Vinod Khosla have had all of their finances tracked
4 and connected together through covert routes that reveal insider stock trading and government policy
5 manipulation, in this case, for their own personal profiteering.

6 - Attorney General William Barr has been formally asked, by Applicants, to appoint a federal
7 Special Counsel to investigate this matter.

8 - The Dark Money FEC campaign finance limits were exceeded by the Silicon Valley oligarchs
9 by many magnitudes in this novel deployment of quid-pro-quo and search engine rigging services for
10 political favors and funding.
11

12 - There has not been a single person involved in "green" DOE funding programs who cared
13 anything about "green energy". The use of the term "green" was a psychological ploy to seek to pacify
14 the public with a crunchy granola positive vibe while stealing taxpayer money in plain sight.

15 - The Obama White House produced a "white list" of friends companies who could get funded
16 and a "black list" of their competitors who could never be funded because Silicon Valley financiers
17 said so. These lists were created from input from John Doerr, Steve Westly and Doerr's business
18 partner: Al Gore. Even though most Applicant's beat the metrics, features and national security issues
19 of favored Obama Applicant's, no outsiders and no non-campaign financiers would ever be approved.
20

21 - The very first Applicant for the ATVM fund was EV CAR, which was solicited to apply by
22 DOE and Barbara Boxer's office. The 1.) Section 136 law, 2.) DOE videos of meetings and 3.) DOE
23 documents clearly state that Applicant's would be reviewed on a "**first-come, first served**" basis per the
24 federal law. When XP, which was black-listed by the White House because it competed with Obama
25

1 financiers Tesla and Fisker, moved far ahead in the Applicant list, DOE illegally changed the rules so
2 that "first come - first served" was ignored and only favored insiders were reviewed. XP, Brammo,
3 EcoMotors, Elio, etc. were all "bottom drawered". Even though XP hand delivered, to DOE and
4 Congress, more customer order proofs than ALL other Applicant's combined, DOE insiders, who held
5 stock in competing companies, placed XP on a permanent black-list.

6 - As of December 28, 2008 DOE staff already decided who would "win" the money, and who
7 would not, because the entire program had been hard-wired, via lobbyists and insiders, to only go to the
8 "white list" applicants. Nobody who was not on the original "white list" could ever get DOE funding. It
9 only takes one "insider" at DOE, from the Obama Administration (many are still there) to kill any
10 application, no matter how much better that proposal is compared to every other applicant.

11 - U.S. Department of Energy and White House officials hired Nick Denton's sleaze-ball tabloid
12 empire comprised of Jalopnik, Gawker Media and Gizmodo Media to run character assassination and
13 defamation campaigns, in partnership with the DNC's Google, to attack any person who exposed the
14 corruption scam at DOE.

15 - The GAO wrote multiple federal reports confirming that DOE was running one of the most
16 poorly administrated non-transparent operations ever and that DOE staff were not even following the
17 Section 136 law.

18 - White House and DOE staff hired Gawker, Gizmodo, Jalopnik defamation bloggers to attack
19 those who exposed the plot. Patrick George At Jalopnik attacks outsiders under contract with Elon
20 Musk and DNC. Silicon Valley campaign finance oligarchs hire him to run hatchet jobs on innocent
21 outsiders and then Gawker-Gizmodo-Jalopnik uses their financial partnership with the DNC's Google
22 to push the character assassination articles to the top of Google web products and searches. Patrick
23
24
25
26

1 George, Adrian Covert, John Hermann and Nick Cook are the sexually degenerate cabin boys that
2 report to boy-loving sleaze-tabloid oligarch Nick Denton. They created the Fake News crisis in the
3 media by flooding the internet with defamation posts and reprisal hatchet job articles designed to
4 damage political enemies of the Socialists. They coordinate a large number of the character
5 assassination efforts at Gawker, Gizmodo, Jalopnik, CNN, New York Times and other propaganda
6 outlets.

7
8 - DOE staff never even communicated with Applicant's, who were not Obama insiders; yet
9 Tesla, Fisker and other Obama insiders got hundreds of phone calls, meetings and careful help to hand-
10 hold them through the process to make certain that they got their payola while the outsiders only got
11 blockades, Lois Lerner "missing hard drives" and stone-walls.

12
13 - The DEFRAUDED staff and employees of Bright, XP, Limnia, ZAP, Brammo, and the other
14 Applicant's, have **NEVER** gotten a fair court hearing, Congressional or IG hearing that was not
15 compromised by an Obama Judge or stock-owning insider. They are owed money for their damages
16 from the deeply corrupt DOE programs!

17
18 - The Obama Administration officials who carefully manipulate the DOE and federal process
19 for crony favorites include: Steven Chu, Kathy Zoi, Carol Battershal, Steve Westly, Steven Spinner,
20 John Podesta, Jonathan Silver, Danial Cohen, et al; with cover-up support from James Comey, Eric
21 Holder, Steve Rattner, et al...

22
23 - Over a thousand other criminal and ethics violation charges are charged against DOE and its
24 associates yet no actual interdictions have taken place in California or federal government actions
25 because the "Deep State" cover-ups are so extensive. The raw criminality of the U.S. Department of
26 Energy in these matters is verified, proven and audacious...

Illustration 24: How The Passed Payola Back To Campaign Financiers

1 **THE WHITE HOUSE DIRTY TRICKS ATTACK TEAM**

2
3 **AG Barr Finds White House Power Was Used By Obama Administration To Spy On**
4 **American Citizens And Run Dirty Tricks Reprisal Operations**

6
7 by [Tyler Durden](#)

8
9 In his first pair of interviews since being sworn in, Attorney General Barr told [Fox News](#) and
10 [WSJ](#) that he was pursuing the investigation into the origins of the Trump-Russia probe - an
11 investigation [he has tasked](#)

12 [John Durham, the US Attorney from Connecticut](#), with leading - because Americans need to
13 know whether the government "**put a thumb on the scale**" to try and undermine President Trump
14 both during the campaign and during the first two years of his term, just like "**we need to ensure that**
15 **foreign actors don't influence the outcome of our elections.**"

16
17 Separately, he told [WSJ](#) that "**government power was used to spy on American citizens...**I
18 can't imagine any world where we wouldn't take a look and make sure that was done properly."

19
20 Barr has doubled-down on using the term 'spying', which has angered Democrats, after first
21 using it during Senate committee testimony from April 10, where he uttered the now-infamous phrase
22 "I think spying did occur."

23
24 The AG has declined to elaborate on what prompted these concerns, **though he has said he'd**
25 **be interested to see the underlying intelligence that sparked the FBI decision**, in the summer of

1 2016, to open a counterintelligence investigation. At this point, **Durham's review isn't a criminal**
2 **investigation**, and Barr hasn't offered a timetable for when the investigation might be completed.
3 Ultimately, the probe could lead to changing FBI protocols involving investigations into political
4 campaigns.

5 Appearing to respond to Barr's interviews, President Trump declared that his campaign was
6 "conclusively" spied on.

7 My Campaign for President was conclusively spied on. Nothing like this has ever happened
8 in American Politics. A really bad situation. TREASON means long jail sentences, and this
9 was TREASON!

THE SILICON VALLEY CORRUPT 'GREENTECH' VC CONTROL OVER WASHINGTON DC

Katie Fehrenbacher

[- How Silicon Valley Oligarchs Took Over The Obama Administration](#)

There've been a couple articles in the past few weeks pointing to President Obama as the "[clean tech investor in chief](#)" and the [presidential VC with bets on clean energy](#). The real trend is that venture capitalists focusing on greentech seem to have had an unprecedented influence on U.S. federal policy and allocations of the stimulus package.

When I attended the Department of Energy's (DOE) first [ARPA-E conference](#) (Advanced Research Projects Agency-Energy) earlier this year in Washington D.C., I was struck by how many venture capitalists were there. I shared a cab back to the airport with some familiar Silicon Valley faces, and was told if your firm didn't have a dedicated person in Washington — in some circles they call them lobbyists — maneuvering grant and loan programs, you weren't able to be competitive.

Just look at the figures from the stimulus package (which I am fully in support of): somewhere between \$50 billion and \$80 billion into clean power and energy efficiency initiatives ([depending on how you slice it](#)). The Obama administration has gone out of its way to seek the advice of green-

1 leaning venture capitalists and entrepreneurs in the Valley on how to spend that colossal amount and
2 what programs would be the most affective.

3 Kleiner Perkins managing partner John Doerr is on President Obama’s [Economic Recovery](#)
4 [Advisory Board](#), and was able to convince Vice President Al Gore to join Kleiner, in addition to former
5 Secretary of State Colin Powell. Kleiner’s investments have had some successful government bids,
6 most notably the [\\$529 million loan to Kleiner portfolio](#) company Fisker Automotive out of the DOE’s
7 highly competitive Advanced Technology Vehicles Manufacturing, or ATVM, program. Fisker plans
8 to use the loan to build its factory and launch its electric vehicle in 2011.

9
10 If you remember, another winner of the \$25 billion ATVM program was Tesla Motors (s
11 TLISA), which, as most of us know, was backed by venture capitalists from Draper Fisher Jurvetson,
12 Technology Partners, and Vantage Point among others.

13 I attended Khosla Venture’s LP meeting earlier this year where the firm [announced that former](#)
14 [UK Prime Minister Tony Blair](#) would be joining the firm as Senior Advisor. Several of my journalism
15 peers were comparing the political influence Blair could wield to what Kleiner was doing with Gore.
16

17 The Obama administration appointed [former venture capitalist Jonathan Silver](#) as its loan chief
18 to lead both the DOE’s loan guarantee and ATVM loan programs. About a third of the DOE’s loan
19 guarantee commitments went to venture-backed startups, including thin film solar maker Solyndra and
20 solar thermal company BrightSource.

21 I [wondered earlier this year](#) if the loan guarantee for Solyndra wasn’t a mistake, given the
22 company has one of the highest manufacturing costs out of its competitors. The company withdrew its
23 IPO plans, citing poor market conditions. The Government Accountability Office also found that the
24 loan guarantee process treated some companies unfairly in their bids and risked “excluding some
25

potential applicants unnecessarily.”

THE ELON MUSK AND TESLA MOTORS BRIBES

Another Tesla car catches fire in Hong Kong parking lot: media - ALL TESLA BATTERIES EXPECTED TO HAVE CHEMISTRY DEGRADE AND EXPLODE AS DOE WAS WARNED IN WRITING BY BERNIE TSE, BRIGHT AND XP

HONG KONG (Reuters) - A Tesla Inc electric car caught fire in a parking lot in a Hong Kong shopping mall, the Apple Daily newspaper said on Tuesday, but no one was injured in the blaze, whose cause was not immediately known.

The electric car burst into flames 30 minutes after being parked in the city's San Po Kong district on Sunday, the newspaper said, with three explosions seen on CCTV footage.

Firemen took 45 minutes to douse the fire.

The vehicle was a Tesla Model S 85 KWH dual power version, added the paper, which gave no explanation of what might have caused the blaze.

Responding to a request from Reuters, Tesla declined to comment. Reuters was not able to contact the vehicle owner or obtain CCTV footage of the incident.

Hong Kong's fire services department told Reuters a vehicle caught fire on Sunday, but gave no details, such as the make of the car. Authorities are investigating the cause.

The incident comes three weeks after Tesla said it had sent a team to investigate a video on Chinese social media that showed a parked Tesla Model S car exploding in the commercial hub of Shanghai.

The automaker has said its EVs are about 10 times less likely to experience a fire than petrol-

1 powered cars.

2 There have been at least 14 instances of Tesla cars catching fire since 2013, most of them after
3 a crash.

4 Reporting by Donny Kwok and Shellin Li in Hong Kong, Yilei Sun in Shanghai; Editing by
5 James Pomfret and Clarence Fernandez. Our Standards: [The Thomson Reuters Trust Principles](#).

6
7 **DEADLY EXPLODING LITHIUM ION BATTERIES AND COBALT CORRUPT**
8 **MINING SCAMS ARE KILLING AND ROBBING THE PUBLIC WITH DIRTY "BLOOD**
9 **MINERALS" THAT ARE TOXIC, SELF-IGNITING DANGERS**
10

11
12 Lithium ion batteries: Cause wars in the Congo, Afghanistan and Bolivia from the corrupt mining deals
13 involved with mining lithium and cobalt; are insider trading-owned by ex-CIA boss Woolsey and DOE
14 Boss Chu; excrete chemicals that mutate fetuses when they burn; destroy your brain, lungs and
15 nervous system when they burn; kill the factory workers who make them; cause Panasonic to be one of
16 the most corrupt companies in the world; poison the Earth when disposed of; can't be extinguished by
17 firemen; poison firemen when they burn; are based on criminally corrupt mining schemes like
18 URANIUM ONE; Have over 61 toxic chemicals in them; come from an industry that spends billions
19 on internet shills and trolls used to nay say all other forms of energy; are insider-trading owned by
20 corrupt U.S. Senators who are running a SAFETY COVER-UP about their dangers.
21
22

23
24 NiCad Batteries and hundreds of other battery types do not have this many problems... but the
25 ownership of the lithium mining business by Elon Musk, his Silicon Valley cartel and California
26

1 Senator's families causes other solutions to be hidden, the dangers of lithium ion to be hidden and a
2 monopoly to exist.

3
4 Apple products with lithium ion batteries have been exploding and setting people on fire; over time the
5 chemical dendrites inside each battery grow worse and increase the chances of explosion as they age -
6 LITHIUM ION BATTERIES BECOME MORE AND MORE LIKELY TO EXPLODE AS TIME
7 GOES ON AND AS THEY AGE; "Bad Guys" have figured out how to make them explode remotely;
8 have their dangers hidden by CNN and MSM because pretty much only the DNC people profit from
9 them; are the heart of Elon Musk's stock market scam.
10

11
12 The Obama Administration promised Silicon Valley oligarchs the market monopoly on lithium ion
13 batteries and the sabotage of fuel cells in exchange for campaign financing and search engine rigging;
14 United States Senators that are supposed to protect us from these deadly products own the stock market
15 assets of them so they protect them and stop the FDA, OSHA, DOT & NHTSA from outlawing them.
16

17 WRITE YOUR ELECTED REPRESENTATIVE AND DEMAND THAT LITHIUM ION
18 BATTERIES BE MADE ILLEGAL TO SELL! NiCAD and Hundreds of other battery chemistries DO
19 NOT have all of these problems but Lithium Ion batteries get a monopoly because of politician insider
20 trading ownerships. A recent fire on U.S. Highway 101 near Mountain View, CA, burned the driver
21 alive and killed him. In Florida two kids died in a Tesla, burned alive, screaming in agony. A man died
22 in agony in a Tesla crash in Malibu that set Malibu Canyon on fire. A young woman, at the start of life,
23 and her boyfriend were burned alive in their crashed Tesla.
24

1 There are many more deaths and crashes than you have heard about. The deaths and the cover-ups are
2 endless. Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own
3 the stock in Tesla Motors and/or it's suppliers and mining companies and they cover-up and halt
4 investigations and laws designed to save the public. They, and their crony's, spend over \$1B a year to
5 shill and troll hype about lithium ion batteries and cover-up the dangers. Lithium ion EVs are more
6 prone to battery fires. Experts say that their lithium-ion batteries can fuel hotter fires that release toxic
7 fumes and are more difficult to put out. Lithium ion fires keep reigniting which explains why it takes so
8 long and requires copious amounts of water or foam (it is an electric fire, after all) to smother the
9 flames. Tesla employee Bernard Tse and his team warned Elon Musk about these dangers in 2008 and
10 they got fired and/or warned to "say nothing" by Musk. Three top Tesla engineers died in a plane crash
11 next to Tesla offices in San Carlos after two of them agreed to become whistle-blowers.
12

13
14 Elon Musk exists because he bribed DNC politicians and Senators Feinstein, Reid, Boxer, Harris,
15 Clinton and Pelosi to give him free taxpayer cash and government resources from the Dept. of Energy
16 and the Calif treasury. DOE has been covering-up organized crime activities at DOE in which DOE
17 funds are being used as a slush-fund to pay off DNC campaign financiers and to pay for CIA/GPS
18 Fusion-Class attacks on Silicon Valley business competitors of those DNC campaign financiers who
19 DOE staff share stock market holdings with. Elon Musk is a criminal, a mobster, an asshole, a bald
20 fake-hair wearing, plastic surgery-addicted, douchebag, woman-abusing, sex addicted, tax evader.
21 Musk exploits poor people and child slaves in the Congo and Afghanistan to mine his lithium and
22 Cobalt.
23
24

1 Musk spends billions per year to hire Russian trolls, fake blogger fan-boys and buy fake news self-
2 aggrandizement articles about himself. Musk thinks he is the 'Jesus' of Silicon Valley. Fake News
3 manipulator Google is run by Larry Page and Larry is Musk's investor and bromance butt buddy. Musk
4 uses massive numbers of shell companies and trust funds to self-deal, evade the law and hide his bribes
5 and stock market insider trading. A huge number of Tesla drivers have been killed; pedestrians and
6 oncoming drivers have also been killed, and Musk covers it up. The DNC and the MSM refuse to allow
7 any articles about Musk's crimes to be printed because they benefit from Musk's crimes. Musk has been
8 professionally diagnosed as a 'psychotic narcissist.' A 'Silicon Valley Mafia; cartel of frat boy sociopath
9 venture capitalists like Steve Jurvetson, Tim Draper, Eric Schmidt, et al; threaten those who do not
10 support the cult of Tesla or their political candidates.
11

12
13 In EVERY blog that you read that mentions 'Musk', at least 1/3 of the comments have been placed their
14 by Musk's paid shills. Musk holds the record for getting sued for fraud by his investors, wives, former
15 partners, employees, suppliers and co-founders. Elon Musk has gone out of his way to hire hundreds of
16 ex-CIA staff and assign them to "dirty tricks teams" to attack his competitors and elected officials who
17 Musk hates. Musk never founded his companies. Musk's "Starlink" satellites are domestic spy and
18 political manipulation tools - never get your internet from one. Musk stole Tesla in a hostile ownership
19 take-over from Marty the true inventor of the Tesla. The same kind of EMF radiation proven to cause
20 cancer from cell phones exists in massive amounts in a Tesla.
21
22

23
24 Musk can't fix a car or build a rocket and has almost no mechanical skills. If you pull a report of every
25 VIN# of every Tesla ever built and cross reference that with insurance, repair and lawsuit records you
26

1 will find that the "per volume" fire, crash, death and defect rate is THE WORST of any car maker in
2 history! Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Sachs has
3 a dedicated team of 18 men who rig stocks and valuation bumps for Musk. Over 1000 witnesses can
4 prove every one of those claims in any live televised Congressional hearing! Senators Dianne
5 Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla Motors
6 and/or it's suppliers and mining companies. That is why they criminally help cover-up investigations of
7 Tesla! All of this was reported, in writing, to James Comey, Patricia Rich and David Johnson at the
8 FBI.
9

10
11 The DNC bosses own the stock in lithium, Solar and EV markets and use kickbacks from those markets
12 (Especially via convoluted campaign finance laundering via Elon Musk) to finance the DNC. The DNC
13 bosses use character assassination as their main political tool against any member of the public who
14 speaks out against their felony stock market scams and PizzaGate-like scandals. The Harvey Weinstein
15 reports by Ronan Farrow show that they have teams of hired goons that they pay to destroy people's
16 lives. They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media, Gizmodo Media, Media
17 Matters, David Brock, Sid Blumenthal, NY Times, Google servers, Facebook servers, Podesta Group,
18 Perkins Coie, Covington & Burling and a host of "assassins".
19

20
21 It should be a felony to hire character assassins in the USA. DEMAND A LAW and DEMAND the
22 termination of these attack services. IE: Gawker and Gizmodo Media sets-up the attack stories and, in
23 paid partnership with Google, Google kicks their attack links around the globe, in front of 8 Billion
24 people, forever. Google locks the attack articles of its enemies on the front top search results of Google
25

1 search results forever, on purpose! That is why Google is being terminated in the largest, most well
2 resourced anti-corruption public service take-down in history!

14 etc.....

15
16
17
18 You may have run across Musk’s self promoting, narcissistic, multi-billion dollar, self-
19 aggrandizing PR hype but here is the other side of the coin. We know these facts from personal
20 interaction with Musk, his companies and his politicians. Everything in this letter can be proven in a
21 jury trial, Congressional hearings or live TV debates. Musk will do anything to keep this information
22 from getting out but... it is too late for him! While this may sound like a bad Hollywood movie script.
23 It all really happened and there is now massive hard copy evidence to prove it.

24
25 Elon Musk exists because he bribed DNC politicians including Obama, Clinton and Senators

1 Feinstein, Reid, Boxer, Harris, Spier and Pelosi to give him free taxpayer cash and government
2 resources from the Department of Energy and the California political tax pool. This is proven when you
3 follow-the-money and the insider trading, stock ownership and crony payola kick-backs.

4 The Energy Dept (DOE) has been covering-up organized crime activities at DOE in which DOE
5 funds are being used as a slush-fund to pay off DNC campaign financiers and to pay for CIA/GPS
6 Fusion-Class attacks on Silicon Valley business competitors. DNC campaign financiers and DOE staff
7 share stock market holdings with each other under family trusts, shell corporations and layered
8 Goldman Sachs accounts. The deal was: Obama funds Tesla, Musk conduits campaign funds to
9 Obama, top Obama staff profit off of insider Musk stocks.
10

11 Elon Musk is a criminal, a mobster, an asshole, a balding fake-hair wearing, plastic surgery-
12 addicted, bi-sexual douchebag, woman-abusing, sex addicted, tax evader. We can put this in writing
13 because all of those identifications regarding Musk can be proven in court and are documented in
14 existing lawsuits and news stories.

15 Musk exploits poor people and child slaves in the Congo and Afghanistan to mine his lithium
16 and Cobalt. Look up this phrase on the top search engines: “child labor electric car batteries”.

17 Musk spends billions per year to hire Russian trolls, fake blogger fan-boys and buy fake news
18 self-glory look-at-me articles about himself. Musk thinks he is the 'Jesus' of Silicon Valley and he will
19 do anything to make the public think so. Musk is insecure because his father was abusive and his
20 “trophy wife” Mother is overbearing so he developed sociopath-like mental issues. Musk has been
21 professionally diagnosed as a 'psychotic narcissist. He public stated on an investor call that he uses
22 drugs and alcohol to get through the night. We have the tapes.
23
24
25
26

1 Musk relies on Google and the DNC Main Stream News (MSN) to hide bad news about him.
2 Fake News manipulator Google is run by Larry Page. Larry is Musk's investor and bromance 'Butt
3 buddy'. They share an apartment. Musk uses massive numbers of shell companies and trust funds to
4 self-deal, evade the law and hide his bribes and stock market insider trading. His brother ran Solar City
5 and is now under federal investigation for securities fraud.

6 A huge number of Tesla drivers have been killed; pedestrians and oncoming drivers have also
7 been killed, and Musk covers it up.

8
9 The DNC and the MSM refuse to allow any articles about Musk's crimes to be printed because
10 they benefit from Musk's crimes. VC's Tim Draper and Steve Jurvetson are so fanatical about not being
11 embarrassed from a Tesla bankruptcy that they will pump the TSLA stock and threaten anybody who
12 might disclose the Musk misdeeds. Peter Thiel, a Musk 'boyfriend' also protects Musk. Musk, and his
13 cronies, use Palantir, Google and related software to scan the entire internet every few minutes for any
14 occurrence of the words: "Musk", "Tesla" or "Tesla Fire". They send trolls and fake bloggers (Many of
15 them Russian) to put pro-Musk comments on the comments section of any blogs or articles discussing
16 those topics and try to flood out the truth about Musk. In EVERY blog that you read that mentions
17 'Musk', at least 1/3 of the comments have been placed their by Musk's paid shills. There are no "Tesla
18 Fan Boys". All of the fanatic Tesla comments on the internet are Musk's, Thiel's, Jurvetson's and
19 Draper's fake fanboy trolls. Musk, himself, stays up late at night pretending to be a 'Tesla Fan Boy' on
20 blogs.
21

22 The 'Silicon Valley Mafia; cartel of frat boy sociopath venture capitalists like Steve Jurvetson,
23 Tim Draper, Eric Schmidt, et al; threaten those who do not support the cult of Tesla or their political
24 candidates.
25

1 Musk holds the record for getting sued for fraud by his investors, wives, former partners,
2 employees, suppliers and co-founders. Elon Musk has gone out of his way to hire hundreds of ex-CIA
3 and In-Q-Tel staff and assign them to "dirty tricks teams" to attack his competitors and elected officials
4 who Musk hates.

5 Musk never founded his companies. He took Tesla away from the founder: Marty, in a hostile
6 take-over!

7 Musk's "Starlink" satellites are domestic spy and political manipulation tools - never get your
8 internet from one. SpaceX is entirely a spy satellite operation.

9 The same kind of EMF radiation proven to cause cancer from cell phones exists in massive
10 amounts in a Tesla.

11 Musk can't fix a car or build a rocket and has almost no mechanical skills.

12 If you pull a report of every VIN# of every Tesla ever built and cross reference that with
13 insurance, repair and lawsuit records you will find that the "per volume" fire, crash, death and defect
14 rate is THE WORST of any car maker in history!
15

16 Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Sachs has a
17 dedicated team of 18 men who rig stocks and valuation bumps for Musk.
18

19 Over 1000 witnesses can prove every one of those claims in any live televised Congressional
20 hearing! Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own
21 the stock in Tesla Motors and/or it's suppliers and mining companies. That is why they criminally help
22 cover-up investigations of Tesla! All of this was reported, in writing, to James Comey, Patricia Rich
23 and David Johnson at the FBI.
24

25 Why aren't all of those parties in prison if it is so easy to prove the crime? Think back to recent
26

1 history: the heads of the Department of Energy, the FBI, The DOJ and the U.S. Attorney General were
2 kicked out of their jobs for corruption. THIS was the corruption they were doing. They all knew about
3 this crime but they were covering it up.
4

5 Musk took over Tesla Motors in a hostile take-over in order to exploit lithium, cobalt and other mining
6 corruption deals for his business partners. Let's take a look at the 'lithium' in Musk's horrifically miss-
7 engineered lithium ion batteries:
8

9 His batteries cause wars in the Congo, Afghanistan and Bolivia from the corrupt mining deals
10 involved with mining lithium and cobalt. Lithium ion batteries are insider trading-owned by ex-CIA
11 boss Woolsey and DOE Boss Chu. Lithium ion batteries excrete chemicals that mutate fetuses when
12 they burn; destroy your brain, lungs and nervous system when they burn; kill the factory workers who
13 make them; cause Panasonic to be one of the most corrupt companies in the world; poison the Earth
14 when disposed of; can't be extinguished by firemen; poison firemen when they burn; are based on
15 criminally corrupt mining schemes like URANIUM ONE; Have over 61 toxic chemicals in them; come
16 from an industry that spends billions on internet shills and trolls used to nay say all other forms of
17 energy; and are insider-trading owned by corrupt U.S. Senators who are running a SAFETY COVER-
18 UP about their dangers.
19

20 Apple products with lithium ion batteries have been exploding and setting people on fire. Over
21 time the chemical dendrites, or deposits, inside each battery grow worse and increase the chances of
22 explosion as they age - LITHIUM ION BATTERIES BECOME MORE AND MORE LIKELY TO
23 EXPLODE AS TIME GOES ON AND AS THEY AGE. This is not a theory. This is a scientific fact.
24 That is why you hear about more and more lithium batteries catching fire and blowing up. Additionally,
25
26

1 scientists also speculate that the increasing presence of low energy nuclear background energy and wifi
2 energy in the environment is making lithium ion batteries explode more often lately. This theory is
3 upheld by the increasing number of FAA reports about commercial airline cabins suddenly “filling up
4 with toxic smoke” as some lithium ion battery explodes in someones overhead luggage. As commercial
5 jets go higher they lose the protection of the atmosphere and are subjected to more gamma (and other)
6 radiation from overhead. This makes the already unstable lithium ion batteries on board blow up.
7

8
9 "Bad Guys" have figured out how to make them explode remotely in devices by making the device
10 electronics cause the batteries to overload. The dangers of lithium ion batteries are hidden by CNN and
11 Main Stream News (MSN) because pretty much only the DNC people profit from them and the DNC
12 folks control CNN and the MSN.

13 The Obama Administration promised Silicon Valley oligarchs the market monopoly on lithium
14 ion batteries and the sabotage of fuel cells in exchange for campaign financing and search engine
15 rigging; United States Senators that are supposed to protect us from these deadly products own the
16 stock market assets of them so they protect them and stop the FDA, OSHA, DOT & NHTSA from
17 outlawing them.
18

19 Tom Steyer is a notorious DNC financier. His partner, Margaret Sullivan ran, the federal
20 USAID agency, USAID sent all of the DNC campaign financiers in Silicon Valley a federal ‘report’
21 from USAID that said there was “A TRILLION DOLLARS OF LITHIUM IN AFGHANISTAN” and
22 promised to give those lithium mines, EXCLUSIVELY, to the Silicon Valley venture capitalists if they
23 funded and web search manipulated the election for Obama to take over the White House. We have the
24 documents proving this. In other words, a re-up of the Afghan War was caused by Elon Musk and it
25

1 killed American soldiers so that Musk could buy more mansions and trophy wives.

2 Alkaline, NiCAD and hundreds of other battery chemistries DO NOT have all of these
3 problems but Lithium Ion batteries get a monopoly because of politician insider trading ownerships.

4 Tesla Motors has caused far more deaths and injuries than the world generally knows about. A
5 recent fire on U.S. Highway 101 near Mountain View, CA, burned the driver alive and killed him. In
6 Florida two kids died in a Tesla, burned alive, screaming in agony. A man died in agony in a Tesla
7 crash in Malibu that set Malibu Canyon on fire. A young woman, at the start of life, and her boyfriend
8 were burned alive in their crashed Tesla. There are many more deaths and crashes than you have seen
9 in the Main Stream News (MSN) The deaths and the cover-ups are endless.

10
11 Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own
12 the stock in Tesla Motors and/or it's suppliers and mining companies and they cover-up and halt
13 investigations and laws designed to save the public. They, and their crony's, spend over \$1B a year to
14 shill and troll hype about lithium ion batteries and cover-up the dangers. Lithium ion EVs are more
15 prone to battery fires. Experts say that their lithium-ion batteries can fuel hotter fires that release toxic
16 fumes and are more difficult to put out. Lithium ion fires keep reigniting which explains why it takes so
17 long and requires copious amounts of water or foam (it is an electric fire, after all) to smother the
18 flames. Tesla employee Bernard Tse and his team warned Elon Musk about these dangers in 2008 and
19 they got fired and/or warned to "say nothing" by Musk. Three top Tesla engineers died in a plane crash
20 next to Tesla offices in San Carlos after two of them agreed to become whistle-blowers.

21
22 The DNC bosses, Congress people and federal executives own the stock in lithium, Solar and
23 EV markets and use kickbacks from those markets (Especially via convoluted campaign finance
24 laundering via Elon Musk) to finance the DNC.
25

1 The DNC bosses and Musk use character assassination as their main political tool against any
2 member of the public who speaks out against their felony stock market scams and PizzaGate-like
3 scandals. The Harvey Weinstein reports by Ronan Farrow show that they have teams of hired goons
4 that they pay to destroy people's lives.

5 They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media, Gizmodo Media, Media
6 Matters, David Brock, Sid Blumenthal, NY Times, Google servers, Facebook servers, Podesta Group,
7 Perkins Coie, Covington & Burling and a host of "media assassins".

8
9 Gawker and Gizmodo Media set-up the attack stories and, in paid partnership with Google,
10 Google kicks their attack links around the globe, in front of 8 Billion people, forever. Google locks the
11 attack articles of its enemies on the front top search results of Google search results forever, on
12 purpose! Google and Musk are partners-in-crime. Larry Page steals technology for Google and Musk
13 meets with Larry Page to advise him on which technologies to steal and how to bypass FEC laws.
14 Musk has exceeded FEC campaign finance limits by billions of dollars via “in-kind” services.

THE DEPT OF ENERGY AND THE WHITE HOUSE ATTACKS ANYBODY WHO EXPOSES THIS

How and why did a Donald Trump stripper-date named "Stormy" or an Elon Musk sex party or a Kavanaugh drinking incident or the Moonves and Weinstein indiscretions suddenly hit the news at about the same time in news history?

In addition to actual murder, Politicians and Silicon Valley Oligarchs hire operatives to end people's lives in other creative ways.

It is all part of the modern trend in vendetta, revenge and political payback when a Senator or a tech oligarch issues a "kill order" on an opponent.

The client does not like to get their hands dirty so the actual social hit job is performed by companies such as:

IN-Q-Tel - (DNC); Gawker Media - (DNC); Jalopnik - (DNC); Gizmodo Media - (DNC); K2 Intelligence - (DNC); WikiStrat - (DNC); Podesta Group - (DNC); Fusion GPS - (DNC/GOP); Google - (DNC); YouTube - (DNC); Alphabet - (DNC); Facebook - (DNC); Twitter - (DNC); Think Progress - (DNC); Media Matters - (DNC); Black Cube - (DNC); Mossad - (DNC); Correct The Record - (DNC); Sand Line - (DNC/GOP); Blackwater - (DNC/GOP); Stratfor - (DNC/GOP); ShareBlue - (DNC); Wikileaks (DNC/GOP); Cambridge Analytica - (DNC/GOP); Sid Blumenthal- (DNC); David Brock - (DNC); PR Firm Sunshine Sachs (DNC); Covington and Burling - (DNC), BuzzFeed - (DNC) Perkins Coie - (DNC); Wilson Sonsini - (DNC) and hundreds of others... These are the people and companies that except cash, revolving door jobs, political appointments, insider trading stock in Silicon Valley tech companies, prostitutes and real estate in exchange for destroying the lives of others.

These attackers deserve to be punished for the rest of their lives for taking away the lives of

1 others in exchange for cash. Any company who is corrupt enough to hire any of these assassins should
2 be forced out of business. These attack services are responsible for 90% of the "Fake News" problem in
3 the world because they are the authors of most fake news. Congress must act to make these kinds of
4 companies illegal!

5 These digital assassination services offer hit-jobs, character assassinations and economic
6 reprisal programs to famous billionaires and corrupt politicians who are seeking revenge, retribution
7 and vendetta executions.

8
9 In the case of reporters getting targeted for attacks, President Donald Trump has been accused
10 by the liberal corporate media of whipping up a hateful frenzy against the press. But while CNN’s Jim
11 Acosta grandstands against Trump, real journalists are still reeling from the draconian extrajudicial
12 measures that Barack Obama and his administration used to target them for exposing truth.

13 This secretive targeting occurred while Obama speechwriter and hate-filled ANTIFA supporter
14 Ben Rhodes was running “Operation Echo Chamber,” which reportedly continues, in which he fed
15 information to willing corporate media scribes. “They literally know nothing,” Rhodes said of the
16 twentysomething journalists he easily manipulated.

17
18 The Freedom of the Press Foundation’s Trevor Timm published documents showing how
19 former attorney general Eric Holder changed the rules to more effectively intimidate and surveil
20 members of the press.

21 Timm writes: “Today, we are revealing—for the first time—the Justice Department’s rules for
22 targeting journalists with secret FISA court orders. The documents were obtained as part of a Freedom
23 of Information Act lawsuit brought by Freedom of the Press Foundation and Knight First Amendment
24 Institute at Columbia University.”

1 Trending: Brennan and Clapper Accused of Hacking John Roberts To Blackmail Him

2 Here is the memo published by the Foundation, which dropped the documents in their entirety:

3
4 Obama is also clearly linked to the plot to obtain fraudulent FISA warrants on President Trump’s team,
5 as evidenced by Peter Strzok and Lisa Page’s texts confirming that Obama was overseeing their fly-by-
6 night operation.

7 Larry Schweikart reported for Big League Politics:

8
9 For months pundits and researchers have been pondering the mystery of the FISA approval that
10 led to the illegal and historically titanic scandals to ever hit the U.S. government. Some have argued
11 that Assistant Attorney General Rod Rosenstein knew the FISA was bogus when he extended it. Others
12 have wondered if Special Counsel Robert Mueller knew about the fraudulent basis of the FISA when
13 he used it, in part, to indict Michael Flynn. Other still, that Mueller was fooled by the FBI.

14 This is what President Trump calls “SPYGATE”.

15
16 It may well be that the surveillance that was conducted began with UK intelligence services and
17 then was fed back to the White House of Barack Obama. Here’s the kicker:

18 President Barack Obama did not need a FISA warrant to authorize spying/electronic
19 surveillance on Trump because Obama all along had legal authorization to by-pass the normal court
20 vetting process. According to 50 U.S. Code 1802, the “Electronic Surveillance Authorization” ()
21 “Foreign intelligence in relation to a US person (Trump or his associates) is information that’s
22 necessary for the US to protect against attack, hostile acts, sabotage, . . . as well as other clandestine
23 activities by a foreign power . . . OR . . . information relevant to national defense/security of the US, or
24 the conduct of foreign affairs of the U.S.” Such an authorization by Obama required certification by
25

1 Attorney General Loretta Lynch that must be logged with the FISC court. (“The [AG]+ shall
2 immediately transmit under seal to the court [FISC] a copy of his certification.”)

3 In short, the DOJ has this. If we are correct, a copy of that certification is currently under seal at
4 least with the DOJ and the FISC. This is what they are hiding.

5
6 However, the Act requires the AG to keep the Select Committee on Intelligence and the Senate
7 Committee on Intelligence informed of these authorizations and unmaskings therein. See 1803 (a) (1)
8 (C) If indeed this is what happened, did Lynch report—or only selectively report—to the committees in
9 a way that excluded non-friendlies? Can you see why Adam Schiff, Mark Warner, and their ilk are
10 terrified?
11

12 1) Obama authorized spying/electronic surveillance on Team Trump, by-passing normal
13 judicial oversight.

14 2) To create “foreign intelligence,” John Brennan and others organized for UK intelligence to
15 conduct surveillance on Trump and his associates, either from the UK or from UK assets within the
16 U.S. This is another reason revealing this will unleash an excrement storm: the UK is about to be
17 caught meddling bigly in an American election.
18

19 3) Lynch certified Obama’s authorization which is now held under seal by DOJ (and FISC).

20 From this authorization, all unmaking followed, as well as the FBI fraudulent counter intel
21 investigation and perhaps the FISA warrant too. Obama knew this was all fake when he made the
22 authorization; Lynch knew it was fake when she certified it; the entire inner circle, including the FBI,
23 all knew. This takes the U.S. into uncharted territory, and could imperil any politician in the British
24 government who supported this or had knowledge of it. Proving any of this would be difficult, as if
25
26

1 confronted Lynch would almost certainly cover up and Obama would simply deny knowledge. Without
2 a paper trail, a conviction might be a bridge too far. This is only one of thousands of "kill order" tactics
3 introduced by the Obama Administration.

4 These are the playbook tactics that Senators and tech oligarchs most often use to destroy the
5 lives of their political and business enemies:

6
7 - Government agency bosses sometimes solicit the target victims with false promises of future loans,
8 contracts or grants from their agency and cause the target victims to expend millions of dollars and
9 years of their time for projects which those government bosses had covertly promised to their friends.
10 They use the target victims as a “smokescreen” to cover their illegal government slush-funds for the
11 victims competitors and personal enemies. By using this tactic, the attackers can drain the target
12 victims funds and force them into an economic disaster in plain view of everyone without the
13 government bosses fearing any reprisal for their scam.
14
15

16
17 - Every match.com, okcupid.com, Plenty Of Fish, Seeking Arrangements and all other IAC-owned,
18 or similar, dating sites (IAC is managed by Hillary Clinton's daughter) have had their profiles, texts,
19 and inter-member communications, since those companies were started, hacked or purchased. The
20 attack service providers use Palantir and In-Q-Tel financed data analysis software to analyze every
21 activity in those dating services in order to find honey-trap, blackmail, sextortion and social conflict
22 exploitation opportunities. If you had a bad date with someone, that someone will be hunted down and
23 convinced to help harm, #metoo or "rape charge" the intended target. All dates involve a search for sex,
24 so the likelihood that a sexual disappointment experience will exist in each persons dating history is
25
26

1 high. Searching every past dating email and text of a subject is quite easy with modern software and
2 hacking techniques. A synthetically amplified, PR-agency optimized sex scandal can destroy any
3 target. Your dating experiences from the 70's or 80's will come back to haunt you decades later. Most
4 dates involve drinking alcohol and taking drugs. If you were unattractive or had bad sexual skills your
5 bad date will be called "date rape", "drugging your date for sex" and related twisted narratives that are
6 designed to shame you, the target. If you try to get a date in the future, your potential date will be
7 contacted by a third party who will slander and libel you to make sure your potential first date gets
8 cancelled. Your social life will, essentially, end. Every photo on every dating site is cross checked with
9 every other photo on the internet in order to cull your Facebook, LinkedIn, Snapchat and other social
10 media together to create a total psychological manipulation profile data file on you. A single photo on a
11 dating site can be cross searched on every mugshot archive, photo album and corporate database in the
12 worth within minutes using modern super-computers. Your sex life will be on public record in a flash.

13
14
15
16 - Social Security, SSI, SDI, Disability and other earned benefits are stone-walled. Applications of
17 targets are "lost". Files in the application process "disappeared". Lois Lerner hard drive "incidents" are
18 operated in order to seek to hide information and run cover-ups.

19
20 - Government officials and tech oligarchs contact members of the National Venture Capital
21 association (NVCA) and created national "black-lists" to blockade target victims from ever receiving
22 investor funding. This was also confirmed in a widely published disclosure by Tesla Motors Daryl Siry
23 and in published testimony. If Silicon Valley political campaign finance oligarchs black-list you (see
24 the "AngelGate" Scandal and the "High Tech No Poaching Class Action Lawsuit" cases) you will never
25

1 get investor funding again.

2
3 - FOIA requests are hidden, frozen, stone-walled, delayed, lied about and only partially responded to
4 in order to seek to hide information and run cover-ups.

5
6 - State and federal employees will play an endless game of Catch-22 by arbitrarily determining that
7 deadlines had passed that they, the government officials, had stonewalled and obfuscated applications
8 for, in order to force these deadlines that they set, to appear to be missed. This can bankrupt a target
9 victim.
10

11
12 - Some Victims found themselves strangely poisoned, not unlike the Alexander Litvenko case.
13 Heavy metals and toxic materials were found right after their work with the Department of Energy
14 weapons and energy facilities. Many wonder if these “targets” were intentionally exposed to toxins in
15 retribution for their testimony. The federal MSDS documents clearly show that a number of these
16 people were exposed to deadly compounds and radiations, via DOE, without being provided with
17 proper HazMat suits which DOE officials knew were required.
18

19
20 - Victims employers are called, and faxed, and ordered to fire target victims from their places of
21 employment, in the middle of the day, with no notice, as a retribution tactic.
22

23
24 - On orders from Obama White House officials, DNC-financed Google, YouTube, Gawker Media
25 and Gizmodo Media produce attack articles and defamation videos. Google locks this attack media on
26

1 the internet on the top line, of the front page of all Google searches for a decade in front of 7.5 billion
2 people, around the world. This attack-type uses over \$40 million dollars in server farms, production
3 costs and internet rigging. The forensic data acquired from tracking some of these attacks proves that
4 Google rigs attacks against individuals on the internet and that all of Google's "impressions" are
5 manually controlled by Google's executives who are also the main financiers and policy directors of
6 the Obama Administration. This data was provided to the European Union for it's ongoing prosecution
7 of Google's political manipulation of public perceptions.
8

9
10 - Victims HR and employment records, on recruiting and hiring databases, are embedded with
11 negative keywords in order to prevent the victim targets from ever gaining future employment.
12

13 - Gary D. Conley, Seth Rich, Rajeev Motwani and many other whistle-blowers in these matters,
14 turned up dead under strange circumstances. It is very possible that some of these attack services,
15 operated by former CIA operatives, even offer discrete murder-for-sale services using high-tech
16 assassination tools that make murders look like heart attacks and brain failures.
17

18
19 - Disability and VA complaint hearings and benefits are frozen, delayed, denied or subjected to lost
20 records and "missing hard drives" as in the Lois Lerner case.
21

22 - Paypal (A DNC-biased operation) and other on-line payments for on-line sales are de-platformed,
23 delayed, hidden, or re-directed in order to terminate income potential for target victims who competed
24 with the attackers interests and holdings.
25

1
2 - DNS redirection, "website spoofing" sends target victims websites to dead ends where no sales
3 orders or customer inquiries actually get back to the target. These internet revenue activity
4 manipulations are conducted using Google and Amazon servers. All commercial storefronts and on-
5 line sales attempts by target victims, will have had their sites hidden, or search engine de-linked by a
6 massively resourced facility located in Virginia, Texas or Palo Alto, California in order to terminate
7 revenue potentials for the target victims.
8

9
10 - Over 50,000 trolls, shills, botnets and synth-blog deployments are deployed to place defamatory
11 statements and disinformation about victims in front of 7.5 billion people around the world on the
12 internet in order to seek to damage their federal testimony credibility by a massively resourced facility.
13

14 - Campaign finance dirty tricks contractors are hired by campaign financiers to attack the friends and
15 family members of the target victim in order to create low morale for the target victims psyche and
16 motivation.
17

18
19 - Are you getting weird headaches and hearing a "buzzing sound" in your head? The U.S.
20 Government has now acknowledged that the Cuban, Chinese and other embassy "sonic attacks" are
21 from a known microwave beam weapon. Any one of the technical departments of the attack services
22 listed at the top of this article can build such a biological harassment weapon. It can be aimed at the
23 target victims office, bedroom or vehicle and, within a week, have caused biological and emotional
24 damage using a weapon that has no visible track of trajectory. It is designed to make the target victim
25

1 think they are "going crazy" or "hearing sounds in their head". While this may sound pretty out there,
2 web search "Embassy sonic attacks" on the top 5 non-Google search engines and read the very credible
3 reports of these attacks.

4
5 - In one case covert political partner: Google, transferred large sums of cash to dirty tricks
6 contractors and then manually locked the media portion of the attacks into the top lines of the top pages
7 of all Google searches globally, for years, with hidden embedded codes in the links and web-pages
8 which multiplied the attacks on Victims by many magnitudes.

9
10
11 - Covert Cartel financier: Google, placed Google’s lawyer: Michelle Lee, in charge of the U.S.
12 Patent Office and she, in turn, stacked all of the U.S. Patent Office IPR and ALICE review boards and
13 offices with Google-supporting employees in order to rig the U.S. Patent Office to protect Google from
14 being prosecuted for the vast patent thefts that Google engages in. Google has hundreds of patent
15 lawsuits for technology theft and a number of those lawsuits refer to Google’s operations as
16 “Racketeering”, “Monopolistic Cartel” and “Government Coup-like” behaviors. Thousands of articles
17 and investigations detail the fact that Google, “essentially” ran the Obama White House and provided
18 over 80% of the key White House staff. A conflict-of-interest unlike any in American history. Google’s
19 investors personally told Applicant they would “kill him”. Google and the Obama Administration were
20 “the same entity”. Applicant testified in the review that got Michelle Lee terminated and uncovered a
21 tactical political and social warfare group inside Google who were financed by Federal and State funds.
22
23

24
25 - Honeytraps and moles were employed by the attackers. In this tactic, people who covertly worked
26

1 for the attackers were employed to approach the “target” in order to spy on and misdirect the subject.

2
3 - Gawker Media, Gizmodo Media, Snopes, SPLC and other hired media assassins will be retained to
4 produce "hatchet job" character assassination articles about you. Then those articles will be faxed,
5 mailed and emailed to your employer and investors with a note saying: "You don't want to have
6 anything to do with this person, do you..?" in order to get you fired from your job and get your loans or
7 financing pulled. The attackers will use their round one attack media, that they authored, to create a
8 round two second wave attack designed to end your life via economic warfare.
9

10
11 - Mortgage and rental applications will have had red flags added to them in databases to prevent the
12 targets from getting homes or apartments.
13

14 - Krebs On Security, Wired, Ars Technica, The Wall Street Journal and most major IT publications
15 have reported that hundreds of spy "back-doors" have been found on every Intel, AMD, Apple, Xfinity,
16 Cisco, Microsoft, Juniper Networks motherboard, chip-set and hardware component set. This means
17 that any kid with the "key" code can open any computer, server, router, cloud-network or other network
18 connected device and read every file, photo, video, your calendar and email on your devices at any time
19 from any location on Earth. The key codes have been released to every hacker community in the world
20 for over ten years. There is now no government, corporate or personal data that can't be hacked, even
21 data from decades ago. Every single one of your darkest secrets can be in the hands of your enemy
22 within 60 minutes, or less. Important meetings you had planned with potential investors, employers,
23 clients, dates, suppliers and others will suddenly get cancelled at the last minute. They will get
24
25
26

1 cancelled because your enemies are reading your calendar remotely and covertly sending slander
2 information to those you had hoped to engage with in order to sabotage your life. Nothing you have
3 ever typed on a computer or Smartphone is safe. it WILL be acquired and it WILL be used against you.
4

5 - McCarthy-Era "Black-lists" are created and employed against target victims who competed with
6 Obama Administration executives and their campaign financiers to prevent them from getting funding
7 and future employment.
8

9
10 - Obama Administration targets were very carefully placed in a position of not being able to get jobs,
11 unemployment benefits, disability benefits or acquire any possible sources of income. The retribution
12 tactics were audacious, overt..and quite illegal.
13

14 - There are thousands of additional Dirty Tricks tactics being used by these Attack Services yet
15 Congress refuses to pass laws out-lawing such attack services. The cost of an attack on a person ranges
16 from \$150,000.00 to over \$50,000,000.00. While a Silicon Valley billionaire can afford to launch
17 counter-measures to these attacks, any regular taxpayer will be utterly destroyed, and incapable of
18 fighting back, against even the smallest version of one of these "kill orders". A number of modern
19 office shootings are the results of these attacks against an individual who has lost everything because of
20 the attack and has no options left.
21
22

23
24 Federal law enforcement, the United States Congress and the highest level investigators in the U.S.,
25 and abroad, have documented (per the "FISA Memo", Congressional Reports and federal employee
26

1 testimony) and proven the fact that the Obama Administration regularly engaged in the operation of
2 retribution, vendetta and reprisal campaigns known as “hit-jobs” against domestic natural born U.S.
3 citizen domestic taxpayers. The Federal Court, in at least one previous court case, has ruled that
4 Applicants, in this particular matter, were the victims and target of a number of these attacks designed
5 to inflict permanent medical, emotional, character assassination, brand negation, economic and career
6 damage.

Lara Logan "I'm Being 'Targeted' For Saying the Media is 'Mostly Liberal'"

by Tamar Auber

On Wednesday, former CBS News foreign correspondent Lara Logan spoke with Fox News Sean Hannity about her recent comments slamming the media as “mostly liberal.”

Logan told Breitbart podcaster Mike Ritland the remarks made on his show — which drew widespread attention online — amounted to “professional suicide.”

Defending her remarks on Hannity’s show, Logan said that as the result of her speaking out about how the media is “mostly liberal” she has been targeted because she is an independent voice.

“Any journalists who are not beating the same drum and giving the same talking points,” she insisted “pay the price” for not going along with the liberal crowd.

She also called out her targeters by name.

“I know they’re going to come after me,” she told Hannity. “Michael Calderone who is at the Huffington Post. I can give you the script now. I can tell you who the players are. Joe Hagan. Brian Stelter.”

She added: “They smear you personally. They go after your integrity. They go after your reputation as a person and a professional. They will stop at nothing. I am not the only one. And I am just, I am done, right, I am tired of it. And they do not get to write my story anymore. They don’t get to speak for me, I want to say loudly and clearly to anybody who is listening, I am not owned. Nobody owns me, right? I’m not owned by the left or the right.”

Logan made headlines recently when, during a scorched earth podcast interview with Ritland, she said that there was a lot of “weight” in most news organizations on “one side of the political

1 spectrum.”

2 “The media everywhere is mostly liberal. But in this country, 85 percent of journalists are
3 registered Democrats. So that’s just a fact, right?” she told Ritland.

4 She also trashed reporting based on single, anonymous government sources.

5 “That’s not journalism, that’s horseshit,” Logan stressed. “Responsibility for fake news begins
6 with us. We bear some responsibility for that, and we’re not taking ownership of that and addressing it.
7 We just want to blame it all on somebody else.”

PUBLIC RECORD PROVE THE EXISTENCE OF MANY OBAMA HIT-JOB ATTACKS ON CITIZENS

Internal documents from a private Israeli intelligence firm called Psy-Group show that, at the time of many incidents, the company, and possibly other private investigators, were targeting U.S. citizens because they spoke up about crimes.

Psy-Group’s intelligence and influence operations, which included a failed attempt in the summer of 2017 to sway a local election in central California, were detailed in a New Yorker investigation that I co-wrote earlier this month. Before it went out of business (ie: changed it's name) , last year, Psy-Group was part of a new wave of private-intelligence firms that recruited from the ranks of Israel’s secret services and described themselves as “private Mossads.” Psy-Group initially stood out among its rivals because it didn’t just gather intelligence; its operatives used false identities, or avatars, to covertly spread messages in an attempt to influence what people believed and how they behaved. In 2016, Psy-Group held discussions with the Trump campaign and others about conducting covert “influence” operations to benefit the candidate. Psy-Group’s founder and C.E.O., Royi Burstien, a veteran Israeli intelligence officer who established the firm in 2014, told me that his talks with the Trump campaign went nowhere. The company’s posturing, however, attracted the attention of Robert Mueller, the special counsel, who has been investigating interference in the 2016 Presidential race.'

FED BOMBSHELL: Fusion GPS Bribed Dozens of MSM Journalists With Cash To Run Character Assassinations, While News Companies Paid Firm to Dig Dirt on Trump

1 High-ranking FBI insiders are pulling back the curtain on Fusion GPS, the firm that
2 commissioned and spread the bogus Trump dossier.
3

4 It appears the embattled intelligence firm was quite busy paying off Big Media reporters,
5 according to federal sources who have traced dozens of transactions between TD Bank and media
6 members as well as media organizations, sources confirm.
7

8 But stunningly, Big Media organizations have employed Fusion GPS to dig dirt on politicians
9 and D.C.’s elite — namely Donald Trump.

10 “Fusion GPS was on the payroll of the media and in turn had members of the media on its
11 payroll,” one FBI insider said.
12

13 **Bombshell revelations.**
14

15 FBI insiders confirm Fusion GPS employed law firms as well as shell companies to send and
16 receive funds to and from media and reporters. But the embattled firm also used its accounts at TD
17 Bank to directly commission reporters. Likewise, Fusion GPS received funds from media companies
18 into its own accounts at TD Bank, FBI insiders said,
19

20 “There are dozens of payments from the media flowing into their (Fusion GPS’) account,” one
21 federal law enforcement official said. “One company wired funds to Fusion (GPS) more than a dozen
22 times.”
23

24 Why would media companies commission Fusion GPS? Likely to dig dirt on enemies or secure
25 records that reporters could not legally obtain, one federal law enforcement insider said. One FBI
26

1 insider said the payments to Fusion GPS coincide with Donald Trump’s run for the White House.

2 The payments were made between Sept. 2015 and Sept. 2017, records show.

3 The unthinkable: The mainstream media paying Fusion GPS for dirt on Trump to the same firm
4 the Democratic National Committee paid to fund the bogus Trump dossier. And at the same time
5 Fusion GPS bribing journalists to place stories — likely negative about Trump, as well as spread the
6 bogus Trump dossier around.

7 **Stunning!**

8 Was BuzzFeed — the only company to publish the full bogus dossier — on that list?

9 And who is on the payroll? We are trying to run that information down.
10

11 *And why aren’t these people behind bars?*

HOW AMERICA CAN SAVE BILLIONS OF DOLLARS

Feds Could Save Taxpayers ‘Billions Of Dollars’ By Straightening Out One Corrupt Energy

Department Program, Report Finds

Michael Bastasch | Energy Editor

The Trump administration could save “billions of dollars” if the Energy Department improved its management of radioactive waste cleanups, according to the Government Accountability Office (GAO).

The GAO [report](#), released Tuesday, also reported Congress could save up to \$4.3 billion by eliminating the loan program that gave \$192 million to a failed luxury electric car company.

“The Department of Energy could potentially avoid spending billions of dollars by developing a program-wide strategy to improve decision-making on cleaning up radioactive and hazardous waste,” GAO reported.

The Energy Department is responsible for cleaning up waste from nuclear weapons produced during the Cold War. The department has spent \$170 billion on cleanup since 1989, GAO reported, but lots of radioactive waste remains. [\(RELATED: The NYT Walks Back Bombshell EPA Report, Doesn’t Issue A Correction\)](#)

The cost of cleanup is growing. The Energy Department estimates future nuclear waste cleanup could cost \$377 billion at 16 sites across the country. GAO says taxpayers could save billions if they

1 took a programmatic approach rather than each nuclear waste site setting its own priorities.

2 The 200 Area of the Hanford nuclear site is seen in a 1995 aerial photo. Department of
3 Energy/Handout via REUTERS

4 For example, Energy Department officials estimated \$18 billion in savings from prioritizing
5 high-risk over low-risk waste at the Hanford site in Washington state. The department has yet to
6 determine what it will do with as much as two-thirds of the low-risk waste at Hanford.

7 The Hanford site cleanup [came under increased scrutiny](#) after a “take cover” order was given in
8 2017 after a tunnel containing radioactive waste collapsed.

9 “DOE officials said that they are making progress in implementing a national programmatic
10 approach to the cleanup and will continue to work toward this,” GAO reported. “DOE provided
11 technical comments, which were incorporated as appropriate.”

12 GAO also highlighted an open recommendation to Congress that could save taxpayers up to
13 \$4.3 billion.

14 “Unless the Department of Energy can demonstrate demand for new Advanced Technology
15 Vehicles Manufacturing loans and viable applications, Congress may wish to consider rescinding all or
16 part of the remaining credit subsidy appropriations,” GAO reported.

17 The Obama administration used that loan program to hand out taxpayer funds to electric car
18 companies, including luxury **automaker Fisker Automotive, which drew down on \$192 million**
19 **before [having its government credit stripped](#) away.**

20 Fisker’s loan was [sold off to a Chinese billionaire](#) for \$25 million in 2013, netting
21 **taxpayers a \$139 million loss.**

DOE CORRUPTION—APPOINTED AND ELECTED OFFICIALS SHOULD FACE PRISON TIME

[Marita Noon](#)

An exhaustive review of [350+ pages of leaked emails](#) regarding the Obama administration’s handling of the various green-energy loan and grant programs makes several things very clear: they [lied](#), engaged in favoritism, and rushed application approvals to suit the political agenda of the White House. At the same time, worthy projects that went through a complete due diligence process were denied or ultimately withdrawn, as the lengthy approval process “taxed investors’ patience”—as was the case with Aptera Motors, which worked closely with the DOE for two years.

Paul Wilbur, President and CEO at Aptera, didn’t think they were treated unfairly. He told me, “At the end of the day, we couldn’t get through the process.” But, he admits, he hasn’t read the emails.

Aptera was trying to build a very efficient electric vehicle with an under \$30K price point. Wilbur met with Secretary Chu who could see the value in the technology. But our research shows that value was not the deciding factor in which projects got funded and which ones didn’t. Wilbur reports that he didn’t donate to any candidate. He wanted to keep the whole process clean and do what was “good for America.”

[The report](#) from the House Oversight Committee says Aptera first applied for an ATVM loan in December of 2008 and “shut down on December 2, 2011.” The report implies that Aptera was led on: “After numerous negotiations with DOE, in September 2011, Aptera received a conditional loan commitment of \$150 million if the company was able to raise \$80 million privately.” And: “The loans given to Fisker and Tesla gave Aptera hope that DOE would eventually act on their application. More importantly, since the DOE continued to engage with the company throughout the time period,

1 management was convinced that DOE was interested and willing to provide financing for the
2 company.”

3 Aptera’s 100% US technology has since been sold to a Chinese company.

4 Aptera was applying for an Advanced Technology Vehicle Manufacturing loan (ATVM). Only
5 five loans were given out through the program and all have political ramifications. Christine Lakatos,
6 who has worked with me on the green-energy, crony-corruption reports I’ve written, has done thorough
7 research on the topic. She has read each and every one of the 350+ pages of emails released on October
8 31 and has written a [blog post](#) specifically addressing the ATVM program and its hijinks. As she cites,
9 Fisker and Tesla (which Romney referenced in the first debate), got loans in 2010 and then the Vehicle
10 Production Group’s loan was the only ATVM loan closed in 2011; all have ties to Obama bundlers.
11 The other two ATVM loans went to Ford and Nissan—both of which, according to the House [report](#),
12 “were heavily engaged in negotiations with the Administration over fuel economy standards for model
13 years 2012-2016 at the time the DOE was considering their applications. Both companies eventually
14 expressed publicly their support for these standards, which the Administration described as the
15 ‘Historic Agreement.’”

16 Armed with the sweeping knowledge of the House reports and subsequent hearings, evidence
17 from DOE staffers (many of whom were appointed by Obama), Lakatos’ research, and personal
18 experience, a different ATVM applicant has now taken its case to court citing “corruption and
19 negligence.”

20 On November 16, 2012, [XP Technologies](#) filed a lawsuit against the federal government
21 concerning the DOE’s denial of XP Technology’s loan guarantee application. The [complaint](#) alleges:
22 “criminal activities did take place by DOE staff and affiliates.” A November 23 [press release](#)
23

1 announces that XP Technologies is now represented by [Cause of Action](#), “a nonprofit, nonpartisan
2 organization that uses investigative, legal, and communication tools to educate the public on how
3 government accountability and transparency protects taxpayer interests and economic activity.”

4 According to the document filed on November 16, “Plaintiffs' backgrounds include extensive
5 issued patents on seminal technologies in use world-wide, White House and Congressional
6 commendations and an engineering team of highly experienced auto-makers. Plaintiff brought a vehicle
7 design, which was proposed as the longest range, safest, lowest cost electric vehicle, to be built in
8 America in order to deliver extensive American jobs nationwide. No other applicant, or award
9 ‘winner’, has succeeded in meeting, or (is) intending to meet, that milestone. XP Technology
10 developed a patented lightweight, low-cost, long-range, electric vehicle using air-expanded foam-
11 skinned material for a portion of the polymer body and received numerous patents, acclaim and
12 superior computer modeling metrics over any competing solution. XP presented a vast set of letters of
13 support to DOE from pending customers. Major auto-industry facilities and engineers had joined forces
14 to bring the vehicle to the defense, commercial and consumer market.”
15
16

17 Over the weekend, we had an exclusive interview, on condition of anonymity, with a senior
18 official at XP Technologies about the lawsuit and the experience.

19 He reported: “Staff from within the DOE have provided evidence which is quite compelling.”
20 As Aptera's Wilbur made clear, the individuals within the DOE were very thorough. One of the emails,
21 in the 350+ pages, was from Secretary Chu himself in which he criticized staffers for taking a
22 “principled stand,” which held up the approval process of projects the White House wanted advanced.
23 Another indicated that the pressure to rush was coming from “above the agency.” Overall, the emails
24 show that projects were rushed so that announcements could coincide with visits, speeches, and photo
25
26

1 ops—as well as providing talking points for the president.

2 Our XP source told us “We experienced, and have been provided evidence of, applicant
3 submissions and reviews being modified in order to benefit some and disadvantage others, and the
4 business connections between the different parties associated with the ones that benefited is quite
5 extraordinary.” The leaked emails support this accusation, specifically regarding the “business
6 connections.” In her post, Lakatos calls it “green fraternizing.” The emails show that certain applicants
7 and decision makers went bike riding together, had coffee meetings, sleepovers, beer summits, parties,
8 dinners, and fundraisers.

9
10 While he didn’t provide us with a name, the XP official said, “We experienced a senior senator
11 blockading our efforts and then providing favors to a competitor, which then benefited his family
12 financially.” The discovery the lawsuit will provide will expose the “senior senator,” but our previous
13 research shows that [Senator Harry Reid](#)’s actions seem to fit the XP official’s comment.

14
15 XP Technologies believes that “DOE officials changed the first-come-first-served published
16 rules and standards of the funding in order to take applicants in order of who they favored and who had
17 purchased the most influence instead of the order in which they applied, as required.”

18
19 Having extensively studied the DOE’s various loan programs, including the ATVM, Lakatos
20 and I agree with our source’s startling conclusion: “Based on the evidence provided by investigators,
21 and experienced directly by our team, it is hard to imagine that at least one or more elected, or?
22 appointed, officials might not be seeing measures ranging from censure or even federal prison time.”

23 Time, the lawsuit, and subsequent investigation will tell.

24
25 While the House Oversight Committee has been digging deeply into the mismanagement and
26 corruption of the green energy loans, the media has paid little attention. Other than [our report](#), the

1 October 31 release of the emails cited here received virtually no news reporting. Even the Fox News
2 Channel ignored the story. The plight of promising companies like Aptera and XP Technologies would
3 have gone unnoticed if not for the lawsuit. The legal complaint attracted attention.

4 On November 16, the [Heritage Foundation](#) broke the XP story: “A lawsuit filed in federal court
5 on Wednesday alleges mass favoritism in the Department of Energy’s decisions to award federal grants
6 to major car companies to develop electric vehicles, according to a legal complaint obtained by
7 Scribe.”

8
9 On November 19, Lakatos, whose work is listed as “evidence” in the legal complaint, received
10 a call from Fox News’ Gary Gastelu—who [reported on the story](#) on November 20. The next day, Fox
11 News covered the lawsuit on America’s Newsroom. Even the Drudge Report picked up on the story.

12 XP has a [litigation website](#) on which the company states: “The case has nothing to do with
13 complaining about not getting the loans. It has everything to do with HOW the applicants didn't get the
14 loans!” They are communicating with other applicants about participating in the lawsuit.

15
16 The XP story and subsequent media coverage offers a lesson for others—especially industries
17 who have been wronged by the Obama Administration’s practices (such as energy). The lawsuit may—
18 or may not—send officials to federal prison, as our XP source suggests, but it could go a long way to
19 winning in the court of public opinion.

HOW THE BRIBES WERE PAID...

...in the Cleantech Crash with energy department “green” cash

From 2006 to 2012 Nancy Pelosi and her staff, Dianne Feinstein and her staff, Harry Reid and his staff and the campaign staff for Barack Obama made more illicit profiteering money on insider stock trading on “Green Energy” deals than the entire U.S. Congress had made, inclusively, since the founding of the USA! Senior staffers buy and sell shares in companies that benefit from legislation in their committees.

By Maggie Severns and Taylor Callery for POLITICO

On Sept. 28, 2016, three members of the Senate Judiciary Committee sent a letter to the Justice Department suggesting that the drug company Mylan was violating Medicaid laws.

Nine days later, the Justice Department reached a massive \$465 million settlement with the firm.

In between, another action happened almost invisibly: A Judiciary Committee aide to Sen. Dick Durbin (D-Ill.) dropped somewhere between \$4,004 and \$60,000 in Mylan stock from his and his child’s portfolios.

If an aide had done the same thing in the executive branch, he or she could be investigated for violating federal conflict-of-interest law. But the Durbin aide’s ownership of shares of Mylan, and their timely sale, are reflective of Congress’ persistent refusal to crack down on stock trading by staffers, even in firms overseen by their committees.

1 Durbin’s aide, Daniel Swanson, isn’t alone. A POLITICO review of federal disclosures for
2 2015 and 2016 found that some senior aides regularly buy and sell individual stocks that present
3 potential conflicts of interest with their work. A smaller number of staffers trade in companies that
4 lobby Congress and the committees that employ them. In all, approximately 450 aides have bought or
5 sold a stock of more than \$1,001 in value since May 2015.

6
7 That’s likely just the tip of the iceberg, since most congressional aides aren’t required to report
8 their trades. Only those in positions earning more than \$124,406 per year must reveal their investments.
9 Of the 12,500 staffers working for lawmakers, committees and leadership offices, only about 1,700
10 make that much, according to data compiled by Legistorm and the Brookings Institution.

11
12 Government watchdogs say that, at a minimum, staffers should be prevented from buying
13 shares of companies with business before their committees. But they are not. And despite the disparity
14 between the rigorous standards for the executive branch and the laxness of Congress, the House and
15 Senate have taken a permissive approach even to enforcing existing rules.

16
17 That’s a serious problem, watchdogs say, because aides often have more of a hands-on role than
18 the members themselves in crafting details of legislation that could have enormous consequences for
19 individual companies. And because aides are rarely in the spotlight, there’s more potential for ethical
20 lapses to go unnoticed.

21 Reckless stock trading leaves Congress rife with conflicts

22
23 “The staff level is actually more dangerous, because they don’t get scrutiny and they’re not
24 accountable,” said Meredith McGehee, chief of policy at Issue One, a watchdog group for money and
25 politics. “If a member does it, he can get defeated. A staff person can wield enormous amounts of
26

1 power that isn't seen, and there's really no way to hold that staff accountable.”

2 Indeed, one of the key findings of the POLITICO review is that senior aides to both Republican
3 and Democratic House leaders, who often have quiet, largely unseen input into the crafting of
4 legislation, are active traders.

5 At least 11 aides to House leaders have bought and sold multiple stocks in the past two years.
6 David Hoppe, who was Speaker Paul Ryan's chief of staff in late 2015 and 2016, regularly traded
7 stocks.
8

9 Hoppe and his wife bought shares of the oil companies Occidental Petroleum and Devon
10 Energy shortly before Congress announced plans to lift a years-old ban on oil exports that benefited
11 both corporations.
12

13 Diane Dewhirst, deputy chief of staff to House Minority Leader Nancy Pelosi, disclosed her
14 spouse's purchase of stock in two pharmaceutical companies, Astrazeneca and GlaxoSmithKline, in
15 December 2016, shortly before Congress passed a medical research bill that benefited both companies.
16

17 3 things to know about congressional aide stock trading

18 Senior staffers buy and sell shares in companies that benefit from legislation in their
19 committees.
20

21 Meanwhile, on the House Energy and Commerce Committee, which sets energy policy and is
22 the main committee overseeing Obamacare, at least six aides have bought and sold stock in companies
23 with interests in the work of the committee. One longtime committee aide in an oversight role bought
24 and sold more than two dozen health care and energy stocks during 2015 and 2016 and sold his stock in
25

1 Express Scripts, the prescription drug sales company, as the company came under scrutiny over its role
2 in setting drug prices last October.

3 On the House and Senate appropriations committees, which make broadly influential spending
4 and policy decisions through annual government funding bills, at least 18 House aides and 14 Senate
5 aides have bought or sold at least one stock, through their own accounts or family members'. For
6 example, one senior House Appropriations aide working for a member focused on energy and water
7 funding has,

8
9 through various family accounts, bought and sold shares in companies including Royal Dutch
10 Shell, Energy Transfer Partners, Dow Chemical and Emerson Electric. Another longtime aide on the
11 committee's staff who is focused on investigations and research, which are at the heart of the
12 committee's decision-making, holds and trades stock in companies with major interests in the
13 committee's work, including pharmaceutical companies such as GlaxoSmithKline and energy
14 companies such as Occidental Petroleum.
15

16 Swanson, Hoppe and some other senior staffers said their brokers are authorized to buy and sell
17 stocks without their involvement, and thus they were not consulted on the trades listed in their
18 disclosure forms. But ethics watchdogs have long frowned on such personal deals, noting that they can
19 be abridged at any time and that outsiders have no way to verify that they're being followed. Aides,
20 like members themselves, can create blind trusts that fully bar them from involvement in any trades. If
21 they don't want to go to the trouble of setting up a blind trust, they could protect themselves from many
22 potential conflicts by investing in publicly traded mutual funds.
23

24 Meanwhile, some staffers also defended their trading on the grounds that the congressional
25

1 actions that affected the companies they bought and sold, including the three senators’ letter to the
2 Justice Department about Mylan, were known to the public. Ethics watchdogs, however, say that it’s
3 often difficult, if not impossible, to determine whether an aide has information that wouldn’t be
4 available to the public, and that any trading of stocks that are directly influenced by their committee
5 work constitutes a conflict of interest.

6
7 “It causes the public to question whether personal stock holdings are influencing legislative
8 activity,”

9 said Donna Nagy, an Indiana University law professor who has written extensively on the issue.
10 “That doesn’t necessarily mean a ‘yes’ or ‘no’ vote, as it would a senator or member of Congress. Did
11 personal stock holdings influence the speed or slowness with which a report is written? That’s
12 something that would be in staffers’ control.”

13
14 Simply having a financial stake in an industry may make a person more likely to advocate for it,
15 at least in the eyes of taxpayers. That’s the premise behind the far tougher requirements for staffers in
16 the executive branch, where employees are required by law to recuse themselves from any investments
17 that could potentially conflict with their work.

18
19 Senate committee aides are held to no such legal standard. But a little-recognized Senate rule
20 states that aides should divest themselves “of any substantial holdings which may be directly affected
21 by the actions of [their] committee” unless they have permission from the Senate Ethics Committee.

22
23 But the rule is interpreted quite narrowly, watchdogs say: The Senate Ethics Committee often
24 measures a “substantial holding” by the percentage of a company that’s owned by the aide, or whether
25 an individual investment constitutes the bulk of an aide’s savings — not the amount of money that’s
26

1 invested. So most stock trades aren't covered. The Ethics Committee declined to comment.

2 And the Ethics Committee rarely probes stock trading by aides. Ethics watchdogs told
3 POLITICO they couldn't think of a single case of an aide being investigated for a conflict of interest.
4 The committee hasn't issued a disciplinary sanction against an aide for any reason in 10 years.

5
6 "There does not appear to be an effective system of enforcement in place," concluded Craig
7 Holman, lobbyist at the watchdog group Public Citizen. "This is the type of conflict-of-interest rule that
8 should apply to all members as well as senior staff, enforced by real-time public disclosure or stock
9 trading activity."

10
11 "Anybody who's ever met Dan [Swanson] knows that he has conducted himself with the utmost
12 integrity every day of his public service on the Hill," Sen. Dick Durbin's spokesman said. "That may
13 not matter to POLITICO, but it matters in the real world and to Sen. Durbin, and that's what counts." |

14
15 Through their brokerage accounts, Swanson, who is Durbin's senior counsel on the Judiciary
16 Committee, and his immediate family bought and sold stocks of at least \$1,000 in value 120 times over
17 2015 and 2016, according to his financial disclosures. His family's holdings amount to somewhere
18 between a minimum of \$99,043 and a maximum of \$785,000, based on the price ranges in the
19 disclosure form. Some of those purchases and sales were in mutual funds, while others were in
20 companies with significant business interests before Durbin and the Judiciary Committee.

21
22 Among a variety of trades made through his and his family's accounts, Swanson bought and
23 sold stock in 2U, a for-profit online education company that bills itself as an alternative to the
24 traditional for-profit colleges that have been heavily criticized by his boss, Durbin. He traded stock in
25 Comcast and Verizon,

1 both of which have come under Judiciary Committee scrutiny in the past because of proposed
2 deals and mergers. And he held and sold stock in Express Scripts, a company that, like Mylan, has
3 increasingly caught the eye of regulators and lawmakers for its possible role in drug overpricing.

4 When asked about the trades, Durbin spokesman Ben Marter provided a letter from Swanson’s
5 brokerage firm that says trading in Swanson’s account is directed by the firm based on “a mutually
6 agreed upon written statement of your objectives” and that the investment firm has “full authority” to
7 make trades without giving Swanson notice.
8

9 Swanson declined to comment further.
10

11 Durbin himself is among the many House members and senators who avoid buying and selling
12 stocks, in many cases because of the ethical ramifications of being invested in companies while voting
13 on and passing laws. And he introduced a bill earlier this year to force President Donald Trump and
14 Vice President Mike Pence to completely divest themselves of any holdings that could present conflicts
15 of interest.
16

17 If Trump dropped such investments, Durbin said, it would let “the American people know with
18 certainty that he is putting America first.”

19 But when it comes to his aides, Durbin stops far short of requiring the sale of investments.
20

21 “Anybody who’s ever met Dan knows that he has conducted himself with the utmost integrity
22 every day of his public service on the Hill,” Durbin spokesman Marter said. “That may not matter to
23 POLITICO, but it matters in the real world and to Sen. Durbin, and that’s what counts.”
24

25 As Paul Ryan prepared to become speaker of the House in October 2015, he tapped David
26

1 Hoppe, a fellow Wisconsin native and former Hill aide, to serve as his chief of staff. Hoppe left
2 lobbying jobs with both his own firm, Hoppe Strategies, and the K Street powerhouse Squire Patton
3 Boggs to work for the new speaker. After he moved back through the revolving door, Hoppe continued
4 to trade stock in companies with interests before Congress.

5
6 Hoppe, who has a variety of investments in his and his wife’s portfolios, traded dozens of
7 stocks between mid-December 2015 and January 2017, when he left Ryan’s office. Some of those
8 trades were made days ahead of Congress passing legislation that benefited the companies Hoppe
9 traded in, and at moments when companies were furiously attempting to sway lawmakers.

10
11 As Congress finalized a massive tax-and-spending package at the end of 2015, Hoppe and his
12 wife invested in two petroleum companies that were aggressively lobbying Congress to lift the 30-year
13 ban on oil exports, Occidental Petroleum and Devon Energy. Hoppe made the purchases 16 days before
14 Congress announced plans to lift the ban on oil. During the fall of 2016, as Congress finalized and
15 passed a \$6 billion medical research bill, Hoppe’s spouse invested in the pharmaceutical companies
16 Merck and Bristol-Myers Squibb.

17
18 Such investments can present conflicts of interest, or the appearance of, even if they’re not
19 based on inside information.

20
21 “It looks terrible. They shouldn’t be doing this,” said Richard Painter, former ethics lawyer for
22 President George W. Bush, referring to stock trading by aides to House and Senate leaders. “There are
23 two separate problems. One is that if they buy or sell stock based on insider information, they’re
24 criminals. But if they make decisions on a bill that could have an effect on their own financial
25 decisions, that might not be a crime — though it is a crime in the executive branch — [but] it stinks to
26

1 high hell.”

2 In the executive branch, employees are barred from holding investments that pose potential
3 conflicts with their work, and must recuse themselves from decisions that could conflict with their
4 remaining investments. In Congress, however, employees are often left to set their own standards.
5

6 Hoppe said in an interview that he doesn’t direct trades in the two accounts controlled by him
7 and his wife. Prior to joining Ryan’s office, he said, he and his wife asked their brokers to keep him out
8 of any trading decisions.
9

10 “There were no directions in which [a broker] called me and said, ‘Do you want to trade this?
11 Do you want to trade that?’” said Hoppe. “Has there been a time when they’ve asked me about
12 something or another? Probably, but I can’t remember it, and I can tell you it wasn’t when I was
13 working for Paul.”
14

15 Dewhirst, the top Pelosi aide whose spouse bought stock in pharmaceutical companies shortly
16 before Congress moved to pass the medical research bill, has worked for Pelosi since 2003. She also
17 recorded purchases and sales in energy and technology stocks in the past two years. Nearly all of those
18 transactions were listed to an account controlled by her spouse. A Pelosi spokesperson said in a
19 statement that Dewhirst is not involved with the investments.
20

21 “All transactions are made by [Dewhirst’s] spouse upon the recommendation of his investment
22 advisor,” the Pelosi spokesperson said.
23

24 Pelosi is one of few members of House and Senate leadership who actively buys and sells
25 stocks — and she was heavily criticized for it in a 2011 report by “60 Minutes” about the stock trading
26 habits of members of Congress. She has since scaled back the number of stocks that she and her
27

1 husband buy and sell. An account owned by Pelosi's husband traded 14 stocks in the past two years.

2 Most senior members of House and Senate leadership avoid the practice because of the
3 potential for conflicts of interest. Ryan, House Majority Leader Kevin McCarthy, House Majority
4 Whip Steve Scalise and House Minority Whip Steny Hoyer all refrain from buying and selling shares
5 of individual companies. Senate Majority Leader Mitch McConnell sold three stocks this year but has
6 otherwise abstained from trading, and Senate Majority Whip John Cornyn made one purchase and one
7 sale in recent years, each in Apple stock.
8

9 While they avoid any appearance of conflicts in their own trades, they seem to exercise little
10 restraint on their aides, who are often the real experts on the intricacies of policies. Planned Parenthood
11

12 President Cecile Richards described Dewhurst, for example, as “the first person I call if I'm
13 trying to really get the lay of the land on an important issue, particularly on the Hill,” in a 2015
14 interview.
15

16 David Hoppe (left), who was Speaker Paul Ryan’s chief of staff in 2015 and 2016, traded stock
17 in companies with an interest in Congress. | Tom Williams/CQ Roll Call Some aides who engage in
18 trades, like those on the House Energy and Commerce Committee, are charged with overseeing
19 powerful industries. In the House, committee aides are allowed to do so while holding and trading
20 stocks in those very industries. Meanwhile, they’re sometimes being lobbied by very same companies.
21 The company whose stock Swanson held, Mylan, spent \$315,000 lobbying Capitol Hill last fall,
22 including \$170,000 paid to the Podesta Group solely to lobby on “drug pricing and oversight,” after it
23 was accused of mischaracterizing its drug EpiPen in order to avoid having to pay a federally mandated
24 rebate, according to public filings.
25
26

1 “The very senior staffers ought to be considered very much the same as members. These are
2 policy-making individuals. They’re the people lobbyists want to meet with and influence,” said
3 Holman, of Public Citizen. “It’s their ability to affect public policy that matters, whether or not they
4 receive votes or subject themselves to elections.”

5
6 For his part, Hoppe recalled that during an earlier stint on Capitol Hill working for former
7 Senate Majority Leader Trent Lott, he once recused himself from working on an issue involving the
8 Walt Disney Co. because he was a shareholder. But he said he didn’t see any similar conflicts while
9 working for Ryan, and added that he was on only a temporary stint in the speaker’s office, waiting to
10 return to his lobbying job.

11
12 “I’m obviously older, and they don’t pay the same on Capitol Hill as I was making in the
13 private sector,” Hoppe said. “My wife likes living in a house as opposed to living in a car.”

14
15 Many Capitol Hill aides are young and don’t earn enough money to have large investment
16 portfolios, Hoppe said, and nearly all are drawn to public service for reasons that have nothing to do
17 with making money. But he didn’t rule out the possibility that aides could have access to information
18 that would boost their holdings.

19
20 “Is it in the realm of possibility that somebody could do that? Yes. Is it very likely? No,” Hoppe
21 said. “But people who are dishonest will find a way to be dishonest.”

22
23 Though congressional aides are largely invisible to the public’s eye, they have played roles in
24 well-publicized scandals in the past. In the early 1960s, a Senate aide close to Lyndon Johnson named
25 Bobby Baker was investigated for using his office for personal gain, including accepting cash in
26 exchange for promoting legislation, and running a vending-machine company, Serv-U. Baker’s net

1 worth as a Senate aide ballooned from \$11,000 to \$2.5 million over the course of two decades. He was
2 later convicted of crimes including fraud and tax evasion, and both the House and Senate soon started
3 requiring aides to disclose their finances for the first time.

4 More recently, since Congress passed the Stock Act, a 2012 law that for the first time formally
5 barred members of Congress from insider trading, the sole Securities and Exchange Commission
6 investigation of a potential Stock Act violation that’s known to the public involves the actions of a
7 congressional aide.

8
9 The aide, a former Ways and Means Committee staff director, allegedly leaked information
10 about Medicare reimbursement rates that were about to rise. A firm called Height Securities, which
11 specializes in gathering intelligence in Washington and relaying it to Wall Street, sent the information
12 to hedge funds, causing stock to shoot up in a company that benefited from the Medicare rate hike.

13
14 The SEC has been investigating the case since 2013, but it was delayed for several years when
15 House counsel refused to comply with SEC subpoenas for testimony and documents related to the
16 investigation.

17
18 Though the SEC and the House reached an undisclosed agreement that settled the court case,
19 the SEC

20 hasn’t yet announced the results of its investigation. But watchdogs say it shows why the laws
21 governing stock trades by aides need to be tightened: Congress seems intent on protecting its unique
22 status and perks, and the SEC remains mostly silent on stock trading.

23
24 “We’d be a lot better off if the SEC would look into it, find out what’s going on, and reach the
25 conclusion that there are no serious insider-trading concerns — or, if there are concerns, take
26

1 enforcement action,” Painter said.

2 And while concerns over separation of powers could make it difficult for the SEC to take some
3 investigative steps, such as seizing congressional documents, Painter said, “there’s absolutely no reason
4 not to start an investigation, and I think 99 percent of what they need, they could get without
5 problems.”

6
7 The potential problems arising from aides trading stocks extend beyond insider trading. There’s
8 also the potential that investing in a company could corrupt the views or interests of staff.

9
10 New York Republican Rep. Chris Collins, a business titan who is among the House’s wealthiest
11 members, garnered headlines earlier this year for appearing to persuade at least five of his fellow
12 House colleagues to invest in a tiny Australian drug company called Innate Immunotherapeutics, on
13 whose board he sits.

14 Little noticed was the fact that Collins’ chief of staff, Michael Hook, has made significant
15 investments of his own that track closely with Collins’.

16
17 Hook, who knew Collins before joining the lawmaker’s office, owned stock in Innate
18 Immunotherapeutics when he joined Collins as chief of staff in late 2015. During his time working for
19 Collins, Hook aggressively sold off investments in other companies and poured the proceeds into
20 Innate Immunotherapeutics stock in three dozen transactions. Collins was and continues to be a
21 member of Energy and Commerce, the central committee overseeing health care policy in the House.
22

23 He was reelected to the board of directors of Innate Immunotherapeutics in August 2016, after a
24 failed clinical trial drove down the company’s stock.

1 Hook reported owning at least \$1 million in Innate Immunotherapeutics stock at the end of
2 2016. This January, Hook unloaded at least a half-million dollars in Innate Immunotherapeutics stock
3 amid the weeks of scrutiny of Rep. Tom Price, President Donald Trump’s choice for secretary of
4 Health and Human Services, who had bought stock in the company at Collins’ urging. Hook began
5 repurchasing stock in the company at the end of January.
6

7 Innate Immunotherapeutics isn’t the only company with ties to Collins that Hook has invested
8 in. In November and December 2016, Hook invested at least \$150,002 combined — and as much as
9 \$350,000 — in two real estate LLCs that were raising private capital, Sinatra-Stadt Illinois III LLC and
10 Linda Lane Apt. Group. Both LLCs are owned by Buffalo-area developer Nick Sinatra, who has
11 donated to Collins’ campaign every election cycle since Collins first ran for his congressional seat.
12

13 The news that Collins had suggested Price invest in Innate Immunotherapeutics set off a
14 firestorm of bad press for the two House Republicans, both of whom served on the main panel in
15 charge of setting health care policy. Further reports of Collins’ promotion of the company to his peers
16 — and comments made near the House floor about "how many millionaires I've made in Buffalo" —
17 sparked an investigation from the House Ethics Committee. The committee plans to announce its
18 course of action by Oct. 12. Hook’s investments don’t appear to be part of the probe.
19

20 A Hook spokesperson declined a request for comment. The spokesperson also declined to say
21 whether Hook had consulted with the House Ethics Committee on his investment decisions. The
22 committee advises lawmakers and staff on how to comply with the chamber’s general guideline that
23 employees’ personal actions should not discredit Congress.
24

25 “They genuinely don’t want to see the body brought into scandal, controversy or disrepute,”
26

1 said Joseph Birkenstock, a former chief counsel for the Democratic National Committee. “That
2 includes things like, is your boss twisting your arm? Are you doing things because you’re under some
3 job pressure? Or is there any credible forum where someone could claim that your actions or your boss’
4 actions are connected in any way to the commercial success of this business?”

5
6 One reason that Hook’s investments have not been closely scrutinized amid all the focus on
7 Collins’

8 and Price’s stock trading is that Hook’s information — while public — isn’t easy to access: It’s
9 not online and can be viewed only in person in an office tucked into a House Office Building.

10
11 In 2012, when Congress passed the Stock Act, leaders crowed that information about the
12 investments of both lawmakers and senior staff would be available online in an easily searchable
13 format. But a year later, Congress silently passed revisions to the bill that wiped out many of those data
14 requirements.

15
16 investigation earlier this year found that while most lawmakers refrain from trading stocks, a
17 small number frequently trade shares in companies they oversee in Congress. | Win McNamee/Getty
18 Images Information on lawmakers is still available online, but it cannot easily be searched or sorted by
19 date or company traded. The requirement that aides’ disclosures be posted online was scrapped from
20 the law, and today such information is available only in person at computer kiosks maintained by the
21 House and Senate.

22
23 Individuals seeking the information must log in using their name and other personal details. The
24 documents they seek cannot be downloaded or otherwise taken out of the office in a digital format.

25 They can be printed for 10 cents to 20 cents a page.

1 “There’s little excuse for these barriers, especially in the digital age," said Larry Noble, senior
2 director at the Campaign Legal Center.

3 “When you have to go to an agency or to Congress to have a document printed out, and you put
4 your name down — all that is to deter people from doing it,” said Noble. “All that was outrageous 25
5 years ago. That’s not the way the world works anymore.”
6

7 Other ethics requirements don't make the same exceptions for staff members. Conflict-of-
8 interest laws governing future employment after leaving Capitol Hill treat staff similarly to members of
9 the House.
10

11 Both House lawmakers and senior staff must take a “cooling-off” period after leaving their jobs
12 on Capitol Hill before lobbying their former colleagues. (Senators are subject to a two-year cooling-off
13 period, while staff follow the same one-year cooling-off period as House aides.)
14

15 “The rules in the House and the Senate on trading stock are very permissive, and essentially
16 don’t regulate members and staff who are trading in industries when they work on the committee
17 overseeing those industries,” said Kenneth Gross, who leads the political law practice at Skadden,
18 Arps, Slate, Meagher & Flom.

19 The House Energy and Commerce Committee provides extra guidance on stock trading to staff
20 in its committee handbook. The handbook tells employees to avoid potential conflicts of interest and
21 err on the side of caution by consulting the House Ethics Committee with questions, according to an
22 excerpt provided by a committee spokesperson.
23

24 Spokespeople for the House Energy and Commerce Committee and the Senate Judiciary and
25 Appropriations Committees all declined to say what steps, if any, their staffers who trade stocks are
26

1 making to comply with their Ethics Committee guidelines.

2 The Senate Appropriations Committee suggested that staffers are largely on their own:
3 “Committee staff are responsible for adhering to Senate Ethics Committee rules and guidelines,”
4 committee spokesman Chris Gallegos wrote in an email.
5

6 Despite the public outrage earlier this year over Collins’ and Price’s trading, Congress has done
7 little to address the rules that allowed the two members of the committee overseeing health care to buy
8 and sell hundreds of shares of health care companies.
9

10 Congress rarely changes its ethics laws and rules. Historically, most changes were preceded by
11 well-publicized scandals: The last major ethics reforms took place in 2006, for example, in the wake of
12 the Jack Abramoff scandal, when lawmakers overhauled rules on what lobbyists have to disclose. And
13 2012’s Stock Act, which explicitly barred lawmakers from insider trading, was passed in the wake of
14 the jarring “60 Minutes” report that spotlighted Pelosi’s trading.
15

16 Earlier this year — and five years after the Stock Act was passed — a POLITICO investigation
17 found that while most lawmakers refrain from trading stocks, a small number frequently trade shares in
18 companies they oversee in Congress. An analysis by Public Citizen this year similarly found that fewer
19 lawmakers appear to be trading stocks, but a dedicated number of senators are regularly trading
20 investments in industries that they partly oversee. POLITICO’s findings on congressional aides who
21 are regularly trading stocks raise further questions about whether the Stock Act put a sufficient check
22 on conflicts of interest among lawmakers or their staff, watchdogs said.
23

24 Behind the scenes, reform groups have been shopping several proposals that would prevent
25 lawmakers
26

1 — and their aides — from engaging in such behavior. One idea floated by Issue One would ban
2 lawmakers from trading stocks aside from mutual funds. This would ensure lawmakers have broadly
3 diversified portfolios that they do not control. Public Citizen, meanwhile, would simply apply the much
4 tougher conflict-of-interest rules that apply to the executive branch to members of Congress and their
5 aides.

6
7 The groups say they have heard some interest from lawmakers — but no one has stepped
8 forward to introduce either bill. Democrats have been focused on criticizing the Trump White House’s
9 apparent ethical lapses. And lawmakers haven’t proposed other plans for overhauling the stock trading
10 system

11
12 — in part, ethics watchdogs say, because they haven’t been sufficiently shamed into doing so
13 by the public.

14 “The more embarrassing the story that comes out, the more pressure there is to do something,”
15 Noble said. “A lot of members do honestly believe they should not be trading in stock while they’re
16 working in legislation, [but] they may not feel as strongly about it” as the members who disagree.

A HISTORICAL PERSPECTIVE ON THIS CORRUPTION

This is how organized crime operates in plain sight in some government offices.

Your elected officials compete against you, rig contracts for cronies and help the companies that they OWN STOCK IN to *Cheat-Rather-Than-Compete!*

The issues had nothing to do with the environment. It was all about stock market insider investment bank scams owned and operated by corrupt Senator’s families.

These are FACTS. They will stand up in a Grand Jury Hearing, A Civil Jury Trial and a Live Televised Congressional Hearing. C. Lakatos, Marita Noon and Veritas are owed thanks for much of this research.

Everyone who pays any attention to the news knows the name Solyndra. It has become synonymous with the overall failed green energy program administered by the Obama team. Politicos know there are many other companies that have received loan guarantees for various green energy projects that have since become a source of ridicule for the White House. Some might even be able to name a few. There is the now-bankrupt company that made batteries for electric cars: Ener1. The plug-in electric sports car company, Fisker, that made its cars in Finland and has troubles too numerous to cite. And, of course, we know about the Chevy Volt—that our taxpayer dollars bailed out only to have demand so low that Chevrolet had to pull the plug on the production line and lay off workers for five weeks earlier this year. But few know the full story.

Connecting the dots will make your head hurt. There are various programs and special tax breaks and different kinds of companies that received green energy loans: solar, wind, and geothermal;

1 and car companies, battery manufacturers, and biofuel producers. While the projects differ, they have
2 several startling similarities. The vast majority of the green energy loan guarantees were given to
3 companies that could not obtain enough financial backing from private investors. Their “junk” or
4 “speculative” grade kept people from putting their own money into them —yet your money and mine
5 was given to them, and we had no say in the matter. Of the 27 loans issued through the 1705 Loan
6 Guarantee Program to 21 firms, virtually all of them have “connections” to either President Obama or
7 other high-ranking Democrats—or both! The loans were made to fill a market created not by free-
8 market demand, but by government mandates. And, all of the “[special seven](#)” got fast-tracked
9 approvals through the Department of Interior with little scrutiny over environmental damages that
10 would have taken any other energy company months, if not years, to get, and EPA regulations were
11 applied selectively.
12

13 Many of the companies that received the funds had involvement with large donors and/or
14 bundlers for the Obama campaign, and there is an amazing revolving door through which the players
15 pass many times. They worked, for example, for Senator Harry Reid. Then they are on the staff of an
16 investment firm that invested in one, or more, of the companies. Next you find he or she is on some
17 White House commission—or worse, became part of the Obama Department of Energy team. Some
18 460 companies applied for DOE loans, but only 27 projects, 21 companies, got the funds. And 85% of
19 these have been found to have “connections.” The remaining 15% may well have connections too,
20 albeit more guarded or hidden.
21

22 These are not wild assertions. I have the data to back them up.
23

24 Following the publication of my column a couple of weeks ago on [crony capitalism](#), I was
25 connected with Christine Lakatos. She’s a private citizen and a single mom with a nose for research.
26

1 Beginning in 2009, she was hired to work on investigative projects, following the green energy money.
2 But when those projects were completed, she didn't stop digging. She kept finding more and more.
3 With no outlet for her work, she started a blog where she "brain dumps" her findings—which for a total
4 unknown has received an impressive number of readers. For anyone but the most stalwart, her [Green](#)
5 [Corruption Blog](#) is like getting a drink of water from a fire hydrant.

6 On Sunday, some of Lakatos' research was presented in my [weekly column](#). The response
7 prompted us to begin a collaboration.

8 For each of the next 17 weeks, we will expose one green-energy, crony-corruption story after
9 another (though my travel schedule may require me to skip a week here and there). It will be a "book"
10 released chapter-by-chapter. If you like what you find, we hope you'll let us know and come back the
11 following week for the next installment.

12 Some single stories of what we'll expose are "out there"—though surely not covered by the
13 mainstream media and not all in one place or all connected as we're doing. If you made a study of the
14 green-energy, crony-corruption story your passion, you likely found out a lot of what we'll share. If
15 you read the [report](#) from the House Oversight and Government Reform Committee (HOGRC) on the
16 Obama Administration's green energy gamble word-for-word, or watched the incriminating hearings,
17 you'll already know some of what we'll present. Or, if you've read the chapter in Peter Schweizer's
18 book [Throw Them All Out](#) that addresses alternative energy and "how the game of funneling taxpayer
19 money to friends has exploded to astonishing levels in recent years," you have a good idea of the big
20 picture. If you have made this your passion, have studied the report, and have coordinated with
21 Schweizer, as Lakatos has, you are encouraged to help make these reports as complete as possible.
22 Together, we'll connect the dots and present it here in bite-sized pieces.
23
24
25
26
27
28

1 Each of the energy projects we will profile in the “special seven” section were recipients of
2 billions of taxpayer dollars through the 1705 Loan Guarantee Program (LGP) and many will be
3 receiving millions more through the 1603 Grant Program. The 1705 LGP is an expansion of the 1703
4 program that was approved in 2005 under President Bush—increasing the expenditures from [\\$17.9](#)
5 [billion in 2007 to \\$37.2 billion in 2010](#). The 2009 American Recovery and Reinvestment Act
6 significantly expanded the DOE’s authority, under Energy Secretary Steven Chu, through the newly
7 created 1705 LGP. (Under the Recovery Act, \$86 billion—approximately 10% of the stimulus package
8 —was earmarked for green energy projects.) The LGP means that companies get risk-free money. If
9 the company succeeds, the low-interest loan gets paid back. If they fail—as [many have](#)—we, the
10 taxpayers, lose. In contrast, the [1603 Grant Program](#)—implemented as part the Obama stimulus—is
11 administered by the Treasury Department, with the goal of reimbursing eligible applicants for a portion
12 of the costs of installing specified energy property used in a trade or business or for the production of
13 income. Basically 1603 gives billions in favored businesses tax-free cash gifts that do not have to be
14 paid back.
15

16
17 While we can prove that cronyism has run amok within the majority of 1705 LGP, we'll stay
18 focused on the Special Seven. Here, in Part 1, we present a complete overview of the connecting dots
19 on one project: SolarReserve, LLC. With this introduction made, we’ll likely address several
20 companies, with a common denominator, in subsequent releases.

21 In Sunday’s column, the following thumbnail was presented: “SolarReserve’s [Crescent](#)
22 [Dunes](#) project is a solar thermal power tower plant utilizing the advanced molten salt power tower
23 technology with integrated storage located in Tonopah, NV. The company's Fitch rating is BB, yet in
24 September 2011, it was the recipient of [\\$737 million](#) in DOE loan guarantees. Obama’s law school
25

1 buddy and 2008 Obama campaign bundler, Michael Froman, was managing director of alternative
2 investments at Citigroup—which became a [major investor](#) in SolarReserve. Froman currently serves on
3 the [White House staff](#). Additionally, other high profile Democrats are involved with SolarReserve.”

4 But there is more...

5 More about Michael Froman. Peter Schweizer reports that “When Obama ran for president,
6 Froman helped raise large sums of money on Wall Street” for the 2008 campaign. The HOGRC report
7 (page 47) confirms Peter’s findings and adds that Froman was a \$200,000 bundler: “Michael Froman
8 currently serves as the Deputy Assistant to the President and Deputy National Security Advisor for
9 International Economic Affairs. He was a friend of President Obama’s from law school, and supported
10 his political career by bundling over \$200,000 for his 2008 presidential candidacy. Prior to his arrival at
11 the White House, Froman was the Managing Director of Alternative Investments at Citigroup, where
12 he managed infrastructure and sustainable development investments. Citigroup became a major
13 investor in SolarReserve, which ultimately received a \$737 million loan guarantee in September 2011.”

14
15
16 The Citigroup connection is tighter. [Richard Parsons](#) was Chairman for Citigroup from 2009
17 until he [announced stepping down](#) in March 2012. [Citigroup](#) was a top Obama donor in 2008. Parsons
18 served on the Obama Transition Team and on the Economic Advisory Board. In 2011, Parsons was
19 appointed to the [President’s Council on Jobs and Competiveness](#).

20 Next, David Sandalow—who is currently “the Assistant Secretary for Policy and International
21 Affairs at DOE, where he acts as Secretary’s Chu’s principal adviser on energy policy, as well as
22 coordinating DOE’s foreign policy involvement.” (HOGRC report page 49) “Sandalow’s ties to the
23 White House date back to the Clinton Administration, during which he worked with President Clinton
24 on environmental issues. After having gained this experience, Sandalow became the influential Chair
25

1 of the Energy & Climate Working Group of the Clinton Global Initiative. He went on to advise
2 President Obama’s presidential campaign in 2008. Prior to joining the Obama Administration,
3 Sandalow was a senior advisor to Good Energies, Inc., an energy-focused venture capital firm. Good
4 Energies is an [investor](#) in SolarReserve.”

5 Other SolarReserve connections to the Democratic Party include:

6 **Ronald Pelosi**—Former Speaker of the House Nancy Pelosi’s brother-in-law, [Ronald Pelosi](#),
7 holds a leadership position with Pacific Corporate Group Asset Management—which is an [investor in](#)
8 [SolarReserve](#). Additionally, his colleague, [Jasandra Nyker](#), has served as a member of SolarReserve’s
9 board of directors.

10 **George Kaiser**—Argonaut Private Equity is an investor in SolarReserve. Argonaut Private
11 Equity is owned by [major Democratic fundraiser](#) and a 2008 Top Obama bundler George Kaiser, who
12 also invested in Solyndra. Kaiser made multiple visits to the White House in the months before the
13 company was granted a \$535 million loan from the government. The Managing Director for Argonaut
14 Private Equity, Steve Mitchell, serves on SolarReserve's Board of Directors.

15 **Tony Podesta**—[OpenSecrets.org](#) shows that SolarReserve paid hundreds of thousands of
16 dollars in lobbying fees to the Podesta Group. Tony Podesta is the principal at the Podesta Group—
17 which he [started with his brother John](#). John Podesta ran Barack Obama’s presidential transition team
18 and is the Director of the Center for American Progress—which is “reportedly [highly influential](#) in
19 helping to craft White House Policy.” Both Tony Podesta and his wife Heather (a Washington power
20 couple) are frequent White House visitors that share high ranks in "lobbying power," and Democrat
21 bundling as well.

22 **Lee Bailey**—SolarReserve’s Chairman of the Board is Lee Bailey, a Managing Director with
23
24
25
26

1 U.S. Renewables Group, who holds a significant financial stake in SolarReserve. [Bailey has donated](#)
2 \$21,850 since 2008 to Democratic candidates, including President Obama, Senate Majority Leader
3 Harry Reid, California Sen. Barbara Boxer and then-presidential candidate Hillary Clinton.

4 **James McDermott**—[SolarReserve board member](#) James McDermott is also a Managing
5 Director with U.S. Renewables Group. He contributed [\\$61,500 to various Democratic](#) campaigns since
6 2008, including \$30,800 to Obama’s presidential election campaign. U.S Renewable Energy Group has
7 ties with Senator Harry Reid.

8
9 If there were only one connect-the-dots story, it would be easy to dismiss it as coincidence. But
10 here, with just one company, you can see the dots connect, and connect, and connect. As you will
11 continue to see, they keep on connecting. In this case, connect-the-dots is no innocent childhood game.
12 It is a high-stakes gamble and only those with connections get to play. Obama and his Democratic
13 friends are the winners. We, the taxpayers, the losers. We lose the financial investment of our tax
14 dollars and our electricity rates go up (M. Noon)

15
16 On the Senate floor, the Majority Leader Harry Reid rambled on suggesting that instead of
17 considering the latest Republican aim to derail the successful implementation of Obamacare, the Senate
18 should be addressing things like energy efficiency and facing the reality of climate change. This was
19 later [posted](#) by the left-wing propaganda machine, Think Progress, which is a blog run by Center for
20 American Progress the high-powered (lobbying) organization that has a major foothold [inside](#) the
21 Obama administration, and is a [driving force](#) inside this clean-energy scheme, which of course,
22 includes pushing a "[radical](#) climate agenda."

23
24 Considering that the Affordable Care Act has since turned into a calamity, the Obama
25 administration is now [grasping](#) for climate change legacy as his second-term agenda crumbles.

1 However, behind the scenes, and before recent unfavorable events, it was [reported](#) that he [Obama] sees
2 this [climate change] as a necessary part of his legacy."

3 This means that while the president released his "[Climate Action Plan](#)" in June 2013, the push
4 to spend [billions more](#) of taxpayer [money](#) in order to save the planet will continue to spew out of the
5 White House, coupled with various [executive actions](#), extreme measures, and further expansion of our
6 federal government's control over our lives. What most Americans don't know is that a March 2012
7 report by the Brookings Institute, [places](#) the Obama administrations' "total government spending (both
8 stimulus and non-stimulus) on green initiatives at [\\$150 billion through 2014](#)." And what did we, the
9 taxpayer, get out of the deal? Billions [wasted](#), increased debt, outsourcing green energy money and
10 green jobs to other countries, as well as massive amounts of corporate welfare, cronyism, and
11 corruption. Even so, as the congressional Democrats and their allies [resume plotting](#), the senator from
12 Nevada has more sinister motives: the "green" gave Reid a 2010 platform and facilitated a guaranteed
13 reelection. Who knows what the future holds for Reid if the Obama administration and his "climate
14 minions" continue to have their way. Senator Reid: Repeat Offender on "List of Washington's Ten
15 Most Wanted Corrupt Politicians"
16

17
18 Harry Reid is another one of those career politicians making their living off the backs of
19 American taxpayers. Reid, who came from [humble beginnings](#), has "risen from the son of a hard-rock
20 miner to a fabulously [wealthy](#) Senate Majority Leader" ([net worth in 2010](#) ranged from \$3,302,053 to
21 \$10,309,999). First elected in 1986, Reid knows how to use the system, inside and out, in order to get
22 elected over and over.
23

24 Reid is even a "repeat offender" at the Judicial Watch "List of Washington's Ten Most Wanted
25 Corrupt Politicians." While Judicial Watch, in [2012](#), gives examples on how the majority leader has
26

1 used earmarks and influence to enrich himself and his family, they do reference his tie to solar. Sen.
2 Harry Reid’s latest influence-peddling scandal involves ENN Energy Group, a Chinese green energy
3 client of Nevada’s largest and most prestigious law firm Lionel Sawyer & Collins, of which the
4 Senator’s son, Rory Reid, is a principal. Back in the summer of 2012, [news broke](#) on how Harry and
5 his oldest son, Rory, were both involved in an effort by a Chinese energy giant, ENN Energy Group, to
6 build a \$5 billion solar farm and panel manufacturing plant in the southern Nevada desert. Needless to
7 say, Reid’s connection to green energy goes much deeper than one Chinese firm. In getting underneath
8 the majority leader's clean-energy dirt, one must know that sometime in either late 2008 or early 2009,
9 the senator was first instrumental in getting the "Recovery Act" to appropriate and expand the Energy
10 Department's Loan Guarantee Program, which ultimately added stimulus loans to its repertoire. Then
11 prior to, at the same time, or shortly thereafter, Reid received money from the geothermal industry, as
12 well as those seeking stimulus loans. Reid, then, in September 2009, pressured President Obama, the
13 Secretary's of Treasury and Energy as well as the Director of the Office of Management and Budget to
14 fund clean-energy projects "rapidly" all under the guise of "investments" and based on the false
15 promise of job creation.
16
17

18 What we will be exposing in this Green Corruption File is that instead of creating jobs, there is
19 a case whereas Reid’s advocacy actually ‘bailed out’ his cronies. Meanwhile, the White House and
20 those inside the DOE helped Reid secure clean-energy stimulus loans (and grants) for projects in
21 Nevada that had "his support" all the while Reid used these wins as a campaign ploy to ensure a 2010
22 midterm victory, of which we can confirm that the senator is directly linked to over \$3 billion in just
23 the stimulus loans alone in taxpayer money that created a whopping 224 permanent jobs.
24

25 Senator Reid's Role in the Recovery Act Stimulus Loans In June 2013, we reported that Senator
26

1 Harry Reid had a small role (hypocrisy) in our "[Nuclear Crimes and Misdemeanors](#)" story, which
2 involves the billion-dollar Colorado-based consulting, engineering and construction firm [CH2M Hill](#),
3 who has been on the government dole for quite some time, and not only had input into the 2009-
4 Recovery Act, but in 2009, [was awarded \\$1.3 billion](#) in stimulus funds. Apparently, it was appropriate
5 to scrutinize the "conflict of interest" when President Bush was in office, but not a peep from Reid
6 under President Obama. CH2M Hill may be just a fluke, but what we can confirm is that Majority
7 Leader Reid is heavily involved in this green energy scheme.

8
9 Shortly after President Obama began his reign as our 44th president, in February 2009, he
10 [signed into law](#) the American Recovery and Reinvestment Act (ARRA). This was a massive economic
11 stimulus bill among the biggest in history that was sold to the American people as a means save our
12 economy from the brink of disaster and create American jobs. This stimulus package was jammed-
13 packed full of [clean-energy provisions](#), of which about 10 percent (\$100 billion) of the monies were
14 earmarked for renewable energy.

15
16 When looking at the entire Green Corruption scandal, it's important to reiterate that Senator
17 Reid [led passage](#) of the \$814 billion stimulus bill (some reports say higher) and worked to include the
18 loan guarantee program to help finance clean-energy projects. ***(Some say America should punch Reid***
19 ***in the eye for all of the corruption he engaged in against the public)***

20 Seven months after the stimulus was signed into law, on September 23, 2009, Senator Reid,
21 wrote a letter to President Obama, which was cc:ed to Secretary of Treasury Timothy Geithner,
22 Secretary of Energy Steven Chu, and Director of the Office of Management and Budget, Peter Orsag,
23 complaining as to the slow pace of implementation of the Department of Energy's loan guarantee
24 programs. During the course of that correspondence, is also where Senator Reid patted himself on the
25

1 back for his role (via the stimulus bill) in helping to "appropriate an additional \$6 billion for an
2 expanded loan guarantee program."Despite Reid’s acknowledgment of the risk involved, he proceeded
3 to request that "obstacles be cleared away," and basically demanded that the Recovery Act monies for
4 the loan program be dispensed "rapidly" all the while claiming that these billions in taxpayer funds
5 "will grow tens of thousands of green jobs."

6 The loan program that Reid is referring to in this letter, which he helped expand under the
7 stimulus law, is the Energy Department's Section 1705 a program of which in March of 2012, we
8 discovered [from the](#) House Oversight and Government Reform committee that in excess of \$16 billion
9 was doled to 26 projects, of which 22 of the loans were rated “Junk” grade due to their poor credit
10 quality. The remaining ended up on lowest end of the investment grade of categories, giving the DOE’s
11 1705 loan portfolio an overall average of BB-, which explains the term [DOE's "junk bond" portfolio](#)
12 frequented throughout my work.

13 The Green Corruption Files has exposed many times that at least 90 percent of the winners of
14 these DOE stimulus loans (the entire Energy Department loan portfolio) have meaningful politically
15 connections (bundlers, top donors, fundraisers, etc) to the president and other high-ranking Democrats
16 in some cases, to both.

17 Since 2009, the Energy Department, through three separate programs ([Section 1703](#), [Section](#)
18 [1705](#), which was [created](#) by the 2009-Recovery Act, and [Advanced Technology Vehicles](#)
19 [Manufacturing \(ATVM\)](#) has guaranteed along with pressure and influence from President Obama,
20 Vice-President Biden, and the White House \$34.5 billion of taxpayer money that thus far has [funded 33](#)
21 projects. To date, the big [alternative energy losers](#) in just this clean-energy program are Solyndra,
22 Beacon Power, Abound Solar, [SoloPower](#), Fisker Automotive, and the Vehicle Production Group with
23
24
25
26

1 quite a few still in the shadows.

2 Later we learned that many of these same projects funded with DOE loans also won free
3 taxpayer cash from one of the biggest stimulus scams: the [1603 Treasury Program](#), which has to date
4 given out \$19,349,675,402 in another [part of this scandal](#) that we have been tracking.

5 "Reid's [platform](#) was power," wrote the Huffington Post back then: "the 71-year-old one-time
6 boxer touted his ability to bring federal money to his home state no one could do more, he argued..."

7
8 In fact, Reid's 2010 campaign included taking credit for his part in the Recovery Act, bragging
9 about his role in the SWIP-S project, and promoting himself as a major green jobs creator, which
10 included this slogan: [FIGHTING FOR CLEAN ENERGY JOBS IN NEVADA](#). Ironically, part of
11 Senator Reid's clean-energy legacy is his September 2010 appearance at the Clean Energy Summit in
12 Las Vegas [when he showed](#) up in [a fleet of SUVs](#) so that he and a few aides would not have to walk
13 the mere 100 yards to address environmental activists.

14
15 Senator Reid brought home the federal dollars all right, and the White House and those inside
16 the Department of Energy (DOE) made sure of that. Stimulus money that was supposed to save our
17 economy from the brink of disaster and create American jobs not save an election. While there are
18 three additional Nevada projects funded with stimulus money, we'll stay focused on the five stimulus
19 loans, listed in the chart below.

- 20 • FIVE "speculative" loans: over \$3 billion that produced (or expected to create) 2532
21 temporary construction jobs and 224 permanent jobs.
- 22 • FOUR in Nevada: SWIP-S, Nevada Geothermal (Blue Mountain), Ormat Nevada, Inc.
23 (OFC 2, LLC project), and SolarReserve (Crescent Dunes Solar) and one in California,
24 BrightSource Energy (Ivanpah facility)
25

1 • FOUR got "special" Department of Interior "fast-track" approval: Nevada Geothermal,
2 Ormat Nevada, SolarReserve, and BrightSource Energy

3 • FOUR included campaign donors: Nevada Geothermal, Ormat Nevada, SolarReserve,
4 and BrightSource Energy with the latter firm even throwing a fundraiser for Senator Reid

5 • TWO involved former aides of Senator Reid: Nevada Geothermal and Ormat Nevada

6 • THREE were announced and/or finalized in time for 2010 midterms: SWIP-S, Nevada
7 Geothermal, and BrightSource Energy with Ormat Nevada featured in a [2010 Midterm Ad](#)
8 "approved by" Senator Reid.

9 • FOUR included special appearances and/or press releases by Senator Reid: SWIP-S,
10 Nevada Geothermal, Ormat Nevada, and SolarReserve

11 Now with the overview presented, let me share some of the "behind the scenes" and "in front of
12 the camera" details, starting with a project known as SWIP-E (winner of \$343 million; 2/2011), which
13 was used as 2010 midterm ploy, and photo opportunity. In fact, the SWIP-E project is where Senator
14 Reid even touts his role in the loan program with this February 2011 [press release headline](#): "ON Line
15 Transmission Project Was Possible Thanks to Recovery Act Loan Guarantee Secured by Senator
16 Reid."
17

18 We also learned [from the](#) Washington Free Beacon that, Nevada Geothermal [winner of \$98.5
19 million; 9/2010], Ormat Nevada [winner of \$350 million; 9/2011) and SolarReserve [winner of \$737
20 million; 9/2011] are located in Reid's home state (as is the SWIP-E project) and that as of 2012,
21 "executives from all three companies [had] donated to Reid and his fellow Democrats, contributing
22 more than \$58,000 since 2008.
23

24 Last but not least, there is [BrightSource Energy](#), the winner of [\\$1.6 billion](#) in April 2011 for a
25

1 huge solar project near the California-Nevada border. BrightSource Energy's then-CEO, John Woolard,
2 and the then-chairman of PG&E Corporation, Peter Darbee hosted a breakfast fundraiser in August
3 2010 for Senator Reid in the Oakland offices of BrightSource Energy.

4 Adding to the Obama administration's larger green energy initiative (and cronyism), "on March
5 11, 2009, the Department of Interior (DOI) issued a secretarial order to fast track the siting of
6 renewable energy projects on public lands managed by the agency." This included a "fast-tracked
7 approval of several major projects in California and Nevada, which "raised questions over negative
8 environmental impacts and the agency's adherence to environmental regulations," [reported](#) by Beacon
9 in 2012.
10

11 What's most disturbing is that these decisions were made with a little scrutiny over
12 environmental damages, and [according to](#) the Los Angeles Times, it caused strife amongst
13 environmentalists and some eco-drama, including news that Gang Green, the nation's big
14 environmental players, were silent on the projects or actively lobbied for them. We can confirm that
15 seven projects that also won DOE stimulus loans (some grants), also received fast-tracked approval by
16 the DOI to lease federal lands in a no-bid process: Abengoa Solar, BrightSource Energy, First Solar,
17 Nevada Geothermal Power, NextEra Energy Resources, Ormat Nevada, and SolarReserve."
18

19 While the environmentalists were mostly silent on this issue, The Beacon was alarmed by the
20 "speed with which the projects were approved, coupled with the fact that the companies had already
21 received Energy Department loan guarantees with strict time lines attached," concluding a
22 suspicion "as to whether Interior's actions were predetermined."
23

24 Later we learned that at least two of these projects were having environmental problems.
25 BrightSource's Ivanpah solar power project in the Mojave Desert was killing turtles an issue that they
26

1 spent \$56 million to resolve, however, not without [causing more harm](#) to animals and other calamities
2 to the tortoises that were made vulnerable by the project. And now this project is
3 "executing birds"(more details forthcoming in the BrightSource section) a federal crime when
4 perpetrated by an oil company. The second one is NextEra's Genesis solar energy project that was
5 [killing the](#) sensitive desert kit fox population and "possibly desecrating an ancient Native American
6 burial site."We first tackled this part of the Green Corruption scandal in the summer of 2012, in our
7 "[Special Seven](#) series, which as you can see includes four of Reid's DOE deals. But worse is that Reid
8 not only [colluded with](#) the Secretary of the Interior Ken Salazar in a June 29, 2009 special
9 announcement regarding the"Fast Track" initiatives for solar energy development on western lands, but
10 he also takes credit for this "fast-track permitting" itself in his "[Playing to win in CLEAN ENERGY](#)"
11 report [released](#) in March of 2012. Reid also documents his clean-energy initiatives as far back as 2001,
12 along with more "green" government favors that went to Nevada, which will be detailed later. Needless
13 to say, the senator must have forgotten to share the fact that "Reid's staffers have been a key part of
14 Washington D.C.'s revolving door, setting up shop with lobbying outfits that have ties to green energy
15 companies and the Department of Interior, which oversees such projects," [noted](#) The Beacon in 2012.
16 Internal Emails Proves that Projects in Nevada were Prioritized for Senator Reid, And these are
17 decisions, by the way, that are made by the Department of Energy, they have nothing to do with
18 politics. President Obama [responded to a reporter](#) in October of 2012, when asked about the green
19 companies that have gone bankrupt despite receiving taxpayer support.

20 That statement was absolutely false. The House Oversight and Government Reform Committee
21 [released internal DOE emails](#) on October 31, 2012 that compromised "Obama's position on two counts:
22 one, the emails show that Obama himself was involved in approving loans; two, DOE officials were
23
24
25
26

1 keenly aware of the political interests at stake, as they regarded the loans as a way for the White House
2 to help Reid by giving him a way to brag about bringing federal money into Nevada," [reported](#) the
3 Washington Times.

4 The circumstantial evidence alone is enough to indict Senator Reid for cronyism and corruption,
5 but it was the 2012 Halloween email dump that proved [how](#) the Obama administration used DOE loan
6 money to help Harry Reid's 2010 campaign. As this revelation hit the airwaves, Marita Noon, energy
7 columnist at Townhall.com, and I [immediately hammered away](#) by busting open the DOE's den of
8 deception, exposing it's coercion, corruption, cronyism, and cover-ups.

9 Today we'll stay focused on the Senator Reid's role, which began as early as December 2009,
10 yet we'll begin with the Washington Examiner released back then, which involves James C. McCrea,
11 Senior Credit Advisor of the Loan Programs and the DOE Loan Director Jonathan Silver.

12 NOTE: Silver is reported to be an Obama bundler, and had been a managing partner at Core
13 Capital Partners [and co-founder] in Washington. It turns out that one of Silver's colleagues there was
14 Tom Wheeler, another 2008 Obama bundler as well as part of the Obama-Biden Transition Team.
15 Silver formerly served in the Clinton administration, and it has been reported that "he is a strict partisan
16 when it comes to his own campaign contributions, the recipients have all been Democrats. Silver was
17 appointed as the Executive Director of the Loan Programs Office in November 2009, of which he was
18 responsible for the agency's strategic direction and oversees all of its transactions. Silver is a key figure
19 inside these DOE loans, up until Silver [resigned](#) in early October 2011, amidst the "Solyndra \$535
20 Million Saga."
21
22

23 In December 2009, McCrea in an EMAIL forwarded one of his colleagues an article about how
24 Reid would struggle in the 2010 campaign along with a comment on how it might affect the DOE loan
25
26

1 program...

2 “...Reid may be desperate, McCrea wrote. WH may want to help. Short term considerations
3 may be more important than longer term considerations and what’s a billion anyhow?...”

4 In that same message, McCrea also speculated that, in light of Reid’s campaign struggles, there
5 may be an opportunity to move several transactions simultaneously, allowing LGPO to finish with a
6 trifecta!

7 A May 2010 EMAIL shows that Reid requested a meeting with Jonathan Silver...

8 Silver interpreted Reid’s request in light of the campaign. Reid is constantly hit at home for not
9 bringing in the federal dollars, he wrote. Silver’s task, according to the DOE memo prepared for his
10 meeting, was to assure Reid that we anticipate a good number of projects to be approved in the coming
11 months. (*Did Reid have Dennis Hof killed because Hof said he was going to expose Reid!*)

12 The Washington Examiner also noted, "The House Oversight and Government Reform
13 Committee proves that throughout 2010 LPO emails indicate that projects in Nevada were prioritized
14 because they were “high profile” tied to larger events, or because they had Senator Reid’s support. The
15 Majority Leader's Energy Department Deals Those set of pesky and incriminating [2012 DOE email](#)
16 dump, more specially inside the [350+ page Appendix II](#), reveal that many of the DOE loans were
17 rushed and approved for political purposes Presidential visits, speeches, announcements, photo ops, and
18 talking points for the president as well as for the purpose of helping those connected to the companies
19 seeking the loans “ CEO's, investors, and Democrat politicians, which goes beyond [subsidizing Nevada](#)
20 [companies](#) in order to help Senate Majority Leader Harry Reid win his 2010 reelection. Yet, Reid's part
21 in this Green Corruption scandal is unprecedented as reflected not only in his role in the 2009-
22 Recovery Act, but also in the amount of clean-energy federal dollars that he brought home to his state
23
24
25
26

1 of Nevada. As mentioned, Reid is tied to five green energy risky projects (four in Nevada and one in
2 California). However, besides finding favor with the Interior Department, many of these same projects,
3 as well as three others that we found, won cash free money from the stimulus package as well thus
4 placing Reid's clean-energy stimulus tab over \$3.4 billion and counting.

5 #1. LS Power (Transmission Line project), formally known as SWIP-S, located in Nevada:
6 [\\$343 million](#) DOE stimulus loan ([Rating BB+ by Fitch](#)) / Total taxpayer money to date: \$343 million,
7 all stimulus

- 8 • Announced [October 2010](#), which included a special visit a photo op for Senator Reid.

9 Finalized in February 2011, which involved [bragging rights](#) by Senator Reid.

- 10 • Status as of November 8, 2013: not completed
- 11 • Jobs: anticipated 400 construction and 15 permanent
- 12 • Also in my [February 23, 2013](#): Massive Green Money Machine

13 On April 14, 2010, Steve Shulman sent James McCrea (at that time the Loan Program Office
14 Credit Advisor), an EMAIL asking if he had assigned anyone from his group to work on the Great
15 Basin (LS Power) transmission project.

16 McCrea responds to Steve and Sandy Claghorn (at that time she was a Credit Consultant at the
17 DOE, and ironically her background is from the credit-rating agency Fitch that gave the SWIP-S
18 project a Rating BB+), I presume you mean SWIP? If so, Sandy Claghorn will be lead. McCrea, in his
19 email response, addresses Sandy directly, "Sandy " This is a very high profile transaction that has,
20 within the past 2 weeks, become the subject of a ton of high level focus. It is a priority for Jonathon..."

21 The "Jonathan" referred to here is Mr. Silver, who was head of the loan program from
22 November 2009 to October 2011, of which we highlighted his role and background a bit earlier in this
23

1 post, and throughout most these Green Corruption Files.

2 In an October 13, 2010 EMAIL, with the subject line "SWIP -- FERC Approvals," [Kimberly](#)
3 [Heimert](#) (Deputy Chief Counsel at Loan Guarantee Program) writes to Jim McCrea....

4 "We (and OMB) have huge political pressure to get this deal done..."

5 In the middle of the entire ruckus regarding SWIP that occurred since April 2010 (that we know
6 of), this project, five days after this email on [October 19, 2010](#), received a conditional commitment for
7 a stimulus loan worth \$350 million. It also got a special celebration, which included [a special visit](#) and
8 PHOTO OP from key (now formal) energy officials: Jonathan Silver, Executive Director of the
9 Department of Energy's Loan Programs Office, and Secretary of the Interior Ken Salazar as well as
10 Senator Harry Reid.

12 Later in November 2010, during the course of several inter agency emails with the subject line,
13 "SWIP - Fast Track," we can confirm that "SWIP" was on the fast-track process, which from what I
14 gather, was "only intended to help get the conditional commitment, not closing."

16 However, it was a process of which many who were reviewing the DOE loans were frustrated
17 with, as reflected in this November 19, 2010 EMAIL by McCrea:

18 Basically, they are going to fight us on transactions if they don't meet these criteria. That means
19 that not much is likely to come through the process. We will now declare victory at Credit Committee
20 approval, support the interagency process the best we can, hope for an outcome but not count on it and
21 then, when someone needs a photo op or the applicant screams loud enough, an occasional transaction
22 will be spit out into the conditional commitment. I know this is a harsh comment but it is also realistic
23 unfortunately.

25 Later in February 2011, despite the fact that a month earlier, Fitch had rated the Nevada

1 transmission line project as "non-investment grade," it was finalized. The SWIP-S project was set "to
2 develop the first phase of a line that will carry approximately 2,000 MW of electricity" and it was
3 projected to produce 400 construction jobs. When operational, it will provide 15 permanent jobs.

4 Nevertheless, it turns out that Reid has been in the middle of this project conflicts and all for
5 many years, which dates as far back as 2007, putting a huge hamper into the transmission line project at
6 that time. However, [according to](#) the Las Vegas Sun, "...in 2009, Reid again stepped in, this time not
7 with a bullet, but a lifeline.

8
9 The Sun continues, Reid tucked \$3.2 billion worth of low-interest loans for transmission line
10 development into the economic recovery act the stimulus bill President Barack Obama signed into law
11 last February. Of which the Sun surmises, noting minimal campaign contributions, but that...

12 Reid gets a transmission line for Nevada an election-year trophy, no doubt, perhaps with a
13 photo op of hundreds of workers building the power line, and the start of the state's the green energy
14 future, just in time for Election Day.

15
16 NOTE: In February 2013, we unleashed Citigroup's massive "green" money machine, and how
17 their renewable energy transactions tie them to approximately \$16 billion of "green" taxpayer money,
18 which includes representing SolarReserve (we'll get to in a bit) as well as LS Power for at least two
19 projects; one in California and Arizona.

20 But LS Power has a lot [of projects](#), and there is one in particular that stands out due to the fact
21 that it was the recipient of one of those stimulus "junk" rated DOE loans. LS Power and its project
22 labeled "One Nevada Transmission Line" a Nevada project called ON Line, which was formerly
23 known as SWIP-S, and where [Great Basin Transmission, LLC](#), an affiliate of LS Power, is developing
24 the Southwest Intertie Project (SWIP).
25

1 #2. Nevada Geothermal Power Company, known as the Blue Mountain Geothermal Project
2 located in Humboldt County, Nevada: [\\$98.5 million](#) DOE stimulus loan ([Rating BB+ by Fitch](#)) / Total
3 taxpayer money to date: over \$164 million, all stimulus

4 • Announced on [June 15, 2010](#), which also included a special [press release](#) by Senator
5 Harry Reid; and it was finalized on it was finalized on [September 7, 2010](#), which also involved
6 the senator

7 • On July 6, 2011, NGP Blue Mountain I LLC won a \$65,741,725 stimulus grant from the
8 1603 Grant Program

9 • Received fast-tracked approval by the Department of Interior

10 • Status as of November 8, 2013: Plant reported to be completed and operational

11 • Jobs: 200 construction and 14 permanent jobs the plant's operation now provides

12 • Both the Nevada Geothermal and Ormat Nevada parts can be found in our [July 15, 2012](#)
13 post entitled "Senator Harry Reid's Part in Green-Energy Crony-Corruption," which at that time
14 was Part Three of our "Special Seven Series"

15 Nevada Geothermal Power (NGP), now [Alternative Earth Resources Inc](#), "holds leasehold
16 interests in four geothermal projects located in the Western United States." Two months before NGP's
17 Blue Mountain project received a conditional approval for an Energy Department loan guarantee (in
18 April 2010), [Reid toured](#) the plant, promoting it as a jobs creator: "This project is exactly the type of
19 initiative we need to ensure Nevada creates good-paying jobs,..." Mr. Reid said. In a June [2010 press](#)
20 [release](#), when the \$98.5 million loan was moving at full speed, Reid stated, "I am glad to see economic
21 recovery funding being used to put Nevadans to work on a project that will help us achieve energy
22 independence. Reid at that time also declared, "Northern Nevada is the Saudi Arabia of geothermal
23
24
25
26

1 energy... "The campaign contributions both from the geothermal industry as well as "[executives from](#)"
2 NGP not to mention Reid's part in the ensuring that stimulus package expanded the Energy
3 Department's loan program (1705), and the fact that Reid was campaigning for their project early on,
4 could be why, despite the low credit rating of the Blue Mountain geothermal project in Humboldt
5 County, the \$98.5 million stimulus loan was finalized.

6 During the September 7, 2010 [announcement](#), Secretary Chu marked the Blue Mountain
7 moment as part of the Obama administration's "commitment to reducing carbon emissions while
8 creating clean energy jobs" all 214 of them. Meanwhile Senator Reid again takes credit, "As I led
9 passage of the stimulus bill, I worked to include the loan guarantee program to help finance clean-
10 energy projects like Blue Mountain geothermal that will put Nevadans back to work and bring us closer
11 to energy independence."

12 Both the June and September press releases, with both Secretary Chu and Senator Reid
13 claiming victory over "green jobs," runs into direct conflict with these claims. The House Oversight
14 report stated: It was known to him [Secretary Chu] at that time [of the press conference], that the loan
15 would not create a single job, but instead would simply refinance an existing loan, despite DOE's claim
16 that it would create over 200 jobs.

17 Worse, instead of using the loan as Title XVI, Section 1602 of the American Recovery and
18 Reinvestment Act of 2009, requires: "Recipients shall use grant funds in a manner that maximizes job
19 creation and economic benefit" but the loan was used to pay off a creditor.

20 According to the Washington Times report, At the time the Energy Department announced its
21 conditional approval of the guarantee, Mr. Issa said NGP would have defaulted on a loan from TCW
22 Asset Management Co., then its primary lender, had DOE not swooped in to save the failing company
23
24
25

1 with taxpayer money. A committee report said the loan did not finance any new construction and did
2 not help to create a single job.

3 Despite the hype, at the time the DOE approved the loan in September 2010, they were well
4 aware of NGP’s “well-documented” financial difficulties. The House Oversight and Government
5 Reform Committee [called the loan a “bailout”](#) which violated the spirit and, quite possibly, the letter of
6 the law and provided an opportunity for private industry to exit an investment, de-leverage and transfer
7 the extraordinarily high default risk to taxpayers. Instead of creating jobs, in this particular case, Reid’s
8 advocacy actually ‘bailed out” his cronies and added another notch to his 2010 midterm bragging rights
9 on clean-energy and green jobs”, all the while sticking it to the taxpayer. And they didn't stop at \$98.5
10 million.
11

12 On July 6, 2011, NGP Blue Mountain I LLC won a \$65,741,725 stimulus grant from the [1603](#)
13 [Grant Program](#). By October 2011, the Nevada Geothermal, again was facing turmoil (operational and
14 financial problems with the Blue Mountain plant"), as documented by the New York Times of which
15 they also [reported](#) Senator Reid's part in the DOE deal. Reid was instrumental in securing that
16 financing for Nevada Geothermal, noting that Mr. Reid has taken the nascent geothermal industry
17 under his wing, pressuring the Department of Interior to move more quickly on applications to build
18 clean energy projects on federally owned land and urging other members of Congress to expand federal
19 tax incentives to help build geothermal plants, benefits that Nevada Geothermal has taken advantage of.
20

21 You might think Reid has altruistic motives, such as creating jobs for his state, however, as the
22 New York Times pointed out: Mr. Reid has received some support from the industry, in the form of at
23 least \$43,000 worth of campaign contributions from the geothermal industry since 2009, according to
24 an analysis of federal campaign finance records.
25

1 Nevertheless, problems persisted both before the stimulus loan and thereafter. Less than a year
2 after the loan was issued, leading accounting firm Deloitte & Touche did a 2011 [audit of NGP](#) and
3 [concluded](#): “significant doubt” about Nevada Geothermal Power’s ability to continue as a going
4 concern. The company’s vital signs are not looking good: it has incurred net losses over the past several
5 years, has an accumulated deficit of \$44.0 million and an anticipated inability to retire its long-term
6 liabilities.

7
8 During the [May 16, 2012 testimony](#) before the House Oversight Committee, the CEO Brian D.
9 Fairbank spoke about the many good things occurring at Blue Mountain and stated that they remained
10 bullish on the future of geothermal resource potential at Blue Mountain.

11 However, in 2012, the future of Nevada Geothermal was [looking dim](#), as it was still facing
12 financial problems, and "the company’s internal auditors had questioned whether it could stay in
13 business" ... insight that came from NGP auditors via a financial statement for the period ending March
14 31 [2012] and reported by the Washington Times.

15
16 With such a terrible 2011 audit and another grim financial statement completed in March 2012,
17 one as to wonder how much did Fairbanks actually know about the status of NGP during that May 16
18 testimony when he defended their taxpayer subsidized geothermal project.

19 Needles to say, Nevada Geothermal Power (NGP), [in July of 2012](#), were still facing financial
20 issues, and it was reported that NGP was on its way toward bankruptcy. However, as of May 2013,
21 financial news [reported](#) that Blue Mountain had owed almost \$200 million to its private lenders, and
22 that NGP "has completed the sale of the Blue Mountain Geothermal Project to funds managed by [EIG](#)
23 [Global Energy Partners, LLC](#), the mezzanine lender for the project, pursuant to an equity and collateral
24 transfer agreement."
25

1 It's not quite clear what went down behind the Blue Mountain, but as of April 3, 2013 NGP
2 changed its name to [Alternative Earth Resources Inc.](#) Still, as of November 2013, the DOE states that
3 the Blue Mountain project is operational, and it also claims 200 construction and 14 permanent jobs.

4 Wow, over \$164 million for 14 jobs, if we count the temporary.#3. Ormat Nevada, Inc, for [their](#)
5 [project](#) known as "OFC2," which involves a portfolio of three different geothermal power facilities the
6 state of Nevada Jersey Valley, McGinness Hills, and Tuscarora: [\\$350 million](#) DOE stimulus loan
7 ([Rating BB by S&P](#)) / Total taxpayer money to date: \$455 million, all stimulus

8
9 • Announced on [June 9, 2011](#), which included Secretary Chu and Senator Reid. It was
10 finalized in September 2011, of which Senator Reid made a [special announcement](#) as well,
11 however, folks from Ormat were used in a 2010 midterm campaign ad.

12 • Ormat Technologies projects have received over than [\\$250 million in various DOE and](#)
13 [Treasury grants](#), of which the majority came from the stimulus-created 1603 Grant Program.

14 • Received fast-tracked approval by the Department of Interior

15 • Status as of November 8, 2013: currently operational

16 • Jobs: expected to create 332 jobs during construction and 64 permanent jobs

17
18 Keep in mind that "[executives from](#)" Ormat had donated to Reid and his fellow Democrats,
19 since 2008, and as mentioned during the course of covering the Nevada Geothermal deal, Mr. Reid has
20 received support from the industry, in the form of at least \$43,000 worth of campaign contributions
21 from the geothermal industry since 2009. Still, there's much more to the Ormat/Reid clean-energy story
22 to share.

23
24 With all the "green energy campaigning" that Reid engaged in for the 2010 midterms, he failed
25 to put into a press release that "meaningful ties exist between the senator and Ormat." Two of Ormat's
26

1 federal lobbyists previously worked for Senator Reid," and they both donated to his campaign all well
2 [documented](#) in the in the House Oversight report that came on March 20, 2012.

3 While Ormat's outside lobbyist, [Kai Anderson](#) of Cassidy and Associates, served as Senator
4 Reid's Deputy Chief of Staff up until 2005, Ormat's company lobbyist, Director of Policy and Business
5 Development from September 2005 until September 2013, was Paul Thomsen. Mr. Thomsen is another
6 former aide to the Senator (2002 to 2005), where he handled public lands and energy issues. [Mr.](#)
7 [Thomsen](#), [amongst other roles](#), also sat on Senator Harry Reid's Blue Ribbon Council on Renewable
8 Energy. He's now at the [Governor's Office of Energy](#) in Nevada.

9
10 To make this case more convoluted, the senator (in June 2010) launched a "[2010 Geothermal](#)
11 [Campaign Ad](#)" starring his former staffer Thomsen, who heralded, Geothermal means 16,000 Nevada
12 jobs Harry Reid saw the potential before just about anybody else.

13 We [find that](#) "in addition to Anderson and Thomsen, Ormat's President, Yoram Bronicki, gave
14 thousands in political contributions to Senator Reid. The strong ties between the company and the
15 Senate Majority leader raise questions about whether the DOE acted in the best interests of the
16 American people when it approved the loan guarantee." Yoram Bronicki is the son of Mrs. Yehudit
17 (Dita) Bronicki, the CEO and Director of Ormat Technologies, who recently [announced](#) that she, "plans
18 on retiring in 2014."

19
20 Ormat Nevada is a wholly-owned subsidiary of Ormat Technologies, Inc., on June 9, 2011,
21 received a conditional commitment for a partial guarantee for a \$350 million loan from the Energy
22 Department, which [was presentedby](#) they dynamic duo once again, Chu and Reid.

23
24 Both made their case known. This project will help our nation maintain its position as the
25 world's leader in installed geothermal capacity, while creating hundreds of jobs in Nevada, stated
26

1 Secretary Chu. Meanwhile Senator Reid, once again, claimed jobs: Energy jobs.

2 Despite the projects low credit rating ("speculative"), in September 2011, the Department of
3 Energy finalized the \$350 million DOE stimulus loan to support Ormat Nevada, Inc.'s OFC 2, of which
4 the three projects involved are aided by this DOE loan as well production tax credits.

5 According to [the Senator's 2012 report](#), "Ormat is also taking advantage of the Treasury
6 Department's (Section 1603) grant in lieu of tax credit program. In September 2010, Ormat received
7 \$108.2 million for specified energy property in lieu of tax credits relating to its North Brawley
8 geothermal power plant in California." However, during the June 19, 2012 House Oversight hearing,
9 via written testimony by the CEO of Ormat, Dita Bronicki, we found that Ormat Technologies projects
10 have received more than [\\$200 million in various DOE and Treasury grants](#), of which the majority came
11 from the stimulus-created 1603 Grant Program.

12 A few months after the Jun 19th hearing (September 15, 2012), Ormat again won more free
13 cash (close to \$47 million), which went toward one of its three projects in Nevada. So, this geothermal
14 project in Nevada is not only funded by taxpayers with \$350 million stimulus loan, but three stimulus
15 grants all doled out in 2012 (ORNI 15 LLC, ORNI 39 LLC and ORNI 42 LLC), totaling over \$105
16 million, meaning that Reid's Ormat deal, thus far has been subsidized with \$455 million.

17 Meanwhile in July of 2013, ORNI 18 LLC, Geothermal Electricity in California snagged
18 another 1603 grant for \$122,970,821.

19 Still, Reid, at the time the loan was approved, in a [press release](#) took credit and said, Now that
20 this loan guarantee is finalized, hundreds of Nevadans will soon be working again, while noting that
21 this project will generate nearly 400 jobs. Yet, as of November 8, 2013, the DOE states that this
22 geothermal project is currently operational, it has only produced 64 permanent jobs again another
23
24
25

1 example on how the ratio of jobs created (even saved) versus the amount of taxpayer money spent on
2 these "stimulus" green energy projects is laughable...at best.

3 Just these two Nevada geothermal projects (Blue Mountain and Ormat's "OFC2") funded with
4 stimulus loans and grants, cost taxpayers over \$600 million stimulus money that was supposed to save
5 our economy from the brink of disaster and create American jobs. Adding to the insult is that this
6 administration and their "climate minions" continue to sell "green energy" as means to "end America's
7 addiction to oil." Yet, these two projects only created 78 permanent jobs and 522 temporary
8 construction jobs, bringing no relief to our economic woes or any closer to "energy independence.
9 Geothermal wind and solarpower generates electricity. America is already electricity independent.
10

11 #4) SolarReserve Inc, LLC, know as the [Crescent Dunes Solar Energy Project](#) located in
12 Tonopah, Nevada: [\\$737 million](#) DOE stimulus loan ([Rating BB by Fitch](#)) / Total taxpayer money to
13 date: \$737 million, plus 1603 treasury grants (amount unknown), all stimulus

- 14 • Announced on [May 19, 2011](#), even [by](#) Senator Reid; and [finalized](#) on September 28,
15 2011
- 16 • According to Senator Reid, "the Crescent Dunes project [also allowed](#) it to qualify for
17 Treasury Department's (Section 1603) grant in lieu of tax credit program," yet I was unable to
18 find an amount or date.
- 19 • Received fast-tracked approval by the Department of Interior
- 20 • Status as of November 8, 2013: Construction underway...
- 21 • Jobs: According to the Energy Department, "The project created 600 construction jobs.
22 When the project is completed, it will also provide 45 jobs for plant-operations."
23

- 24 • We started chronicling the SolarReserve story in June 30, 2012 with "[Obama's Green-](#)
25
26

1 [Energy, Crony-Corruption](#) Special series, however since that time, we've uncovered much
2 more.

3 With the Department of Interior December 2010 [approval intact](#), which included "strong
4 support from Washington, DC," and "Senator Reid's relentless assistance on the project," on May 19,
5 2011, the dynamic duo, Reid and Chu joined forces once again to announce the Department of
6 Energy's conditional commitment for a loan guarantee to [SolarReserve](#) for a Nevada solar project. In
7 [Reid's presser](#), again, both Chu and Reid claimed victory on the green jobs front: Today's
8 announcement is about one thing: creating good paying clean-energy jobs right here in Nevada, said
9 Senator Reid. SolarReserve, LLC is headquartered in Santa Monica, California, while the [Crescent](#)
10 [Dunes](#) project, which is a solar thermal power tower plant utilizing the advanced molten salt power
11 tower technology with integrated storage, is located in Tonopah, Nevada. Despite the projects low
12 credit rating in August 2011, a month later (September 28, 2011), the \$737 million in DOE loan
13 guarantee was [finalized](#).
14

15
16 Needles to say, just three months prior to the SolarReserve May 2011 DOE loan roll out (six
17 months to its finalization), there is an intriguing set of March 23, 2011 EMAILS (with the subject line,
18 "Re: " Tonopah"credit issues") that went on all day long between [James McCrea](#), the credit advisor for
19 the DOE's " Loan Guarantee Program, [Alok Mathur](#) (Credit Team Consultant for DOE's Loan
20 Guarantee Program and also part of the Greenwich Energy & Company "[team](#)"), and [Monique Fridell](#)
21 (Supervisory Senior Investment Officer at the DOE's Loan Guarantee Program from 2009 until 2012),
22 as well as executives from [Scully Capital](#) in the loop.
23

24 McCrea at one point (5:35 PM) wrote to Monique...

25 "Actually, at a time like this, it is imperative that I send the note to the senior Federal team with
26
27
28

1 my recommendation. My recommendation is to kill the transaction.”

2 Later that evening a more interesting interaction occurred at 7:17 PM when John Ravis of
3 Scully Capital wrote...

4 "Jim, Just to let you know, while we were discussing the EPC Contract issues with Solar
5 Reserve, when we reached an impasse, their CFO Michael Whalen, threatened to go scorch earth on the
6 DOE in the press about our uncommercial and unrealistic positions. Best regards, John."

7
8 At 11:34 PM that same evening, Alok Mathur responded to Ravis and cc'd McCrea...

9 "John and I have pretty thick skins (a necessary qualification in this business), but I have to
10 agree with John. Michael has a very arrogant attitude and has accused us of 'wasting his time'....

11 Mathur continues to complain on how [Michael Whalen](#) (who served as the Chief Financial
12 Officer of SolarReserve from September 2008 until [sometime in 2013](#)), mistreats the DOE, then he
13 writes, "He has taken this attitude because nobody (to-date) has told him where to get off and he is
14 convinced that with Harry Reid's backing, he can get Jonathan to agree to anything...."

15
16 Let me get this straight. First off, we have Senator Reid's "relentless assistance on the
17 [Tonopah] project," which was documented as early as December 2010. In the mix, Reid captures [the](#)
18 [gratitude](#) of the CEO of SolarReserve, Kevin Smith and by March 2011, the CFO, Michael Whalen, is
19 all wound up because he has "the backing" of the senator.

20 Add in the fact that, SolarReserve, a [predominately](#) Democrat donor, [executives](#) had given to
21 Reid's campaign since 2008. Still, we have their [founding partner](#), holding a significant financial stake
22 in SolarReserve, which is [US Renewables Group](#) (USRG) “a \$575 million private equity firm
23 exclusively focused on renewable power and clean fuel projects." USRG opens up the door to [two](#)
24 [SolarReserve board members](#) that since 2008 have donated heavily to Democrats, including Reid,
25

1 President Obama and other high-ranking Democrats. They include “SolarReserve’s [Chairman of the](#)
2 [Board](#) Lee Bailey, who is also the founder and Managing Director of USRG, as well as James
3 McDermott, a [board member](#) at SolarReserve, who is also a Managing Director with USRG.

4 Apparently, Senator Reid is tied to another big [green energy cronyism story](#) that involves U.S.
5 Renewable Energy Group ([US-REG](#)), which at first glance, seems to be the same firm here that has a
6 stake in SolarReserve: US Renewables Group ([USRG](#)). However, in my opinion, they are two different
7 companies. US-REG is "a Dallas investment firm with strong ties to Washington and the Democratic
8 Party," with the public face of Cappy McGarr, "a wealthy Texas philanthropist, investor and longtime
9 fixture in Democratic politics," documented NBC News. Meanwhile, USRG, having offices in Los
10 Angeles and New York, doesn't seem connected here. I could be wrong. Nevertheless, Reid is in this
11 middle of this US-REG deal, which is about a proposed wind farm in Texas ([Spinning Star](#)), [driving](#)
12 [green jobs to China](#), top Democratic fundraisers and lobbyists, big unions, major ties to the White
13 House, more donations to the senator from Nevada, and \$450 million in stimulus money. Typical of all
14 these clean-energy projects under Team Obama. In addition to the above players, we have Citigroup,
15 who in September 2008 [became an investor](#) in SolarReserve along with [Good Energies Capital](#), now
16 Bregal Energy, who is also [currently](#) an investment partner. This brings us to [David Sandalow](#), a DOE
17 insider, who from March 2009 to the spring of 2013, served in senior positions at the U.S. Department
18 of Energy (DOE), including Acting Under Secretary of Energy and Assistant Secretary for Policy &
19 International Affairs.
20
21

22 It seems that Sandalow has many interesting positions, including Brookings Institution fellow,
23 and serving as Chair of the Energy & Climate Working Group of the Clinton Global Initiative. But the
24 most relevant is that Sandalow also served as a Senior Advisor to Good Energies, an energy-focused
25

1 venture capital firm.

2 In 2008, before joining the DOE, Sandalow [had been paid](#) \$239,000 for consulting work for this
3 venture capital firm. Probably not the most influential, because [Citigroup](#) this "too-big-to fail" bailed
4 out bank, whose PAC [gives to both](#) political parties in 2008, according to the Center for Responsive
5 Politics, were top contributors to both [Harry Reid](#) as well as [Barack Obama](#). This turn brings us
6 to President Obama™s law school buddy, 2008 Obama campaign bundler, Michael Froman, who was
7 managing director of alternative investments at Citigroup. Mr. Froman is the former chief of staff to
8 Treasury Secretary Robert Rubin during the Clinton administration. During Obama's 2008 presidential
9 campaign, [Froman](#) served as an informal adviser, raising money and helping to secure endorsements. In
10 fact, Michael Froman, a close college friend of Obama™s, managed Citis alternative investment
11 portfolio [as well as other Citigroup positions starting in 1999] until he left for a [top White House post](#)
12 in 2009. Froman was key to the President™s 2008 election effort, [connecting him](#) with major donors in
13 New York™s financial industry," [notes](#) Lachlan Markay of the Heritage Foundation.

14
15
16 Since 2009, [Froman](#) was a member of Obama's National Economic Council as well as the
17 Deputy National Security Advisor for International Economic Affairs. In June 2013, Froman became
18 the U.S. Trade Representative now he's [Ambassador Froman](#).

19 The tangled web and the [infiltration](#) of so many Citigroup executives and [Goldman Sachs](#) for
20 that matter inside the Obama administration, even shaping his economic policy, as well as the fact that
21 they scored big with the Green Bank of Obama, is extraordinary. Other than [Michael Froman](#), they
22 range from the former chief of staff [Jack Lew](#), who in 2013 replaced Timothy Geithner as Treasury
23 Secretary. Lew was also the head of Office of Management and Budget, from November 2010 to
24 January 2012 (during the time these DOE loans were being processed). Lew was the CEO of
25

1 Citigroup™s Alternative Investments, from January 2008; however, he was with Citi starting as far
2 back as 2006, of which he departed either in late 2008 or in January 2009. Next is [Richard Parsons](#), who
3 was Chairman for Citigroup from 2009 until he [announced stepping down](#) in March 2012. Parsons
4 served on the Obama Transition Team and on the Economic Advisory Board. In 2011, Parsons was
5 appointed to the [President™s Council on Jobs and Competitiveness](#), until it [closed down](#) in January
6 2013.

7
8 Last but not least we have the retired Chicago investment banker Louis Susman, who [served on](#)
9 Obama™s 2008 National Finance Committee. The staunch Democratic donor and fundraiser that
10 Susman was, he turned out to be a top 2008 bundler that raised so much money for Obama that he got a
11 nickname the Vacuum Cleaner." Obama showed his appreciation and [made him](#) ambassador to Great
12 Britain. At the time of his nomination, Susman retired in February 2009 as Vice Chairman of Citigroup
13 Corporate and Investment Banking. NOTE: Michael Schell, New York, Citigroup Global Markets was
14 also a [2008 Obama bundler](#).

15
16 This year, Marita Noon and I exposed Citigroup's part in this massive mess in two exposÃ©s:
17 "[Citigroup™s Massive 'Green' Money Machine](#)" and "[Wall Street Walks on the White House](#),"
18 chronicling Citigroup's carbon footprint inside the Obama administration as well as this Green
19 Corruption scandal which goes way beyond SolarReserve as wells as LS Power's SWIP-S project
20 mentioned in the begging of this post. In short, I personally and meticulously analyzed Citi™s [green](#)
21 [stash](#) (dated March 19, 2012), and calculated that they are tied to approximately \$16 billion of taxpayer
22 money, the majority from the the 2009-Recovery Act.

23
24 However, there is another key connection here that I unleashed in my last Green Corruption
25 File: "[The RAT in the Recovery and the Gang of Ten](#)." It has to do with a Michael Eckhart, who after
26

1 spending the last decade as the founding President (2001) and a member of the Board of Directors at
2 American Council on Renewable Energy (ACORE); [joined Citigroup](#) as Managing Director in
3 February 2011.

4 ACORE is a renewable energy [lobby powerhouse](#), of which PJ Media [had alerted to 2011](#):
5 Michael Eckhart and the ACORE membership also helped design the Department of Energy grant
6 programs that partly offset the loss of tax equity financing arrangements..."

7 Other SolarReserve connections to the Democratic Party include:

8 Ronald Pelosi: Former Speaker of the House Nancy Pelosi™s brother-in-law, [Ronald Pelosi](#),
9 holds a leadership position with Pacific Corporate Group Asset Management™ which is an [investor in](#)
10 [SolarReserve](#). Additionally, his colleague, [Jasandra Nyker](#), has served as a member of SolarReserve™s
11 board of directors.

12 George Kaiser: Argonaut Private Equity is an investor in SolarReserve. Major [Democratic](#)
13 [fundraiser](#) and a 2008 Obama bundler George Kaiser, who also invested in Solyndra, owned Argonaut
14 Private Equity. Kaiser made multiple visits to the White House in the months before the company was
15 granted a \$535 million loan from the government. The Managing Director for Argonaut Private Equity,
16 Steve Mitchell, serves on SolarReserve's Board of Directors.

17 Tony Podesta: [OpenSecrets.org](#) shows that SolarReserve paid hundreds of thousands of dollars
18 in lobbying fees to the Podesta Group. Tony Podesta is the principal at the Podesta Group™ which he
19 [started with his brother John](#). John Podesta ran Barack Obama™s presidential transition team and is the
20 founder of the left-wing think tank, Center for American Progress CAP, where [he is currently](#) Chair of
21 CAP and the CAP Action Fund. [CAP](#). It's important to point out that CAP has a major foothold [inside](#)
22 the Obama administration, including the 2013 addition, [Denis McDonough](#) as the White House [chief of](#)
23

1 [staff](#). Not only did a squadron of CAP experts work with president Obama's transition team, they are
2 reportedly [highly influential](#) in helping to craft White House Policy and they are a driving force inside
3 this clean-energy scheme.

4 Meanwhile, both Tony Podesta and his wife Heather ([a Washington power couple](#)) are frequent
5 White House visitors that share high ranks in "lobbying power," and Democrat bundling as well.

6 With all this access and influence from Wall Street to the White House, to Senator Reid, and
7 beyond, it's no wonder SolarReserve, despite its "speculative rating" and documented credit issues as
8 well as the fact that the DOE loan credit advisor wanted to "kill" the transaction, won [\\$737 million](#) of
9 taxpayer money, for a project that, after two years, is still under construction, and anticipates
10 a whopping 45 jobs, plus the 600 temporary construction jobs.

11 #5) BrightSource Energy, Inc, for the [Ivanpah facility](#) located in the Mojave Desert of
12 California: [\\$1.6 billion](#) DOE stimulus loan ([Rating BB and BB+ by Fitch](#)) / Total taxpayer money to
13 date: \$1.6 billion, all stimulus

- 14 • Announced on [February 22, 2010](#), and finalized April 2011 for [\\$1.6 billion](#)
- 15 • Received fast-tracked approval by the Department of Interior
- 16 • Status as of November 8, 2013: predicted to be completed in late 2013
- 17 • Jobs: Construction phase, 1,000 full-time employees and when operational, 86

18 permanent

19 We've been uncovering BrightSource Energy's \$1.6 Billion Shady DOE Deal since [July 6,](#)
20 [2012](#), and as new information came available we've revisited this huge solar deal several
21 times: [November 4, 2012](#), February 23, 2013 as part of [Citi™s Massive ~Green Money](#)
22 [Machine](#) (handling their IPO), as well as in my [March 22, 2013](#) due to the connection to the left-wing
23

1 billionaire George Soros. Lastly, in my [September 2013](#) post on their lobbyist McBee Strategic
2 Consulting.

3 As I opened this Green Corruption file, there is [BrightSource Energy](#), the winner of [\\$1.6 billion](#),
4 who in August 2010, then-CEO, John Woolard, and then-chairman of PG&E Corporation, Peter
5 Darbee hosted a breakfast fundraiser for Senator Reid in the Oakland offices of BrightSource Energy. It
6 [was reported](#) at that time, "PG&E will be a major consumer of the electricity generated by the new
7 project, with the first plant expected to go on-line in 2012. Woolard and other company executives
8 have given a total of \$6,000 to Sen. Reid since 2009 and PG&E's PAC has given \$2,000."

9
10 Six months earlier, on February 22, 2010, Energy Secretary Steven Chu [announced](#) the
11 conditional commitment of the loan guarantees under the American Recovery and Reinvestment Act to
12 fund BrightSource Energy's three-unit power system project known as [Ivanpah](#), located on federally-
13 owned land in the Mojave Desert in southeastern California, near the Nevada border. The project uses a
14 proprietary power-tower solar thermal system. Chu at that time, touted the Ivanpah project as "an
15 investment in American jobs and the clean, renewable energy our economy needs." Needless to say, just
16 as BrightSource is the only DOE deal not located smack in the middle of Harry Reid's home state, it is
17 also much bigger than the senator from Nevada. According [to Forbes](#), BrightSource was founded in
18 2004 by American-Israeli pioneer Arnold Goldman, whose Luz International built nine solar thermal
19 power plants in the Mojave Desert in the 1980s and 1990s.

20
21 Despite the fact that BrightSource Energy™s project was one of the stimulus "junk" loans, it
22 didn™t sway the DOE in the least, because on April 11, 2011, the [DOE announced](#) the finalization of
23 \$1.6 billion in loan guarantees for BrightSource™s Ivanpah project.

24
25 Adding to the corruption, this billion-dollar DOE deal was a bailout, which is a clear violation

1 of the American Recovery and Reinvestment Act of 2009. As Peter Schweizer puts it in Throw Them
2 All Out, [describing the financial issues](#) they were having, "BrightSource badly needed this infusion of
3 taxpayer cash a fact that [we elaborated on](#) many times. But still the Ivanpah project has since been
4 plagued with financial issues and problems, including putting endangered desert tortoises at risk of
5 being murdered.

6 While BrightSource has paid \$56 million to protect and relocate scores of desert tortoises, "even
7 that has not been enough to avert catastrophe. Animals were crushed under vehicle tires, army ants
8 attacked hatchlings in a makeshift nursery, and other calamities have befallen tortoises made vulnerable
9 by the project," explained the Heartland Institute last year. Needless to say, BrightSource's
10 "green executions" of animal are far from over. Just a few days ago, USA Today reported that they
11 (and possibly other taxpayer-funded solar projects) are currently in the hot seat for burning and killing
12 birds: "California solar power plants singeing bird feathers." "Of 34 birds reported dead or injured at
13 Ivanpah in September, 15 had melted feathers. Dozens of other bird carcasses, not singed but with
14 critical injuries, have been found in recent months at two solar projects about to go online on public
15 land between Joshua Tree National Park and Blythe, Calif., a town of 20,800 on Interstate 10 near the
16 Arizona border," documented USA Today. With BrightSource's plans for an initial public offering
17 [cancelled in 2012](#), citing adverse market conditions, it's unclear where they now sit financially,
18 however, nineteen months later, after getting \$1.6 billion from the American taxpayer, the Ivanpah
19 solar project is still not ready. More BrightSource "Energy & Players" Nevertheless, other than the
20 Majority Leader Reid in the mix, there are additional powerful players found inside this billion-dollar
21 DOE deal, starting with it's former CEO, [John Woolard](#), who during the time of the loan review
22 process [was the](#) president and CEO of BrightSource Energy, and now serves as a director. Woolard was
23
24
25
26

1 not only a Reid fundraiser and donor but also an [Obama donor](#) that has visited the White House dozens
2 of times since Obama took office. A March 16 2012 [hearing](#) before the House Oversight and
3 Government Reform Committee revealed that Woolard used his connections to try to get a commitment
4 for the DOE loan for BrightSource ” despite the fact that Secretary Chu has repeatedly said the loans
5 were based on merit. During the hearing, Woolard said: I believe that everything we did in our project
6 was fully on the merits. It was a very solid project.

7
8 However, a series of emails involving Mr. Woolard show him interacting with decision-makers
9 in the administration seeking political influence. The House Oversight Chairman Issa told [The Hill](#):
10 Clearly we have a discovery of emails showing there was direct conversation intended by the people
11 having those conversations to be lobbying all the way up to and including President Obama.

12 These particular emails reveal communications between Woolard and Matt Rogers and between
13 Woolard and Jonathan Silver. The January 2010 EMAIL is where John Woolard (then CEO of
14 BrightSource), [told the DOE](#) of Obama's involvement when he was pushing for a conditional
15 commitment.

16
17 "Darbee at PG & E talked directly to Obama about the program's challenges and the bad
18 situation it puts him in," Woolard emailed to Matt Rogers

19 At the hearing, Rep. Jim Jordan, R-Ohio, [emphasized](#) to Woolard, PG& E and Darbee had a
20 vested interest in getting this thing approved because you were providing them their required
21 commitment for green power.

22 The stakeholder here is Peter Darbee then-CEO and chairman of Pacific Gas and Electric, who
23 when the "three-plant Ivanpah Solar Complex" was moving forward it was [also announced](#) that,
24 "Electricity from the project will be sold under long-term power purchase agreements with Pacific Gas
25

1 & Electric and Southern California Edison Company (SCE)."

2 Rogers and Silver, on the other hand, each has their own interesting connections, of which we
3 profiled many times. In fact throughout this post we've established Jonathan Silver's role as the
4 Director of the Loans Programs Office at the DOE from November 2009 to early October 2011.
5 Meanwhile, Matt Rogers, from January 2009 until September 2010, served Senior Advisor to Energy
6 Secretary Steven Chu. Rogers oversaw the disbursement of tens of billions of dollars in stimulus funds
7 for renewable energy projects.

8 The March 7, 2011, Woolard/Silver EMAIL asked Silver to look over a letter drafted by
9 Woolard and then-BrightSource chairman John Bryson that requested direct White House influence in
10 BrightSource™s loan guarantee application. The letter, intended for then-White House Chief of Staff
11 Bill Daley, said...

12 We need a commitment from the WH to quarterback loan closure between OMB and DOE. It
13 also included a request for guidance and support from the White House. According to testimony from
14 Woolard, the email was never submitted.

15 Keep in mind, too, that Mr. Bryson, months after the DOE loan was approved, joined the
16 Obama administration in October 2011 (appointed in May 2011) as the [Secretary of Commerce](#)
17 although [he resigned](#) in June 2012 following a series of mysterious auto accidents. The Washington
18 Free Beacon [reported in 2012](#), According to financial disclosures, Bryson had up to \$500,000 in stock
19 options from BrightSource and a \$700,000 advisory fee from Kohlberg Kravis Roberts, an investment
20 group that has bought a number of solar farms in California. He was also the CEO of Edison
21 International, which obtained exclusive power purchase agreements for four of the solar projects, at the
22 time the awards were issued.

1 During the [July 18th Oversight hearing](#) regarding Obama™s green energy failures, Silver (the
2 loan program Director) admitted that he had known John Bryson for many years as well as to making
3 some "modest edits" to this particular email asking for White House intervention and it came from his
4 private email account. More astonishing, is that in the [July 2012 Oversight Hearing](#) we discovered that
5 Silver (and others inside the DOE) had a habit of using personal email accounts to conduct DOE
6 business, which clearly violates at least the spirit of the [Federal Records Act](#) of 1950 as well as
7 hampers any type of transparency and accountability.

8
9 Still, one month after the March 7, 2011 email exchange asking for direct White House
10 influence, whereas both Woolard and Silver claimed that it was never sent, the [\\$1.6 billion federal loan](#)
11 [guarantee](#) was approved with a handful of reporters taking note:

- 12 • The [Washington Post](#) stated, venture capitalists who held advisory roles with the Energy
13 Department were given access to Obama™s top advisers.
- 14 • The [Washington Examiner](#) report, President Obama discussed the Department of Energy
15 loan program with a stakeholder dependent on the DOE, and the conversation appears to have
16 expedited the process.

17
18 Even so, others will give the credit to Bernie Toon, who served then-Senator Joe Biden as his
19 Chief of Staff, and became a lobbyist for BrightSource Energy on [March 6, 2011](#). According to
20 [the](#) Wall Street Journal, BrightSource spent more than \$500,000 on lobbying in the third quarter of 2010
21 through the second quarter of 2011. \$40,000 of the lobbying money went to Toon. In fact, Toon and
22 BrightSource executives made two visits to the White House in March. The loan was approved the
23 following month. Toon™s contract ended [the day after](#) BrightSource got the loan.

24
25 However, the BrightSource [push](#) started as early as September 2009, which involved the top DC
26

1 lobbyists, [McBee Strategic Consulting](#), as reflected in the House Oversight leaked EMAILS that were
2 [unleashed](#) late October 2012 a treasure trove of "DOE Intel" that we have been revealing since their
3 release. These emails not only confirm the above shady scenario, but it implicates more BrightSource
4 executives and stakeholders, DOE officials as well as [Obama™s Green Team](#) and several in Congress
5 from the Democrat side.

6 On September 29, 2009, CEO of BrightSource John Woolard had written an EMAIL to Sanjay
7 Wagle (subject line Steve Chu email?)....

8 Sanjay I need to send a note to Matt R and Secretary about our situation and my only email for
9 Dr Chu is old lbnl address. Can you please send his new email?

10 Related to this, will likely be in DC again this week if you can free up for a beer (or am coffee)?

11 JW

12 "Matt R" is Matt Rogers, the DOE Advisor mentioned above, but who is Sanjay?

13 [Sanjay Wagle](#) was an Obama fundraiser in 2008 rallying [support](#) through a group he headed
14 known as [Clean Tech for Obama](#). According to the 2012 House Oversight report, has most recently
15 served as Renewable Energy Advisor to DOE under Secretary Chu [from June 2009 to November
16 2011], making him another DOE insider tied to many of the green deals. The report continues, Prior to
17 arriving in Washington, Wagle was a principal at Vantage Point Venture Partners, a cleantech venture
18 capital firm, whose investments received billions in taxpayer funds, which are not limited to the \$1.6
19 billion BrightSource deal. His former firm and the companies it invested in, therefore had a large stake
20 in the financing decisions being made by DOE at the time.
21
22

23 Wagle joined the DOE just as, according to the [Washington Post](#), the administration embarked
24 on a massive program to stimulate the economy with federal investments in clean-technology firms a
25
26

1 firm by the way that won a slew of "green" money from the Obama administration. As of September
2 2013, [VantagePoint's](#) investment portfolio [has at least](#) nine clean-energy firms/projects, which includes
3 three DOE loans that received loans, grants, and special tax breaks, and places their total at about \$3
4 billion of taxpayer money.

5 In a December 8, 2009 EMAIL with the subject line: Bobby K, please read, which was also
6 labeled "Importance: High" is where we find an interaction between Woolard and Kris Courtney
7 where she writes...

8
9 Call Bobby when you have a moment. He spoke with Carol Browner, who spoke with DOE and
10 DOE promised a call back to you/BSE within 24 hours. He also spoke with Ed Markey. Wants you to
11 call him so he can brief you.

12 Response from Woolard: Just got scheduled with Chu at 5:15 today for a call - JW

13 Response from Natalie Shaefer, "Great - when should we move our McBee call to?"

14 Woolard answer, "5:45 should work"

15
16 Carol Browner, an Obama bundler, was part of the both the Transition and Green teams, and
17 eventually was promoted to Obama™s Climate Czar, where she reigned during the time when many of
18 these loans were being approved (2009 to early 2011). Meanwhile, Bobby K is Robert F. Kennedy Jr.,
19 who is a [partner and Senior Adviser](#) at VantagePoint. Also, Ed Markey is the Democrat House
20 Representative for Massachusetts, who has made [energy policy](#) his top priority. He sits on several
21 energy committees and subcommittees, and is the former chairman of the [Select Committee on Energy](#)
22 [Independence and Global Warming](#).

23
24 In the [350+ page Appendix II](#), there is ongoing interaction and pressure from the heavy weight
25 K Street firm [McBee Strategic Consulting](#) the top DC lobbyists, which I thoroughly analyzed and
26

1 exposed in September 2013, starting with the president and CEO, Steve McBee. In 2011, Tim Carney
2 of the Washington Examiner [exposed](#) McBee's influence: "Energy lobbyists on Capitol Hill say that
3 this provision, which opened the spigot on the DOE loans, was written by Steve McBee. The
4 "provision" Carney is referring to was inserted into the 2009 stimulus bill that removed the portion of
5 the "2005 law" that had required from the beneficiary a sort of "down payment," to cover the risk of
6 default. So not only were most of these loans "junk" rated, but this allowed the DOE to give out loan
7 guarantees without the "down payment."
8

9 McBee's lobbying firm, not only represented BrightSource Energy, but the other key investors,
10 and those that had an invested interest in this \$1.6 billion loan, such as VantagePoint where [Steve](#)
11 [McBee](#) is also a Senior Advisor, as well as Google and PG&E the former VC firm listed above, and
12 the latter two, there is much more to share. However, what's key here is that [my research reflects](#) that
13 of McBee struck stimulus gold: with 31 energy clients (that I found), 19 (over 60 percent) received
14 green-government subsidies under the Obama administration, totaling approximately \$13.7 billion of
15 taxpayer money. In an EMAIL dated December 20, 2009, there is a very suspicious email exchange
16 about BrightSource [that included](#) John Woolard again (the former CEO), Joshua Bar-Lev the Vice
17 President Regulatory Affairs for BrightSource, and the lobbying firm representing BrightSource,
18 [McBee Strategic Consulting](#) with well as some unknown Democrats that are tied to energy-related
19 issues: We discovered that in 2009, Steve McBee alerted the masses with the following EMAIL:
20

21 "Wanted to let you know that the BrightSource application appears to moving apace at OMB
22 and has a fighting chance of getting over to DOE..."
23

24 "DOE is another story. We are hearing that despite a strong push by Silver, Spinner, Rogers and
25 others internally, the process is getting sideways by any number of bureaucratic hold ups and there is
26

1 now real potential for consideration of the project to slip until next year."

2 The next paragraph, Steve undermines the "integrity of the Loan Guarantee Program, and then
3 writes that if the project slips to 2011, that there is a strong likelihood that the project will be
4 redeployed to China..."

5 McBee continues, "ANYTHING you guys would be willing to do with DOE in terms of
6 moving the process would be deeply appreciated."

7 Joshua Bar-Lev in response says, "Do you all think we should have vantage point insist on mtg
8 with chu or silver or rodgers? Should john or I try to fly out for something similar? Looking for some
9 game changer but perhaps we™ve done all we could. Is dc shut down by the snow or is there some
10 impact we could make? Joshua"

11 It seems that 2010 was a busy year for the BrightSource players, because other than the January
12 2010 Woolard/Rogers email to get Jonathon Silver™s assistance, as well as Peter Darbee™s meeting
13 with President Obama divulged above, there were more and all prior to the April 11, 2011 finalization
14 of the \$1.6 billion DOE loan.
15

16 EMAIL January 13, 2010 (subject DOE Loan Guarantee): Joshua writes to Steven L. Kline and
17 cc™s John Woolard...

18 Steve, would have a few minutes to discuss both 1) status of our efforts with DOE, and then 2)
19 our strategy of trying to meet with 3-4 members (Reid, Boxer, Bingaman, maybe Feinstein) in early
20 February to either say '~huge problem, need your help or ~thank you for your assistance,' but it could
21 have been better or something like that!
22

23 EMAIL: January 12, 2010 (subject line DOE update): Woolard writes to Peter Darbee (at that
24 time the CEO and chairman of PG&E)...
25

1 Peter “ I understand you might be having breakfast with Secretary Chu tomorrow morning”

2 Woolard then goes on to complain about issues they are having, stuck in bureaucracy and that
3 Peter should drive the point home...you could let him [Chu] know that if it not approved we would
4 likely move to build projects in China as it will be the final signal that the US is dysfunctional!

5 Woolard closes with, "Thanks in advance if there is any way you can help move this forward.
6 Bechtel and Brightsource are in a detailed project review and are ready to move this project forward.
7 Regards, John."

8
9 The next day, Woolard writes, "...without the doe loan guarantee pge is at risk for losing entire
10 commitment and CA is at risk for RPS requirements."

11 Needless to say, about a month prior to the April 2011 approval, additional correspondences
12 took place between March 5 and March 10, 2011:

13 EMAIL March 5, 2011 (subject line: Outline for DOE presentation), Joshua Bar-Lev (the Vice
14 President Regulatory Affairs for BrightSource) alerts his internal masses!

- 15 • The attached Outline will be filled in as talking points to be used by the political team.

16 Over the weekend. Arthur, Jack and the deal team coming into DC Monday.

- 17 • Meetings at the highest level possible should be arranged for Tuesday/Wednesday with
18 our champions. We will need you to schedule. You should work with Arthur on appropriate
19 mtgs with DOI (like Steve Black) etc. Woolard coming in the following week. JW Will want
20 meetings that week with the VP, Reid, Chu, Feinstein and other principles.

- 21 • Once Bernie Toon inculcated (shortly), you guys need to fold him in to the arguments,
22 roles and get him the litigation and other info. NOTE: Bernie Toon, mentioned earlier, is the
23 lobbyist that served for then-Senator Joe Biden as his Chief of Staff. And we know that visits by
24
25

1 him Toon and BrightSource executives made two visits to the White House in March 2011.

2 • JW just now heard from Gov™s asst Picker that Governor wants to talk to JW. That is
3 happening now or shortly. Governor wants to express, as Gov and as former AG, STRONG
4 STATE INTEREST¹. Will call Chu and may want to call President and VP. [this just happened
5 SWEET].

6 EMAILS March 8th and 9th, 2011 (subject line: DOE UPDATE): Again Joshua Bar-Lev in an
7 email exchange with BrightSource folks, and cc's Bernie Toon writes...

8 We just had a political meeting and concluded that it is prudent for JW and possibly others to be
9 in DC next Tuesday. We are working on mtgs with our key senators, and with the VP and WH offices,
10 and of course with Jonathan Silver, and possibly others..." Joshua concludes, Is this like the Stanley
11 Cup finals, seventh game, overtime, or what? Joshua

12 There was also discussion of a signing ceremony, whereas Gabe Horwitz (at that time the
13 Executive VP at McBee Strategic Consulting) states...

14 Yes, it can be organized and having JW suggest it is a perfect avenue. Key is whether DOE
15 wants a big splash to tamp down the downward pressure as a result of the IG report and solyndra or
16 they want to just churn these out with much less fanfare.

17 Mr. Horwitz goes on...

18 John can further reference the Hill meetings/conversations we have been having and note to
19 Silver that there is interest from senior leaders on the Hill to take a victory lap along with the WH on
20 this and have a collective talking point for both Obama and the entire Administration to use in the
21 midst of the unrest in Libya and need for further demonstration of domestic power.

22 Natalie Schaefer responded with concern...

1 Personally I donTMt think you want to have a signing ceremony until everything is said and
2 done|

3 Ms. Schaefer mentioned another concern...

4 NRG met with Silver last week and was told by him: DOE will be ready by the 17th/18th, but
5 its 'OK' if equity is not, we donTMt need to fund until you are ready|she went on, |we MUST CLOSE by
6 the 18th|this is the miss-messaging that people get confused about and I find myself having to explain
7 away the differences and sensitivities here to timing and what issues impact the various dates (running
8 out of money vs. govt shut down and loss of appropriations).
9

10 Josh replies with urgency...

11 The third week of March is a recess week; politically its better to do it next week and take a
12 victory lap even BEFORE the cps are satisfied|

13 In the middle of all the pruning and prodding (mostly in early 2011), we find Woolard biking
14 and having sleepovers with Silver. We also see that Silver was hosting a party for John Bryson. Also,
15 David Crane, the CEO of NRG Energy, was sending invitations to Woolard and Bryson to a
16 fundraising dinner at his home that included Louisiana Senator Mary Landrieu. But Bryson declined
17 CraneTMs invite only due to the fact that it conflicted with a dinner he was having with Ted Craver and
18 California Senator, Diane Feinstein. There you have it, despite the fact that during the loan review
19 process, BrightSource Energy was bleeding money; obviously desperate for the cash; and their huge
20 solar project loan was rated "speculative" at best, it didnTMt sway the DOE in the least, because on
21 April 11, 2011, the [DOE announced](#) the finalization of \$1.6 billion in loan guarantees that was made
22 available by the passing of the 2009-Recovery Act, for their Ivanpah project stimulus money that they
23 predict will create 1000 construction jobs, with only 86 permanent jobs, once it ever gets completed.
24
25
26

1 But there's more...

2 Three Key Players Inside the Ivanpah project: PG&E, Google, & NRG Energy Besides all
3 energy expended on getting the BrightSource \$1.6 billion loan approved, plus the key participants
4 listed above, many of which were friends of President Obama, we must throw in the fact that
5 BrightSource has an [array of investors](#) that are high-powered [Obama donors](#) such as VantagePoint
6 Capital, Google, BP Alternative Energy, Morgan Stanley, and [Goldman Sachs](#) with BrightSource
7 having partnered with NRG Energy and Google on their Ivanpah project, though, according to [Forbes](#),
8 the federal loan guarantee is financing the bulk of Invanpah™s construction costs. VantagePoint, which
9 I outlined earlier, noting many direct connections to the president, and that as of September
10 2013, [VantagePoint's](#) investment portfolio [has at least](#) nine clean-energy firms/projects, which includes
11 three DOE loans that received loans, grants, and special tax breaks, and places their total at about \$3
12 billion of taxpayer money.

14 While each of the listed investors deserve further scrutiny, we'll stay with three that are directly
15 part of the [Ivanpah](#) project located on federally-owned land in the Mojave Desert in southeastern
16 California, near the Nevada border.

18 The BrightSource strategy not involved their gang, which ranged from the CEO John Woolard,
19 its chairman John Bryson, and their lobbyists McBee Strategic Consulting. But in the mix was their
20 vice president connection Bernie Toon; VantagePoint ties to the president; key DOE insiders and high-
21 profiled Democrats such as Senator Harry Reid working on their behalf, as well as other key figures in
22 the mix, which included the former chairman of PG&E, Peter Darbee, who was also working on their
23 behalf due to the fact that PG&E had an invested interest in the Ivanpah project. Still, PG&E is a [strong](#)
24 Obama and Democrat donor. In fact, PG&E is jam-packed with Washington "[green cronies](#)," including
25

1 Cathy Zoi, who is the "most controversial former PG&E employee to hold an influential government
2 position." Zoi, an Al Gore acolyte, in April 2009, became the Assistant Secretary for Energy
3 Efficiency, who oversaw the disbursement of [more than \\$30 billion](#) in renewable energy stimulus funds
4 in her DOE position at the Office of Energy Efficiency and Renewable Energy ([EERE](#)). Later in 2010,
5 during a series of [DOE vacancies](#), Zoi briefly filled the role of Acting Undersecretary for Energy, and
6 in February 2011, she [jumped](#) the DOE ship to work for George Soros another friend of Obama and
7 [key villain](#) in this Green Corruption scandal, and also a shareholder of NRG Energy. Meanwhile, [Zoi is](#)
8 [also tied](#) to a few other green energy companies that got stimulus funds. Additionally, with their high-
9 powered connections all the way up to the president and inside the DOE, [PG&E](#) won a significant
10 amount of stimulus money for various projects: [at least seventeen to date](#) and over \$55 million. Still,
11 the big win for this Big Utility corporation is that they have an invested interest in \$7.6 billion of
12 Energy Department stimulus loans, which includes the BrightSource's Ivanpah project and details into
13 these taxpayer-funded projects can be found in my [April 2013 post](#). Factor in Google, which had made a
14 \$10 million equity investment in BrightSource in 2007. Then on April 11, 2011, the day that the DOE
15 had finalized BrightSource's billion-dollar DOE loan, Google [announced](#) its largest investment in
16 renewable energy to date: \$168 million [into the](#) Ivanpah project. Google has an array of ties to the
17 president, including the fact that Google™s [\\$814,540](#) contribution to then-Senator Obama™s
18 campaign made it the fifth largest donor in 2008, and [in 2012](#) moved up to the number three spot with a
19 whopping \$805,119. Meanwhile, top Google executives not only donated, but also were heavily
20 involved in both Obama's [2008](#) and [2012](#) campaigns. So, it's no coincidence that in [September 2013](#),
21 when I tackled [Google Ventures](#) via their "Energy Investments" and other "green deals" that I was
22 able to confirm that they have at least ten verified winners of stimulus and other green energy funds,
23
24
25
26

1 which places their investment score at close to \$5 billion of taxpayer cash. This figure does not include
2 Silver Spring Networks and their connection to \$1.3 billion in smart-grid stimulus grants [that I](#)
3 [divulged](#) a few times. Enter in NRG Energy, another huge energy corporation that sometime in October
4 2010, during the time of the BrightSource DOE loan review process, [NRG became the lead](#)
5 [investor](#) (\$300 million) in the Ivanpah solar project of the 392 MW Ivanpah project." It so happens that
6 NRG Energy a Fortune 500 and S&P 500 Index company and its subsidiaries was the recipient of
7 most of 1705 stimulus loans worth \$5.2 billion of taxpayer money, and counting. Due to the George
8 Soros connection to NRG Energy as a shareholder; his role as another "stimulus author;" and the fact
9 that he bankrolled both of Obama's elections, you can find more on NRG Energy as well as Soros in
10 my [March 2013 Green Corruption File](#): Left-wing Billionaire George Soros: Obama™s 'Agent of
11 Green.' There you will also discover that NRG Energy has its fair share of Obama connections as
12 well. NOTE: In case you'd like to learn more about all the "stimulus authors" that financially benefited
13 from the stimulus package that they helped craft, I exposed them in my last Green Corruption File,
14 "[The RAT in the Recovery and the Gang of Ten](#)." Now we discover that the [Ivanpah Solar project](#) is
15 "being constructed by Bechtel," another big corporation with their hand in the stimulus a piece of this
16 scandal that I divulged in my June "[Nuclear Crimes and Misdemeanors](#)" story with the main focus on
17 the billion-dollar Colorado-based consulting, engineering and construction firm [CH2M Hill](#). Senator
18 Harry Reid Brings Home More "Green" In October 29, 2009, Reid, and his pal Secretary Chu
19 [announced](#) more than \$90 million for Nevada related geothermal energy projects. This is on top of the
20 two geothermal projects documented earlier. Then in Senator Reid's 2012 "Playing to win in CLEAN
21 ENERGY" [portfolio](#), we find that there are three more projects, whereas Reid brought home to Nevada
22 more special favors and additional money from the 1603 grant program, which was created by the 2009
23
24
25
26

1 economic stimulus law. Spring Valley Wind It was reported that the Spring Valley project "[sits on](#)
2 federal land and relied on financial support from the American Recovery and Reinvestment Act,"
3 However, how much taxpayer money that this wind project received is unclear. According to Reid's
4 2012 document, the [Spring Valley Wind](#) a project of Pattern Energy utilized the Department of
5 Treasury's Section 1603 program for its funding. And, "In order to help take advantage of the 1603
6 program, [the](#) Department of Interior and Bureau of Land Management designated Spring Valley as a
7 priority project in 2009." In fact, the Spring Valley project and its "fast-track process" caused some
8 environmental alarm, including [a lawsuit](#), which was covered in an [August 2012 report](#) by E&E
9 Publishing that stated...

11 The project sits on 7,673 acres of public land, requiring Pattern to receive approval from the
12 Bureau of Land Management and complete environmental reviews required by the National
13 Environmental Policy Act before construction could begin. BLM said early on that it wanted to "fast
14 track" the approval process ([Land Letter](#), Jan. 14, 2010).

16 That review did not satisfy environmental groups such as the Center for Biological Diversity,
17 which filed a lawsuit in early 2011 seeking to halt the project, arguing it would be harmful to bats that
18 roost in the area. Pattern and the environmentalists settled the lawsuit earlier this year, with the
19 company agreeing to undertake additional mitigation measures and pay up to \$50,000 for a study on
20 bat roosting habits ([Greenwire](#), April 18).

21 It seems that in [April 2012](#), "Pattern's Spring Valley Wind Project Reaches Settlement
22 Agreement." Senator Reid was also one of those in Congress [pushing for](#) the extension of the
23 [Production Tax Credit](#) (PTC) that was set to expire at the end of 2012, thus helping his "wind pal"
24 over at Pattern Energy. This (wind energy and the PTC) is another huge piece of the clean-energy
25

1 scandal that I've covered a few times, but most recently in my [January 2013 post entitled](#), "Big Wind
2 Energy Subsidies: A Hurricane of Carnage, Cronyism and Corruption." Silver State North and Copper
3 Mountain

4 According to Reid. "In Nevada, First Solar partnered with Sempra Generation to expand the
5 existing solar facility in the Eldorado Valley known as Copper Mountain and is the developer of the
6 Silver State North near Primm, Nevada." While the Eldorado and Copper Mountain solar projects, are
7 owned by Sempra Generation, the Silver State North project belongs to First Solar. It turns out that
8 First Solar™s projects in Nevada were "aided by the federal government™s 1603 grant program." "In
9 addition, these projects were also assisted by the BLM™s fast-track permitting process. Finally, the
10 State of Nevada™s renewable energy tax abatement program also helped First Solar offer lower prices
11 to utilities." The two grant I found were as follows:

13 • On October 17, 2012, Silver State Solar Power North, LLC won a \$54,633,872 stimulus
14 grant.

16 • On June 11, 2013, Copper Mountain Solar 2, LLC won a \$74,207,365 stimulus grant.

17 Stillwater Solar

18 According to Reid. "In Nevada, Enel Green Power North America has already constructed the
19 Stillwater and Salt Wells geothermal power plants near Fallon. The availability of renewable energy
20 tax credits and the U.S. Department of the Treasury™s Section 1603 grant in lieu of tax credit program
21 have played an important role in the development of the Stillwater project."

22 On September 25, 2012, EGP Stillwater Solar, LLC won a \$20,830,904 stimulus grant.

24 ".....In closing... These five "speculative" stimulus loans, with a few that also received stimulus
25 grant, costs American taxpayers over \$3.3 billion, while producing (or expected to create, save or

1 whatever) 2532 temporary construction jobs and only 224 permanent jobs. If we add in the additional
2 stimulus funds that Harry brought to his home state, the total is much higher.

3 What is clear is that the American Recovery and Reinvestment Act (ARRA) was a massive
4 economic stimulus bill that was sold to the American people as a means save our economy from the
5 brink of disaster and create American jobs. Needless to say, the American were intentionally misled,
6 because even though the job figures don't add up, we now know that the stimulus package wasn't about
7 our economy or jobs.

8
9 Eventually, in early 2012, most Americans discovered the truth behind the trillion-dollar
10 Recovery Act, which was jammed-packed full of [clean-energy provisions](#) (about 10 percent of the
11 monies were earmarked for renewable energy). Internal [revelations](#) revealed that the [real intent](#) behind
12 Obama's trillion-dollar spending spree: it was a key tool for advancing the Obama administration™s
13 clean-energy goals and fulfilling a number of campaign commitments. In reality it was "walking
14 around money" for the president to payback his wealthy bundlers and donors as well as his "green"
15 cronies and allies, which unequivocally in an unprecedented and corrupt tactic included Senator Harry
16 Reid. (C. Lakatos)

THE WHITE HOUSE SPONSORED ATTACKERS

In America today, the only effort made by political executives is to steer the annual expenditure of trillions of dollars of taxpayer funds to one group of friends or another. It is called “Cronyism”.

The benefits of almost every public official have little or nothing to do with their salaries and everything to do with real estate, stock market ownership, revolving door payola jobs and investment bank accounts that show profits from each deal that a politician pushes.

Our team can show the FBI-level tracking of the covert accounts, trusts, shell corporations, family members and associates of every public official involved in this case and prove that they made money by competing with the Applicant’s business ventures. The Panama Papers Leaks, Swiss Leaks, Snowden Leaks, and all of the other leaks prove this as fact.

The Bottom Line:

Whiny fraternity boys from rich family dynasties joined forces at Yale and Stanford University frat clubs and placed their associates in the U.S. Government in order to get taxpayer funds kicked back to their “*Palo Alto Mafia*”, AKA “*PayPal Mafia*”. By creating government sponsored monopolies, using networks and resources that only these “rape-culture” oligarchs controlled, they gained exclusive access to massive wind-fall profits.

They copied many of their companies from companies previously created, patented, launched and marketed by Plaintiff and ostracized Plaintiff when he complained of their thefts and Cartel plans. This PayPal Mafia created, financed and internet manipulated the Obama campaign in exchange for industry monopolies.

1 U.S. Senators and White House staff ordered, financed and operated the attacks on the Plaintiff
2 in order to please their Silicon Valley oligarch financiers.
3

4 The following companies sell attack services. They are hired by famous politicians in order to
5 to try to distract from the fact that those politicians are engaged in financial crimes:

6 **THESE INSIDERS ARE MANIPULATING GLOBAL ELECTIONS**

7 - Second former employee of controversial data firm to be questioned by special counsel's
8 inquiry into Russia collusion

9 By Carole Cadwalladr

10 Brittany Kaiser is said to be cooperating fully with the Mueller inquiry.

11
12 A director of the controversial data company Cambridge Analytica, who appeared with Arron
13 Banks at the launch of the Leave.EU campaign, has been subpoenaed by the US investigation into
14 possible collusion between the Trump campaign and the Russian government.

15 A spokesman for Brittany Kaiser, former business development director for Cambridge
16 Analytica – which collapsed after the Observer revealed details of its misuse of Facebook data –
17 confirmed that she had been subpoenaed by special counsel Robert Mueller, and was cooperating fully
18 with his investigation.

19
20 He added that she was assisting other US congressional and legal investigations into the
21 company's activities and had voluntarily turned over documents and data.

22 Kaiser, who gave evidence to the UK parliament last April in which she claimed Cambridge
23 Analytica had carried out in-depth work for Leave.EU, is the second individual connected to the firm
24 subpoenaed by the special counsel. The Electoral Commission has said its investigation into Leave.EU
25

1 found no evidence that the campaign “received donations or paid for services from Cambridge
2 Analytica ...beyond initial scoping work”.

3 Damian Collins, chairman of parliament’s inquiry into fake news, said it was “no surprise” that
4 Kaiser was under scrutiny by Mueller because “her work connected her to WikiLeaks, Cambridge
5 Analytica and [its parent company] SCL, the Trump campaign, Leave.EU and Arron Banks”.

6 He said it was now vital Britain had its own inquiry into foreign interference: “We should not
7 be leaving this to the Americans.”

8 Tom Watson, the deputy leader of the Labour party, echoed Collins’s statement, saying: “This
9 is the first evidence that a significant player in the Leave.EU campaign is of interested to the global
10 Mueller inquiry. People will be bewildered that the British government has no interest in establishing
11 the facts of what happened.”

12 In August, Sam Patten, a US political consultant who had worked for Cambridge Analytica on
13 campaigns in the US and abroad, struck a plea deal with Mueller after admitting he had failed to
14 register as a foreign agent for a Ukrainian oligarch.

15 He became a subject of the special counsel’s inquiry because of work done with Paul Manafort,
16 Trump’s campaign manager, in Ukraine. He had also set up a business with Konstantin Kilimnik, a key
17 figure who Mueller has alleged has ties to Russian intelligence and who is facing charges of obstruction
18 of justice. In a 2017 statement to the Washington Post, Kilimnik denied any connection to intelligence
19 services. Kaiser, however, is the first person connected directly to both the Brexit and Trump
20 campaigns known to have been questioned by Mueller.

21 The news came to light in a new Netflix documentary, The Great Hack, which premiered at the
22 Sundance film festival last month and is expected to be released later this spring. Film-makers followed
23

1 Kaiser for months after she approached the Guardian, including moments after she received the
2 subpoena. She claims the summons came after the Guardian revealed she had visited WikiLeaks
3 founder Julian Assange while still a Cambridge Analytica employee in February 2017, three months
4 after the US election.

5 One part of Mueller’s investigation focuses on whether the Trump campaign sought to
6 influence the timing of the release of emails by WikiLeaks before the election. Investigators are
7 looking at communications between them. In the film, Kaiser says that she has gone from being a
8 cooperating witness to a subject of investigation because of her contact with Assange.

9
10 In October 2017, it was revealed that Alexander Nix, the chief executive of Cambridge
11 Analytica, had contacted Assange in August 2016 to try to obtain emails from Hillary Clinton’s
12 presidential campaign – which indictments from Mueller’s team say were obtained by Russian military
13 intelligence – to use in Donald Trump’s campaign. When Kaiser gave evidence to parliament last year,
14 she was asked about her relationship with Assange and WikiLeaks but failed to reveal that she had met
15 Assange.

16
17 In the documentary, Kaiser is shown after receiving an email from the Guardian last June
18 asking about meeting Assange and alleged donations of cryptocurrency to WikiLeaks. Kaiser did not
19 respond to the email at the time, but on camera says: “She knows I met Assange. And she knows I
20 donated money to WikiLeaks in bitcoin.”

21 Her legal representatives later wrote to the paper to say that the allegations, including that she
22 had “channelled” donations to WikiLeaks, were false. Kaiser said she had received a small gift of
23 bitcoin in 2011 – long before she worked at Cambridge Analytica – and, not knowing what else to do
24 with it, gave it to WikiLeaks, because she had benefited from material it had released over the years.

1 Her lawyer told the Observer that the meeting with Assange came about after a chance
2 encounter in London with an acquaintance who knew him. It lasted 20 minutes and consisted mainly of
3 Assange telling her “about how he saw the world”. He said they did not discuss the US election.

4 Patten and Kaiser were involved in a controversial election campaign in Nigeria in January
5 2015, which former Cambridge Analytica employees say had “unsettling” parallels to the US
6 presidential election.

7 The Guardian revealed that the data firm had worked alongside a team of unidentified Israeli
8 intelligence operatives on the campaign. Ex-Cambridge Analytica employees described how the
9 Israelis hacked the now-president of Nigeria’s emails and released damaging information about him to
10 the press weeks before the election.

11 Internal documents from a private Israeli intelligence firm called Psy-Group show that, at the
12 time of many incidents, the company, and possibly other private investigators, were targeting U.S.
13 citizens because they spoke up about crimes. Psy-Group’s intelligence and influence operations, which
14 included a failed attempt in the summer of 2017 to sway a local election in central California, were
15 detailed in a New Yorker investigation that I co-wrote earlier this month.

16 Before it went out of business (ie: changed it's name) , last year, Psy-Group was part of a new
17 wave of private-intelligence firms that recruited from the ranks of Israel’s secret services and described
18 themselves as “private Mossads.” Psy-Group initially stood out among its rivals because it didn’t just
19 gather intelligence; its operatives used false identities, or avatars, to covertly spread messages in an
20 attempt to influence what people believed and how they behaved. In 2016, Psy-Group held discussions
21 with the Trump campaign and others about conducting covert “influence” operations to benefit the
22 candidate. Psy-Group’s founder and C.E.O., Royi Burstien, a veteran Israeli intelligence officer who
23
24
25
26

1 established the firm in 2014, told me that his talks with the Trump campaign went nowhere. The
2 company's posturing, however, attracted the attention of Robert Mueller, the special counsel, who has
3 been investigating interference in the 2016 Presidential race.'

GOVERNMENT AGENCIES WERE ILLICITLY USED AS ATTACK SERVICES AGAINST PLAINTIFFS

National News Coverage Exposes Reprisal Problems With DOE, DOJ, SSA, IRS, HUD and other Government Agencies

By Conner Lee

A vast number of agency abuse cases and lawsuits are now on public record in the Inspector General's offices and federal courts.

It is an indisputable fact that some government agencies run "hit-jobs" on citizens on orders from certain corrupt politicians. These actions are felony violations of the law.

Federal and State Agencies including SSA, FEC, DOE, HHS, VA, CIA, HUD, SA, SEC, FBI, DOJ and many others, have been charged, and found guilty, in these crimes against citizens.

In the Congressional investigation published by the United States Congress in review of the U.S. Department of Energy LGP/ATVM programs, it is clearly proven that the U.S. Department of Energy was used as a slush-fund by some DOE executives in order to pay off campaign financiers by attacking and sabotaging their competitors.

The DOE Paducah Gaseous Diffusion Plant under contracts with the Department of Energy and the government-owned U.S. Enrichment Corp paid \$5M whistle-blower awards to those whistle-blowers who were attacked, using government agency resources, for reporting a crime.

Dept. of Energy Hanford URS has agreed to settle a lawsuit brought by former employee Walter Tamosaitis for \$4.1 million. The settlement in the whistle-blower case comes almost one year before the case was set for a jury trial in federal court in Richland and compensates Tamosaitis for attacks against him, by DOE officials, in retribution for reporting a crime.

1 VA officials attacked hundreds of citizens who reported corruption, ie:

2 [https://www.thenewamerican.com/usnews/health-care/item/18610-va-whistleblowers-facing-](https://www.thenewamerican.com/usnews/health-care/item/18610-va-whistleblowers-facing-retribution)
3 retribution.

4 As shown in this report: [https://www.pogo.org/analysis/2018/08/new-report-confirms-](https://www.pogo.org/analysis/2018/08/new-report-confirms-whistleblower-retaliation-is-alive-and-well-at-department-of-veterans-affairs/)
5 whistleblower-retaliation-is-alive-and-well-at-department-of-veterans-affairs/

6 , Agencies attack often and harshly.

7 CIA and NSA executives have been widely shown to use spy tools to attack domestic citizens
8 they don't like, ie: [https://www.dailymail.co.uk/news/article-2435011/NSA-employees-used-phone-](https://www.dailymail.co.uk/news/article-2435011/NSA-employees-used-phone-tapping-tools-spy-girlfriends-cheating-husbands.html)
9 tapping-tools-spy-girlfriends-cheating-husbands.html , and hundreds of other news links that can be
10 provided.
11

12 Elon Musk and Tesla, as well as Eric Schmidt and Larry Page at Google, have been proven to
13 use the CIA group: IN-Q-TEL, to run government sponsored/financed attacks on business competitors.
14

15 In Civil Action No. 1:13-cv-00777-RBW GOVERNMENT AGENCIES WERE CAUGHT
16 BEING USED FOR ATTACKS AGAINST CITIZENS AND PUNISHED IN THE COURT AND
17 THE MEDIA!

18 The IRS, and hordes of other government agencies have been caught and proven, IN COURT,
19 to target and attack people for presumed political differences.

20 Why should we assume that the Social Security Administration is not ALSO doing this too to
21 harm citizens who speak out?
22

23 The Lois Lerner IRS attacks took many years to resolve. In an unprecedented victorious
24 conclusion to a four year-long legal battle against the IRS, the bureaucratic agency admitted in federal
25 court that it wrongfully targeted citizens, during the Obama Administration, because of their political
26

1 viewpoints and issued an apology to those people for doing so.

2 In addition, the IRS is consenting to a court order that would prohibit it from ever engaging in
3 this form of unconstitutional discrimination in the future.

4 In a proposed Consent Order filed with the Court, the IRS has apologized for its treatment of
5 U.S. citizens including organizations from 20 states that applied for 501(c)(3) and (c)(4) tax-exempt
6 status with the IRS between 2009 and 2012 -- during the tax-exempt determinations process. Crucially,
7 following years of denial by the IRS and blame-shifting by IRS officials, the agency now expressly
8 admits that its treatment of our clients was wrong and a total violation of our Democracy..
9

10 As set forth in the proposed Order:

11 “The IRS admits that its treatment of Plaintiffs during the tax-exempt determinations process,
12 including screening their applications based on their names or policy positions, subjecting those
13 applications to heightened scrutiny and inordinate delays, and demanding of some Plaintiffs’
14 information that TIGTA determined was unnecessary to the agency’s determination of their tax-exempt
15 status, was wrong. For such treatment, the IRS expresses its sincere apology.”
16

17 Throughout litigation of this case, activists have remained committed to protecting the rights of
18 the public who faced unlawful and discriminatory action by the IRS and other agencies. The objective
19 from the very beginning has been to hold agencies accountable for corrupt practices.

20 This Consent Order represents a historic victory for the public and sends the unequivocal
21 message that a government agency’s targeting of citizens organizations, or any organization, on the
22 basis of political viewpoints, will never be tolerated and that revenge will be swift and vast.
23

24 The Order will put an end, once and for all, to the abhorrent practices utilized against citizens,
25 as the agreement includes the IRS’s express acknowledgment of – and apology for – its wrongful
26

1 treatment of the public. While this agreement is designed to prevent any such practices from occurring
2 again, rest assured that all public interest lawyers will remain vigilant to ensure that the IRS, SSA, DOJ
3 or SEC does not resort to such tactics in the future.

4 Per detailed reports, in March of 2012 lawyers began being contacted by literally dozens of
5 citizens and groups who were being harassed by the Obama IRS after submitting applications for tax-
6 exempt status. Their tax-exempt applications were held up for years (over seven years in some cases),
7 and they began receiving obtrusive and unconstitutional requests for donor and member information.
8 That began a now more than five and a half year fight with the burgeoning bureaucracy at the IRS.
9 Then on May 10, 2013, Lois Lerner, the then head of the IRS Tax Exempt Organizations Division,
10 publicly implicated the IRS in one of the worst political targeting scandals of the century.
11

12 This is an extraordinary victory against government agency abuse. It sends a powerful warning
13 to the deep state bureaucracy that it will not be allowed to violate the Constitution in order to silence
14 and shut down the whistle-blowers.
15

16 In addition to the IRS's admissions of and apology for its wrongful conduct, the Consent Order
17 would specifically award Plaintiffs the following:

18 - A declaration by the Court that it is wrong to apply the United States tax code to any tax-
19 exempt applicant or entity based solely on such entity's name, any lawful positions it espouses on any
20 issues, or its associations or perceived associations with a particular political movement, position or
21 viewpoint;

22 - A declaration by the Court that any action or inaction taken by the IRS must be applied
23 evenhandedly and not based solely on a tax-exempt applicant or entity's name, political viewpoint, or
24 associations or perceived associations with a particular political movement, position or viewpoint; and
25

1 - A declaration by the Court that discrimination on the basis of political viewpoint in
2 administering the United States tax code violates fundamental First Amendment rights. Disparate
3 treatment of taxpayers based solely on the taxpayers’ names, any lawful positions the taxpayers
4 espouse on any issues, or the taxpayers’ associations or perceived associations with a particular
5 political movement, position or viewpoint is unlawful.

6 In the Order, the IRS has also agreed that (unless expressly required by law) certain actions
7 against the Plaintiffs– i.e. the sharing, dissemination, or other use of information unnecessarily
8 obtained by the IRS during the determinations process (such as donor names, the names of volunteers,
9 political affiliations of an organization’s officers, etc.) – would be unlawful. In addition, the IRS
10 promises not to take any retaliatory action against our clients for exposing the targeting scheme.
11

12 Finally, and of crucial significance, the IRS admits it targeted persons and groups based on their
13 viewpoints (i.e., “policy positions”) and that such viewpoint discrimination violates fundamental First
14 Amendment rights. This is the first time the IRS has admitted that its targeting scheme was not just
15 “inappropriate” – as TIGTA found – but, as alleged, blatantly unconstitutional.
16

17 To ensure consistency and uniformity within the agency’s operations going forward, the IRS is
18 required, pursuant to the Order, to inform all employees within the Exempt Organizations Division, as
19 well as the Commissioners and Deputy Commissioners within other divisions, of the Order’s terms.
20

21 This Order not only validates allegations about their treatment at the hands of the corrupt
22 Obama-era IRS but also provides important assurances to the American public that the agency
23 understands its obligation to refrain from further such discriminatory conduct. As Attorney General
24 Sessions acknowledged in this regard, “[t]here is no excuse for [the IRS’s] conduct,” as it is “without
25 question” that the First Amendment prohibits the conduct that occurred here, i.e., subjecting American
26

1 citizens to disparate treatment “based solely on their viewpoint or ideology.” Sessions further
2 confirmed his Department’s commitment to ensuring that the “abuse of power” in which the IRS
3 engaged here “will not be tolerated.”

4 It is impossible to overstate the importance of this victory. This marks a years-long fight for
5 justice in defense of the constitutional rights of the public.

6 This is an extraordinary victory against abuse of power and corruption.

7 It sends a powerful warning to the deep state bureaucracy that it will not be allowed to violate
8 the Constitution and manipulate the IRS, SSA and other agencies in order to silence and shut down
9 those who speak out about political corruption crimes.
10

11
12 In the wake of Wisconsin Watchdog’s investigation into SSA staff allegations of
13 incompetence, misconduct, and retaliation in Social Security disability appeals offices, several
14 employees have taken their complaints to a Senate committee led by Wisconsin Sen. Ron Johnson.

15 An official with knowledge of the complaints said the Senate Homeland Security and
16 Governmental Affairs Committee, chaired by the Oshkosh Republican, has received emails and other
17 contacts from “certain people” inside the Social Security Administration’s Office of Disability
18 Adjudication and Review.
19

20 The initial complaints came from an employee inside the Milwaukee office following
21 Wisconsin Watchdog’s opening investigative report that found some claimants waiting more than
22 1,000 days for an appeals decision on their disability benefits claim.
23

24 Following Wednesday’s story of a whistleblower in the Madison ODAR office, the committee
25 has received more specific complaints about retaliation against employees, the source said.
26

1 Committee staff members sent the latest Watchdog piece to SSA administrators hoping they
2 will “cooperate,” the source said. To date, the agency has been less than cooperative.

3 “This is an ongoing process, and they are not always as forthcoming as we’d like them to be,”
4 the source said. “Hopefully with your continued reporting, this is an issue they can’t duck.”

5 A Senate committee member said officials there are working with the Office of Special Counsel
6 on “multiple whistleblower retaliation claims.” The committee continues to request information from
7 the SSA.

8 The whistleblower in the Madison office claims management retaliated against her after she
9 was called to testify in a misconduct case. The incident involved “inappropriate behavior” by an
10 administrative law judge, she said.

11 “They are so corrupt. It’s absolutely horrible,” said the woman, a lead case technician in the
12 Madison Office of Disability Adjudication and Review.

13 She spoke on condition of anonymity, fearing more retribution from her supervisors. While she
14 said recounting her particular experiences will more than likely betray her identity anyway, the ODAR
15 case worker insisted she has had enough.

16 “I’m at point where they don’t care about me, I don’t see why I’m protecting them. This is my
17 last resort,” she said. “I want to do my work without fear of retaliation.”

18 She said she has contacted the Senate committee.

19 “I forwarded my information to them and I got an email back from them. They said people are
20 coming out of the woodwork with their complaints (about ODAR) following your story,” the whistle-
21 blower said.

22 Ronald Klym, a long-time senior legal assistant in the Milwaukee ODAR office, alleges he has
23

1 been retaliated against by supervisors for going public with his charges of incompetence and
2 misconduct in the agency.

3 The federal employee, who has worked for SSA for 16 years, provided Wisconsin Watchdog
4 with documents showing extremely long wait times for claimants appealing their denied applications
5 for benefits.

6
7
8 Doug Nguyen, SSA regional spokesman, in a previous story said the agency acknowledges that
9 Milwaukee ODAR has a “high average processing time for disability appeal hearings, and we are
10 working to address the issue.”

11 Beyond the delays is what Klym calls the “shell game,” the wholesale transferring of cases to
12 other parts of the country by administrators to make the Milwaukee office’s numbers look better than
13 they are.

14 The Madison office whistle-blower confirmed Klym’s allegations, saying at one point she saw
15 2,000 cases from the Milwaukee office handed off to the Oak Brook operation.

16
17 There are over 10,000 SSA disability manipulation charges against SSA executives and staff.
18 The case against “Mario U”, an SSA supervisor at the San Mateo, California Social Security office,
19 involves Mario putting political attacks on citizens who he did not like the politics of.

20 The last bastion of hope for American citizens is their Social Security funds that they earned
21 over the course of their lives. To find out that Social Security staff can cut off your only hope for
22 survival because you voted for Rand Paul or AOC is a heinous crime against the public.

A PERSONAL NOTE TO THE DEPARTMENT OF ENERGY FROM SOME OF THE VICTIMS

“CFO, U.S. Department of Energy

Dear Dong:

The public, the media, Congress and every knowledgeable member of the public has examined the facts and concluded that your ATVM and LGP loan programs are corrupt, organized crime, dark-money, crony payola, political slush-funds which have only EVER been used to pay off political campaign financiers.

Everyone now knows that you have a policy of NEVER approving an application that is not part of a dark money political quid-pro-quo bribery deal.

The DOE ATVM and LGP loan programs have proven, to every non-crony applicant (AND WE INTERVIEWED MOST OF THEM) that it will always:

- Stonewall*
- Obfuscate*
- “Lois-Lerner” manipulate*
- Intentionally ignore data*
- Intentionally misinterpret data*
- Run political “hit-jobs”*
- Operate as “deep state” slush fund*
- Run decades-long delays*

1 *..and, generally, be criminal crony stooges for the Palo Alto Mafia Cartel Oligarchs*

2
3 *Everything in your response letter is manipulated interpretations based on your desire to try*
4 *to avoid another lawsuit for corruption. You did a fine job of building a counter-case for what you*
5 *think is coming next but your vision was limited.*

6 *You will NOT avoid the fruits of your corruption.*

7
8 *WE WON THE LAST LAWSUIT AGAINST YOUR LITTLE “CORRUPTION PARTY”. WE*
9 *EXPOSED YOUR WHOLE DIRTY OPERATION. THE MATERIAL, NOW ONLINE, TAKES*
10 *THE “PANAMA PAPERS” TO THE NEXT LEVEL!*

11 *THE NEXT ACTIVITY WILL USE 100% LEGAL RESOURCES , MEDIA*
12 *TECHNOLOGIES AND TACTICS YOU CAN’T BEGIN TO COMPREHEND! IN FACT, IT IS*
13 *ALREADY UNDERWAY!*

14 *You have to live with the fact that every history book, until the end of time, will document*
15 *you, and your program, as a “criminal political slush-fund crony payola scam”*

16
17 *Your staff lied when they said: “Oh, no, don’t worry, we got rid of the bad ones from*
18 *Solyndra”*

19 *Not only did you not get rid of the crooks in your hen-house, you kept the worst ones and*
20 *hired more of them.*

21 *We should know, we were one of the whistle-blowers that led to the FBI kicking in the doors*
22 *at Solyndra.*

23
24 *You spent days in private meetings with campaign financiers Tesla and Fisker to guide them*
25 *to the cash. You spent vast numbers of hours on phone calls with Tesla and Fisker bosses because*

1 *they were the financiers of the Obama Administration and The Obama White House told you to just*
2 *hand them the crony cash.*

3
4 *You NEVER called us or met with us, even once, to clarify the facade of conjectures and*
5 *false statements in your bullshit response today. You wanted to make certain that we were never*
6 *funded by your offices again because we caught you doing crimes! You didn't want to know the*
7 *truth because you can't handle the truth!*

8
9 *You have known since 2008 that you would never approve any additional funding for us as*
10 *“political payback” for exposing your felony corruption.*

11 *Every response in your letter is either false, or a lie, or an intentional misreading of our plan*
12 *in order to build a case to try to get out of the next lawsuit.*

13 *Your cheap mobster slush-fund antics have truly been a joy to expose. You guys are really*
14 *cheese-ball shabby mobsters in your slush-fund game.*

15
16 *You, and your staff, own some conflict-of-interest stock market stocks, off-shore accounts*
17 *and share some assets with some very interesting people... all at the expense of the taxpayers. Let's*
18 *examine that further.. we have officially asked the FBI, SEC, FTC, DOJ, EU and global*
19 *investigative news industry to assist in that effort.*

20 *U.S. Attorney General William Barr has now publicly stated, before Congress, and on the*
21 *record, that the Obama Administration DID abuse intelligence agency resources to manipulate*
22 *federal agencies and attack U.S. Citizens in illegal and extreme reprisals, vendettas, revenge and*
23 *benefits blockades and we were one of those entities that was attacked.*

1 ***The Department of Energy was one of the biggest tools in that operation. You used federal***
2 ***employees and contractors to seek harm U.S. born, natural citizen taxpayers by subjecting them to***
3 ***extreme reprisals, vendettas, revenge and benefits blockades as payback for assisting law***
4 ***enforcement in the Solyndra/Palo Alto Mafia/DOE political corruption case.***

5
6 ***That kind of abuse of a public office like DOE is a felony violation of the law. We will be***
7 ***delighted to see the crowd-sourced public forensics hobbyists use all of their global social-media***
8 ***resources to put you, and your crony's, in prison and out of public offices.***

9
10 ***What kind of a tunnel-vision bubble of delusion do you people live in? Do you not realize that***
11 ***the entire world knows what a crony scam you operate? Have you never typed: "Solyndra***
12 ***Corruption" into a search engine or watched the 60 Minutes Episodes: "The Cleantech Crash",***
13 ***"Congress Trading on Insider Information", "The Lobbyists Playbook", etc.?? How can you sleep at***
14 ***night knowing you are going into work the next day to operate a criminal, campaign financing,***
15 ***payback scheme?***

16
17 ***While we love the letter from the heads of Bright Automotive: proclaiming your agency to be***
18 ***a sham, we think our letter gets to the meat of things.***

19 ***We demand a qualified, unbiased, conflict-free, review of the entire process of your crony***
20 ***kick-back scam since it was first crafted. case instructed by the United States Congress. Our***
21 ***international alliance of federal investigators, FBI experts, White House staff, forensics examiners,***
22 ***investigative journalists and voters will not rest until this matter is fairly resolved...."***

23
24 ***The Department of Energy seems to simply be a political slush-fund staffed by liars, zealots***
25 ***and White House goons. We are going to fix that!***

A CASE STUDY IN PAY-TO-PLAY CRONYISM

By Dan Epstein —

News flash: Government subsidies and special-interest favors go hand in hand.

The latest example comes from a federal green-energy loan program. Last month, the DC District Court [ruled](#) that Cause of Action, where I am executive director, can [proceed with a lawsuit](#) against the Department of Energy. We’re suing the federal government for the blatant political favoritism in its \$25 billion “Advanced Technology Vehicle Manufacturing Loan Program.”

In principle, this taxpayer-funded program was supposed to support the manufacture of energy-efficient cars. In practice, it rewarded a select few well-connected companies.

Since the program was created in 2008, numerous businesses have applied for its taxpayer-backed financial support. Yet only a small number were approved. Among the lucky few were two electric car manufacturers: [Tesla](#) and [Fisker](#).

Both companies’ political connections run deep, especially Tesla’s. The company’s founder, Elon Musk, was a [max donor](#) for President Obama. One of its board members, [Steven Westly](#), was appointed to a Department of Energy [advisory board](#). And another Obama bundler, Tesla investor and adviser Steven Spinner, [secured employment](#) in the department’s Loan Program Office—the very office that gave the company a taxpayer-backed loan.

Fisker also has friends in high places. The company, which has since [gone bankrupt](#), [was backed](#) by a San Francisco [venture capital firm](#) whose senior partners [donated millions](#) to the 2008 Obama campaign and other Democrat causes. [One partner](#), [John Doerr](#), parlayed his support into a seat on the President’s Council of Jobs and Competitiveness.

1 Such connections can allow a company to exert political pressure to enrich itself.

2 Unsurprisingly, Department of Energy emails show that such pressure was rampant in its loan
3 programs.

4 There's no shortage of examples. The department's leaders—including then-Secretary of
5 Energy Steven Chu—repeatedly promised to deliver results to politicians like Rep. Steny Hoyer (D-
6 Md.) and Sen. [Harry Reid](#) (D-Nev.). [One emails reads](#), “DOE has made a political commitment” to
7 approve a company's loan. Another says the “pressure is on real heavy” from none other than Vice
8 President [Joe Biden](#). And still [another shows](#) an employee asking, “what's another billion anyhow?”
9

10 Unsurprisingly, the Obama administration gave Tesla and Fisker preferential treatment, and
11 then some.

12 The Department of Energy revised its review process in order finish the companies'
13 applications faster. The government [gave them extraordinary access](#) to its staff and facilities—even to
14 the point of having government employees personally walk them through the loan application and
15 approval process. The department ignored its own lending rules in order to approve the companies'
16 loans. And it [renegotiated the terms of some loans](#) after the companies could not keep their original
17 commitments or were experiencing financial difficulties. Tellingly, Fisker has since gone out of
18 business, despite receiving over a billion dollars in loans through this federal program.
19

20 Now contrast this preferential treatment with what happened to EV CAR and Limnia, neither of
21 which have the same political connections. (My organization is suing the Department of Energy on
22 their behalf). The two companies partnered to manufacture an energy-efficient sport utility vehicle that
23 would have competed with Tesla and Fisker's cars. They applied for loans in 2008 and 2009 under the
24 same loan program.
25

1 The department refused them both—and it used bogus reasons to do so.

2 For starters, the department made claims that were laughably false. To take one example: It
3 rejected XPV’s application because [its vehicle was powered by hydrogen](#). It was an electric SUV. It
4 also raised objections that it didn’t raise with other companies whose applications were approved. For
5 instance: The bureaucracy [criticized](#) the proposed all-electric vehicle for not using a specific type of
6 gasoline. Yet Tesla and Fisker received the loans despite producing similar all-electric cars.

7
8 In light of these obvious problems and hypocrisy, both companies presented the Department of
9 Energy with detailed rebuttals. Yet the government failed to respond. To this day, both XPV and
10 Limnia are awaiting a satisfactory reply. In the meantime, [XPV has gone out of business](#), unable to
11 compete against its politically connected—and subsidized—rivals.

12 This casts the Department of Energy’s loan program in a new light. It was sold to the American
13 public as a means of promoting energy-efficient vehicles. Instead, it was used to benefit a select few
14 well-connected companies. It was a blatant crony handout, paid for by the U.S. taxpayer.

15
16 Sadly, similar examples are widespread in Washington. That’s no surprise considering the feds
17 spend [roughly \\$100 billion a year](#) in taxpayer-funded handouts to businesses. This breeds the sort of
18 government-business collusion Americans think is rampant in Washington. In fact, [over two-thirds of](#)
19 [likely voters](#) think the federal government helps businesses that hire the most lobbyists, shake the right
20 hands, and pad the right pockets. They’re right.

21 This points to a simple conclusion: Politicians and bureaucrats shouldn’t use the public’s money
22 to pad private companies’ bottom lines. As the Department of Energy’s green-vehicle loan program
23 shows, the capacity for corruption is immense—and inevitable.

Lawsuit Alleges “Corruption and Negligence” at Department of Energy

Laohlan Markay | November 15, 2012 at 11:35 am | (22) | Like 5.6 |
Tweet 339

A lawsuit filed in federal court on Wednesday alleges mass favoritism in the Department of Energy's decisions to award federal grants to major car companies to develop electric vehicles, according to a legal complaint obtained by Scribe.

The plaintiff, San Francisco-based XP Technology, says in a complaint filed in the U.S. Court of Federal Claims that "corruption and negligence" pervaded DOE's decision to award loan guarantees to Ford, Nissan, Tesla Motors, and Fisker Automotive for the development of electric vehicle technology.

"Investigations have shown that DOE officials intentionally stalled numerous applicants' reviews in order to force them out of business and protect favored players," the complaint claims. It adds:

XP has received information demonstrating that the unprecedented number of failures in the DOE program relative to what DOE officials have claimed to be "the most expensive and extensive due diligence in history" is explained by manipulated reviews, in the due diligence effort, on behalf of what the United States Government Accountability Office (GAO) investigations found to be "favoritism" in published investigation reports. A senate ethics investigation states, in published reports, that "negligence and mismanagement by DOE officials" was a regular occurrence.

COPY, PASTE, LEGISLATE – INSIDE THE FEINSTEIN AND PELOSI OFFICES

You elected them to write new laws but Crooked California Senators are letting corrupt Silicon Valley corporations do it instead.

After you pay the stock market bribe to the Congress-person/U.S. Senator, you hand them a paper with the law you want them to push...a law that ONLY benefits Google or Facebook!

While Plaintiff's have created and changed multiple federal laws to help the public, Google, Facebook, Netflix and LinkedIn have ORDERED U.S. Senators to create laws to harm the Plaintiff's for competing with them. In Fact, DNC Silicon Valley Company lobbyists produce as much, or more, fake copy/paste legislation as GOP-connected parties.

Silicon Valley tech corporations have submitted tens of thousands of pages, through their covert lobbyists, of COPY/PASTE legislation designed to make domestic inventors, such as the Plaintiff, obsolete, and the U.S. Government has assisted those corporations with that effort in the USPTO... THAT IS AN ANT-TRUST FELONY!

An investigation by USA TODAY, The Arizona Republic and the Center for Public Integrity

Rob O'Dell and Nick Penzenstadler

1 Each year, state lawmakers across the U.S. introduce thousands of bills dreamed up and written
2 by corporations, industry groups and think tanks.

3 Disguised as the work of lawmakers, these so-called “model” bills get copied in one state
4 Capitol after another, quietly advancing the agenda of the people who write them.

5 A two-year investigation by USA TODAY, The Arizona Republic and the Center for Public
6 Integrity reveals for the first time the extent to which special interests have infiltrated state legislatures
7 using model legislation.

8 USA TODAY and the Republic found at least 10,000 bills almost entirely copied from model
9 legislation were introduced nationwide in the past eight years, and more than 2,100 of those bills were
10 signed into law.

11 The investigation examined nearly 1 million bills in all 50 states and Congress using a computer
12 algorithm developed to detect similarities in language. That search – powered by the equivalent of 150
13 computers that ran nonstop for months – compared known model legislation with bills introduced by
14 lawmakers.

15 The phenomenon of copycat legislation is far larger. In a separate analysis, the Center for
16 Public Integrity identified tens of thousands of bills with identical phrases, then traced the origins of
17 that language in dozens of those bills across the country.

18 Model bills passed into law have made it harder for injured consumers to sue corporations.
19 They’ve called for taxes on sugar-laden drinks. They’ve limited access to abortion and restricted the
20 rights of protesters.

21 In all, these copycat bills amount to the nation’s largest, unreported special-interest campaign,
22 driving agendas in every statehouse and touching nearly every area of public policy.

About this report

This story was produced as part of a collaboration between USA TODAY, The Arizona Republic and the [Center for Public Integrity](#). More than 30 reporters across the country were involved in the two-year investigation, which identified copycat bills in every state. The team used a unique data-analysis engine built on hundreds of cloud computers to compare millions of words of legislation provided by LegiScan.

The investigation reveals that fill-in-the-blank bills have in some states supplanted the traditional approach of writing legislation from scratch. They have become so intertwined with the lawmaking process that the nation’s top sponsor of copycat legislation, a member of the Pennsylvania General Assembly, claimed to have signed on to 72 such bills without knowing or questioning their origin.

For lawmakers, copying model legislation is an easy way to get fully formed bills to put their names on, while building relationships with lobbyists and other potential campaign donors.

For special interests seeking to stay under the radar, model legislation also offers distinct advantages. Copycat bills don’t appear on expense reports, or campaign finance forms. They don’t require someone to register as a lobbyist or sign in at committee hearings. But once injected into the lawmaking process, they can go viral, spreading state to state, executing an agenda to the letter.

USA TODAY’s investigation found:

- Models are drafted with deceptive titles and descriptions to disguise their true intent. The Asbestos Transparency Act didn’t help people exposed to asbestos. It was written by corporations who wanted to make it harder for victims to recoup money. The “HOPE Act,” introduced in nine states, was written by a conservative advocacy group to make it more difficult for people to get

1 food stamps.

2 •Special interests sometimes work to create the illusion of expert endorsements, public
3 consensus or grassroots support. One man testified as an expert in 13 states to support a bill that makes
4 it more difficult to sue for asbestos exposure. In several states, lawmakers weren't told that he was a
5 member of the organization that wrote the model legislation on behalf of the asbestos industry, the
6 American Legislative Exchange Council.

7 •Bills copied from model legislation have been used to override the will of local voters and their
8 elected leaders. Cities and counties have raised their minimum wage, banned plastic bags and
9 destroyed seized guns, only to have industry groups that oppose such measures make them illegal with
10 model bills passed in state legislatures. Among them: Airbnb has supported the conservative Arizona-
11 based Goldwater Institute, which pushed model bills to strike down local laws limiting short-term
12 rentals in residential neighborhoods in four states.

13 •Industry groups have had extraordinary success pushing copycat bills that benefit themselves.
14 More than 4,000 such measures were introduced during the period analyzed by USA TODAY/Arizona
15 Republic. One that passed in Wisconsin limited pain-and-suffering compensation for injured nursing-
16 home residents, restricting payouts to lost wages, which the elderly residents don't have.
17
18

19
20 **How model bills work and why you should care**

21 How special interests use copycat bills to peddle laws in your statehouses.

22 Patrick Shannahan, USA TODAY

23
24 “This work proves what many people have suspected, which is just how much of the democratic
25 process has been outsourced to special interests,” said Lisa Graves, co-director of Documented, which
26

1 probes corporate manipulation of public policy. “It is both astonishing and disappointing to see how
2 widespread ... it is. Good lord, it’s an amazing thing to see.”

3 The impact of model legislation is undoubtedly larger than the 10,000 copied bills identified by
4 USA TODAY/Arizona Republic.

5 Because the investigation relied on matching identical text, it flagged instances where
6 legislators copied model legislation nearly verbatim, but it did not detect bills that adapted an idea
7 without using the same language.

8
9 Sherri Greenberg, who spent 10 years in the Texas Legislature and is now the Max Sherman
10 Chair in State and Local Government at the University of Texas at Austin, said bills used to spring
11 from lawmakers’ experiences, constituents, or lobbyists representing long-established industries. Model
12 legislation has flourished as gridlock in Congress forced special interest groups to look to the states to
13 get things done, she said.

14 The states that copy the most

15
16 Every state legislature copies model legislation, but the types of special interests they copy from
17 and how frequently vary nationwide. Here’s how the model bills we found break down based on the
18 stated political leaning or purpose of the group that wrote each bill.

19 ■

20 SOURCE: USA TODAY/Arizona Republic analysis of legislation from 2010 to 2018;
21 LegiScan

22 Veronica Bravo, Mitchell Thorson/USA TODAY

23
24 Not all model legislation is driven by special interests or designed to make someone money.
25 Some bills were written to require sex offenders to register with law enforcement, while others have

1 made it easier for members of the military to vote or increased penalties for human trafficking.

2 Charles Siler, a former external relations manager for the Goldwater Institute, which has pushed
3 copycat bills nationwide, said it's a fast way to spread ideas because with little modification lawmakers
4 can adapt it to their state.

5 “It’s not inherently bad, one way or the other,” said Siler, who now works for a political action
6 committee. “It depends on the idea and the people pushing it. Definitely people use model legislation to
7 push bad ideas around.”

8
9 Allison Anderman, managing attorney at the pro-gun-control Giffords Law Center to Prevent
10 Gun Violence, said model bills are simply how the system works now.

11 “This is how all laws are written,” she said. “You’d be hard-pressed to find a law where a
12 legislator sits in a chamber until a light bulb goes off with a new policy.”

13 =

14
15
16 Bills promise to protect the public.

17 They actually bolster the corporate bottom line.

18
19 The Asbestos Transparency Act sounds like the kind of boring, good-government policy voters
20 expect their representatives to hammer out on their behalf to safeguard public health.

21 Better transparency was one reason Colorado state Sen. Jerry Sonnenberg said he introduced the
22 bill in 2017, and again last year, at the urging of a tort reform group called the Colorado Civil Justice
23 League and backed by insurance companies, including Nationwide Insurance.

24
25 “Whenever you add transparency to the mix, it helps all consumers,” said Sonnenberg, a
26

1 Republican.

2 But the bill had nothing to do with requiring companies to disclose to consumers what products
3 contained asbestos or informing those who had been exposed to the cancer-causing mineral how to get
4 help.

5 It, in effect, cast corporations as victims of litigation filed by people harmed by asbestos. The
6 model bill requires people battling the asbestos-triggered disease mesothelioma to seek money from an
7 asbestos trust, set up to compensate victims, before they can sue a company whose product might have
8 caused their cancer.

9 That process can take months or even a year.

10 Many mesothelioma victims die within a year of their diagnosis. Their families can still sue on
11 their behalf, but for far less money.

12 “I can tell you for a fact that families don’t have time for all these hoops they want you to jump
13 through,” said Chris Winokur, whose husband Bob was diagnosed with mesothelioma in 2015 and died
14 nine months later. “They’re trying to make it more difficult to sue.”

15 Bob Winokur, who worked for the U.S. Forest Service and served as mayor of Fort Collins,
16 Colorado, never pinpointed where he came in contact with asbestos. And he never filed a claim to help
17 pay his medical bills. The disease progressed too rapidly to allow it, even without the additional
18 requirements proposed by the model bill, Chris Winokur said.

19 The model legislation was the work of corporations seeking to limit their exposure to billions of
20 dollars in litigation associated with asbestos. Insurance companies Nationwide, AIG, Travelers,
21 Hartford and CNA Financial Corp. together hold more than half the nation’s asbestos claim exposure
22 totaling over \$870 million.

1 USA TODAY/Arizona Republic found the Asbestos Transparency Act, a product of
2 the American Legislative Exchange Council, an industry-supported model bill factory, has
3 been introduced in at least 17 states since 2012. It became law in at least 11 states.

4 ■

5
6 Chris Winokur with a portrait of her late husband, a former Fort Collins city councilman and
7 mayor, in January 2019 in Estes Park, Colo. Bob... Timothy Hurst, The Coloradoan

8
9 Sonnenberg, the lawmaker who introduced it in Colorado, said he didn't write the bill and relied
10 on "my experts" to explain it during a February 2017 hearing.

11 One of those experts was Mark Behrens, who logs thousands of miles a year testifying before
12 lawmakers about ALEC's model asbestos legislation. He has done so in at least 13 states, where he was
13 billed as an objective authority.

14 Behrens is an attorney with Shook, Hardy and Bacon, which represents companies in complex
15 civil litigation. He is a co-chairman of ALEC's Civil Justice Task Force and is a paid consultant for the
16 U.S. Chamber's Institute for Legal Reform, an arm of the nation's largest business lobby, which has the
17 stated goal of reducing litigation.
18

19
20 During the hearing, Behrens testified: "The only thing the legislation does is accelerate the
21 timing of when the trust claim is filed. It's not putting any new burdens on plaintiffs."
22

23 A Democratic legislator pressed Behrens on why the 26-page bill needed technical language
24 that could confuse victims trying to be compensated. She called it, "a gift to defendants," before voting
25 against it.
26

1
2 Which bills were copied?

3 Of the 10,000 bills state lawmakers introduced that were copies of model legislation, most were
4 written by industry and conservative groups.

5 ■

6 SOURCE: USA TODAY/Arizona Republic analysis of legislation from 2010 to 2018;

7
8 LegiScan

9 Veronica Bravo/USA TODAY

10
11 Sonnenberg told USA TODAY he didn't know Behrens worked for the Chamber of Commerce
12 when he called him to testify. "I just knew they were experts and they indeed understood the legal
13 issues and process much better than I," he wrote in an email.

14 Behrens said the Asbestos Transparency Act seeks to hold wrongdoers accountable, while
15 exonerating innocent companies paying for harm they didn't cause.

16
17 "These companies don't get a vote; all we can do is make our case," Behrens told USA
18 TODAY. "I don't care who I'm there for, I still have to be credible and honest."

19 Graves said special interests have "so-called experts who aren't neutral. They go around the
20 country and testify about those bills as if they're good for that state or even as if they're products of that
21 state."

22 Colorado lawmakers rejected the Asbestos Transparency Act in 2017 and 2018,
23 and Sonnenberg said he doesn't plan to introduce it this year.

24
25 "It would be wise," he said, "for someone with a better understanding of these types of issues to

1 carry the bill in the future.”

2 Bill Meierling, chief marketing officer and executive vice president of ALEC, said supporters
3 of the asbestos model believed it did create more transparency, "but it's up to each individual state to
4 choose how they would name" the bill when they copy ALEC's model.

5 USA TODAY found more than 4,000 bills benefiting industry were introduced nationwide
6 during the eight years it reviewed. More than 80 of those bills limit the public's ability to sue
7 corporations, including limiting class-action lawsuits, a plaintiff's ability to offer expert testimony, and
8 cap punitive damages for corporate wrongdoing.

9 "No citizens are saying, 'Hey, can you make it harder to sue if ... low-paid (nursing home)
10 orderlies happened to kill or injure my parents,' " Graves said. "That's not a thing citizens are clamoring
11 for. But you know who is? The nursing home industry, and big business in general."
12

13 Many of the bills USA TODAY found were copied from models written by special interests
14 were couched in unremarkable or technical language that obscured their impact. Bans on raising
15 the local minimum wage were dubbed "uniform minimum wage" laws. Changes to civil court rules
16 to shield companies from lawsuits were described as "congruity" or reforms to make laws consistent.
17 Repealing business regulations was disguised under the term "rescission."
18

19
20
21 Politicians get a shortcut to success.

22 Special interests get their agendas turned into law.
23
24

25 A moderate Republican from the Philadelphia suburbs shows how copycat bills in some states
26

1 set the legislative agenda.

2 Rep. Thomas Murt has sponsored more model legislation than any other state lawmaker in the
3 nation, according to USA TODAY's database.

4 Murt, whose biggest campaign donors include the Pennsylvania Republican Party and labor
5 unions, said he was stunned to learn that he was listed as a sponsor on 72 bills substantially copied from
6 model legislation from 2010 to late 2018.

7 ■
8
9 Matt Rourke, AP

10 Pennsylvania House members solicit co-sponsors by circulating short memos summarizing a
11 bill without including its actual language or who wrote it.

12 “I had no way of knowing unless it’s put in the ... memo,” Murt said of the bills he helped
13 sponsor.

14 Murt’s situation highlights how critical bill titles and summaries are – especially when it comes
15 to copycat legislation – because lawmakers, even sponsors, often don’t read bills.

16
17 Had Murt probed further, he would have seen the bills he signed onto came from ALEC, its
18 liberal counterpart ALICE, the State Innovation Exchange, Council of State Governments, Goldwater
19 Institute and other groups that specialize in writing copycat bills.

20 They dealt with cities’ ability to take action against blighted properties, prohibitions on
21 businesses banning guns in employees' vehicles, and a call for the U.S. president to be elected by
22 popular vote, among many others.

23
24
25 Which copies became law?

1 Industry and conservative groups are even more dominant at getting copycat bills passed and
2 signed into law.

3 ■

4 SOURCE: USA TODAY/Arizona Republic analysis of legislation from 2010 to 2018;
5 LegiScan

6 Veronica Bravo/USA TODAY

7
8
9 USA TODAY provided Murt with a list of all 72 bills, 13 of which became law, and
10 asked questions about his support for them. He was the primary sponsor of only one: a ban on smoking
11 in workplaces written by the liberal State Innovation Exchange.

12 Murt said he would reconsider his support for two of the bills that were copied from ALEC,
13 after learning more about their impact. One was a call for a constitutional convention to curb federal
14 spending, backed by the controversial Koch brothers conservative political network. The other was a
15 bill protecting Crown Cork & Seal from asbestos liability.

16
17 "I would be suspect of such a proposal," Murt said of the constitutional convention model. "But
18 bear in mind that when that co-sponsor memo was circulated, I'm sure it never mentioned the Koch
19 brothers, because for some people that would have been a show-stopper."

20 Murt also said he would never support limiting asbestos victims' ability to sue.

21 USA TODAY interviewed more than 50 sponsors of model legislation nationwide. Half said
22 they knew they had sponsored model legislation. But 20 legislators said they didn't know the source of
23 their bill or claimed they wrote at least part of the bill.

24
25 Five insisted the bill was their own work, even though the wording of each included multiple

1 passages that matched model legislation nearly verbatim. Almost all of the sponsors defended the
2 practice of copying model legislation or had no opinion of it.

3 In Michigan, Republican state Sen. Joe Haveman said he worked with a lobbyist from a
4 Lansing law firm to draft his state’s version of the law aimed at shielding Crown Cork & Seal from
5 asbestos liability stemming from a corporate merger in the 1960s. The law firm, Clark Hill, has donated
6 \$1,800 to his campaigns since 2012, according to state records.

7
8
9 Help us report this story

10 We found more than 10,000 bills that were based on model legislation were introduced nationwide.

11 Help us find more. Submit language you think might be from model legislation and we will run it
12 through our system to see if it has been introduced by state lawmakers.

13 [Tell your story](#)

14
15
16 Haveman said he had no issues with relying on model bills and said even though Crown Cork &
17 Seal is not a Michigan company, he said he saw it as a “fairness issue.” He said he was approached by
18 a lobbyist and agreed with the bill when he saw a draft.

19 “It really had nothing to do with my passion for anything. They had to do this in all 50 states,”
20 Haveman said. “Somebody targeted me, and I had to do it.”

21 It’s not just legislators circulating copycat bills. In Pennsylvania, the nonpartisan service that
22 drafts all bills for the state Assembly – the Legislative Reference Bureau – frequently copies directly
23 from model legislation, said director Vincent DeLiberato. But the legislator ultimately decides whether
24 to use it, he said.
25

1 In Wisconsin, the Legislature’s nonpartisan legal staff is similarly tasked with converting
2 lawmakers’ ideas into bills. A March 1, 2017, email to that staff from the office of Republican
3 Assembly Speaker Robin Vos requested that an attached document be “drafted as stated.”

4 ■

5 Andy Manis, AP

6 The document contained the Campus Free Speech Act, which prevents universities from
7 blocking controversial speakers and imposes penalties on students, including expulsion, for disrupting
8 such events. The measure, written by the Goldwater Institute, is a reaction to liberal protesters at
9 Middlebury College, UC-Berkeley, University of Florida and other campuses who have disrupted
10 speeches by conservative commentator Ben Shapiro and white supremacist Richard Spencer, among
11 others.
12

13 Vos did not respond to questions about the origin of his bill, which was copied nearly verbatim
14 from Goldwater's model. It didn’t pass, but the ideas were incorporated in new university rules adopted
15 by Wisconsin.
16

17 USA TODAY’s algorithm found the same model was introduced in 13 states, becoming law in
18 Arizona and North Carolina. A similar version passed in Colorado.

19 The relationship between groups writing model legislation and the lawmakers introducing them
20 is a marriage of convenience, experts said.

21 Special interests give lawmakers fully conceived bills they can put their names on and take
22 credit for. And those special interests can become dependable donors to their campaigns.
23

24 Conservative groups like ALEC nurture those relationships at annual conferences where
25 lawmakers and corporate lobbyists discuss policy and mingle over meals and drinks paid for by
26

1 corporate sponsors.

2 This arrangement is particularly appealing to new lawmakers, said Alexander Hertel-Fernandez,
3 an assistant professor at Columbia University who has studied the influence of ALEC and other
4 conservative groups.

5 His research showed less-experienced lawmakers are more likely to use copycat legislation.

6 They “know they are conservative, they know they are pro-business, but ... they don’t really
7 know what it means to translate that into different bills,” he said. “These networks are able to fill in
8 what it means to be a conservative Republican who wants to support business.”

9
10 Meierling, ALEC's chief marketing officer, said there are checks and balances on corporate
11 influence within the organization "just like our government structure."

12 Companies join ALEC because they want feedback and insight from a variety of legislators, he
13 said.

14 "Sure they (companies) are going to share their perspective, but a legislator is there to represent
15 their constituents and if they don't they'll be held accountable at the ballot box," Meierling said. "ALEC
16 ... has proven it’s an asset to society."

17
18 Progressive groups, meanwhile, have failed to replicate conservatives’ success because they’ve
19 not invested in facilitating the relationships between lawmakers and special interests, Hertel-Fernandez
20 said.

21 “What ALEC does is more than provide the model bills: They provide relationships. They
22 approach you when you are first elected and build these enduring social connections with you at
23 recurring events that happen every year,” he said. “You really need that social connection in addition to
24 the model-bill resources that you’re getting, the research help.”

1
2
3 Bills sound like they're protecting people from a problem.

4 They're actually for promotion, and persuading people to open their wallets.

5 "Countless American lives will be saved. ... I don't want to say thousands because I think it's
6 going to be much more – hundreds of thousands," President Donald Trump said at a signing ceremony
7 for the national "Right to Try" bill in May 2018. "It is such a great name. From the first day I loved it.
8 It's so perfect: Right. To. Try."

9
10 With the stroke of a pen, Trump made a bill that had circulated in statehouses for four years the
11 most successful copycat bill in history. Not only did it pass in 41 states, it also had conquered
12 Congress.

13 The version passed by Congress allows terminally ill individuals a right to try experimental
14 medications that have not been fully approved by the Food and Drug Administration.

15
16 The bill's title left the public with the impression it was spurred by a groundswell of patients
17 demanding lifesaving treatment.

18 Instead, it was a focus group-tested name, coined by a consultant to a for-profit corporation.

19 ■
20 Evan Vucci, AP

21 That corporation, Cancer Treatment Centers of America, a chain focused on alternative cancer
22 treatments, wanted access to experimental drugs.

23
24 Right to Try illustrates another finding of USA TODAY's investigation: Some copycat bills
25 amount to little more than marketing and posturing, with organizations behind them highlighting a
26

1 perceived problem and then offering a solution with little or no measurable impact.

2 The point is seemingly to score political points, draw attention to the organization behind the
3 model, and raise funds off the effort.

4 Former Goldwater President Darcy Olsen parlayed this campaign into the book “Right to Try.”
5 In it, she said Cancer Treatment Centers of America approached Goldwater for help addressing a
6 “national medical emergency”: the government blocking terminally ill patients from receiving potential
7 lifesaving treatments.

8 When asked, Goldwater could not produce any of those patients.

9
10 Chuck Warren, corporate consultant to Cancer Treatment Centers of America, said he came up
11 with the bill’s name.

12 Goldwater and CTCA paid for focus groups to make sure the name struck the right chord. “It
13 was always our favorite name and it was the name that resonated the most with focus groups,” Warren
14 said.

15 While the marketing was cutting edge, its policy largely had been implemented decades earlier.

16
17 Alison Bateman-House, an assistant professor of medical ethics at New York University’s
18 Langone Health, said Right to Try is “an effort to address a problem that did not actually exist.”
19 Patients have been able to access experimental drugs since the 1970s, she said.

20 Through the FDA’s compassionate-use program, about 1,000 patients a year have gained access
21 to non-approved drugs in recent years. The FDA approves more than 90 percent of those requests, often
22 within days and, in emergencies, sometimes more quickly.

23
24 “The Goldwater Institute was taking advantage of a very heart-rending and sympathetic issue to
25 push for their pet policy, which is basically to roll back regulations,” Bateman-House said. “They did

1 pick a winner of a name. ... Unfortunately, it's a lie.”

2 It's unclear how many people have received experimental drugs through Right to Try. Bateman-
3 House said she's heard of two. Goldwater points to those same two patients, and a Texas doctor who
4 ran a trial involving 200 patients.

5 Goldwater CEO Victor Riches said those were only the individuals who informed his
6 organization about their success using the law.

7 Riches said Goldwater crafts legislation it sees a need for in Arizona, where it's based. It then
8 considers the “exportability” of its model legislation to other states, he said.

9 Goldwater's strategy for Right to Try was to get it passed in as many states as possible to
10 pressure Congress to enact a version, Riches said.

11 “When you are in 41 states and you've had literally thousands of legislators, Democrats and
12 Republicans alike, it is hard for the federal government not to take notice,” he said.

13 It's even harder to pin down what problem the American Laws for American Courts bill is
14 solving.

15 The model bill, which was introduced in legislatures 53 times during the past eight years,
16 mandates judges' rulings be void if based on a foreign law or doctrine that violates the rights granted to
17 U.S. citizens under the Constitution or state law.

18 Even backers struggle to identify situations where this has occurred.

19 ■
20 Joe Jaszewski for USA TODAY

21 “This is a solution looking for a problem,” said Ahmed Abdelnaby, an engineer who testified
22 against the bill last year at the Idaho Legislature because he felt it fomented hate against his Muslim
23

1 faith.

2 While proponents are unable to cite court cases where U.S. law has been supplanted by Sharia
3 or some other doctrine, those lobbying for it collected about \$206 million in donations between 2008
4 and 2013, according to a study released by the Council on American-Islamic Relations and University
5 of California, Berkeley’s Center for Race and Gender.

6 “They wouldn’t be doing it if they weren’t making a buck,” said Robert McCaw, government
7 relations director for CAIR.

8
9 Drazkowski also pushed a bill in 2011 to declare English as the official language of Minnesota
10 and prohibit conducting routine business in foreign languages, including driver’s license exams. The
11 bill was strikingly similar to model legislation by a group called ProEnglish, which calls itself the
12 “nation's leading advocate for official English.”

13 The Saint Paul Pioneer Press editorialized that Drazkowski was using it to ensure his reelection
14 by “pandering to the mostly conservative and card-carrying residents of ... the paranoid states of
15 America.”

16
17 Drazkowski said he is aware of ProEnglish but couldn’t remember where he got the
18 language for his English-only bill.

19 “The use of these model bills is not the end of the world,” he said, noting that immigrants are
20 more successful when they learn English. “The idea that one organization or group is somehow
21 controlling legislation or legislators or states, that’s a fallacy.”

22
23
24 Voters say they want one thing.

25 Special interests get lawmakers to do the opposite.

1 For Susan Edwards, it seemed like a godsend when Arizona lawmakers introduced a bill to
2 create a new kind of school voucher for students with disabilities.

3 With the money – funded by dollars taken from a recipient’s local district school – the mother
4 of two children on the autism spectrum could send her kids to a private school where they would
5 receive specialized attention they wouldn’t get elsewhere.

6 With a sympathetic group of students as the face of the legislation, Democrats and Republicans
7 rallied behind the 2011 bill which borrowed language from the Goldwater Institute, ALEC, and
8 American Federation for Children, the pro-school choice group founded by U.S. Secretary of Education
9 Betsy DeVos.
10

11 Edwards’ opinion of the program, however, changed drastically as legislators later introduced
12 bill after bill to give vouchers to more students, culminating in lawmakers approving them for all
13 students.

14 None of those bills, however, guaranteed Edwards’ sons and others with disabilities could keep
15 their vouchers as more students were added. She didn’t know it at the time, but lawmakers were
16 drawing their ideas from model legislation.
17

18 Edwards said she realized in retrospect that students with disabilities were used as a Trojan
19 horse to put on the legislative agenda a fringe idea that was part of a much bigger campaign. In the
20 years that followed, 19 other states debated 93 nearly identical proposals based on model
21 legislation. They became law in Florida, Mississippi, Nevada, North Carolina and Tennessee.
22

23 "Every single, little expansion, if you look at who's behind it, it is the people that want to get
24 that door kicked open for private religious education," Edwards said. "All we (families with disabled
25 students) are was the way for them to crack open the door."
26

1 Riches, Goldwater's CEO, said starting the Empowerment Scholarship Account voucher
2 program with a small group of students and expanding it was the best approach.

3 "When you are talking about a big idea, a new idea, usually the best way of approaching it is to
4 wade into it and demonstrate it can work on a smaller level and then grow it from there," Riches said.

5 The groups behind Arizona's move toward universal vouchers, however, were shown in
6 indisputable terms that the public opposed their ideas.

7 On Election Day 2018, Arizona voters rejected universal vouchers by a 65-35 margin.

8 It was only the most recent example of model legislation that didn't reflect the will of voters,
9 USA TODAY/Arizona Republic found.

10 Model-legislation factories have increasingly proposed what are known as "preemption" bills.
11 These laws, in effect, allow state legislators to dictate to city councils and county governing boards
12 what they can and cannot do within their jurisdiction—including preventing them from raising the
13 minimum wage, banning plastic grocery bags, and destroying guns.

14 USA TODAY's algorithm found more than 100 such bills had been introduced on an expanding
15 array of topics.

16 Kansas stopped local efforts to require restaurants to list calories on their menus.

17 Arizona and New Hampshire prevented local regulations on home rentals. Airbnb has lobbied
18 against home-sharing restrictions, often with the Goldwater Institute's assistance.

19 One model pushed by ALEC and the Goldwater Institute prohibits local jurisdictions from
20 creating occupational licensing requirements. It reflects conservatives' and libertarians' belief that job
21 licensing stifles competition and hurts the economy, and should only be required when it involves
22 health and safety.

1 Drazkowski, the Minnesota representative, said he introduced such a bill “so you don’t have a
2 patchwork kind of discombobulated mess of different ordinances from one community to the next.”

3 But Riches said his group stopped promoting similar model legislation because of the public
4 outcry.

5 “We found very quickly that you bring people out of the woodwork when you try to get rid of
6 occupational licenses,” he said. “What I would refer to as the status-quo crowd.”

7 Goldwater returned with another that allows anyone who's been harmed by occupational
8 regulation to sue for damages, including harm that occurred before the law was enacted.

9 It was introduced in at least five states and passed in Arizona. But Riches acknowledged no one
10 has used it to file suit, and the only beneficiary he can point to is a person with ties to the
11 administration of Arizona Gov. Doug Ducey, a vocal supporter of occupational licensing restrictions.

12 Because preemption bills have almost exclusively been advanced by Republicans, many of
13 whom rail against the excessive mandates of Washington, D.C., critics see such legislation as the
14 height of hypocrisy.

15 "There's real ... hypocrisy in many of these so-called conservative legislators trying to rip away
16 local control when they preached for years that a government that's closest to you ... is most responsive
17 to you," said Dawn Penich-Thacker, who campaigned to overturn Arizona's school-voucher expansion
18 with a public vote.

19 Penich-Thacker saw a similar disregard for the will of voters when within hours
20 of Arizonans’ vote to overturn universal school vouchers, the Goldwater Institute and American
21 Federation Children declared they would continue to feed their model proposals to state lawmakers.

10 Bills to modify Arizona's voucher program were soon introduced. One bore a striking
11 resemblance to model legislation from the Heartland Institute, granting vouchers to any parent who
12 feels their child is unsafe or being bullied at school.

13 The sponsor, Shawna Bolick, denied any knowledge of the Heartland model. Her bill, she
14 said, was based on the experience of her daughter.

15 Edwards, the voucher supporter-turned opponent, noted that just like the first Arizona
16 bill granting vouchers to children with disabilities, Bolick had sympathetic victims—kids who'd been
17 bullied—to help sell her bill.

18 “It really does seem like you are fighting against the tide,” Edwards said of the influence
19 of model legislation and the groups behind it. “They are ignoring the vote of the people.”

20 A letter to the editor appeared in The Arizona Republic defending renewed efforts to expand the
21 voucher program despite defeat at the ballot box.

22 The letter's author, Scott Kaufman, wasn't a concerned parent, or even an Arizona resident.

23 He had sent his letter from the Washington, D.C., suburbs, from a model-bill factory: the

1 American Legislative Exchange Council.

THE SOLYNDRA CRONY CAMPAIGN FINANCIER PAYOLA CORRUPTION

**Federal Audit Confirms Government Employee Corruption In Solyndra Deal And Other
DOE Cronyism**

The “serious concerns” of U.S. Treasury officials involving a risky \$535 million infusion for a fly by night solar panel firm were ignored as the deal was fast-tracked by the Obama Administration, according to a federal audit released this week.

Bankrolled by Obama fundraiser George Kaiser, the now-defunct northern California company (Solyndra) got more than half a billion dollars from the U.S. government to promote green energy. Instead, it abruptly folded last fall, stiffing American taxpayers and laying off more than 1,000 workers. From the start, it was a controversial deal that was suspiciously rushed through for a politically-connected entrepreneur that had raised large sums for Obama.

This week a Treasury Inspector General report sheds light on the scandalous process that, not only ignored warning signs about the startup company’s viability, but also blew off the concerns of officials at the agency responsible for doling out the cash. The “loan,” which will never be repaid, was rushed through by Obama appointees at the Department of Energy (DOE) without Treasury input.

That violated the terms of the program, which was created by the president’s disastrous stimulus. It allows the DOE to make loan guarantees to companies investing in “innovative clean technologies” but specifically requires the Secretary of the Treasury to be consulted on the terms and conditions of the loan guarantee concurrent with its review process. As of December 2011 the DOE guaranteed 28 projects totaling \$16.1 billion after consulting with Treasury, the audit says.

1 Evidently this did not occur with the Solyndra deal because it was expedited for a political
2 donor. In fact, the IG report cites an electronic mail written by a Treasury official after a conference call
3 with DOE brass, presumably to discuss the pros and cons of the huge Solyndra deal. “We pressed
4 certain issues...but the train really has left the station on this deal.”

5 Judicial Watch is investigating the Solyndra scandal and has sued the Obama DOE and Office
6 of Management and Budget to obtain records involving the deal. In September JW submitted Freedom
7 of Information Act (FOIA) requests seeking records from both agencies, but the DOE says it’s
8 reviewing documents in preparation for public release. The Office of Management and Budget has
9 totally blown off the request. This indicates that the administration is on cover-up mode.

12
13
14 **The Year That Green Tech VCs Ruled The Hill**

15 On average, the U.S. federal government's investment in energy research and development is
16 paltry--about \$5 billion a year, compared to the \$30 billion that goes to the National Institutes of
17 Health, according to figures from the newly launched American Energy Innovation Council.

18 But the past couple of years haven't been average when it comes to federal energy funding. The
19 Obama administration has used the stimulus funds to pump between \$50 billion and \$80 billion into
20 green tech initiatives (depending on what you define as green tech) since 2009.

21
22 I applaud this funding and agree with the American Energy Innovation Council--which counts
23 Bill Gates, GE CEO Jeff Immelt Jeff Immelt , and Silicon Valley venture capitalist John Doerr as
24 members. The Council is calling for a \$16 billion federal investment in energy innovation every year.
25 Boosting federal funding will be crucial to deliver innovation around energy technology.

1 One thing I have noticed from the sudden massive boost in green tech stimulus funding is just
2 how much influence green tech venture capitalists have quietly developed. VCs have been at the
3 forefront of shaping federal energy investing policy, including weighing in on which sectors should get
4 funding and perhaps even which companies should receive federal support.

5 Take Kleiner Perkins Caulfield & Byers managing partner John Doerr. He's the man who
6 seeded Google and Amazon.com , and kicked off the green-tech investing boom in 2007 when he
7 reportedly cried during a climate change themed TED talk. Doerr has morphed into one of the most
8 influential political movers in Silicon Valley and sits on President Obama's Economic Recovery
9 Advisory Board. He and his partners managed to convince former Vice President Al Gore to join
10 Kleiner Perkins as a partner in late 2007 and before that brought on former Secretary of State Colin
11 Powell (who now works with oh-so-buzzy fuel cell firm Bloom Energy).

12 Kleiner, which is investing hundreds of millions of dollars in green tech startups, has benefited
13 from some notable government support. The most significant is a \$529 million federal loan to its
14 portfolio company electric car maker Fisker Automotive. The Obama administration also set aside
15 some \$4 billion in stimulus funds for smart grid technology, which gave a nice boost to its investment
16 in smart grid network builder Silver Spring Networks.

17 Last year the Obama administration named former venture capitalist Jonathan Silver to head the
18 Department of Energy's highly competitive loan guarantee program and green car loan program. Silver
19 is in charge of the programs' application process, analysis and negotiation as well as staffing. According
20 to a release from the DOE, he also manages "the full range of the Department's alternative energy
21 investments."
22
23
24

1 Over the past year over a third of the DOE's loan guarantee commitments (roughly 5 out of 12)
2 have gone toward venture-backed startups, including solar thermal company BrightSource, solar panel
3 maker Solyndra, efficient window developer SAGE Electrochromics, wind developer Nordic

4 Windpower and thin film solar company Abound Solar. Obama commonly holds public
5 speeches at these types of venture-backed and government-supported clean energy startups and
6 stumped at Solyndra in May.

7
8 It shouldn't come as a surprise that the Obama administration has turned to VCs as guides for
9 how to invest stimulus funds in clean energy. More than anyone else, the venture capitalists in Silicon
10 Valley have been leading the investments in clean power and energy efficiency in recent years. In the
11 third quarter of 2009 when the recession hit hard, green tech startups became the top venture
12 investment sector (ahead of IT and biotech).

13 As Silver put it in an interview with Earth2Tech: "As a VC, I was looking for important,
14 potentially transformative technologies. I was looking for companies that could scale ... and projects
15 that would have impact. The same thing certainly is true on the public-sector side."

16
17 But could so much green tech VC influence negatively affect the allocation of funds? Probably
18 not. However, there could be potential drawbacks.

19 VCs have some of the highest appetites for risk among all investors: For every 10 venture
20 investments, VCs hope that one or two will make them a whole lot of money. Given that stimulus funds
21 are meant to create jobs and revive the economy, if 80% to 90% of the green tech stimulus investments
22 don't create jobs, we're going to be in a world of hurt.

1 The Silicon Valley venture world is still an elite club. Many times companies receive
2 investments because, frankly, the founder has a personal relationship with the investor. Has that
3 mentality carried over to the federal funds?

4 The Government Accountability Office, the watchdog arm of Congress, recently found that the
5 DOE has treated some companies unfairly in their bids to receive loan guarantees and risked excluding
6 some potential applicants unnecessarily. In particular the GAO found that the DOE approved
7 conditional awards to at least half of the first 10 winning companies before all of the project reviews
8 had been completed.

9
10 In one case the GAO found that the DOE didn't bother to get a single report from an external
11 reviewer about a specific (unnamed) project before fast tracking it for a loan guarantee. The DOE
12 responded that the project in question was on the fast track because the department already had enough
13 information that the project made solid business sense. But from the GAO's perspective, "It is unclear
14 how the DOE could have sufficient information to negotiate commitment without such reviews."

15
16 I wondered earlier this year if the DOE's first loan guarantee was actually a mistake. Solyndra
17 has one of the highest production costs of any of its thin film solar competitors. The company had been
18 planning on going public this year, but had to withdraw its IPO plans and its own auditor found that
19 Solyndra's operating losses, negative cash flow, and \$532.3 million deficit raised substantial doubt
20 about its ability to continue as a going concern. Solyndra has raised close to \$1 billion from private
21 investors including Argonaut Ventures, CMEA Ventures and RockPort Capital Partners.

22
23 The influence of venture capitalists on federal green tech funding will lead to a lot of startups--
24 both good and bad--receiving crucial capital that could get them from early stage to

1 commercialization--the so-called Valley of Death. But it's a situation that should be watched very
2 closely. (Katie Fehrenbacher is editor of the website Earth2Tech.com.)

[Why Bill Gates is embracing clean tech | Computerworld](#)

 <https://www.computerworld.com/article/2518887/why-bill-gates-is-embracing-clean-tech.html>

Why Bill Gates is embracing clean tech Part of the answer lies with the story of a **Silicon Valley** start-up that's merging IT and clean **energy** technologies

THE SILICON VALLEY POLITICAL BIG TECH BLACK-LIST CREATED BY THE WHITE HOUSE

The size and scale of social media companies exploded primarily because they presented themselves as open platforms — blank slates. **Google, Facebook, and Twitter all characterized their products as engines for social improvement.** “We think of Twitter as the global town hall,” said former Twitter CEO Dick Costolo. “We are the free speech wing of the free speech party.”

Costolo was Twitter’s chief executive from 2010 until 2015 and the immediate predecessor of

1 current CEO Jack Dorsey. Twitter’s general manager in the United Kingdom, Andy Yang, likewise
2 described Twitter as the “free speech wing of the free speech party” in March 2012. Google became a
3 multibillion-dollar company by offering a portal for free, unrestricted information to anyone with
4 access to the internet; famously, its original motto was “Don’t be evil.” An internal Facebook memo
5 circulated in June 2016 stated that at Facebook, “we believe in connecting people so deeply that
6 anything that allows us to connect more people more often is de facto good.”

7
8 **The public has given these three tech companies (and others) enormous power to select**
9 **the information we read, share, and discuss with our neighbors and friends.** We’ve gotten so
10 accustomed to the role they play in our lives that we fail to notice that Big Tech is sifting through the
11 available information and narrowing, and prioritizing, our choices. Although Facebook, Google, and
12 Twitter once touted themselves as **bastions of democracy and free speech**, they are now **openly**
13 **moving toward direct censorship and media manipulation** - and specifically targeting conservative
14 ideas and personalities.

15
16 They have already acquiesced to their new censorship fetish. In March 2018, Google circulated
17 an internal memo that instructed employees on the benefits of censorship. In the memo, which was
18 titled “The Good Censor,” **Google conceded that while the internet was “founded upon utopian**
19 **principles of free speech,” free speech is no longer en vogue.** “Tech companies are adapting their
20 stance towards censorship” in direct response to “the anxiety of users and governments.” The memo
21 said that “tech firms have gradually shifted away from unmediated free speech and towards censorship
22 and moderation” but framed that shift as a positive development. **One major way that tech companies**
23 **are “stepping into the role of moderator” is by “significantly amping up the number of**
24 **moderators they employ** — in YouTube’s case increasing the number of people on the lookout for
25

1 inappropriate content to more than 10,000.” It argued that censorship was necessary partly because of
2 users “behaving badly.”

3 **The most alarming part of the missive, however, was that it spoke approvingly of foreign**
4 **governments that were censoring online speech.** Google framed the acts as “taking steps to make
5 online spaces safer, more regulated, and more similar to their offline laws. Protected from hate speech
6 on the street? Now you are on the net too ...” Twitter has completely and publicly abandoned its brand
7 as the “free speech wing of the free speech party,” with Dorsey claiming the whole “free speech wing”
8 thing was one giant “joke.” His company, once seemingly devoted to the free expression of its users,
9 now says it is prioritizing making users feel safe from others’ speech. Facebook, too, is openly
10 rebranding itself as a benevolent censor. Here’s what Facebook CEO Mark Zuckerberg told the Senate
11 Commerce and Judiciary committees in April 2018 (emphasis added):
12

13 Overall, I would say that we’re going through a broader philosophical shift in how we
14 approach our responsibility as a company. For the first 10 or 12 years of the company, I
15 viewed our responsibility as primarily building tools that, if we could put those tools in
16 people’s hands, then that would empower people to do good things. What I think we’ve
17 learned now across a number of issues, not just data privacy, but also fake news and foreign
18 interference in elections, is that we need to take a more proactive role and a broader view of
19 our responsibility. **It’s not enough to just build tools. We need to make sure that**
20 **they’re used for good. And that means that we need to now take a more active view in**
21 **policing the ecosystem** *and in watching and kind of looking out and making sure that all of*
22 *the members in our community are using these tools in a way that’s going to be good and*
23 *healthy.*
24
25
26

Three forces are driving Big Tech’s online censorship.

• Two are external and related: **market pressures and de-platforming campaigns by liberal activists and journalists.**

• The third pressure is internal: **Silicon Valley is staggeringly one-sided politically.**

Profit margins and market pressures are crucial levers that left-wing ideologues use to pull tech giants and other corporations in the direction of censorship. **Companies want to avoid controversy, and, in the era of outrage mobs, that means avoiding offending the Left, which controls most of the cultural institutions in America.** That’s part of the reason why massive companies are embracing left-wing politics in advertising, such as what Gillette did with its “toxic masculinity” ad. Left-wing activists amplify those pressures with smear campaigns and boycotts intended to rattle advertisers and investors, forcing the hands of tech companies. If you convince corporate marketing agencies that advertising on Facebook is risky, you can be certain that Facebook will take some form of action to shed controversy and reassure investors.

The external pressures of left-wing activists are compounded by the internal pressures of the companies’ employees, who want Big Tech to embrace censorship against nonliberal opinions as a moral and political necessity. The internal office cultures at Facebook, Google, and Twitter have always been overwhelmingly left-leaning, but the election of Donald Trump as president has made them far more radical. I told one Silicon Valley insider that I thought tech culture now resembled the left-wing, activist culture on college campuses. He replied, **“They’re the exact same people.” Their political opinions are certainly monochromatic.** Of the \$8.1 million that tech industry workers donated to presidential candidates during the 2016 campaign, 95% of it went to Hillary Clinton. Among donations from the Silicon Valley area specifically, 99% went to Clinton.

1 So, maybe it's not surprising that Google, Facebook, and Twitter have all become vehicles for
2 left-wing activism. The companies encourage employees to bring their "authentic selves" to work. One
3 Silicon Valley executive told me, "We want people to ... bring their entire perspective and all their
4 values to work, and in the positive sense, that means getting rid of a huge distinction between my
5 professional life and my personal life." For left-wing activists in Silicon Valley, their professional,
6 personal, and political lives are all one. That's why Twitter launched an "intersectionality" initiative for
7 its employees and Google gives millions to left-wing causes — to signal its allegiance to the tribe.
8

9 In 2017, the nonprofit Lincoln Network conducted a survey of tech workers in Silicon Valley,
10 including those employed at Google, Facebook, Apple, Amazon, and Microsoft. The political leanings
11 of those surveyed were more politically diverse than Silicon Valley's overall population: 29% were
12 liberal, 24% were libertarian, 22% were conservative, and 16% were centrist. But on one thing, they
13 agreed: **75% of the liberals and 70% of the conservatives characterized their workplace as either**
14 **"liberal" or "very liberal"** and fewer than 2% of the survey-takers said their places of work were
15 conservative.
16

17 Even some of the liberal respondents thought that left-wing intolerance had gone too far. One
18 liberal tech worker said, "I witnessed repeated calls from managers and nonmanagers alike for people
19 to be fired for the political views they expressed." Another liberal employee said, **"There are people**
20 **who are looking for a reason to be offended, and any sort of disagreement would make them**
21 **wonder if I'm a secret Trump supporter. The idea of 'I agree with you 90%' is not enough."** One
22 self-identified libertarian said, "I have lost multiple talented colleagues who resigned rather than
23 continue in the face of an increasingly extreme, narrow-minded, and regressive environment here at
24 Google. **It's terrifying here. A real horror show. Every day could be my last."**
25
26

1 Eighty-nine percent of respondents who identified as “very conservative” said they **didn’t feel**
2 **comfortable expressing their opinions at work.** “It’s a postmodern, secularist Silicon Valley
3 viewpoint. Highly liberal. It’s motivated by changing the world masquerading as intellectualism,” said
4 one conservative tech employee. A libertarian said “there were many groups devoted to identity
5 politics” in his company, and every one of them was leftist. “If you’re not part of the liberal Democrat
6 crowd, you’re an outsider. Talks are often politicized, whether overtly or not. **The entire executive**
7 **team leans in a certain direction, and you don’t want to be the odd one out for fear of being**
8 **ostracized ... Nobody who didn’t fit the company’s mold talked about their political views.** The
9 company was very homogenous in that sense.” One conservative employee said, “There is
10 overwhelming internal support for leftist political candidates, policies, and ideas, and they are
11 frequently expressed ... There are zero to very few senior people who dare to speak up or represent an
12 alternative (more conservative) point of view in company debates or policy decisions.”

14 **This groupthink affects everything that Big Tech does, every decision it makes, every**
15 **program it releases.** As a former Google engineer noted, Google’s algorithms reflect the assumptions
16 and biases of their creators. The discussion about tech platforms and political bias often (and
17 understandably) centers on what is or isn’t *allowed* on Google, YouTube, Facebook, and Twitter, but
18 the other half of the picture is what is and isn’t *prioritized* on a platform. **Broadly speaking, tech**
19 **companies censor users and content in two ways.**

- 21 • The first, which we’ll call “**hard censorship,**” is pretty straightforward: deleting content
22 or suspending users.
- 23 • The second method, which we’ll call “**soft censorship,**” involves tech companies
24 making content harder to find.
25

1 **Hard censorship is tearing down a roadside billboard; soft censorship is making the**
2 **billboard difficult to see by erecting other billboards in front of it.** Soft censorship by tech
3 companies can be just as effective as hard censorship. Studies show that people rarely click past the
4 first page of Google or YouTube results. Even fewer click past the second or third page. So, pushing a
5 link off the first page (or two or three) of Google is nearly the same as removing it from Google results
6 altogether. The same is true with your Facebook and Twitter feeds: Companies don't have to delete
7 content to make sure you don't see it.

8
9 **Since 2016, every major tech company, including Facebook, Google, YouTube, and**
10 **Twitter, has been busy retooling algorithms or news feeds or monetization standards in ways that**
11 **benefit liberals and sideline conservatives.** Big Tech also partners with left-wing groups such as the
12 Southern Poverty Law Center to “flag” supposedly problematic content. The group falsely labels
13 individual conservatives as “extremists” and conservative organizations as “hate groups” and then
14 promotes more restrictive content policies against alleged “hate speech.”

15
16 To give you some idea of the advocacy group's standards, it **once accused Ben Carson of**
17 **being an “extremist” for stating his belief that marriage is between a man and a woman.**
18 Immersed in scandals of its own, the organization has been widely discredited. But it still works closely
19 with Google engineers who design the digital tools and algorithms to police hate speech on YouTube as
20 part of Google's “Trusted Flaggers” program. **Google kept its collaboration with the Southern**
21 **Poverty Law Center a secret, hidden behind a confidentiality agreement,** and the group only
22 admitted the partnership after I broke the story. All of these partnerships are occurring while the
23 advocacy group publicly keeps pressure on Facebook, Google, and Twitter, calling for them to do more
24 to combat “hate speech” on their platforms, which invariably means giving the organization more
25

1 power in its private dealings with the companies. The Southern Poverty Law Center led five other left-
2 wing groups in forming a coalition called “Change the Terms” that aims to pressure all major
3 technology service providers into setting speech codes governing what their clients say both on and off
4 their platforms.

5 **The coalition demands that each company agree to implement a specific set of policies**
6 **already drafted by the activists.** Among the required changes: empowering third-party organizations
7 (such as, say, the Southern Poverty Law Center) to flag “hateful” actors. The activists’ targets aren’t
8 limited to Facebook, Google, and Twitter (although those companies are certainly on the list) but also
9 include credit card companies and crowdfunding sites. **Once a company caves to the pressure and**
10 **agrees to adopt the left-wing contract, it has essentially deputized the coalition to decide who can**
11 **stay on its platform or use its services and who must leave.** Once the contract is official, the activists
12 immediately shift gears to identify the users or customers the company is now required to ban from its
13 platform. Left-wingers’ plan for weaponizing tech platforms bears a resemblance to the “social credit
14 score” system adopted by the Chinese government. Only instead of the government monitoring your
15 private behavior and limiting your access to society as a result, it’s a collective of left-wing advocacy
16 groups partnered with multinational corporations.

17 **First Amendment rights do not protect you from private organizations’ limitations on**
18 **speech. It’s a devious strategy, and it’s working.** Media Matters is a left-wing political group
19 devoted to silencing conservative viewpoints in the media. For much of its history, it focused on
20 attacking Fox News, but in recent years, it targeted conservative voices online as well. Media Matters
21 presented a 44-page memo to liberal donors at a January 2017 summit that bragged about its plans to
22 work with Facebook and Google to destroy nonliberal media outlets. The memo argued that enlisting
23
24
25
26

1 Big Tech in the left-wing campaign to eliminate conservative media is essential if liberals hope to
2 defeat Trump in 2020. Media Matters promised to accomplish exactly that. **“Key right-wing targets**
3 **will see their influence diminished as a result of our work,”** it promised.

4 **Leftists don’t need to banish every conservative from social media; they only need to**
5 **dominate social media the way they dominate the mainstream media.** They’re OK with discussion
6 that takes place within boundaries they set (as on MSNBC) and so long as they win the elections that
7 matter to them (such as the White House). Since Nov. 8, 2016, they have shifted the digital landscape
8 against conservative voices. **By Nov. 3, 2020, they will have transformed (or rigged) social media in**
9 **ways that will have far-reaching implications for America.**

11
12 **How Dianne Feinstein Can Make Sure You Can Never Get A Job Again If You Speak**
13 **Against Her**

14
15
16 - Nancy Pelosi, Barbara Boxer, Ed Lee, Gavin Newsom and other politicians can access your
17 voting records, every HR service and the hiring managers at every Bay Area company from their
18 desktop computers.

19 - Black-listing of hated employees is a big thing in the Bay Area.

20 - The FBI has not yet been ordered by DOJ to halt this.

21 - Corrupt politicians can kill your career with one phone call or mouse click.

22
23
24 **The High-Tech Employee Antitrust Litigation** is a 2010 [United States Department of Justice](#)
25 (DOJ) [antitrust](#) action and a 2013 civil [class action](#) against several [Silicon Valley](#) companies for alleged

1 "no [cold call](#)" agreements which restrained the recruitment of high-tech employees. It proved that the
2 main financiers of Nancy Pelosi, Barbara Boxer, Ed Lee, Gavin Newsom, Dianne Feinstein and other
3 Bay Area political manipulators, can easily keep you from ever working again if you piss them off.

4 The defendants are [Adobe](#), [Apple Inc.](#), [Google](#), [Intel](#), [Intuit](#), [Pixar](#), [Lucasfilm](#) and [eBay](#), all
5 high-technology companies with a principal place of business in the San Francisco–Silicon Valley area
6 of California.

7 The civil class action was filed by five plaintiffs, one of whom has died in a possible hush-up-
8 murder; it accused the tech companies of collusion between 2005 and 2009 to refrain from recruiting
9 each other's employees.
10

11 Cold calling is one of the main methods used by companies in the high-technology sector to
12 recruit employees with advanced and specialised skills, such as software and hardware engineers,
13 programmers, animators, digital artists, Web developers and other technical professionals.[\[1\]](#) Cold
14 calling involves communicating directly in any manner with another firm's employee who has not
15 otherwise applied for a job opening. Cold calling may be done in person, by phone, letter, or email.[\[2\]](#)
16 According to the legal brief filed by a plaintiff in one of the class-action cases, cold calling is an
17 effective method of recruiting for the high-technology sector because "employees of other [high-
18 technology] companies are often unresponsive to other recruiting strategies... [and] current satisfied
19 employees tend to be more qualified, harder working, and more stable than those who are actively
20 looking for employment."[\[3\]](#)
21

22 Amy Lambert, Google's associate general counsel, noted in a blog post shortly after the DOJ's
23 actions, that Google's definition of cold calling does not necessarily eliminate recruiting by letter or
24 email, but only the process of calling on the telephone. By implication, recruiting through LinkedIn
25
26

1 incurs recruiting by "InMail" - LinkedIn's own mail contact system:"In order to maintain a good
2 working relationship with these companies, in 2005 we decided not to "cold call" employees at a few of
3 our partner companies. Our policy only impacted cold calling, and we continued to recruit from these
4 companies through LinkedIn, job fairs, employee referrals, or when candidates approached Google
5 directly. In fact, we hired hundreds of employees from the companies involved during this time
6 period."

7
8 The challenged "no cold call" agreements are alleged bilateral agreements between high
9 technology companies not to cold call each other's employees. The DOJ alleges that senior executives
10 at each company negotiated to have their employees added to 'no call' lists maintained by human
11 resources personnel or in company hiring manuals. The alleged agreements were not limited by
12 geography, job function, product group, or time period. The alleged bilateral agreements were between:
13 (1) Apple and Google, (2) Apple and Adobe, (3) Apple and Pixar, (4) Google and Intel, (5) Google and
14 Intuit,[\[4\]](#) and (6) Lucasfilm and Pixar.[\[5\]](#)

15
16 The civil class action further alleges that agreements also existed to (1) "provide notification
17 when making an offer to another [company]'s employee (without the knowledge or consent of the
18 employee)" and (2) "agreements that, when offering a position to another company's employee, neither
19 company would counteroffer above the initial offer."[\[3\]](#)

20 **Department of Justice antitrust action**

21
22
23 On September 24, 2010, the [United States Department of Justice Antitrust Division](#) filed a
24 complaint in the [US District Court for the District of Columbia](#) alleging violations of Section 1 of the
25 [Sherman Act](#). In *US v. Adobe Systems Inc., et al.*, the Department of Justice alleged that Adobe, Apple,
26

1 Google, Intel, Intuit, and Pixar had violated Section 1 of the Sherman Act by entering into a series of
2 bilateral "No Cold Call" Agreements to prevent the recruitment of their employees (a similar but
3 separate suit was filed against Lucasfilm on December 21, 2010[6]). The DOJ alleged in their
4 Complaint that the companies had reached "facially anticompetitive" agreements that "eliminated a
5 significant form of competition...to the detriment of the affected employees who were likely deprived
6 of competitively important information and access to better job opportunities." The DOJ also alleged
7 that the agreements "were not ancillary to any legitimate collaboration," "were much broader than
8 reasonably necessary for the formation or implementation of any collaborative effort," and "disrupted
9 the normal price-setting mechanisms that apply in the labor setting." [4] The same day it filed the suit,
10 the DOJ and the defendants proposed a settlement. [7]

12 A final judgment enforcing the settlement was entered by the court on March 17, 2011. [8]
13 Although the DOJ Complaint only challenged the alleged "no cold call" agreements, in the settlement,
14 the companies agreed to a more broad prohibition against "attempting to enter into, entering into,
15 maintaining or enforcing any agreement with any other person to in any way refrain from, requesting
16 that any person in any way refrain from, or pressuring any person in any way to refrain from soliciting,
17 cold calling, recruiting, or otherwise competing for employees of the other person", for a period of five
18 years; the court can grant an extension. [8] The settlement agreement does not provide any
19 compensation for company employees affected by the alleged agreements. [9] Lucasfilm entered into a
20 similar settlement agreement in December 2010. [5]

22 **Civil class action**

23 *In re: High-Tech Employee Antitrust Litigation* ([U.S. District Court, Northern District of](#)
24 [California](#) 11-cv-2509 [10]) is a [class-action](#) lawsuit on behalf of over 64,000 employees of [Adobe](#),

1 [Apple Inc.](#), [Google](#), [Intel](#), [Intuit](#), [Pixar](#) and [Lucasfilm](#) (the last two are subsidiaries of [Disney](#)) against
2 their employer alleging that their wages were repressed due to alleged agreements between their
3 employers not to hire employees from their competitors.^{[11][12]} The case was filed on May 4, 2011 by
4 a former software engineer at Lucasfilm and alleges violations of California's antitrust statute, Business
5 and Professions Code sections 16720 et seq. (the "Cartwright Act"); Business and Professions Code
6 section 16600; and California's unfair competition law, Business and Professions Code sections 17200,
7 et seq. Focusing on the network of connections around former Apple CEO [Steve Jobs](#), the Complaint
8 alleges "an interconnected web of express agreements, each with the active involvement and
9 participation of a company under the control of Steve Jobs...and/or a company that shared at least one
10 member of [Apple's board of directors](#)." The alleged intent of this conspiracy was "to reduce employee
11 compensation and mobility through eliminating competition for skilled labor."^[13]

13 On October 24, 2013 the [United States District Court for the Northern District of California](#)
14 granted class certification for all employees of Defendant companies from January 1, 2005 through
15 January 1, 2010.^[9]

17 As of October 31, 2013, Intuit, Pixar and Lucasfilm have reached a tentative settlement
18 agreement. Pixar and Lucasfilm agreed to pay \$9 million in damages, and Intuit agreed to pay \$11
19 million in damages.^[9] In May 2014, Judge [Lucy Koh](#) approved the \$20 million settlement between
20 Lucasfilm, Pixar, and Intuit and their employees. Class members in this settlement, which involved
21 fewer than 8% of the 65,000 employees affected, will receive around \$3,840 each.^[14]

23 The trial of the class action for the remaining Defendant companies was scheduled to begin on
24 May 27, 2014. The plaintiffs intended to ask the jury for \$3 billion in compensation, a number which
25 could in turn have tripled to \$9 billion under antitrust law.^[15] However, in late April 2014, the four
26

1 remaining defendants, [Apple Inc](#), [Google](#), [Intel](#) and [Adobe Systems](#), agreed to settle out of court. Any
2 settlement must be approved by Judge [Lucy Koh](#).[\[16\]](#)[\[17\]](#)

3 On May 23, 2014, Apple, Google, Intel, Adobe agreed to settle for \$324.5 million. Lawyers
4 sought 25% in attorneys’ fees, plus expenses of as much as \$1.2 million, according to the filing.
5 Additional award payments of \$80,000 would be sought for each named plaintiff who served as a class
6 representative.[\[18\]](#) Payouts will average a few thousand dollars based on the salary of the employee at
7 the time of the complaint.

8
9 In June 2014, Judge Lucy Koh expressed concern that the settlement may not be a good one for
10 the plaintiffs. Michael Devine, one of the plaintiffs, said the settlement is unjust. In a letter he wrote to
11 the judge he said the settlement represents only one-tenth of the \$3 billion in compensation the 64,000
12 workers could have made if the defendants had not colluded.[\[19\]](#)

13 On August 8, 2014, Judge Koh rejected the settlement as insufficient on the basis of the
14 evidence and exposure. Rejecting a settlement is unusual in such cases. This left the defendants with a
15 choice between raising their settlement offer or facing a trial.[\[20\]](#)

16
17 On September 8, 2014, Judge Koh set April 9, 2015 as the actual trial date for the remaining
18 defendants, with a pre-trial conference scheduled for December 19, 2014. Also, as of early September
19 2014, the defendants had re-entered mediation to determine whether a new settlement could be reached.
20 [\[21\]](#)

21 A final approval hearing was held on July 9, 2015.[\[22\]](#) On Wednesday September 2, 2015,
22 Judge Lucy H. Koh signed an order granting Motion for Final Approval of Class Action Settlement.
23 The settlement website stated that Adobe, Apple, Google, and Intel has reached a settlement of \$415
24 million and other companies settled for \$20 million.
25

1 According to the settlement website, Gilardi & Co., LLC distributed the settlement to class
2 members the week of December 21, 2015.

3 While working at Google, Schmidt was involved in activities[47] that later became the subject
4 of the [High-Tech Employee Antitrust Litigation](#) case that resulted in a settlement of \$415 million paid
5 by [Adobe](#), [Apple](#), Google and [Intel](#) to employees. In one incident, after receiving a complaint from
6 [Steve Jobs](#) of Apple, Schmidt sent an email to Google's HR department saying; "I believe we have a
7 policy of no recruiting from Apple and this is a direct inbound request. Can you get this stopped and let
8 me know why this is happening? I will need to send a response back to Apple quickly so please let me
9 know as soon as you can. Thanks Eric".[48] Schmidt's email led to a recruiter for Google being
10 "terminated within the hour" for not having adhered to the illegal scheme. Under Schmidt, there was a
11 "Do Not Call list" of companies Google would avoid recruiting from.[49] According to a court filing,
12 another email exchange shows Google's human resources director asking Schmidt about sharing its no-
13 cold-call agreements with competitors. Schmidt responded that he preferred it be shared "verbally,
14 since I don't want to create a paper trail over which we can be sued later?"[47][50] On August 28,
15 2006, Schmidt was elected to [Apple Inc.](#)'s board of directors, a position he held until August 2009.[11]
16 [51]

17
18
19 Former [Google](#) employee [James Damore](#) filed a class action lawsuit Monday against the tech
20 giant, alleging discrimination against conservative and white male employees.

21 The former software engineer worked for [Google](#) from 2013 until August when his employment
22 was terminated.

23 He was fired after he drafted and circulated an internal memo concerning politics, diversity and
24 gender, which went viral, sparking colleagues to send [Mr. Damore](#) threats. According to the legal
25

1 complaint, [Mr. Damore](#) drafted the memo in response to diversity workshops in an attempt to create
2 debate about the company’s political correctness and hiring practices.

3 “[Google](#) employees who expressed views deviating from the majority view at [Google](#) on
4 political subjects raised in the workplace and relevant to [Google](#)’s employment policies and its
5 business, such as ‘diversity’ hiring policies, ‘bias sensitivity,’ or ‘social justice,’ were/are singled out,
6 mistreated, and systematically punished and terminated from [Google](#), in violation of their legal rights,”
7 read [Mr. Damore](#)’s complaint filed at the Superior Court of California in Santa Clara.

8 [Mr. Damore](#) is joined by another former [Google](#) employee as plaintiffs in the action, and they
9 seek to represent all [Google](#) employees who have been discriminated against due to their gender, race
10 or political views. According to the complaint, [Mr. Damore](#) spoke to Meghana Rao, who worked for
11 [Google](#)’s human resources department, about conservatives feeling disenfranchised at the company.
12 Ms. Rao reportedly said she had heard similar complaints from other employees.

13 He alleges the company blacklisted conservatives and threatened them with termination.

14 His lawsuit proves high-tech blacklisting and asks the court to issue both monetary and
15 injunctive relief.
16

17 When Dianne Feinstein's Chief of Staff isn't contracting Fusion GPS or Black Cube to attack
18 citizens, he has a rolodex of names at tech companies he can call to get you black-listed. Even worse,
19 he has a list of IT staff he can call. These, mostly East Indian, IT contacts work at ***BambooHR, Zoho***
20 ***People, Axiom, Gusto, Oracle, Taleo, Trakstar, Freshteam, ClearCompany, Workday, ADP***
21 ***Workforce Now, UltiPro, Dayforce HCM, Kronos Workforce Central, iCIMS, CivicHr, PurelyHR***
22 ***Time-Off, 7Geese, Collage, Perdo, Qandle, Splunk, Zimyo HRMS, Xobin Interact, Palantir*** and
23 other firms you may not even know existed.
24
25
26

1 With just a few keystrokes, John Doe is "*red flagged*", "*black-listed*", "*negged*", "*shadow-*
2 *banned*" and removed from the job pool. Covert codes and meta-tags are inserted into the databases so
3 that John Doe will never get a second interview. John will never be able to see this hidden codes that
4 will end his life. All of these companies have the ability to cross-examine each other's databases. Of
5 course, the NSA looks at all of that data.

6 This reprisal vendetta process was said have been created by Black Cube in order to help
7 Obama covertly attack his enemies.

8 Even if John Doe has the finest work experience, the most impressive letters of reference,
9 incredible work accomplishments and a resume to-die-for... he is now dead in the career market
10 because he pissed off a corrupt Senator!

THE WHITE HOUSE CRONY-CORRUPTION

By Marita Noon

In the report: (Public Choice (2016) 166:261–290, DOI 10.1007/s11127-016-0322-y) called - Clean or dirty energy: evidence of corruption in the renewable energy sector, Caterina Gennaioli and Massimo Tavoni prove that green energy causes corruption.

Everyone who pays any attention to the news knows the name Solyndra. It has become synonymous with the overall failed green energy program administered by the Obama team. Politicos know there are [many other companies](#) that have received loan guarantees for various green energy projects that have since become a source of ridicule for the White House. Some might even be able to name a few. There is the now-bankrupt company that made batteries for electric cars: [Ener1](#). The plug-in electric sports car company, Fisker, that made its cars in Finland and has [troubles too numerous](#) to cite. And, of course, we know about the Chevy Volt—that our taxpayer dollars bailed out only to have demand so low that Chevrolet had to [pull the plug](#) on the production line and lay off workers for five weeks earlier this year. But few know the full story.

Connecting the dots will make your head hurt. There are various programs and special tax breaks and different kinds of companies that received green energy loans: solar, wind, and geothermal; and car companies, battery manufacturers, and biofuel producers. While the projects differ, they have several startling similarities. The vast majority of the green energy loan guarantees were given to companies that could not obtain enough financial backing from private investors. Their “junk” or “speculative” grade kept people from putting their own money into them —yet your money and mine

1 was given to them, and we had no say in the matter. Of the 27 loans issued through the 1705 Loan
2 Guarantee Program to 21 firms, virtually all of them have “connections” to either President Obama or
3 other high-ranking Democrats—or both! The loans were made to fill a market created not by free-
4 market demand, but by government mandates. And, all of the “[special seven](#)” got fast-tracked
5 approvals through the Department of Interior with little scrutiny over environmental damages that
6 would have taken any other energy company months, if not years, to get, and EPA regulations were
7 applied selectively.

8
9 Many of the companies that received the funds had involvement with large donors and/or
10 bundlers for the Obama campaign, and there is an amazing revolving door through which the players
11 pass many times. They worked, for example, for Senator Harry Reid. Then they are on the staff of an
12 investment firm that invested in one, or more, of the companies. Next you find he or she is on some
13 White House commission—or worse, became part of the Obama Department of Energy team. Some
14 460 companies applied for DOE loans, but only 27 projects, 21 companies, got the funds. And 85% of
15 these have been found to have “connections.” The remaining 15% may well have connections too,
16 albeit more guarded or hidden.

17
18 These are not wild assertions. I have the data to back them up.

19 Following the publication of my column a couple of weeks ago on [crony capitalism](#), I was
20 connected with Christine Lakatos. She’s a private citizen and a single mom with a nose for research.
21 Beginning in 2009, she was hired to work on investigative projects, following the green energy money.
22 But when those projects were completed, she didn’t stop digging. She kept finding more and more.
23 With no outlet for her work, she started a blog where she “brain dumps” her findings—which for a total
24 unknown has received an impressive number of readers. For anyone but the most stalwart, her [Green](#)
25

1 [Corruption Blog](#) is like getting a drink of water from a fire hydrant.

2 On Sunday, some of Lakatos’ research was presented in my [weekly column](#). The response
3 prompted us to begin a collaboration.

4 For each of the next 17 weeks, we will expose one green-energy, crony-corruption story after
5 another (though my travel schedule may require me to skip a week here and there). It will be a “book”
6 released chapter-by-chapter. If you like what you find, we hope you’ll let us know and come back the
7 following week for the next installment.

8
9 Some single stories of what we’ll expose are “out there”—though surely not covered by the
10 mainstream media and not all in one place or all connected as we’re doing. If you made a study of the
11 green-energy, crony-corruption story your passion, you likely found out a lot of what we’ll share. If
12 you read the [report](#) from the House Oversight and Government Reform Committee (HOGRC) on the
13 Obama Administration’s green energy gamble word-for-word, or watched the incriminating hearings,
14 you’ll already know some of what we’ll present. Or, if you’ve read the chapter in Peter Schweizer’s
15 book [Throw Them All Out](#) that addresses alternative energy and “how the game of funneling taxpayer
16 money to friends has exploded to astonishing levels in recent years,” you have a good idea of the big
17 picture. If you have made this your passion, have studied the report, and have coordinated with
18 Schweizer, as Lakatos has, you are encouraged to help make these reports as complete as possible.
19 Together, we’ll connect the dots and present it here in bite-sized pieces.

20
21 Each of the energy projects we will profile in the “special seven” section were recipients of
22 billions of taxpayer dollars through the 1705 Loan Guarantee Program (LGP) and many will be
23 receiving millions more through the 1603 Grant Program. The 1705 LGP is an expansion of the 1703
24 program that was approved in 2005 under President Bush—increasing the expenditures from [\\$17.9](#)
25

1 [billion in 2007 to \\$37.2 billion in 2010](#). The 2009 American Recovery and Reinvestment Act
2 significantly expanded the DOE’s authority, under Energy Secretary Steven Chu, through the newly
3 created 1705 LGP. (Under the Recovery Act, \$86 billion—approximately 10% of the stimulus package
4 —was earmarked for green energy projects.) The LGP means that companies get risk-free money. If
5 the company succeeds, the low-interest loan gets paid back. If they fail—as [many have](#)—we, the
6 taxpayers, lose. In contrast, the [1603 Grant Program](#)—implemented as part the Obama stimulus—is
7 administered by the Treasury Department, with the goal of reimbursing eligible applicants for a portion
8 of the costs of installing specified energy property used in a trade or business or for the production of
9 income. Basically 1603 gives billions in favored businesses tax-free cash gifts that do not have to be
10 paid back.

12 While we can prove that cronyism has run amok within the majority of 1705 LGP, we'll stay
13 focused on the Special Seven. Here, in Part 1, we present a complete overview of the connecting dots
14 on one project: SolarReserve, LLC. With this introduction made, we’ll likely address several
15 companies, with a common denominator, in subsequent releases.

17 In Sunday’s column, the following thumbnail was presented: “SolarReserve’s [Crescent](#)
18 [Dunes](#) project is a solar thermal power tower plant utilizing the advanced molten salt power tower
19 technology with integrated storage located in Tonopah, NV. The company's Fitch rating is BB, yet in
20 September 2011, it was the recipient of [\\$737 million](#) in DOE loan guarantees. Obama’s law school
21 buddy and 2008 Obama campaign bundler, Michael Froman, was managing director of alternative
22 investments at Citigroup—which became a [major investor](#) in SolarReserve. Froman currently serves on
23 the [White House staff](#). Additionally, other high profile Democrats are involved with SolarReserve.”

25 But there is more.

1 More about Michael Froman. Peter Schweizer reports that “When Obama ran for president,
2 Froman helped raise large sums of money on Wall Street” for the 2008 campaign. The HOGRC report
3 (page 47) confirms Peter’s findings and adds that Froman was a \$200,000 bundler: “Michael Froman
4 currently serves as the Deputy Assistant to the President and Deputy National Security Advisor for
5 International Economic Affairs. He was a friend of President Obama’s from law school, and supported
6 his political career by bundling over \$200,000 for his 2008 presidential candidacy. Prior to his arrival at
7 the White House, Froman was the Managing Director of Alternative Investments at Citigroup, where
8 he managed infrastructure and sustainable development investments. Citigroup became a major
9 investor in SolarReserve, which ultimately received a \$737 million loan guarantee in September 2011.”

11 The Citigroup connection is tighter. [Richard Parsons](#) was Chairman for Citigroup from 2009
12 until he [announced stepping down](#) in March 2012. [Citigroup](#) was a top Obama donor in 2008. Parsons
13 served on the Obama Transition Team and on the Economic Advisory Board. In 2011, Parsons was
14 appointed to the [President’s Council on Jobs and Competitiveness](#).

16 Next, David Sandalow—who is currently “the Assistant Secretary for Policy and International
17 Affairs at DOE, where he acts as Secretary’s Chu’s principalEveryone who pays any attention to the
18 news knows the name Solyndra. It has become synonymous with the overall failed green energy
19 program administered by the Obama team. Politicos know there are many other companies that have
20 received loan guarantees for various green energy projects that have since become a source of ridicule
21 for the White House. Some might even be able to name a few. There is the now-bankrupt company that
22 made batteries for electric cars: Ener1. The plug-in electric sports car company, Fisker, that made its
23 cars in Finland and has troubles too numerous to cite. And, of course, we know about the Chevy Volt—
24 that our taxpayer dollars bailed out only to have demand so low that Chevrolet had to pull the plug on

1 the production line and lay off workers for five weeks earlier this year. But few know the full story.

2 Connecting the dots will make your head hurt. There are various programs and special tax
3 breaks and different kinds of companies that received green energy loans: solar, wind, and geothermal;
4 and car companies, battery manufacturers, and biofuel producers. While the projects differ, they have
5 several startling similarities. The vast majority of the green energy loan guarantees were given to
6 companies that could not obtain enough financial backing from private investors. Their “junk” or
7 “speculative” grade kept people from putting their own money into them —yet your money and mine
8 was given to them, and we had no say in the matter. Of the 27 loans issued through the 1705 Loan
9 Guarantee Program to 21 firms, virtually all of them have “connections” to either President Obama or
10 other high-ranking Democrats—or both! The loans were made to fill a market created not by free-
11 market demand, but by government mandates. And, all of the “special seven” got fast-tracked
12 approvals through the Department of Interior with little scrutiny over environmental damages that
13 would have taken any other energy company months, if not years, to get, and EPA regulations were
14 applied selectively.
15

16
17 Many of the companies that received the funds had involvement with large donors and/or
18 bundlers for the Obama campaign, and there is an amazing revolving door through which the players
19 pass many times. They worked, for example, for Senator Harry Reid. Then they are on the staff of an
20 investment firm that invested in one, or more, of the companies. Next you find he or she is on some
21 White House commission—or worse, became part of the Obama Department of Energy team. Some
22 460 companies applied for DOE loans, but only 27 projects, 21 companies, got the funds. And 85% of
23 these have been found to have “connections.” The remaining 15% may well have connections too,
24 albeit more guarded or hidden.
25

1 These are not wild assertions. I have the data to back them up.

2 Following the publication of my column a couple of weeks ago on crony capitalism, I was
3 connected with Christine Lakatos. She’s a private citizen and a single mom with a nose for research.
4 Beginning in 2009, she was hired to work on investigative projects, following the green energy money.
5 But when those projects were completed, she didn’t stop digging. She kept finding more and more.
6 With no outlet for her work, she started a blog where she “brain dumps” her findings—which for a total
7 unknown has received an impressive number of readers. For anyone but the most stalwart, her Green
8 Corruption Blog is like getting a drink of water from a fire hydrant.
9

10 On Sunday, some of Lakatos’ research was presented in my weekly column. The response
11 prompted us to begin a collaboration.

12 For each of the next 17 weeks, we will expose one green-energy, crony-corruption story after
13 another (though my travel schedule may require me to skip a week here and there). It will be a “book”
14 released chapter-by-chapter. If you like what you find, we hope you’ll let us know and come back the
15 following week for the next installment.
16

17 Some single stories of what we’ll expose are “out there”—though surely not covered by the
18 mainstream media and not all in one place or all connected as we’re doing. If you made a study of the
19 green-energy, crony-corruption story your passion, you likely found out a lot of what we’ll share. If
20 you read the report from the House Oversight and Government Reform Committee (HOGRC) on the
21 Obama Administration’s green energy gamble word-for-word, or watched the incriminating hearings,
22 you’ll already know some of what we’ll present. Or, if you’ve read the chapter in Peter Schweizer’s
23 book *Throw Them All Out* that addresses alternative energy and “how the game of funneling taxpayer
24 money to friends has exploded to astonishing levels in recent years,” you have a good idea of the big
25

1 picture. If you have made this your passion, have studied the report, and have coordinated with
2 Schweizer, as Lakatos has, you are encouraged to help make these reports as complete as possible.
3 Together, we'll connect the dots and present it here in bite-sized pieces.

4 Each of the energy projects we will profile in the “special seven” section were recipients of
5 billions of taxpayer dollars through the 1705 Loan Guarantee Program (LGP) and many will be
6 receiving millions more through the 1603 Grant Program. The 1705 LGP is an expansion of the 1703
7 program that was approved in 2005 under President Bush—increasing the expenditures from \$17.9
8 billion in 2007 to \$37.2 billion in 2010. The 2009 American Recovery and Reinvestment Act
9 significantly expanded the DOE’s authority, under Energy Secretary Steven Chu, through the newly
10 created 1705 LGP. (Under the Recovery Act, \$86 billion—approximately 10% of the stimulus package
11 —was earmarked for green energy projects.) The LGP means that companies get risk-free money. If
12 the company succeeds, the low-interest loan gets paid back. If they fail—as many have—we, the
13 taxpayers, lose. In contrast, the 1603 Grant Program—implemented as part the Obama stimulus—is
14 administered by the Treasury Department, with the goal of reimbursing eligible applicants for a portion
15 of the costs of installing specified energy property used in a trade or business or for the production of
16 income. Basically 1603 gives billions in favored businesses tax-free cash gifts that do not have to be
17 paid back.

20 While we can prove that cronyism has run amok within the majority of 1705 LGP, we'll stay
21 focused on the Special Seven. Here, in Part 1, we present a complete overview of the connecting dots
22 on one project: SolarReserve, LLC. With this introduction made, we'll likely address several
23 companies, with a common denominator, in subsequent releases.

25 In Sunday’s column, the following thumbnail was presented: “SolarReserve’s Crescent Dunes

1 project is a solar thermal power tower plant utilizing the advanced molten salt power tower technology
2 with integrated storage located in Tonopah, NV. The company's Fitch rating is BB, yet in September
3 2011, it was the recipient of \$737 million in DOE loan guarantees. Obama's law school buddy and
4 2008 Obama campaign bundler, Michael Froman, was managing director of alternative investments at
5 Citigroup—which became a major investor in SolarReserve. Froman currently serves on the White
6 House staff. Additionally, other high profile Democrats are involved with SolarReserve.”

7
8 But there is more.

9 More about Michael Froman. Peter Schweizer reports that “When Obama ran for president,
10 Froman helped raise large sums of money on Wall Street” for the 2008 campaign. The HOGRC report
11 (page 47) confirms Peter's findings and adds that Froman was a \$200,000 bundler: “Michael Froman
12 currently serves as the Deputy Assistant to the President and Deputy National Security Advisor for
13 International Economic Affairs. He was a friend of President Obama's from law school, and supported
14 his political career by bundling over \$200,000 for his 2008 presidential candidacy. Prior to his arrival at
15 the White House, Froman was the Managing Director of Alternative Investments at Citigroup, where
16 he managed infrastructure and sustainable development investments. Citigroup became a major
17 investor in SolarReserve, which ultimately received a \$737 million loan guarantee in September 2011.”

18
19 The Citigroup connection is tighter. Richard Parsons was Chairman for Citigroup from 2009
20 until he announced stepping down in March 2012. Citigroup was a top Obama donor in 2008. Parsons
21 served on the Obama Transition Team and on the Economic Advisory Board. In 2011, Parsons was
22 appointed to the President's Council on Jobs and Competitiveness.

23
24 Next, David Sandalow—who is currently “the Assistant Secretary for Policy and International
25 Affairs at DOE, where he acts as Secretary's Chu's principal adviser on energy policy, as well as

1 coordinating DOE’s foreign policy involvement.” (HOGRC report page 49) “Sandalow’s ties to the
2 White House date back to the Clinton Administration, during which he worked with President Clinton
3 on environmental issues. After having gained this experience, Sandalow became the influential Chair
4 of the Energy & Climate Working Group of the Clinton Global Initiative. He went on to advise
5 President Obama’s presidential campaign in 2008. Prior to joining the Obama Administration,
6 Sandalow was a senior advisor to Good Energies, Inc., an energy-focused venture capital firm. Good
7 Energies is an investor in SolarReserve.”

8
9 Other SolarReserve connections to the Democratic Party include:

10 Ronald Pelosi—Former Speaker of the House Nancy Pelosi’s brother-in-law, Ronald Pelosi,
11 holds a leadership position with Pacific Corporate Group Asset Management—which is an investor in
12 SolarReserve. Additionally, his colleague, Jasandra Nyker, has served as a member of SolarReserve’s
13 board of directors.

14 George Kaiser—Argonaut Private Equity is an investor in SolarReserve. Argonaut Private
15 Equity is owned by major Democratic fundraiser and a 2008 Top Obama bundler George Kaiser, who
16 also invested in Solyndra. Kaiser made multiple visits to the White House in the months before the
17 company was granted a \$535 million loan from the government. The Managing Director for Argonaut
18 Private Equity, Steve Mitchell, serves on SolarReserve's Board of Directors.

19
20 Tony Podesta—OpenSecrets.org shows that SolarReserve paid hundreds of thousands of dollars
21 in lobbying fees to the Podesta Group. Tony Podesta is the principal at the Podesta Group—which he
22 started with his brother John. John Podesta ran Barack Obama’s presidential transition team and is the
23 Director of the Center for American Progress—which is “reportedly highly influential in helping to
24 craft White House Policy.” Both Tony Podesta and his wife Heather (a Washington power couple) are
25

1 frequent White House visitors that share high ranks in "lobbying power," and Democrat bundling as
2 well.

3 Lee Bailey—SolarReserve’s Chairman of the Board is Lee Bailey, a Managing Director with
4 U.S. Renewables Group, who holds a significant financial stake in SolarReserve. Bailey has donated
5 \$21,850 since 2008 to Democratic candidates, including President Obama, Senate Majority Leader
6 Harry Reid, California Sen. Barbara Boxer and then-presidential candidate Hillary Clinton.

7 James McDermott—SolarReserve board member James McDermott is also a Managing
8 Director with U.S. Renewables Group. He contributed \$61,500 to various Democratic campaigns since
9 2008, including \$30,800 to Obama’s presidential election campaign. U.S Renewable Energy Group has
10 ties with Senator Harry Reid.
11

12 If there were only one connect-the-dots story, it would be easy to dismiss it as coincidence. But
13 here, with just one company, you can see the dots connect, and connect, and connect. As you will
14 continue to see, they keep on connecting. In this case, connect-the-dots is no innocent childhood game.
15 It is a high-stakes gamble and only those with connections get to play. Obama and his Democratic
16 friends are the winners. We, the taxpayers, the losers. We lose the financial investment of our tax
17 dollars and our electricity rates go up—all to support the discredited ruse of man-made climate change.
18 adviser on energy policy, as well as coordinating DOE’s foreign policy involvement.” (HOGRC report
19 page 49) “Sandalow’s ties to the White House date back to the Clinton Administration, during which
20 he worked with President Clinton on environmental issues. After having gained this experience,
21 Sandalow became the influential Chair of the Energy & Climate Working Group of the Clinton Global
22 Initiative. He went on to advise President Obama’s presidential campaign in 2008. Prior to joining the
23 Obama Administration, Sandalow was a senior advisor to Good Energies, Inc., an energy-focused
24
25
26
27
28

1 venture capital firm. Good Energies is an [investor](#) in SolarReserve.”

2 Other SolarReserve connections to the Democratic Party include:

3 **Ronald Pelosi**—Former Speaker of the House Nancy Pelosi’s brother-in-law, [Ronald Pelosi](#),
4 holds a leadership position with Pacific Corporate Group Asset Management—which is an [investor in](#)
5 [SolarReserve](#). Additionally, his colleague, [Jasandra Nyker](#), has served as a member of SolarReserve’s
6 board of directors.

7 **George Kaiser**—Argonaut Private Equity is an investor in SolarReserve. Argonaut Private
8 Equity is owned by [major Democratic fundraiser](#) and a 2008 Top Obama bundler George Kaiser, who
9 also invested in Solyndra. Kaiser made multiple visits to the White House in the months before the
10 company was granted a \$535 million loan from the government. The Managing Director for Argonaut
11 Private Equity, Steve Mitchell, serves on SolarReserve's Board of Directors.

12 **Tony Podesta**—[OpenSecrets.org](#) shows that SolarReserve paid hundreds of thousands of
13 dollars in lobbying fees to the Podesta Group. Tony Podesta is the principal at the Podesta Group—
14 which he [started with his brother John](#). John Podesta ran Barack Obama’s presidential transition team
15 and is the Director of the Center for American Progress—which is “reportedly [highly influential](#) in
16 helping to craft White House Policy.” Both Tony Podesta and his wife Heather (a Washington power
17 couple) are frequent White House visitors that share high ranks in "lobbying power," and Democrat
18 bundling as well.

19 **Lee Bailey**—SolarReserve’s Chairman of the Board is Lee Bailey, a Managing Director with
20 U.S. Renewables Group, who holds a significant financial stake in SolarReserve. [Bailey has](#)
21 [donated](#) \$21,850 since 2008 to Democratic candidates, including President Obama, Senate Majority
22 Leader Harry Reid, California Sen. Barbara Boxer and then-presidential candidate Hillary Clinton.
23
24
25
26

1 **James McDermott**—[SolarReserve board member](#) James McDermott is also a Managing
2 Director with U.S. Renewables Group. He contributed [\\$61,500 to various Democratic](#) campaigns since
3 2008, including \$30,800 to Obama’s presidential election campaign. U.S Renewable Energy Group has
4 ties with Senator Harry Reid.

5 If there were only one connect-the-dots story, it would be easy to dismiss it as coincidence. But
6 here, with just one company, you can see the dots connect, and connect, and connect. As you will
7 continue to see, they keep on connecting. In this case, connect-the-dots is no innocent childhood game.
8 It is a high-stakes gamble and only those with connections get to play. Obama and his Democratic
9 friends are the winners. We, the taxpayers, the losers. We lose the financial investment of our tax
10 dollars and our electricity rates go up—all to support the discredited ruse of man-made climate change.
11

TODAY’S TECH OLIGARCHS AND SENATORS ARE WORSE THAN THE ROBBER BARONS

Yes, Jay Gould was a bad guy. But at least he helped build societal wealth. Not so our Silicon Valley overlords. And they have our politicians in their pockets.

[Joel Kotkin](#)

A decade ago these guys—and they are mostly guys—were folk heroes, and for many people, [they remain so](#). They represented everything traditional business, from Wall Street and Hollywood to the auto industry, in their pursuit of sure profits and golden parachutes, was not—hip, daring, risk-taking folk seeking to change the world for the better.

Now from San Francisco to Washington and Brussels, the tech oligarchs are something less attractive: a fearsome threat whose ambitions to control our future politics, media, and commerce seem without limits. Amazon, Google, Facebook, Netflix, and Uber may be improving our lives in many ways, but they also are disrupting old industries—and the lives of the many thousands of people employed by them. And as the tech boom has expanded, these individuals and companies have gathered economic resources to match their ambitions.

And as their fortunes have ballooned, so has their hubris. They see themselves as somehow better than the scum of Wall Street or the trolls in Houston or Detroit. It’s their intelligence, not just their money, that makes them the proper global rulers. In their contempt for the less cognitively gifted, they are waging what *The Atlantic* recently called [“a war on stupid people.”](#)

1 I had friends of mine who attended MIT back in the 1970s tell me they used to call themselves
2 “tools,” which told us us something about how they regarded themselves and were regarded.
3 Technologists were clearly bright people whom others used to solve problems or make money.
4 Divorced from any mystical value, their technical innovations, in the words of the French sociologist
5 Marcel Mauss, constituted “a traditional action made effective.” Their skills could be applied to
6 agriculture, metallurgy, commerce, and energy.
7

8 In recent years, like Skynet in the Terminator, the tools have achieved consciousness, imbuing
9 themselves with something of a society-altering mission. To a large extent, they have created what the
10 sociologist Alvin Gouldner called [“the new class”](#) of highly educated professionals who would remake
11 society. Initially they made life better—making spaceflight possible, creating advanced medical
12 devices and improving communications (the internet); they built machines that were more efficient and
13 created great research tools for both business and individuals. Yet they did not seek to disrupt all
14 industries—such as energy, food, automobiles—that still employed millions of people. They remained
15 “tools” rather than rulers.
16

17 With the massive wealth they have now acquired, the tools at the top now aim to dominate
18 those they used to serve. Netflix is gradually undermining Hollywood, just as iTunes essentially
19 murdered the music industry. Uber is wiping out the old order of cabbies, and Google, Facebook, and
20 the social media people are gradually supplanting newspapers. Amazon has already undermined the
21 book industry and is seeking to do the same to apparel, supermarkets, and electronics.
22

23
24 Past economic revolutions—from the steam engine to the jet engine and the internet—created in
25 their wake a productivity revolution. To be sure, as brute force or slower technologies lost out, so did
26

1 some companies and classes of people. But generally the economy got stronger and more productive.

2 People got places sooner, information flows quickened, and new jobs were created, many of
3 them paying middle- and working-class people a living wage.

4 This is largely not the case today. As [numerous scholars](#) including [Robert Gordon](#) have pointed
5 out, the new social-media based technologies have had little positive impact on economic productivity,
6 now growing at far lower rates than during past industrial booms, including the 1990s internet
7 revolution.

8
9 Much of the problem, notes *MIT Technology Review* editor [David Rotman](#), is that most
10 information investment no longer serves primarily the basic industries that still drive most of the
11 economy, providing a wide array of jobs for middle- and working-class Americans. This slowdown in
12 productivity, notes Chad Syverson, an economist at the University of Chicago Booth School of
13 Business, has decreased gross domestic product by \$2.7 trillion in 2015—about \$8,400 for every
14 American. “If you think Silicon Valley is going to fuel growing prosperity, you are likely to be
15 disappointed,” suggests Rotman.
16

17
18 One reason may be the nature of “social media,” which is largely a replacement for technology
19 that already exists, or in many cases, is simply a diversion, even a source of [time-wasting addiction](#) for
20 many. Having millions of millennials spend endless hours on Facebook is no more valuable than
21 binging on television shows, except that TV actually employs people.
22

23 At their best, the social media firms have supplanted the old advertising model, essentially
24 undermining the old agencies and archaic forms like newspapers, books, and magazines. But overall
25

1 information employment has barely increased. It's up 70,000 jobs since 2010, but this is after [losing](#)
2 [700,000 jobs](#) in the first decade of the 21st century.

3 Tech firms had once been prodigious employers of American workers. But now, many depend
4 on either workers abroad or imported under H-1B visa program. These are essentially indentured
5 servants whom they can [hire for cheap](#) and prevent from switching jobs. Tens of thousands of jobs in
6 Silicon Valley, and many corporate IT departments elsewhere, rent these “technocoolies,” often
7 replacing longstanding U.S. workers.

8
9 Expanding H-1Bs, not surprisingly, has become a priority issue for oligarchs such as Bill Gates,
10 Mark Zuckerberg, and a host of tech firms, including Yahoo, Cisco Systems, NetApp, Hewlett-
11 Packard, and Intel, firms that in some cases have been laying off thousands of American workers. Most
12 of the bought-and-paid-for [GOP presidential contenders](#), as well as the [money-grubbing Hillary](#)
13 [Clinton](#), embrace the program, with some advocating expansion. The only opposition came from two
14 candidates disdained by the oligarchs, Bernie Sanders and Donald Trump.

15
16
17 Now cab drivers, retail clerks, and even food service workers face technology-driven extinction.
18 Some of this may be positive in the long run, certainly in the case of Uber and Lyft, to the benefit of
19 consumers. But losing the single mom waitress at Denny's to an iPad does not seem to be a major
20 advance toward social justice or a civilized society—nor much of a boost for our society's economic
21 competitiveness. Wiping out cab drivers, many of them immigrants, for part-time workers driving
22 Ubers provides opportunity for some, but it does threaten what has long been one of the traditional
23 ladders to upward mobility.

1 Then there is the extraordinary geographical concentration of the new tech wave. Previous
2 waves were much more highly dispersed. But not now. Social media and search, the drivers of the
3 current tech boom, are heavily concentrated in the Bay Area, which has a remarkable [40 percent of all](#)
4 [jobs in the software publishing and search field](#). In contrast, previous tech waves created jobs in
5 numerous locales.

6
7 This concentration has been two-edged sword, even in its Bay Area heartland. The massive
8 infusions of wealth and new jobs has created enormous tensions in San Francisco and its environs.
9 Many San Franciscans, for example, feel like second class citizens in their own city. Others oppose tax
10 measures in San Francisco that are [favorable to tech companies](#) like Twitter. There is now a movement
11 on to reverse course and apply “tech taxes” on these firms, in part to fund affordable housing and
12 homeless services. Further down in the Valley, there is also widespread opposition to plans to increase
13 the density of the largely suburban areas in order to house the tech workforce. Rather than being happy
14 with the tech boom, many in the Bay Area see their quality of life slipping and [upwards of a third](#) are
15 now considering a move elsewhere.

16
17 Once, we hoped that the technology revolution would create ever more dispersion of wealth and
18 power. This dream has been squashed. Rather than an effusion of start-ups we see the [downturn](#) in new
19 businesses. Information Technology, [notes The Economist](#), is now the most heavily concentrated of all
20 large economic sectors, with four firms accounting for close to 50 percent of all revenues. Although the
21 tech boom has created some very good jobs for skilled workers, [half of all jobs](#) being created today are
22 in low-wage services like retail and restaurants—at least until they are replaced by iPads and robots.
23
24
25
26

1 What kind of world do these disrupters see for us? One vision, from Singularity University, co-
2 founded by Google’s genius technologist [Ray Kurzweil](#), envisions [robots running everything](#); humans,
3 outside the programmers, would become somewhat irrelevant. I saw this mentality for myself at a *Wall*
4 *Street Journal* conference on the environment when a prominent venture capitalist did not see any
5 problem with diminishing birthrates among middle-class Americans since the Valley planned to make
6 the *hoi polloi* redundant.

7
8 Once somewhat inept about politics, the oligarchs now know how to press their agenda. Much
9 of the Valley’s elite–venture capitalist John Doerr, Kleiner Perkins, Vinod Khosla, and Google—
10 routinely [use the political system](#) to cash in on subsidies, particularly for renewable energy, including
11 such [dodgy projects](#) as California’s Ivanpah solar energy plant. Arguably the most visionary of the
12 oligarchs, Elon Musk, has built his business empire largely through [subsidies and grants](#).

13
14 Musk also has [allegedly skirted labor laws](#) to fill out his expanded car factory in Fremont, with
15 \$5-an-hour Eastern European labor; even when blue-collar opportunities do arise, rarely enough, the
16 oligarchs seem ready to fill them with foreigners, either abroad or under dodgy visa schemes.
17 Progressive rhetoric once used to attack oil or agribusiness firms does not seem to work against the
18 tech elite. They can exploit labor laws and engage in monopoly practices with [little threat of](#)
19 [investigation](#) by progressive Obama regulators.

20
21 In the short term, the oligarchs can expect an even more pliable regime under our likely next
22 president, Hillary Clinton. The fundraiser extraordinaire has been raising money from the oligarchs
23 like [Musk](#) and companies such as [Facebook](#). Each may vie to supplant [Google](#), the company with the
24 best access to the Obama administration, over the past seven years.
25

1 What can we expect from the next tech-dominated administration? We can expect moves,
2 backed also by corporate Republicans, to expand H-1B visas, and increased mandates and subsidies for
3 favored sectors like electric cars and renewable energy. Little will be done to protect our privacy—
4 firms like Facebook are determined to [limit restrictions](#) on their profitable “sharing” of personal
5 information. But with regard to efforts to break down encryption systems key to corporate sovereignty,
6 they will defend privacy, as seen in Apple’s [resistance](#) to sharing information on terrorist iPhones. Not
7 cooperating against murderers of Americans is something of fashion now among the entire hoodie-
8 wearing programmer culture.
9

10 One can certainly make the case that tech firms are upping the national game; certain cab
11 companies have failed by being less efficient and responsive as well as more costly. Not so, however,
12 the decision of the oligarchs—desperate to appease their progressive constituents—to
13 periodically [censor](#) and curate information flows, as we have seen at [Twitter](#) and [Facebook](#). Much of
14 this has been directed against politically incorrect conservatives, such as the sometimes outrageous gay
15 provocateur [Milo Yiannopoulos](#).
16

17 There is a rising tide of concern, including from such progressive icons as former Labor
18 Secretary [Robert Reich](#), about the extraordinary market, political, and culture power of the tech
19 oligarchy. But so far, the oligarchs have played a brilliant double game. They have bought off the
20 progressives with contributions and by endorsing their social liberal and environmental agenda. As for
21 the establishment right, they are too accustomed to genuflecting at mammon to push back against
22 anyone with a 10-digit net worth. This has left much of the opposition at the extremes of right and left,
23 greatly weakening it.
24
25
26

1 Yet over time grassroots Americans may lose their childish awe of the tech establishment. They
2 could recognize that, without some restrictions, they are signing away control of their culture, politics,
3 and economic prospects to the empowered “tools.” They might understand that technology itself is no
4 panacea; it is either a tool to be used to benefit society, increase opportunity, and expand human
5 freedom, or it is nothing more than a new means of oppression.

1 **CORRUPTION IN THE ENERGY DEPARTMENT IS BUILT-IN ON A PERMANENT BASIS**

2 By Lakatos & Noon

3
4 *The Washington Post found that* “Obama’s green-technology program was infused with
5 politics at every level.” The \$535 million loan guarantee for the failed Solyndra is a prime example.
6 The Department of Energy approved the loan after pressure from the White House. A main Solyndra
7 investor was a billionaire Obama fundraiser. The **New York Times** found that Solyndra “spent nearly
8 \$1.8 million on Washington lobbyists, employing six firms with ties to members of Congress and
9 officials of the Obama White House.”
10

11 *Crony Capitalism has existed for a long time.* So energy companies have been able to get
12 government officials to pass legislation that helps them make more money. So they get tax breaks,
13 loopholes, subsidies while the rest of the economy suffers and they make huge profits (and in some
14 cases, record breaking profits).
15

16 Clearly the Department of Energy has failed at it's job. Green Energy Corporations Rolling in
17 the Green, Thanks to Friends in High Places

18 *This a portion of a much longer article entitled* “Podesta Power and Center for American
19 Progress: The dark, driving force behind the president’s massive green energy scheme“, **published on**
20 **March 3, 2014**Center for American Progress Finally Reveals its Corporate Donors:

21 At least 17 raking in tens of billions of tax dollars from the Green Bank of Obama

22 While the left-wing think tank is a well-known favorite of billionaire George Soros, as well as
23 other left-leaning ultra-rich donors, “the center does not disclose who finances its activities, a policy it
24 is declining to change even as Mr. Podesta prepares to wield influence over the shape of the Obama
25

1 administration,” *wrote the New York Times* in 2008.

2 However, “after heavy pressure arising from CAP’s quasi-lobbying history. That scrutiny
3 ratcheted up following the announcement that CAP founder John Podesta would be formally joining
4 the Obama administration. Both Politico and the **New York Times** called for the donor list to meet the
5 public eye,” *reported* Breitbart News.

6 So, on December 13, 2013, CAP “revealed that it’s funded by some of the country’s largest and
7 most powerful corporations, trade associations and lobbying firms,” *announced POLITICO*. The
8 donor disclosure *excluded* individuals and foundations, only giving insight into their corporate
9 influence, leaving more darkness in its wake. Moreover, it was reported that each of those listed (*58*
10 *donors*) has given the group more than \$10,000 in 2013, yet the exact amount was not disclosed.

11 CAP’s 2013 donor list “*contains a* myriad of massive corporations, including Apple Inc.,
12 AT&T, Bank of America, BMW of North America, Citigroup, Coca-Cola, Discovery, GE, Facebook,
13 Google, Goldman Sachs, PepsiCo, PG&E, the Motion Picture Association of America, Samsung, Time
14 Warner Inc., T-Mobile, Toyota, Visa, Walmart and Wells Fargo” — many of which are part of this
15 massive green energy scheme.

16 *Still, The Nation, in their May 2013 piece* “The Secret Donors Behind the Center for American
17 Progress and Other Think Tanks, *released a* list of *CAP’s 2012 corporate donors — labeled*
18 “American
19

20 *Progress Business Alliance Members,*” which are charged fees: A confidential CAP donor
21 pitch I obtained describes the Business Alliance as “a channel for engagement with the corporate
22 community” that provides “the opportunity to...collaborate on common interests.” It offers three
23 membership levels, with the perks to [top donors](#) (\$100,000 and up) including private meetings with
24
25
26

1 CAP experts and executives, round-table discussions with “Hill and national leaders,” and briefings on
2 CAP reports “relevant to your unique interests.”

3 The Nation also divulged that CAP doesn’t publicly disclose the members of its Business
4 Alliance, but they “obtained multiple internal lists from 2011 showing that dozens of major
5 corporations had joined.”

6 What’s relevant here is that in 2011 the *lists compiled by The Nation* of CAP’s donors
7 included Comcast, Walmart, General Motors, Pacific Gas and Electric, General Electric, Boeing and
8 Lockheed — with three confirmed winners of green energy funds.

9 So basically the donor list and the membership list are one and the same. And, what’s even
10 more interesting is how **The Nation** chronicles CAP’s assets:

11 “After growing rapidly in its first few years, tax records show, CAP’s total assets fell in 2006
12 for the first time, from \$23.6 million to \$20.4 million. [Assets started growing again](#)
13 [in 2007 when CAP founded the Business Alliance](#), a membership rewards program for
14 corporate contributors, and then exploded when Obama was elected in 2008.”

15 We know that CAP founded its Business Alliance (corporate donors) in 2007, but since we only
16 have a hint of 2011, combined with lists for 2012 and 2013, the mystery remains. Missing are the
17 corporate donors CAP enlisted from 2007 until 2011. When did these now public donors join CAP, and
18 what was dollar amount of money that was given?

19 While I am about to dissect the corporations from these lists (2011 to 2013) that received green
20 energy taxpayer money (loans, grants and special tax breaks), in full disclosure, the majority of the
21 stimulus and non-stimulus clean-energy funds (*\$150 billion through 2014*) were doled out between
22 2009 and 2011. However, as I reported in the beginning of this post, “green” funds continue to flow,
23
24
25

1 and the Obama administration wants billions more of taxpayer money to save the planet.

2 I hate to be redundant, but as you'll see, CAP's corporate donors are connected to many of the
3 same projects and firms that we have documented in previous Green Corruption Files. This is due to
4 the fact that **meaningful** political ties — Obama's bundlers (both *in 2008 and in 2012*), top donors,
5 financiers, and green cronies — have surrounded the green energy money from the onset. However,
6 considering that CAP players operated inside the Obama White House as well as the Energy
7 Department — prior, during and after the money was doled out — this adds another layer of corruption
8 behind the green energy deals.
9

10 At any rate, several of these corporations include *Big Banks* (even the “too-big-to fail”) that
11 have benefited immensely from President Obama's cleantech push. Even though many on Wall Street
12 stood by the president in 2012, the majority sided with *Mitt Romney*. *But* that was after Obama enjoyed
13 his **fair share** of *Wall Street buddies* who helped ensure his victory in 2008, pouring millions of dollars
14 into his campaign coffers, making their mark as *TOP campaign donors (PAC)* — with even Wall
15 Street executives *bundling huge* sums of money for then-candidate Obama. Additionally, “the *big*
16 *bundlers*
17

18 had broad access to the White House for meetings with top administration officials and glitzy
19 social events.”

20 Inside these CAP corporate donor lists we find a few *TARP recipients* such as Citigroup,
21 Goldman Sachs, Bank of America, and *Merrill Lynch*. What's more telling is the *infiltration of so*
22 many Citigroup and *Goldman Sachs* executives operating (past and present) inside the Obama
23 administration, even shaping his economic policy.
24

25 CAP'S 2013 DONORS: Green energy money winners
26

#1) Bank of America (now *Bank of America Merrill Lynch* — confirmed donor since 2012):

Both Bank of America and Merrill Lynch (Campaign Committee’s), from 2003 to 2008, supported Senator Obama. Meanwhile, Bank of America, a heavy hitter donor with major *lobbying pull*, plays both sides of the isle. But in 2008, this Big Bank put their money (PAC and individuals) on blue, including donating to candidate Obama.

In the final days of the DOE loan program (September 2011), the DOE awarded a partial guarantee of \$1.4 billion loan — another *shady stimulus deal* (“non-investment grade”) that was “personally championed” by then-Energy Secretary Steven Chu — for a project called Project Amp. Prior to the finalization of this DOE transaction, in June 2011, Bank of America Merrill Lynch, Prologis and NRG Energy joined forces on Project Amp, which was “a four-year, \$2.6 billion project to place solar panels on rooftops in 28 states, one of the most ambitious clean-energy projects in recent years,” reported the Wall Street Journal.

The **Journal** goes on, “Bank of America Merrill Lynch unit will provide \$1.4 billion in loans for the project,” of which “the financing is part of Bank of America’s plan to put \$20 billion of capital to work in renewable energy, conservation and other clean technologies that address climate change.”

However, by October 2013, the Energy Department pulled the plug on Project Amp, and according to **POLITICO**, Prologis never tapped into the \$1.4 billion. Still, along the way, Prologis did secure “a grant for \$68,000 for the purpose of “rent for warehouse space” under the Recovery Act.

While I have yet to do a complete analysis on Bank of America/Merrill Lynch and their *renewable energy portfolio*, there are additional firms or projects that this bank has backed that also received “green” taxpayer funds from the Obama administration.

NextEra Energy Wind Energy Assets

1 Fist is NextEra, whose CEO Lewis “Lew” Hay, III was member of President Obama’s *Jobs*
2 *Council* (from 2011 until 2013), that was awarded two large DOE stimulus loans, as well as a slew of
3 other green energy stimulus funds. This is part of the scheme that we’ve been documenting since the
4 summer of 2012 (“Third Largest Recipient of DOE Risky Loans“), **and later in my** January 2013 Big
5 Wind Story.

6 But since Bank of America has invested in the wind side, what’s key here is this: NextEra was
7 the biggest user of the wind energy production tax credit. In an analysis *by John Fund of the National*
8 **Review Online**, he states...

9 Begun 20 years ago to spur the construction of wind-energy facilities that could compete with
10 conventional fossil-fuel power plants, the tax credit [PTC] gives wind an advantage over all other
11 energy producers. But it has mostly benefited conventional nuclear and fossil-fuel-fired electricity
12 producers. The biggest user of the tax credit is Florida-based NextEra Energy, the nation’s eighth-
13 largest power producer. Through skillful manipulation of the credits, NextEra from 2005 to 2009 ‘paid
14 just \$88 million in taxes on earnings of nearly \$7 billion,’ Businessweek reports. That’s a tax rate of
15 just 1.25 percent over that period, when the statutory rate is 35 percent.
16
17

18 **SolarCity**

19 Considering that the Podesta Group added SolarCity as a client in 2012, I highlighted the
20 various political connections to this solar firm earlier, including billionaire players that received
21 taxpayer money for other green energy deals, such as Elon Musk, *Nicholas J. Pritzker*, and George
22 Soros.
23

24 But what most don’t know is that SolarCity was in line to get a stimulus loan from the DOE for
25 \$275 million. However, that deal — dubbed SolarStrong — *fell apart due* to the Solyndra “red flags”
26

1 just prior to the loan program’s deadline in September 2011. A month later, *SolarCity found a* willing
2 partner in Bank of America, which was followed by this official *announcement*: “*SolarCity and Bank*
3 *of America Merrill Lynch today announced that they have agreed to terms on financing for*
4 *SolarStrong, SolarCity’s ambitious five-year plan to build more than \$1 billion in solar power projects*
5 *for privatized U.S. military housing communities across the country.*”

6 It should be noted that without government subsidies, *SolarCity wouldn’t be the success it is*
7 *today*:

8 “*SolarCity currently benefits from tax credits totaling as much as 30 percent of the cost of these*
9 *systems,” noted Bloomberg.* And, as I documented earlier, *SolarCity, so far (and since 2009) has*
10 *been subsidized with “green” through various stimulus funds, grants and federal tax breaks at the tune*
11 *of \$514 million.*

13 SunPower

14 Bank of America Merrill Lynch and SunPower have worked together since 2009. And this year
15 *they announced a \$220 million financing program for residential solar lease projects.* In January 2010,
16 *SunPower Corp, the San Jose, Calif.-based designer and manufacturer of solar panels and systems,*
17 *received four of the stimulus-enacted Section 48C Tax Credits totaling \$10.8 million.* Then, despite
18 *SunPower’s well-known financial issues and the fact that it was under a shareholder suit alleging*
19 *securities fraud and misrepresentations, just days (September 2011) before the 1705 Loan Guarantee*
20 *Program’s deadline (along with four other solar companies), this “non-investment” grade \$1.2 billion*
21 *stimulus loan was approved — to support the construction of the California Valley Solar Ranch*
22 *(CVSR) in San Luis Obispo County.*

23 The conditional loan to SunPower was announced on April 12, 2011, and shortly thereafter
24

1 (April 30, 2011), the French oil conglomerate *Total* committed to buying a \$1.37 billion controlling
2 stake (60%) in SunPower Corp — a bailout that was *confirmed* in June 2011. Now, *SunPower* never
3 directly got the cash, because on the final closing of the DOE loan guarantee, they *sold the California*
4 *Valley Solar Ranch* to NRG Energy. However, SunPower continued on as the developer and Bechtel as
5 the *primary contractor* building the project.

6 Also, to date, SunPower Residential, in 2013 and 2014, snagged 34 federal stimulus grants *from*
7 *the 1603 Program* for “solar electricity” that ranges across 12 states, totaling over \$86 million tax
8 dollars.

9 Besides Bank of America, both SunPower and *NRG Energy* have additional **meaningful**
10 political connections to President Obama and other high-ranking Democrats, of which we’ve
11 documented a few times: First in my *October 2012 report* (troubled green energy projects) and then in
12 my February 2013 *analysis on Citigroup*, another CAP donor that is up next, which is a huge player
13 inside this “climate”

14 scam. Lastly, due to the fact that NRG Energy, a Fortune 500 and S&P 500 Index company, of
15 which they and their subsidiaries, initially, were the recipient of most of 1705 stimulus loans: at least
16 \$5.2 billion of taxpayer money (now minus the \$1.4 billion for Project Amp). NRG Energy was one of
17 George Soros’ **timely** investments that I mentioned at the beginning of this post, yet more Intel can be
18 found in my *March 2013 Green Corruption File*.

21 #2) Citigroup (confirmed donor since 2012):

22 Since 2007, Citigroup has been heavily involved in “climate change activities.” We also can
23 confirm that this “*too-big-to-fail*” bank has made a massive footprint inside President’s Obama’s
24 clean-energy dirt — the candidate that Citigroup helped get elected in 2008 as the number seven *top*
25

1 donor (PAC) with many executives and friends of Obama *bundling for both* his campaigns.

2 Meanwhile, in 2012, Citi *contributed* to both President Obama and Mitt Romney.

3 By 2011 — prior to the presidential reelection — *through their* “50 Billion Climate Change
4 Investment Initiative,” Citigroup had “directed \$36.35 billion into such initiatives so far...” — of
5 which they brag:

6 “In the U.S., Citi has the largest market share (28 percent) of U.S. Department of energy section
7 1703/1705 Loan Guarantee program financings for alternative energy, and we are the leader in such
8 bond transactions.”

9
10 Considering that in February 2013, I dedicated an entire post to Cit and their *Massive ‘Green’*
11 *Money*

12 *Machine,*” which included a careful analysis of their “2012 *alternative energy portfolio*” that
13 lists about 37 transactions (plus SolarReserve) — both foreign and here in the United States, here I’ll
14 just give some highlights.

15
16 What I found is that 58 percent (22) of Citi’s clients had received government subsidies,
17 totaling approximately \$16 billion from the taxpayer-funded Green Bank of Obama, the majority from
18 stimulus package. Furthermore, my research not only “followed the green money,” but profiled the Citi

19 executives that operate (d) inside the White House, some with key positions, which included
20 President Obama’s 2013 *choice* to replace Timothy Geithner for Treasury Secretary with *Jack Lew*
21 *(former Chief of Staff), Michael Froman, Richard Parsons, Louis Susman, and Michael Eckhart* — to
22 name a few.

23
24 Many of the alternative energy projects that Citi was involved are mentioned in today’s study,
25 starting with the Energy Department’s junk bond portfolio, which were doled out between 2009 and

2011:

- BrightSource Energy was awarded *\$1.6 billion DOE* loan for the Ivanpah solar facility in

California

- Brookfield Renewable Power, whereas Granite Reliable received a *\$168.9 million* loan for a wind project in New Hampshire.

- Caithness/General Electric received a *\$1.3 billion DOE* loan for the Shepherds Flat wind project in Oregon

- NextEra Energy /First Solar got a *\$1.46 billion* loan for the Desert Sunlight project in California;

- SolarReserve was awarded *\$737 million DOE* stimulus loan for the *Crescent Dunes* project in Nevada.

According to their renewable energy portfolio, Citi, in February 2011, became a major investor in SolarCity. And, as I documented earlier, SolarCity, so far (and since 2009) has been subsidized with “green” through various stimulus funds, grants and federal tax breaks at the tune of \$514 million.

Citigroup, as of 2010 was listed as SunPower’s bookrunner. Then in August 2011 SunPower and Citi

set up a \$105 million fund for residential solar leasing projects, which states, “SunPower will use the fund to extend its SunPower Lease programme to customers in 8 US states, expanding the financing options available to homeowners interested in SunPower solar energy systems. The SunPower Lease is now available in Arizona, California, Colorado, Hawaii, Massachusetts, New Jersey, New York and Pennsylvania. Citi is contributing \$80m to the fund.” Again, I covered

906

1 SunPower under Bank of America, showing that this solar firm was given plenty of green government
2 subsidies:

3 • In January 2010, *SunPower Corp* received four of the *stimulus-enacted* Section 48C Tax
4 Credits totaling \$10.8 million.

5 • In September 2011, SunPower is part of the \$1.2 billion stimulus loan to support the
6 construction of the *California Valley Solar Ranch (CVSR)* in San Luis Obispo County.

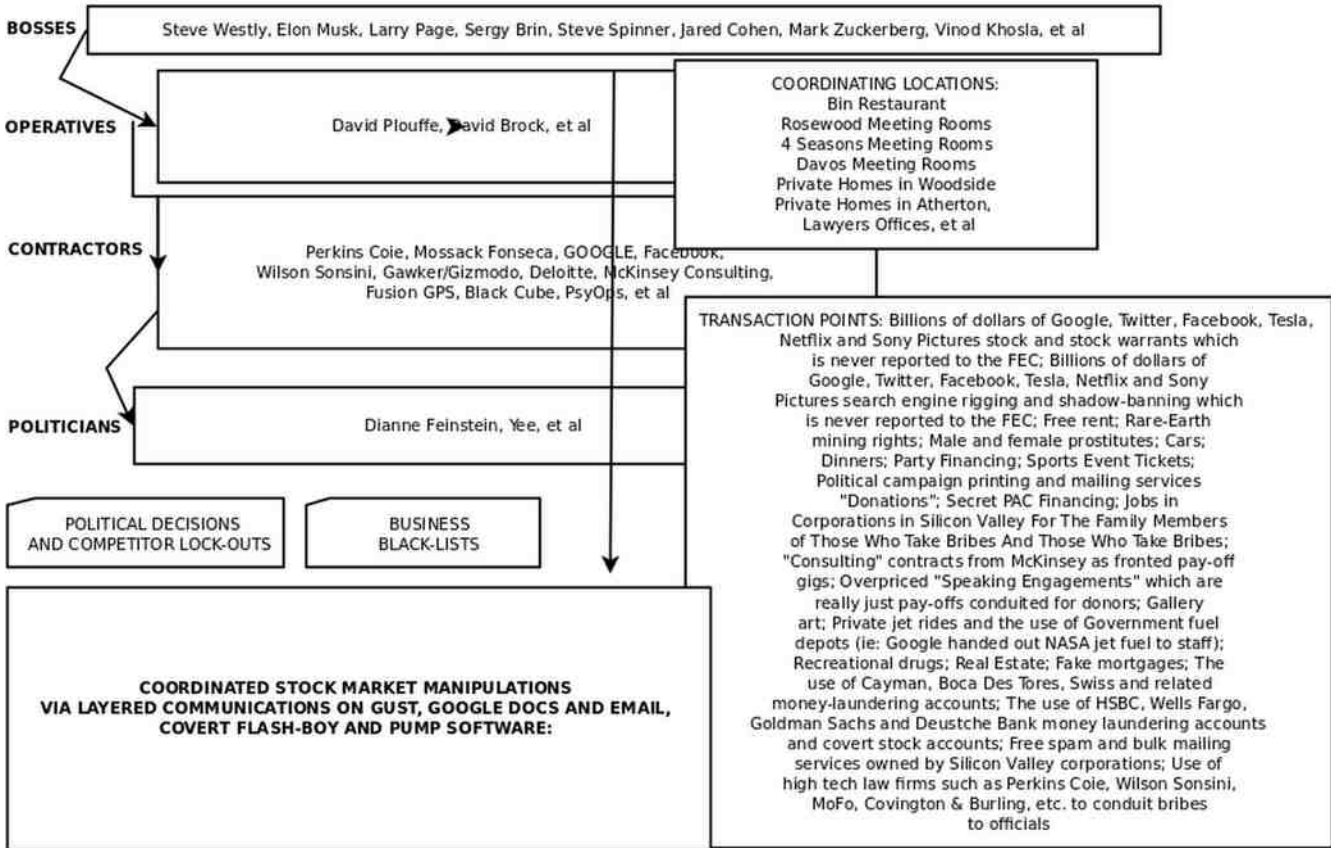

7 • SunPower Residential, in 2013 and 2014, snagged 34 federal stimulus grants *from the 1603*
8 *Program for “solar electricity”* that ranges across 12 states, totaling over \$86 million tax dollars.

9
10 **#3) Goldman Sachs (possibly a donor since 2012):**

11 Goldman Sachs was a *top Obama donor in 2008, but* we also know that two Goldman
12 executives sat on Obama’s 2008 Finance Committee and a slew of partners, *executives and board*
13 *members bundled for*, and donated to Obama’s 2008 campaign. Meanwhile, his administration has been
14 *infested* with Goldmanites — even as early as 2008 when a Goldman board member, *James A. Johnson*
15 *(also an Obama bundler that I profiled many times due to his former firm Perseus)*, was *chosen* as head
16 of Barack Obama’s vice presidential search team. Known as Jim Johnson and “a *fixture of*
17 *establishment Washington*, with ties to Wall Street and “a *major presence in Democratic politics* for
18 more than two decades,” Mr. Johnson *resigned his VP vetting role amidst criticism* over his part in the
19 *Countrywide*

20
21 *Financial scandal* as well as *controversy* surrounding his role as Fannie Mae’s chief executive
22 from 1991 to 1999.

THE SILICON VALLEY CARTEL

1 Even though in 2012, Goldman Sachs *turned their back on Mr. Obama* in 2012, there were
2 many executives and board members *who helped him* get reelected.

3 Like Bank of America, I haven't had the opportunity to examine Goldman Sachs' *Alternative*
4 *Energy Group* and its *Environmental Markets* financing and advisory; however, we do know that
5 Goldman has been investing in renewable energy since at least 2005.

6 By 2014, Goldman Sachs "declared that the renewable sector is one of the most compelling" —
7 even as they backed "green" in 2012, having committed \$40 billion to renewable energy (made and
8 planned investments). According to [Renew Economy](#), "Stuart Bernstein, who heads the bank's clean-
9 technology and renewables investment banking group, told Recharge in a recent interview in a story
10 titled [Goldman goes Green](#). " It is at a transformational moment in time."

11 As Goldman *promotes* President Obama's Climate Action Plan along with other winners of
12 clean-energy funds, they also brag about their climate change roles: "In 2012, we financed nearly \$2
13 billion and co-invested more than \$430 million in the sector. We also served as financial advisor on
14 clean-energy transactions valued at more than \$1.1 billion."

15 Needless to say, *since 2010*, I've been following Goldman and tracking how this Big Bank has
16 been cashing in on the stimulus funds. As my research developed, I found their DNA all over this green
17 energy scheme, of which to date we can confirm that Goldman Sachs has a *vested interest* — *via*
18 various roles, and having entered the scene at different junctures (before, during and after taxpayer
19 subsidies were awarded), in many projects and firms that received loans, grants and special tax breaks.

20 So far I've tracked at least 14 firms connecting Goldman to over \$8.5 billion from the Green
21 Bank of Obama, the majority from the 2009-Recovery Act.

22 Keep in mind too, that Goldman is **associated** (former executives and investments) with the Big
23
24
25
26

1 VC firm Kleiner Perkins as well as *Generation Investment Management (GIM)* — mentioned a few
2 times already. As a reminder, Kleiner Perkins is where we find the “climate duo,” whose combined
3 carbon footprint is larger than my entire city: Billionaires *John Doerr* and Al Gore (partners at the
4 firm), where Doerr, “a very *big-ticket Obama donor*,” in January 2009, persuasions were reflected in
5 the 2009-Recovery Act via his “*meetings with Obama’s transition team and leaders in Congress*” as
6 well as the fact that he made “*five recommendations to Congress and President-elect Barack Obama to*
7 *jumpstart a green-tech revolution and fight global warming.*”

8
9 Shortly thereafter (around February 6, 2009) and just days prior to signing the stimulus bill
10 (*February 18, 2009*), Obama appointed Doerr as a member of his Economic Recovery Advisory Board
11 (PERAB), which later *morphed* into the president’s jobs council — only to close down in February
12 2013.

13 Meanwhile, back in 2004 Gore started GIM with former CEO of Goldman Sachs Asset
14 Management David Blood, who is another *Obama bundler*. Apparently, Blood is the “*wizard behind*”
15 GIM, and behind this “sustainable firm” are *several former Goldman* executives and partners — even
16 as Doerr, in 2007, joined the GIM advisory board.

17
18 This and more insight were profiled in my *January 8, 2013* file on Doerr and Gore, whose
19 “*Greentech Portfolio*” (at least 50%) and GIM’s “Sustainable Investing” secured billions in loans,
20 grants and special tax breaks — the two firms combined are tied to at least \$10 billion from the
21 taxpayer-funded Green Bank of Obama, the majority coming from the 2009-Recovery Act, of which
22 Doerr had helped author.

23
24 As far as Goldman: first off they made big money from the sale of *Horizon Wind Energy* to
25 Portugal’s EDP for \$2.5 billion in 2007, of which ironically, starting in 2009 until the end of 2012,

EDP

Renewables North America LLC (formerly Horizon Wind Energy LLC), received over \$700 million of free taxpayer money from the Obama stimulus bill (\$722,468,855 in Section 1603 Grants) for eleven wind projects, placing them at the number two spot of foreign firms that were winners of US grants.

This was a shocking *report released* in early 2013 by the Energy and Commerce Committee, exposing the extent to which *foreign corporations are benefiting from* green energy stimulus funding.

Goldman’s Green Losers, Winners, Biofuels, & Smart Grids

Nevertheless, Goldman is credited as the “*exclusive financial adviser*” for the now bankrupt Solyndra (\$570.4 million loss), and in 2010, handled the IPO of what most deem a government winner, Tesla Motors that was awarded \$465 million from the DOE ATVM program. Also, according to Goldman, “In May 2013, [they] helped raise over \$1 billion in new financing for Tesla Motors.”

There are more bankrupt ones as well: SpectraWatt (\$20.5 million), Nordic WindPower (\$8.6 million), and Suntech Power Holdings Co. (\$2.1 million) — all taking millions of taxpayer money down with them, while Goldman remains unscathed.

Goldman is also active in advanced biofuels and feedstock companies, handling the IPOs of biofuel companies, of which at least two won money and contracts from the Obama administration: Amyris (\$25 million stimulus grant), Kior (seeking \$1 billion DOE loan) and Solazyme (\$21.7 million

DOE

stimulus grant; plus part of the \$12 million biofuel contract with the U.S. Navy) — the latter company has its very own direct connection to CAP: Jonathan Wolfson, Solazyme cofounder and Chief Executive Officer, “is an active participant in many advisory groups, including sitting on the board of

1 the Center for American Progress (CAP) Clean Tech Council.

2 Meanwhile, Goldman hooked up with another huge winner of stimulus funds: “In March 2013,
3 [they] served as lead-left bookrunner on the \$93 million initial public offering for Silver Spring
4 Networks” —a Foundation Capital, Kleiner Perkins, and Google (all with friends in the White House)
5 green investment, which in 2009, cashed in big time when the DOE starting handing the smart-grid
6 grants as part of the 2009-Recovery Act. During the course of my January 2013 analysis on Silver
7 Spring, I found that 30 percent of the \$4.5 billion stimulus smart-grid grants went to their “customers”
8 — that’s over \$1.3 billion. Then in my May 2013 report, “Smart Gird, Dirty Devices”, I documented
9 additional ties and an interesting analysis of its IPO: “Silver Spring IPO has more red flags than a
10 Communist Party military parade,” PrivCo CEO Sam Hamadeh.

12 Goldman’s Green DOE Stimulus Loans

13 Considering that First Solar is also a CAP Business Alliance Member (donor), we’ll expand on
14 that solar firm later, but what is key here is that Goldman was an early investor in First Solar that
15 snagged three large DOE stimulus loans (over \$3 billion) — a story we’ve featured many times,
16 starting with
17

18 “The First Solar Three Billion Dollar Swindle.”

19 Still, Goldman was (is) also an investor in U.S. Geothermal that in February 2011, landed a \$97
20 million DOE stimulus loan slated to build a 22-megawatt power plant in the eastern Oregon desert.

21 This was —

22 one of the first geothermal projects funded by the DOE, despite the fact that in December 2010,

23 S&P

24 had rated this loan as non-investment grade. Yet, the “2012 Internal DOE Email Dump” prove
25

1 that this deal was rushed and approved in time for a POTUS photo op. Moreover, U.S. Geothermal had
2 other projects that snagged millions in green energy subsidies.

3 Then in September 2011, Cogentrix of Alamosa, LLC (Cogentrix Energy a subsidiary of
4 Goldman Sachs), was awarded a \$90.6 million DOE stimulus loan for the Alamosa Solar Generating
5 Project in Colorado. Cogentrix, on July 16, 2012 bagged a \$34.6 million stimulus grant (free taxpayer
6 money) from the 1603 Grant Program — I’m assuming this is for the same project.

7
8 But that’s not all....

9 BrightSource Energy Just Got Darker

10 According to Renew Economy (January 2014), “[Goldman] has also a substantial investment in
11 BrightSource Energy,” which actually brought its Ivanpah solar power facility into full production last
12 month — and if not for a federal loan guarantee, the \$2.2-billion project would have never seen the
13 light of day. Now this massive solar power plant (struggling to produce power) has become the “\$2.2
14 Billion Bird-Scorching Solar Project” — with even the left-leaning Los Angeles Times, chronicling
15 their grand opening like this:
16

17 After nearly four years of construction that killed desert tortoises, burned the feathers off
18 passing birds and mowed down thousands of acres of native flora, Ivanpah officially opened last month
19 with a gala that included a rock band and a horde of dignitaries — Energy Secretary Ernest Moniz
20 among them.

21 We’ve been uncovering BrightSource Energy’s \$1.6 billion shady DOE deal since July 6, 2012,
22 and as new information became available we’ve revisited this huge solar transaction several times. In
23 short, the Ivanpah Solar Electric Generating System (SEGS) in California was subsidized with a \$1.6
24 billion DOE stimulus loan, which was announced on February 22, 2010 and finalized April 11, 2011 —
25

1 a project that also received special treatment by the Department of Interior, which was documented in
2 our “2012 Special Seven Series.”

3 Still, BrightSource investors not only include Goldman Sachs, but additional 2008 Obama
4 donors such as Google, Morgan Stanley, and BP Alternative Energy. Meanwhile the Ivanpah project
5 incorporates a slew of ties to President Obama as well as Vice President Joe Biden and Senator Harry
6 Reid. This story comprises of big donors, political cronies and connections such as BrightSource,
7 VantagePoint, Google, NRG Energy, PG&E, Goldman Sachs, Citigroup, George Soros, the former
8 Commerce Secretary John Bryson, McBee Strategic Consulting, lobbyists Bernie Toon, and others —
9 with DOE officials,
10

11 Obama’s Green Team, and several in Congress from the Democrat side involved.

12 While I briefly addressed Citigroup’s part in this billion-dollar deal in February 23, 2013
13 (Ongoing —\$250mm IPO / Joint Bookrunner), it should be noted that just days after the finalization of
14 the \$1.6 billion government loan, BrightSource had filed for and IPO, of which Goldman Sachs Group
15 Inc., Citigroup Inc. and Deutsche Bank AG were leading the proposed offering. However, a year later,
16 they canceled their IPO, and BrightSource CEO John Woolard (now former) told Gigaom.com that it
17 was “because of the weak public markets, particularly for solar and greentech companies...” — of
18 which, to date the IPO is still pending. Yet, we do know that Goldman has made equity investments in
19 the solar developer BrightSource.
20

21 We also can confirm that additional political heavyweights have been hovering over this deal,
22 starting with Bechtel (another big corporation with their hand in the stimulus) that constructed
23 BrightSource’s Ivanpah project as well as the fact that sometime in October 2010, during the time of
24 their DOE loan review process, “NRG became the lead investor (\$300m) in Ivanpah solar project. In
25

1 fact, as

2 mentioned, this was one of the four (now three) large taxpayer-funded stimulus projects that
3 NRG Energy is part of.

4 [Side Note](#): My March 22, 2013 file covers The Soros connection, its CEO David Crane, and
5 more. My September 2013 post on BrightSource’s Top DC lobbyist (since 2009) gives more insight
6 into other players inside this \$1.6 billion DOE deal, such as VantagePoint, Google Inc, and PG&E,
7 which included ongoing interaction and pressure from the heavyweight K Street firm McBee Strategic
8 Consulting — another huge player inside this green energy scam. What’s key is that Steve McBee
9 “reportedly wrote key provisions in the stimulus bill to open the spigot of green corporate welfare” —
10 thus over 60 percent of his energy client list cashed in under the Obama administration.
11

12 Lastly, in November 2013, we unleashed BrightSource’s connection to Senator Harry Reid as
13 well as the incriminating “2012 Internal DOE Email Dump” relevant to this particular DOE
14 transaction.
15

16 What’s key here is that BrightSource Energy has never been solid. In fact, the “Oakland-based
17 BrightSource Energy Inc. had emerged from the bankruptcy of its parent company.” Now I’m
18 assuming this was out of the ashes of BrightSource Industries (Israel) Ltd. that was formerly known as
19 LUZ II Ltd., and changed its name in December 2008.

20 Nevertheless, according to Schweizer in Throw Them All Out, as he described the financial
21 issues they were having, “BrightSource badly needed this infusion of taxpayer cash.” So in essence this
22 \$1.6
23 billion stimulus DOE deal was a bailout, which is a clear violation of the American Recovery
24 and Reinvestment Act of 2009 — a fact that we elaborated on many times.
25

1 Goldman: SolarCity, SunEdison & SunRun

2 According to Renew Economy (January 2014), “Goldman Sachs also provided \$500 million of
3 finance to SolarCity, to allow the biggest solar installer in the US to expand its solar leasing business.
4 Goldman is one of a number of banks to do that — the latest was Bank of America/Merrill Lynch.”

5 Goldman, in 2012, also handled the IPO for SolarCity — the solar firm I first highlighted under
6 the Podesta Group (became a 2012 client) and expanded upon under Bank of America, noting that

7 SolarCity was not only in line to receive a loan from the Energy Department, but as
8 documented earlier, SolarCity, so far (and since 2009) has been subsidized with “green” through
9 various stimulus funds, grants and federal tax breaks at the tune of \$514 million. We’ll keep
10 watching...
11

12 There is also SunEdison LLC — a global provider of solar-energy services — which was also
13 an early Goldman Sachs investment. Due to the fact that this solar firm also became a client the
14 Podesta Group in 2012, I covered the fact that in 2013, SunEdison won 5 federal stimulus grants from
15 the 1603

16 Program for “solar electricity” that ranges across 5 states, totaling over \$1.8 million tax dollars.
17

18 Furthermore, SunEdison is in cahoots with JPMorgan, GE Capital as well as Southern
19 Company and a few other familiar green energy players and CAP donors such as Bank of America,
20 Duke Energy, and First Solar.

21 Just last month, the Wall Street Journal reported, “Sunrun Inc., a company that finances and
22 installs home solar projects, has retained Goldman Sachs to raise a growth equity round of more than
23 \$100 million, according to a person familiar with the situation.”
24

25 SunRun can be found in my May 2012 research on Foundation Capital — another friend of the
26

1 Obama White House and big VC winner of taxpayer money from the Green Bank of Obama, adding to
2 my

3 long list of Big VC’s that have had made out like bandits. As of October 2013 , I found that
4 SunRun, between 2011 and 2013, snagged 23 federal stimulus grants from the 1603 Program for “solar
5 electricity” that ranges across 10 states, totaling over \$141 million tax dollars, thus far.

6 Plus in 2010, SunRun announced a \$100 million joint program with major utility Pacific Gas &
7 Electric, which according to Venture Beat, “PG&E will be funding the rooftop systems in question via
8 its subsidiary, Pacific Energy Capital II, a tax equity fund,” of which “In lieu of traditional returns, the
9 investor — PG&E in this case — gets tax benefits in addition to some cash returns.”
10

11 **#4) Covanta Energy (confirmed donor since 2012):**

12 This was one of those Soros timely investments (twelve alternative energy and utility
13 companies) that I had alluded to in the beginning of this post and exposed in my March 2013 Green
14 Corruption File. I found that Covanta, a clean-energy company and the recipient of federal stimulus
15 grants, also received millions in 2010 through Congressional earmarks, yet it is unclear as to how many
16 green government subsidies or the exact stimulus dollar amount that Covanta Energy snagged. Also,
17 Covanta Energy stands to benefit from the NAT GAS Act if it comes to light again.
18

19 **#5) General Electric (confirmed donor since 2011):**

20 General Electric (GE) is a heavy donor to both Republicans and Democrats, and its CEO Jeffrey
21 Immelt “plays the role of typical corporate donor who hedges his bets on both sides of the fence.”
22

23 However in 2008, GE gave the Obama campaign \$529,855, marking them as a top Obama
24 donor.

25 Meanwhile, in early 2009, Immelt was first appointed as a member of Obama’s Economic
26

1 Recovery Advisory Board (PERAB), which later morphed into the president’s jobs council, where
2 Immelt served as the Jobs Czar, until it closed down in February 2013.

3 Nevertheless, GE is a major player on the clean-energy scene as well as in this green energy
4 scheme, starting with the fact that they were also part of the DOE’s Electricity Advisory Committee
5 that had influence into the 2009-Recovery Act. In 2009, the New York Times recognized GE’s green
6 power, noting, “GE lobbied Congress to help expand the clean-energy subsidy programs, and it now
7 profits from every aspect of the boom in renewable-power plant construction, including hundreds of
8 millions in contracts to sell its turbines to wind plants built with public subsidies.”

9
10 I’ve been keeping track of GE’s “green tab” since 2012, which at that time exceeded \$3 billion
11 in direct (some indirect) taxpayer cash. This tally includes three large stimulus loans from Energy
12 Department’s junk bond portfolio that were doled out between late 2010 until September 2011.

13 Considering the treasure trove of Intel found in the “2012 Internal DOE Email Dump,” I
14 revisited GE in my December 2012 post. Long story short, in October 2010, the Caithness Shepherds
15 Flat wind project located in eastern Oregon was awarded a \$1.3 billion DOE stimulus loan — a \$2
16 billion project sponsored by GE, who also supplied the project with 338 wind-turbines. These internal
17 emails show that this transaction was approved with White House pressure. For example:

18
19 September 9, 2010 EMAIL: James McCrea (subject line: Shepherds Flat — Draft Responses to
20 OMB

21 Questions), “As you all know, the pressure to make decisions on this transaction are high so
22 speed of the essence.” Then later that day, McCrea writes (Email #4 from Appendix I) he says,
23 “Pressure is on real heavy on SF [Shepherds Flat] due to interest from VP.”
24

25 Shepherds Flat’s developers also received “a \$500 million federal grant, state tax credits

1 totaling \$18

2 million, accelerated depreciation on federal and state taxes worth \$200 million, and a premium
3 for its power from the state worth \$220 million.” At some point, the Shepherds Flat wind farm received
4 three separate tax credits totaling \$30 million from the state of Oregon.

5 But there’s more...

6 In September 2011, the poorly rated 1366 Technologies, sponsored in part by GE, received a
7 direct \$150 million stimulus loan from the DOE for its solar manufacturing plant.

8
9 GE is also part of the \$1.2 billion DOE stimulus loan for the Desert Sunlight project, which was
10 finalized in September 2011. This is part of the First Solar Swindle that has been mentioned a few
11 times in this post, and will be detailed later.

12 Federal Railroad Administration (FRA) loaned \$54.6 million to Kansas City Southern Railway
13 Company (KCSR) “to purchase thirty new General Electric ES44AC diesel-electric
14 locomotives” — a loan that raised red flags in the March 2012 House Oversight investigation.

15
16 Also, you’ll be “blown away” by the billions of “wind energy grants” that flew out of the
17 stimulus package back in February 2010, of which at that time, GE was contracted to at least 26% of
18 them as the

19 “Turbine Manufacturer.”

20 In late 2009, it was reported by Gigamon, “GE is one of the newer smart meter players, but the
21 conglomerate has been working with utility Oklahoma Gas & Electric on a 6,600 smart meter trial, and
22 has a contract with PHI, which received \$104.80 million for a smart meter deployment in Washington,
23 DC. GE also has a big contract with Florida Power and Light” that also the recipient of a \$200 million
24 stimulus grant.

1 Other than bagging direct green energy stimulus money, GE has also joined forces with others
2 that have benefited from Obama’s alternative-energy taxpayer funds. Two in particular — the
3 Advanced

4 Metering Partners, another John Doerr “venture” via Silver Spring Networks, as well as Energy
5 Technology Ventures formed in 2011 with NRG Energy and ConocoPhillips. And, I’m sure if were to
6 visit GE again, we’d find much more than \$3 billion in green energy funds.

7
8 **#6) Google (confirmed donor since 2012):**

9 Google, like Wall Street and Big Energy, plays the political game well: it’s all about access and
10 influence, starting with campaign contributions. Google’s \$814,540 contribution to then-Senator
11 Obama’s campaign made it the fifth largest donor in 2008, and in 2012 moved up to the number three
12 spot with a whopping \$805,119. Furthermore, Google’s CEO at the time, Eric Schmidt, served as an
13 informal advisor to President Obama. Schmidt, Google Executive Chairman, was also an Obama donor
14 in 2008, and since April 2009, is (was) a member of the president’s Science and Technology Advisory
15 Council (PCAST).
16

17 Another Google political connection is Dan Reicher, director of climate and energy initiatives at
18 Google, who was one of the founders of Cleantech and Green Business Leaders for Obama. There are
19 other interesting folks behind the Google scenes such as John Doerr and Al Gore — the dynamic
20 climate duo mentioned periodically in this post — who has served as a member of Google’s board of
21 directors since May 1999, with Gore as a (past) senior advisor.
22

23 And according to Michelle Malkin, “Google cofounder Sergey Brin, Chief Legal Officer and
24 Senior Vice President David Drummond, and Google Vice President and Chief Internet Evangelist Vint
25 Cerf are all vocal Obama supporters and top donors.” Meanwhile, Google co-founders Sergey Brin &

1 Larry Page, invested in Tesla Motors, while Google, in 2011, partnered with SolarCity (mentioned a
2 few times now) to create a \$280 million fund for residential solar projects — both BIG winners of
3 “green” taxpayer money.

4 Like many of these Big VC’s that won a significant amount of green money from the Obama
5 administration — Kleiner Perkins, Khosla Ventures, The Westly Group, VantagePoint Capital
6 Partners, Google Ventures, Foundation Capital, and others — their “cleantech investments” overlap,
7 and I briefly touched on Google in my January 2012 post about Doerr and Gore.

8
9 Later, I documented Google as energy client of McBee Strategic Consulting (in my September
10 2013

11 Green Corruption File), discovering and exposing the fact that Google Ventures — via their
12 “Energy Investments” and other “green deals” that I tracked down at that time — has ten verified
13 stimulus and other green energy money winners, which places their investment score at close to \$5
14 billion of taxpayer cash, which includes three DOE loans: BrightSource Energy (\$1.6 billion); GE’s
15 Caithness Shepherds Flat wind project (presented under GE for \$1.3 billion); and Tesla Motors that
16 won \$465

17 million ATVM loan. If you add in Silver Spring Networks’ customers that won \$1.3 billion in
18 smart-grid stimulus grants, which I divulged here a few times, that figure rises to \$6.3 billion and
19 counting.
20

21 **#7. PG&E (confirmed donor since 2011):**

22 This utility giant is a strong Obama and Democrat donor that happens to be all over this “green”
23 scam.
24

25 Not only did they have direct influence over the DOE loans, they are jam-packed with
26

1 Washington

2 “green cronies,” including Cathy Zoi, who is the “most controversial former PG&E employee
3 to hold an influential government.” Zoi, an Al Gore acolyte was a DOE Insider from 2009 until 2011,
4 and she is not only tied to PG&E but other stimulus winners.

5 Still, PG&E was another client of the top DC lobbyist, McBee Strategic Consulting, of which I
6 divulged in my September 2013 Green Corruption File. As reported by the Washington Free Beacon in

7 2012, “PG&E has become an aggressive buyer of power supplied by solar, wind, and other
8 renewable sources, in large part due to statutory requirements under California’s Renewable Portfolio
9 Standard, which mandated that 20 percent of the utility’s electricity come from renewable sources by
10 2010 — and 33 percent by 2020.”

11 The big win for this huge energy corporation is that they have an invested interest in seven
12 Energy Department stimulus loans worth \$7.6 billion. Moreover, with the exception of BrightSource
13 Energy’s \$1.6 project, of which we now know from an email Dated January 4, 2010, that Peter Darbee,
14 then CEO of PG&E, had himself spoken to President Obama about this deal, the rest of the loans were
15 finalized between June and September 2011. While the details into these taxpayer-funded projects can
16 be found in my April 2013 post, here’s an overview.

17 Agua Caliente Solar Power Project located in Yuma, Arizona, of which “PG&E will purchase
18 the project’s power and deliver it to customers in California.” Project by NRG Solar: \$967 million loan
19 guarantee

20 BrightSource Energy development located in Baker, CA, of which “electricity from the project
21 will be sold under long-term power purchase agreements with Pacific Gas & Electric and Southern
22 California Edison Company (SCE).” Project by NRG Energy, Inc. (BrightSource): \$1.6 billion loan

1 guarantee California Valley Solar Ranch of which the 250-megawatt is under construction in eastern
2 San Luis Obispo County, and “is generating clean, reliable solar power for transmission over PG&E’s
3 utility grid.” Project by NRG Solar and SunPower is still involved: \$1.237 billion loan guarantee

4 Desert Sunlight Project located in Riverside, CA, with the PPA (purchase power agreement)
5 listed as Southern California Edison and PG&E. This is a First Solar Project that is co-owned by
6 NextEra Energy Resources, GE Energy Financial Services, and Sumitomo Corporation of America:
7 partial

8 guarantee of \$1.46 billion

9
10 Genesis Solar Energy Project located in Riverside County, CA of which “power from the
11 project will be sold to Pacific Gas and Electric Company.” Project by NextEra Energy Resources, LLC:
12 partial guarantee of \$852 million loan

13 Mesquite Solar 1, LLC located in Maricopa County, AZ, of which Bloomberg News had
14 reported at the time the DOE loan was approved, “Sempra will sell electricity from the Mesquite Solar
15 1 plant to California’s largest utility, PG&E Corp., under a 20- year contract.” Project by Sempra
16 Mesquite: \$337

17 million loan guarantee

18
19 Mojave Solar located in San Bernardino County, CA, of which at the time of the DOE loan
20 approval (September 2011), “Abengoa signed a power-purchase agreement with PG&E to buy the
21 energy produced by the project for a period of 25 years.” Project by the Spanish firm Abengoa Solar,
22 Inc.: \$1.2 billion loan guarantee

23
24 Meanwhile, my May 2013 “Smart Grid, Dirty Devices” divulges PG&E’s partnership with
25 Silver Spring Networks on many fronts (PG&E is their top customer). Silver Springs is the the lucky

1 smart-grid technology company that I mentioned earlier, who has an array of White House connections
2 — Foundation Capital, Kleiner Perkins and Google — and as of January 2013 is linked to at least \$1.3
3 billion in smart-grid stimulus grants.

4 But there’s more...

5 PG&E won a significant amount of stimulus money for various projects, of which last year I
6 found at least seventeen that added up to over \$55 million of tax dollars.

7 PG&E also bagged at least four stimulus 1603 grants in 2012 and 2013 (for fuel cell,
8 hydropower and solar) totaling \$127.2 million.

9 SolarCity and SunRun, who both won large sums of stimulus money (duly noted in this post),
10 are in cahoots with P.G.&E. Corporation, the California utility holding company’s tax-equity fund to
11 finance residential solar installations.

12 CAP’S 2011 & 2012 DONORS: Clean-Energy Money Winners (referred to as “American
13 Progress Business Alliance Members”) Energy/Utilities

14 **#8) American Electric Power (AEP):**

15 While I found that AEP (between 2009 and 2010) was awarded at least four stimulus grants
16 totaling \$740 million, which was detailed in my March 2013 Green Corruption File, there is more to
17 share.

18 According to Schweizer’s bombshell book, “in the first quarter of 2009, Soros made an initial
19 purchase of more than 1.5 million shares in American Electric Power (AEP), a utility company that
20 invested heavily in an energy project called FutureGen.”

21 This was a project that had been abandoned by the Bush administration; however, on June 12,
22 2009, the Obama administration revived FutureGen: “a federal-industry partnership that would build an
23

1 advanced coal-burning power plant in Illinois to trap and store carbon dioxide emissions.” After
2 Obama took office, he not only restarted FutureGen with \$1 billion from the stimulus package, but he
3 moved the project to Meredosia.

4 The FutureGen Industrial Alliance “was formed to partner with the U.S. Department of Energy
5 on the FutureGen project.” At that time it was a consortium of major coal and utility companies such as
6 American Electric Power Co. Inc. and Peabody Energy Corp. Just thirteen days later, both AEP and
7 Southern Co withdrew from the U.S.-government backed FuturGen project.
8

9 Despite ongoing drama, cost overruns and delays, as well as potential air pollution and other
10 matters; back in February 2013, the FutureGen project was moving forward. While AEP was gone, we
11 did find Ameren Corp (another Soros timely investment) along the way. Currently the FutureGen
12 Industrial Alliance includes Alpha Natural Resources, Joy Global Inc, Peabody Energy, Xstrata Coal
13 Pty Limited, and another CAP corporate donor, Anglo American (up next).
14

15 **#9) Anglo American (confirmed donor since 2012, listed under energy/utility):**

16 As detailed above, Anglo American, “one of the world’s largest mining companies, is
17 headquartered in the UK and listed on the London and Johannesburg stock exchanges,” is now part of
18 the FutureGen project funded with green energy funds. This past January, the Energy Department
19 “gave the long-planned FutureGen clean-coal project one of the final OKs [and \$1 billion] it needs to
20 start building,” announced the Daily Journal.
21

22 According to most reports, “If all goes according to plan, the FutureGen project should be fully
23 operational by 2017 and continue commercial operations for at least 20 years.”
24

25 **#10) Constellation Energy:**

26 Again, this is one of those twelve alternative energy and utility companies that another Soros
27
28

1 had invested in shortly having helped craft the 2009 stimulus package that I had alluded to in the
2 beginning of this post (exposed in my March 2013 Green Corruption File). I found that Constellation,
3 an Exelon Company, which is labeled as “the president’s utility,” was another top 2008 Obama donor
4 and big winner of “green” funds. Constellation received a \$200 million stimulus grant, of which since
5 they are (were) the parent of Baltimore Gas and Electric Co, I’m assuming the \$200 million smart-grid
6 grant (awarded in October 2009) that went to BGE is the one Schweizer had mentioned in his book
7 (unless they got another \$200 million for something else).
8

9 Moreover, according to the Washington Free Beacon, “Constellation is one of the most prolific
10 providers of green energy to federally owned facilities, sporting contracts with the General Services
11 Administration (GSA) for the U.S. Capitol building, the Federal Reserve, the Smithsonian Institution,
12 the United Nations building in New York, and a host of federal buildings in several states.”

13 **#11) Dow Corning (Silicone Manufacturing/Solar):**

14 In January 2010, two manufacturing tax credits were awarded from the 48C stimulus-created
15 program for solar projects in Michigan. The tax credits included “\$141.9 million for Hemlock
16 Semiconductor’s (a joint venture of Dow Corning Corporation and others) expansion of its Michigan
17 polycrystalline silicon operations, and \$27.3 million for a monosilane plant Dow Corning is building.”
18

19 By 2012, Hemlock Semiconductor announced that they “were postponing three of the four
20 phases of their \$1.2 billion plant in Tennessee,” of which the state of Tennessee had committed \$245
21 million to Hemlock — some of which was stimulus funds. In 2013, the company began laying off
22 hundreds of workers at their Clarksville plant — even 100 were from their facility in Michigan (March
23 2013), and 50 more in May 2013. With the future of their plants unknown, “Dow Corning Corp.
24 announced
25

1 [November 2013] that it is acquiring a bigger stake in Hemlock Semiconductor.” So, here we
2 have two more failing stimulus-funded projects that we need to watch — and a CAP donor ta boot.

3 **#12) Duke Energy:**

4 As duly noted, Duke Energy — the nation’s largest electric power company — has been a client
5 of the Podesta Group since 2009. Jim Rogers, the chairman of Duke Energy, is another Obama donor,
6 who was a major player at the 2012 Democratic convention, as a contributor, creditor, host, and even a
7 speaker.

8
9 While Duke Energy is worthy of additional scrutiny, my January 2013, Big Wind Story
10 documented that in 2011, Duke Energy was the recipient of a \$22 million grant from the DOE’s
11 ARPA-E advanced

12 energy research program that was funded by the 2009 stimulus package. This was “to design,
13 build and install large-scale batteries to store wind energy at one of its wind farms in Texas.”

14 Then in May 2013 (previously dated June 2010), Notrees Windpower — a project of Duke
15 Energy

16 located in Texas — was handed a stimulus grant from the 1603 Program for \$103.6 million.
17 And after a quick glance, I found three 1603 stimulus grants for Duke Energy Carolinas, LLC that were
18 dished out in 2012 and 2013, totaling over \$62 million for “hydropower” and “solar electricity.” Duke
19 Energy was also privy to the “smart” money as well — in 2009, the DOE awarded Duke Energy a \$200
20 million stimulus smart-grid grant to support projects in the Midwest.
21

22 **#13) Enel Green Power North America:**

23
24 In July 2012, Enel Green Power, through its US subsidiary Enel Green Power North America
25 Inc., was awarded a grant for approximately \$99 million from the 2009-Recovery Act 1603 grant
26

1 program for the construction of the Caney River wind farm in Kansas. The Caney River and the Rocky
2 Ridge wind farm project includes J. P. Morgan as well as Wells Fargo Wind Holdings LLC and
3 Metropolitan Life Insurance Company.

4 **#14) First Solar (Solar Manufacturing and possibly a 2011 donor):**

5 As I've alluded to many times in this post and others, First Solar has considerable ties to the
6 Obama administration, starting with the fact that this solar firm was an early investment of Goldman
7 Sachs, the Wall Street giant mentioned above as a CAP corporate donor since 2012 (maybe sooner).
8

9 In the mix we find another First Solar investor — Generation Investment Management (GIM),
10 which as you know, is Al Gore's sustainability firm tied to many green energy deals. Along the way we
11 find a myriad of Obama billionaire cronies (donors and bundlers) that were also investors in First Solar:
12 Ted Turner, Paul Tudor Jones, Whitney Tilson, David Shaw, as well as the fact George Soros bought
13 First Solar stock sometime in late 2007, until about May 2011, as recorded at GuruFocus.com.

14 Prior to the \$3 billion in DOE stimulus loans, in 2010, First Solar snagged \$16.3 million "to
15 expand its manufacturing facility to produce fully completed thin-film solar modules," in Ohio, which
16 was part of the 2009-Recovery Act via the DOE / Treasury, Clean Energy Manufacturing Tax Credits
17 (48C).
18

19 According to reports, "The Ohio Department of Development also lent First Solar \$5 million,
20 and the state's Air Quality Development Authority gave the company an additional \$10 million loan"
21 — marking First Solar's Ohio facility as taxpayer-funded with over \$30 million.
22

23 But it gets better: First Solar, in 2011, "also scored \$547.7 million in loan guarantees [by the
24 controversial taxpayer funded Export-Import Bank (Ex-Im)] to subsidize the sale of solar panels to
25 solar farms abroad," as documented by Veronique de Rugy (senior research fellow at the Mercatus
26

1 Center) in her stunning assessment of DOE’s Loan Program. Ms. de Rugy goes on, “More troubling is
2 the fact that some of the Ex-Im money [\$192.9 million] went to a Canadian company named St. Clair
3 Solar, which is a wholly owned subsidiary of First Solar, meaning that the company received a loan to
4 buy solar panels from itself.”

5 This Ex-Im transaction even hits closer to CAP, starting with Carol Browner — CAP fellow,
6 former DOE insider, and Al Gore’s pal — who is sits on (and has for a while) the Advisory Committee
7 of the Export-Import Bank.
8

9 Still, the Daily Caller last month, unearthed another alarming connection: “[First Solar] is not
10 only listed as a CAP donor, but has also been listed as a client of the Albright Stonebridge Group
11 (ASG) in 2011 — a lobbying firm founded by former Clinton Secretary of State Madeleine Albright.
12 ASG is also listed as a CAP donor.”

13 And, it gets better, as reported The DC

14 Coincidentally, Export-Import Bank President Fred Hochberg has spoken annually at CAP
15 since 2011
16

17 — the same year First Solar got its loan. It is unknown whether the solar company was also a
18 CAP
19 donor at the time.

20 When Hochberg spoke at the progressive think tank in 2012, he mentioned that Alice Albright
21 was in attendance — Madeleine Albright’s daughter and the Ex-Im’s chief operating officer from 2009
22 to 2013. Hochberg spoke on June 25 and First Solar was awarded \$57.3 million in financing on July
23 18.
24

25 In 2011, Hochberg spoke on June 15 and, just over a week later on June 23, Ex-Im awarded
26

1 First Solar millions more in financing. That year the taxpayer-backed export bank awarded First Solar
2 nearly \$573

3 million to make their products more competitive abroad and boost their sales — most of that
4 financing came after Hochberg gave his speech. First Solar Vice President Frank de Rosa was likely
5 bundling donations for Obama’s reelection campaign around this time.

6 Nevertheless, the big money came from the Energy Department: First Solar, an Arizona-based
7 manufacturer of solar panels, in August and September 2011, won three 1705 DOE “junk rated”
8 stimulus loans totaling over \$3 billion. Marita Noon and I first covered the “First Solar
9 Swindler” in the summer of 2012, which began by documenting how seven solar companies received
10 fast-tracked approval by the Department of the Interior (DOI) to lease federal lands in a no-bid process:
11

12 Abengoa Solar, BrightSource Energy, First Solar, Nevada Geothermal Power, NextEra Energy
13 Resources, Ormat Nevada, and SolarReserve.

14 Since then, we’ve tracked First Solar’s woes, which began since the finalization of these three
15 large DOE loan guarantees — projects, by the way, that were sold to more Obama “energy” cronies
16 just after the taxpayer funds were approved. However, First Solar remained involved in all of them.

18 The Projects

19 Exelon (Antelope Valley Solar Ranch): \$646 million stimulus loan

20 In September 2011, the same day that the Antelope Valley Solar Ranch, located in California,
21 received a DOE loan guarantee for \$646 million, Exelon Corp. purchased it. First Solar, which
22 developed the project, is still actively involved. The AVSR1 project, by the way, is expected to create
23 350 onstructions jobs and 20 permanent jobs.

25 The Chicago-based Exelon Corp, a big Obama donor and labeled as “The President’s Utility,”

1 by itself is a huge piece of the Green Corruption scandal, which I have alluded to in the past and a
2 another piece of the scandal in the works.

3 NextEra Energy Resources, LLC (Desert Sunlight): \$1.46 billion stimulus loan

4 The California Desert Sunlight, in September 2011 — again the same day that this project
5 received \$1.46 billion offer for a partial loan guarantee from the DOE — was sold to NextEra Energy

6 Resources, LLC, the competitive energy subsidiary of NextEra Energy, Inc. and GE Energy
7 Financial Services. Yet, the September announcement also stated, “First Solar will continue to build
8 and subsequently operate and maintain the project under separate agreements.” Both CEO’s Jeffrey
9 Immler and Lewis Hay were featured in my “Green Five: Spreading the Wealth to Obama’s Ultra-Rich
10 Jobs Council Members” series.
11

12 According to the DOE, Desert Sunlight, which is expected to create 550 construction jobs and
13 15 permanent jobs for the plant’s operation, “will deploy commercially available First Solar Series 3
14 modules and is projected to achieve commercial operation by February 28, 2015.”
15

16 NRG Solar, LLC (Agua Caliente): \$967 million stimulus loan

17 In August 2011, as the \$967 million DOE loan guarantee for the Agua Caliente, located in
18 Arizona, was announced, it was purchased from First Solar by NRG Solar, LLC, a subsidiary of NRG
19 Energy. At that time it was noted that the First Solar will be providing the solar panels for this project,
20 and that the plant, when completed, would supply power to PG&E.
21

22 According to the DOE, the Agua Caliente project — considered another jobs creator with an
23 expected 400 construction jobs and 10 permanent jobs — “currently generates enough energy to power
24 49,600 households annually.”

25 Keep in mind that documented much earlier was Steve Spinner — the two-time Obama bundler
26

1 DOE

2 advisor (April 2009 to September 2010) turned CAP fellow (September 2010 to October 2011)
3 — and his part in the First Solar deal making, which included advocacy for the at least the Antelope
4 Valley project. Nevertheless, there are additional CAP players here, starting with what The Nation
5 revealed in May 2013:

6 José Villarreal — a consultant at the power-house law and lobbying firm Akin Gump, who
7 ‘provides strategic counseling on a range of legal and policy issues’ for corporations — was on First
8 Solar’s board until April 2012 while also sitting on the board of CAP, where he remains a member,
9 according to the group’s latest tax filing.

11 **#15) First Wind**

12 In my January 2013 Big Wind Story — also a client of the top DC lobbyists McBee Strategic
13 Consulting — I exposed a “twister of sweetheart deals” found in the Department of Energy’s junk bond
14 portfolio, which included four risky wind projects. One of those was Kahuku Wind Power, LLC, a
15 project of First Wind in Kahuku Oahu, HI, which in July 2010, was granted a \$117 million DOE
16 stimulus loan, estimated to create a whopping 200 jobs. And then on February 3, 2012 this same
17 project received a 1603 grant for over \$35 million [docket #2594 to \$35,148,839].

18 Sadly, in August 2012 a fire that destroyed First Wind’s battery storage facility (built by
19 Xtreme Power) and sent toxic fumes into the air, which left ratepayers in the dark over costs and safety.
20 And, it was reported on January 23, 2014 that “Xtreme Power ran out of cash and filed for
21 bankruptcy,” — NOTE: Xtreme Power built the energy storage system for Duke Energy’s Notrees
22 wind energy farm in Texas, another winner of stimulus funds, listed above.
23

24 The First Wind plan was to secure taxpayer money and then go public. Now they achieved their
25

1 first objective with the help of U.S. taxpayers, because and as of July 2012, First Wind’s projects have
2 also received over \$452 million in grants through the stimulus’ 1603 Program.

- 3 • First Wind’s Stetson Wind Farm in Maine — \$40,441,471
- 4 • Cohocton Wind Farm in New York, \$52,352,334
- 5 • Dutch Hill Wind Farm In New York, \$22,296,494
- 6 • Milford Wind Corridor Phase I In Utah; \$120,147,809
- 7 • Milford Wind Corridor Phase II In Utah, \$80,436,803
- 8 • Rollins Wind Farm In Maine; \$53,246,347
- 9 • Sheffield Wind Farm In Vermont, \$35,914,864
- 10 • Kahuku Wind Farm In Hawaii, \$35,148,839
- 11 • Steel Winds II Wind Farm In New York, \$12,778,75

12 However, in November 2010, Bloomberg announced, “First Wind Holdings Inc., the operator
13 of wind-energy projects backed by D.E. Shaw & Co. and Madison Dearborn Partners LLC, said it
14 withdrew its initial public offering because of unfavorable market conditions” that’s code for “weak
15 demand.”
16

17 Speaking of IPO’s...

18 Within the House Oversight leaked emails that were unleashed late October 2012, more
19 specifically the 350+ page Appendix II (“2012 Internal DOE Email Dump”), we find that just months
20 prior to the final approval of the Kahuka loan there was intense interaction within the DOE regarding
21 this transaction...
22

23 “Someone is pressing Jonathan [Jonathan Silver is the former Executive Director of the Loan
24 Program Office] who is now pressing hard on the everyone as the sponsor has an IPO in the works.”
25

1 This and more can be found in my Big Wind Story, including a the fact the first-rate, high-
2 powered political ties to First Wind are vast, starting with D.E. Shaw & Co, a New York-based
3 investment firm that is a backer of First Wind Holdings Inc. (also an investor in First Solar). This was
4 noted when I profiled Larry Summers from CAP — adding that, according to Peter Schweizer, “Larry
5 Summers was part owner of First Wind.”

6 The founder of the hedge fund DE Shaw & Co., David Shaw, is a two-time Obama bundler,
7 who employed Larry Summers before heading to the Obama White House, as the top economic
8 advisor. It turns out that in 2011, according to BusinessInsider.com, Shaw, a computer scientist and
9 computational
10

11 biochemist, was “appointed by Obama to serve on the President’s Council of Advisors on
12 Science and Technology.”

13 As revealed by Peter Schweizer, “another 42 percent of First Wind is owned by Madison
14 Dearborn Partners, an investment firm with close ties [and friend of] to then-White House Chief of
15 Staff Rahm Emanuel. The founder of the firm, David Canning, had been a bundler for George W.
16 Bush. But he switched sides in 2008 and gave heavily to Obama. Madison Dearborn gave more to
17 Emanuel’s
18

19 congressional campaigns than did any other business.”

20 While the GOP found that “Julia Bovey, First Wind’s Director of External Affairs, was
21 formerly Director of External Affairs for Obama’s Federal Energy Regulatory Commission (June 2009
22 to June 2010),” there is much bigger fish here. All government backed green comes with a slew of
23 lobbyists, and First Wind is no different — enter in Larry Rasky’s Lobbying Firm with ties to the top.
24

25 Larry Rasky, “a longtime confidant and campaign strategist” of Vice President Joe Biden, was
26

1 also a 2012 Obama bundler, and since Obama took office, “Rasky has visited the White House at least

2 21

3 Times,” half of which were during the course of the DOE loan review process (Data.gov,
4 Accessed 7/18/12). Moreover, we know that in 2009, about the time the 2009-Recovery Act passed,
5 First Wind retained lobbyists Rasky Baerlein Strategic Communications as well as Brownstein, Hyatt
6 et al, who is primarily a Democrat donor, with some Republicans in the mix — and as of 2012,
7 maintains the work of Rasky. .

8
9 **#16) General Motors (donor in 2011)**

10 As I divulged at the beginning of this post, General Motors (GM) — a CAP donor in 2011 —
11 was a client of the Podesta Group from 2010 until 2012. Even after the taxpayers bailed out General
12 Motors in 2009 (over \$80 billion — \$17.5 billion under Bush and \$63.4 billion from Obama), of which
13 we lost at least \$14 billion, green energy taxpayer money continues to subsidize the failed auto maker.
14 This time, though, was for GM’s hybrid electric vehicle the Chevy Volt — a car that’s not doing very
15 well.
16

17 What I’ve tracked so far is that starting in 2009 until recently, GM has bagged hundreds of
18 millions of stimulus dollars (\$471.6 million to be exact) to support the Chevy Volt as well as green car
19 components, of which I’ll share the details when I dissect the CAP corporate donors.

20 According to the January 25, 2012 House Oversight Report...

21 *The American Recovery and Reinvestment Act of 2009 (ARRA) appropriated \$2.4 billion for*
22 *domestic production of batteries and components for electric cars. Of this, \$1.5 billion in grants were*
23 *directed toward manufacturing the batteries, while the remaining \$900 million went to building new*
24 *facilities or improving existing facilities to produce electric drive components. This included \$151.4*
25

26
27 935
28

1 million to Michigan-based Compact Power, Inc., for production of lithium-ion polymer battery cells for
2 the GM Volt; \$105.9 million directly to GM for production of high-volume battery packs for the Volt;
3 \$105 million to GM to construct facilities for electric drive systems; and \$89.3 million to Delphi
4 Automotive Systems, a former division of GM, to expand manufacturing facilities for electric drive
5 power components.

6 Also, “buyers of the Volt will receive a federal tax credit of up to \$7,500 of per vehicle” as well
7 as state tax credits.

8 Then, lo and behold, on December 12, 2013, Think Progress — CAP’s propaganda machine —
9 announced, “Ford Motor Company and General Motors Company will receive a combined \$50
10 million to support their respective manufacturing facilities that produce electric cars.” This was from
11 the stimulus-created 48C Program, of which GM’s share was \$20 million for “its Detroit-Hamtramck
12

13 Assembly Plant where the company manufactures Extended Range Electric Vehicles—
14 Chevrolet Volts and the Cadillac ELR electric luxury coupe — along with internal combustion cars.”
15

16 **#17) Xcel Energy:**

17 What’s interesting is that Xcel Energy was in the loop with Cogentrix Energy, a subsidiary of
18 Goldman Sachs, which in September 2011, snagged a \$90.6 million DOE stimulus loan for the
19 Alamosa Solar Generating Project. Then on July 16, 2012, Cogentrix bagged a \$34.6 million stimulus
20 grant (free taxpayer money) from the 1603 Grant Program — I’m assuming this is for the same project.

21 What’s interesting (see graph with Goldman Sachs stimulus loans) is that the partners involved
22 in this project included utility Xcel Energy (XEL), which signed a 20-year contract to buy enough CPV
23 power to supply electricity to 6,500 homes; and Amonix, the California-based company that will
24 supply the CPV panels — Amonix (complete with Obama buddies) was subsidized with \$29.6 million
25

1 of taxpayer money before it went bankrupt in July 18, 2012. What a scam...

2 Also, according to MinnPost.com, in 2010, Minnesota’s Senator Al Franken visited Mulroy’s
3 Body Shop “to highlight the use of federal stimulus funds in creating jobs and boosting the alternative
4 energy economy.” It turns out that the owner had 174 solar panels installed on the roof of his Nicollet
5 Avenue body shop in South Minneapolis. And that “Minneapolis-based Solarflow Energy installed the
6 system and is leasing the equipment to Mulroy’s under contract with Xcel Energy. The lease agreement
7 also includes installation, maintenance and support. The federal stimulus funds deliver a grant-in-lieu
8 of a 30 percent tax credit on the value of the installation to Solarflow.” Solarflow start-up was partially
9 funded through an Xcel Energy Renewable Development Fund grant of \$1.5 million.

10
11 While Xcel was omitted from the \$3.4 billion in stimulus smart-grid grants in 2009, for their
12 highly touted \$100 million “Smart Grid City” project in Boulder, Colorado did snag about \$24.2
13 million in federal economic stimulus money for “Smart Grid” updates to the state’s power grid and
14 customer meters. Still, Xcel Energy is slapping ratepayers with the bill: “In 2010, Xcel found itself
15 asking Colorado regulators for permission to recoup \$44.5 million in rate increases, but the Colorado
16 Public Utilities Commission only gave it \$27.9 million,” as documented by GreenTechMedia in 2012.
17 And it seems that while they were seeking another \$16.6 million in 2012 for their Smart Grid City
18 mess, “The Colorado Public Utility Commission (recently) denied Xcel’s request to recover a big
19 chunk of that \$45 million,” reported Smart Grid News.

KEY ISSUES

We have, hereby, provided proof of federal anti-trust law and RICO racketeering law felony violations by public officials, and their financiers, who now owe us payment for our damages. If you want more proof, we have much, much more.

We will continue these disclosures, using a vast set of resources, until we get paid! We will use the most extreme and most novel, ***100% legal*** tools of forensics, news distribution, social media, citizen arrest, public events and criminal referral filings. Every member of the public, globally, is invited to help.

Lawmakers have refused to address these issues because the majority of their profits come from these crimes. That fact is a reflection on the pathetic nature of domestic public policy.

If regulators and law enforcement agencies refuse to arrest these people then what hope does the public have?

If the ‘fines’ for engaging in these crimes continue to be so minimal that no official, or corporation, cares about those fines, then what hope does the public have?

Profound policy changes must be produced! Ownership of ANY stock by ANY politician, or their family, **MUST BE MADE ILLEGAL!**

The Silicon Valley Cartel owns The White House, The EPA and the Department of Energy. That is unfair and exclusionary. It is a violation of the U.S. Constitution.

The internet has made most citizens aware that politicians are paid \$145K per year. 80% of those politicians mysteriously have tens of millions of dollars show up in their personal accounts after taking office. The source of those monies is herein revealed to be bribes paid through covert PACS and

1 illicit stock market manipulation profits via algorithms predominantly operated by *The Silicon Valley*
2 *Cartel*.

3 “A felony organized crime operation” only begins to describe this scam.

4 Why are there no arrests and which top-level officials are preventing such arrests?

9 **ADVANCED TECHNOLOGY VEHICLE MANUFACTURING LOAN**
10 **AND LOAN GUARANTEE SLUSH-FUND CORRUPTION**

11 **The Advanced Technology Vehicles Manufacturing (ATVM) Loan Program** is a \$25+
12 billion direct public finance program funded by [Congress in fall 2008](#) under the guise of "*providing*
13 *debt capital to the [U.S. automotive industry](#) for the purpose of funding projects that help vehicles*
14 *manufactured in the U.S. meet higher mileage requirements and [lessen U.S. dependence on foreign oil.](#)*
15 " The PR department for the U.S. Department of Energy spends nearly a million dollars per year
16 seeking to manipulate news and social media to try to pitch their message that the program was a
17 "success". In fact, it has been, and remains today, ***one of the most criminally corrupt failures in***
18 ***American history..*** It was only a "success" as one of the biggest political slush-funds ever created!
19

20 **The Facts:**

21 Victims had global character assassination and propaganda-media defamation reprisal attacks
22 operated against them by White House staff and their political financiers: Elon Musk, Larry Page,
23 Steve Jurvetson, Eric Schmidt, Steve Westly, John Doerr, et al. Jury and FBI-compliant evidence
24 proves this as fact.
25

26 Victims were attacked because 1.) they helped law enforcement investigate the attackers, 2.)
27

1 They competed with the attackers that attacker's products and the Silicon Valley Cartel attackers chose
2 to "cheat rather than compete". Jury and FBI-compliant evidence proves this as fact.

3 The attackers spent over \$30M, part of that using taxpayer resources, attacking the victims as
4 proven in the financial transaction records from Google, Gawker, Gizmodo, Jalopnik, Media Matters,
5 Fusion GPS, et al. Jury and FBI-compliant evidence proves this as fact.

6 Victims had been previously funded by the U.S. Government and had a multi-decade
7 relationship with the highest offices of the Government, which provided them with deep knowledge of
8 the crimes that were committed. Jury and FBI-compliant evidence proves this as fact.

9 The U.S. Department of Energy is used as a political slush fund to pay back campaign finance
10 millionaires while blockading the competitors of those millionaires from reaching the market or
11 receiving funding. Jury and FBI-compliant evidence proves this as fact.

12 The only entities who participated in the global character assassination and propaganda-media
13 defamation reprisal attacks were those entities owned and controlled by the attackers. Jury and FBI-
14 compliant evidence proves this as fact.

15 Through corrupt rare-earth mining scams and control of federal contracts and grants, attackers
16 had planned to acquire at least one trillion dollars in unjust gains and illegal profiteering. Jury and FBI-
17 compliant evidence proves this as fact.

18 This amount of money they sought, and the "Mafia-like" structure they adopted, caused the
19 suspects to engage in the most extreme crimes, including murder and "Deep State" coup attempts. Jury
20 and FBI-compliant evidence proves this as fact.

21 A significant number of person's who were in conflict with the attackers have died in suspicious
22 manners. Jury and FBI-compliant evidence proves this as fact.

1 The suspects have hired the largest numbers of lobbyists and corporate manipulation lawyers in
2 U.S. history in order to manipulate political decisions. Jury and FBI-compliant evidence proves this as
3 fact.

4 The suspects have spent more money on political bribes than any group of men has spent in the
5 last century. Jury and FBI-compliant evidence proves this as fact.

6 The suspects placed top federal law enforcement and agency bosses (ie: Michelle Lee, Steven
7 Chu, Kamala Harris, James Comey, et al) from their own Cartel, into top government positions, with
8 orders to run cover and protection schemes for them. Jury and FBI-compliant evidence proves this as
9 fact.
10

11 California State officials including the Governor, Controller, The Senators, Secretary of State
12 and regional officials participated in these crimes and pocketed the initial profits from these crimes in
13 covert investment banking. Jury and FBI-compliant evidence proves this as fact.

14 Tesla Motors, Google, Netflix, Facebook, Linkedin, Amazon and other tech Cartel members
15 operate with a common goal of psychological mass ideology manipulation and monopolistic
16 profiteering based on government sponsored anti-trust violations and server control exclusivity. Jury
17 and FBI-compliant evidence proves this as fact.
18

19 The attempted cover-ups of these crimes continues to this day. Jury and FBI-compliant
20 evidence proves this as fact.

21 **A case study in pay-to-play cronyism**

22 By Dan Epstein (Counsel to The White House)

23 News flash: Government subsidies and special-interest favors go hand in hand.

24 *The latest example comes from a federal green-energy loan program. Last month, the DC*

1 District Court ruled that Cause of Action, where I am executive director, can proceed with a lawsuit
2 against the Department of Energy. We're suing the federal government for the blatant political
3 favoritism in its \$25 billion "Advanced Technology Vehicle Manufacturing Loan Program."

4 In principle, this taxpayer-funded program was supposed to support the manufacture of energy-
5 efficient cars. In practice, it rewarded a select few well-connected companies.

6 Since the program was created in 2008, numerous businesses have applied for its taxpayer-
7 backed financial support. Yet only a small number were approved. Among the lucky few were two
8 electric car manufacturers: Tesla and Fisker.

9 Both companies' political connections run deep, especially Tesla's. The company's founder,
10 Elon Musk, was a max donor for President Obama. One of its board members, Steven Westly, was
11 appointed to a Department of Energy advisory board. And another Obama bundler, Tesla investor and
12 adviser Steven Spinner, secured employment in the department's Loan Program Office—the very office
13 that gave the company a taxpayer-backed loan.
14

15 Fisker also has friends in high places. The company, which has since gone bankrupt, was
16 backed by a San Francisco venture capital firm whose senior partners donated millions to the 2008
17 Obama campaign and other Democrat causes. One partner, John Doerr, parlayed his support into a
18 seat on the President's Council of Jobs and Competitiveness.
19

20 Such connections can allow a company to exert political pressure to enrich itself.
21 Unsurprisingly, Department of Energy emails show that such pressure was rampant in its loan
22 programs.
23

24 There's no shortage of examples. The department's leaders—including then-Secretary of
25 Energy Steven Chu—repeatedly promised to deliver results to politicians like Rep. Steny Hoyer (D-
26

1 *Md.) and Sen. Harry Reid (D-Nev.). One emails reads, “DOE has made a political commitment” to*
2 *approve a company’s loan. Another says the “pressure is on rea lheavy” from none other than Vice*
3 *President Joe Biden. And still another shows an employee asking, “what’s another billion anyhow?”*

4 Unsurprisingly, the Obama administration gave Tesla and Fisker preferential treatment, and
5 then some.

6 *The Department of Energy revised its review process in order finish the companies’*
7 *applications faster. The government gave them extraordinary access to its staff and facilities—even to*
8 *the point of having government employees personally walk them through the loan application and*
9 *approval process. The department ignored its own lending rules in order to approve the companies’*
10 *loans. And it renegotiated the terms of some loans after the companies could not keep their original*
11 *commitments or were experiencing financial difficulties. Tellingly, Fisker has since gone out of*
12 *business, despite receiving over a billion dollars in loans through this federal program.*

13 Now contrast this preferential treatment with what happened to EV CAR and Limnia, neither of
14 which have the same political connections. (My organization is suing the Department of Energy on
15 their behalf). The two companies partnered to manufacture an energy-efficient sport utility vehicle that
16 would have competed with Tesla and Fisker’s cars. They applied for loans in 2008 and 2009 under the
17 same loan program.

18 The department refused them both—and it used bogus reasons to do so.

19 *For starters, the department made claims that were laughably false. To take one example: It*
20 *rejected XPV’s application because its vehicle was powered by hydrogen. It was an electric SUV. It*
21 *also raised objections that it didn’t raise with other companies whose applications were approved. For*
22 *instance: The bureaucracy criticized the proposed all-electric vehicle for not using a specific type of*
23
24
25

1 gasoline. Yet Tesla and Fisker received the loans despite producing similar all-electric cars.

2 In light of these obvious problems and hypocrisy, both companies presented the Department of
3 Energy with detailed rebuttals. Yet the government failed to respond. To this day, both XPV and Limnia
4 are awaiting a satisfactory reply. In the meantime, XPV has gone out of business, unable to compete
5 against its politically connected—and subsidized—rivals.

6 This casts the Department of Energy’s loan program in a new light. It was sold to the American
7 public as a means of promoting energy-efficient vehicles. Instead, it was used to benefit a select few
8 well-connected companies. It was a blatant crony handout, paid for by the U.S. taxpayer.

9 Sadly, similar examples are widespread in Washington. That’s no surprise considering the feds
10 spend roughly \$100 billion a year in taxpayer-funded handouts to businesses. This breeds the sort of
11 government-business collusion Americans think is rampant in Washington. In fact, over two-thirds of
12 likely voters think the federal government helps businesses that hire the most lobbyists, shake the right
13 hands, and pad the right pockets. They’re right.

14 This points to a simple conclusion: Politicians and bureaucrats shouldn’t use the public’s money
15 to pad private companies’ bottom lines. As the Department of Energy’s green-vehicle loan program
16 shows, the capacity for corruption is immense—and inevitable.

1
2 **Investigator’s Statement:**
3

4 Note: We have absolute and indisputable intelligence agency, FBI-verifiable and forensic expert
5 proof of all of these assertions.
6

7 The program was used by the Obama Administration to provide crony payola kick-backs to
8 financiers and friends of the Obama Administration and to attack the competitors of the Silicon Valley
9 financiers of the Obama Administration.

10 As of 2019, the U.S. Department of Energy claims that they "overhauled" and "re-did" the
11 ATVM program and it's sister program: the Loan Guarantee Program. In fact, that is false.
12

13 When you peel back the onion-skin of corruption around the covert stock market and
14 investment bank holdings of Eric Schmidt, Dianne Feinstein, Nancy Pelosi, Elon Musk, etc.; you find
15 that they are invested in something called "rare-earth mining". Rare earth mines are generally in third
16 world nations and use child slave labor. These toxic corrupt operations are responsible for more
17 murders, beatings, rapes and genocides (over control of these "blood minerals") than anything on Earth.
18 These minerals are used in the electric cars, cell phones and solar panels that Silicon Valley has
19 attempted to control. So, you see, it isn't about "*saving the environment*"; it is about greed, bribes and
20 corruption on an epic scale.
21

22 The program continues today as a political slush-fund and it is as corrupt as ever. It has NOT
23 been "cleaned-up"! It is STILL a cesspool of corruption! Obama hold-overs and corrupt insiders, with
24 personal conflict-of-interest stock and revolving door career deals, still control the funds and steer the
25 monies exclusively to their friends.
26

1 The program has not funded any company who is not a campaign-finance friend of the Obama
2 Administration. The DOE program attacked, lied to, stalled, delayed, gate-keeper blocked and harmed
3 any Applicants who competed with Tesla, Fisker and the Obama financiers. Through the Silicon Valley
4 control of the *facade group: "The National Venture Capital Association"*, DOE ensured that NO car
5 company or solar company in America could get funded, by any private means, without Silicon Valley
6 oligarch approval. The DOE is a corrupt organization operated by corrupt insiders for corrupt purposes!

7
8 DOE's *two main manipulation tricks* are: 1.) **STONE-WALLING** - Where DOE staff throw
9 outsider Applicant's filings in a box and forget about them for many years in a Lois-Lerner'd review
10 process that takes any commercial bank only 2 weeks to complete. DOE spends years doing hyperbolic
11 nothings in order to delay campaign financiers competitors, and 2.) **INTERPRETIVE LYING** -
12 Where DOE staff make up things that Applicant's never said and twist the Applicant's words into
13 anything BUT what the Applicant's intended, in order to manipulate non-favored Applicant's into
14 negative interpretations. DOE staff never even called outsider Applicant's for clarity discussions of any
15 key data. They did not want to hear the truth, they couldn't handle the truth! They only wanted their
16 crony's to win the funding!

17
18 Every applicant who applied, who was not a crony insider, hard-wired, Obama bagman was
19 **DEFRAUDED, LIED TO, STONE-WALLED** and used as a smoke-screen to hide the true nature of
20 the crony payola scheme operated by Secretary of Energy bosses Chu, Moniz and Perry. They are owed
21 money to pay for their damages from tort-based interference in their businesses and other fraud-related
22 DOE-operated causes-of-action.

23
24 Silicon Valley oligarchs hired "Lobbyists" (who are political operatives who offer bribes to
25 politicians without ever using the word "bribe") to take-over the program. Silicon Valley insider

McKinsey staffed the DOE department while working for the Silicon Valley oligarchs. In a typical corruption example: Steve Spinner worked at DOE handing out money to Solyndra which his wife Alison Spinner worked at as Solyndra's lawyer, while the DNC mailer referred to each of them as the "top West Coast fund-raisers for the DNC".

Originally Obama's "car Czar" Steven Rattner (indicted for stock market securities fraud), working from the West Wing of the White House, had offered a portion of the money to Detroit Auto Unions if the Detroit Unions ordered all of their members to vote for Obama in exchange for bail-outs. Obama insiders David Plouffe (indicted for payoffs to Rahm Emanuel), David Axelrod, and Robert Gibbs extended the deal to the Silicon Valley oligarchs in exchange for global search engine manipulation favoring Obama

A "Silicon Valley Mafia" (AKA - "The PayPal Mafia") exists and is populated by the Bay Area technology oligarchs, their operatives and the West Coast Senators, all of whom profit illicitly off of a combined monopoly and stock market cartel that they control. FBI Director James Comey was fired for protecting his friends in this cartel.

How One Group of Victims Fought Back

1
2
3 Applicants had been awarded federal commendations, state and federal innovation grants,
4 government R&D contracts,
5

6 These citizens instigated Congressional corruption investigations and hearings against the most
7 senior members of the State and Federal government. These actions resulted in the termination of very
8 famous public officials and their crony criminal embezzlement scams and almost resulted in the
9 President being forced to leave office, mid-term, based on revelations of a massive crony kick-back
10 scheme which began to be exposed after the FBI raid of Solyndra. The director of the FBI was fired for
11 assisting in cover-ups related to this matter.
12

13 This natural-born American domestic group of engineers was attacked with a \$30 million
14 dollar+ retribution/political reprisal program contracted by White House political operatives, and their
15 appointees, who were also the business competitors of the engineers. The attackers used Fusion GPS-
16 type character assassination smear campaigns (operated by their cronies at Google, Gawker, Gizmodo,
17 Jalopnik and Facebook), NVCA black-listing, Solyndra-laundering, stone-walling, Lois Lerner-class
18 agency manipulation and search engine rigging. In-Q-Tel turns out to be the only federally financed
19 "charity" whose staff are also employed by each of the suspects in this case and who financed the
20 suspects in this case. It was revealed that White House executives ordered government agencies to
21 harm members of the public and to reprisal with-hold public resources from the public. This was a
22 violation of tort, RICO and anti-trust laws.
23

24 The victims fought back.

25 With the encouragement of members of Congress they used 100% legal tools to interdict the
26

1 corruption.

2 Essentially; they helped the United States government sue itself!

3 First, with a unique new kind of pioneering federal lawsuit, victims established — FOR THE
4 FIRST TIME IN LEGAL HISTORY — that political cronyism is a valid basis for a claim of arbitrary-
5 and-capricious agency action under the Administrative Procedure Act. See: Federal Case One, (D.D.C.
6 2015).

7 Second, they prevailed in the United States Court of Appeals for the District of Columbia
8 Circuit on their appeal of the district court’s ruling that an agency may escape judicial review of its
9 action by requesting a voluntary remand but refusing to reconsider its initial denial of an application.
10 See: Case Federal Two, (D.C. Cir. 2017). The Washington DC Circuit agreed with the victims that an
11 agency may only seek a remand if it promises to reconsider its initial decision. It is because of that
12 victory that the government, under court order is now re-doing the victims applications and GAO, FBI,
13 IG's and Congressional oversight offices are watching to assure effective ethics and transparency.
14

15 Third, these cases placed, on permanent public record, one of the most detailed documentation
16 sets, ever assembled, about how modern political "Dark Money" conduits operate. The legal team hired
17 ex-FBI, CIA and SEC experts to track down covert bank accounts, revolving door bribes, insider stock
18 trades and other payola between the victim's competitors and public officials. This documentation now
19 prevents the use of those kinds of criminal efforts, in the future, by exposing their tactics to the public.
20

21 Fourth, the victim's team engaged in the interdiction and termination of corrupt agency
22 executives, contractors and their financiers. This included some of the most well-known names in
23 Washington, DC, at the time. Many of them were, and are still being, investigated and watched by the
24 FBI, GAO, SEC and Congress.
25

1 Fifth, and most important, the effort put every corrupt political scheme on notice that they
2 WILL be found out and interdicted!

3 The bottom line?

4 The victims group WON on every single aspect of their public-interest goals but still have yet to
5 be recompensed for their damages!

6 Now the "bad guys" have less options to engage in the corruption of our Democracy!
7

8
9 **Charges against the Department of Energy supported by the**
10 **factual evidence:**
11

12
13 - DOE officials told Applicant's they had to pay tens of thousands of dollars in order to apply
14 for the LGP monies but with-held responses until after the dead-line had passed in order to cut non-
15 Obama financiers out of the running.

16 - Google provided the staffing for the agencies involved, the media manipulation for the
17 politicians involved, and was the beneficiary for some of the funds in a 4-way conflict of interest in
18 which Google staffed the largest contingent of Obama White House staff.
19

20 - Steven Chu handed massive amounts of DOE cash to Russian billionaires from Ener1,
21 Severstal and other Russian connections even though they were foreign billionaires who had no need of
22 U.S. taxpayer subsidies. If one wants to look at dirty Russian collusion, they need look no further than
23 Steven Chu, the architect of the failed Iran Nuclear deal and corrupt Uranium One deal. Steven Chu
24 and Rahm Emanuel ordered DOE's Sandia Livermore Labs and Argonne Labs (who they were both
25 connected to) to manipulate Applicant data in order to only favor campaign financiers companies.
26

1 - DOE abuses of process defrauded non-insider Applicants out of billions of dollars of their
2 savings and investor monies yet DOE never offered those that it harmed and recompense.

3 - DOE officials owned stock market stock and revolving door job promises in the very
4 companies that they were supposed to be conducting "due diligence" on.

5 - Tesla Motors and SpaceX were staged as campaign finance dark money conduits to transfer
6 taxpayer cash from government treasuries to private parties and then into campaign funds without
7 transparent public disclosure.

8
9 - The Obama Administration promised an exclusive on Afghanistan mining deals to Frank
10 Guistra and the Silicon Valley oligarchs for lithium, indium, cobalt and rare-earth metals mining after
11 USAID pitched (
12 [http://2.bp.blogspot.com/_VyTCyizqrHs/TBaffwKixYI/AAAAAAAAAH74/Wee8LTOfo3k/s1600/](http://2.bp.blogspot.com/_VyTCyizqrHs/TBaffwKixYI/AAAAAAAAAH74/Wee8LTOfo3k/s1600/afghanminerals.jpg)
13 [afghanminerals.jpg](http://2.bp.blogspot.com/_VyTCyizqrHs/TBaffwKixYI/AAAAAAAAAH74/Wee8LTOfo3k/s1600/afghanminerals.jpg)) manipulated reports from McKinsey Consulting saying that "*Afghanistan was*
14 *the Saudi Arabia of lithium and had trillions of dollars of lithium*" to dig up. It turned out to be a lie to
15 get oligarchs to support Obama's Afghan invasion. (<http://pubs.usgs.gov/fs/2007/3063/pdf-page.jpg>)
16 DOE helped sell this lie because the Russians had already scoured Afghanistan and found it to be fairly
17 worthless as a mining potential. Elon Musk bought into this for his battery monopoly. This is why
18 Steven Chu gave so much money to Russians at Ener1 and Severstal. DOE staff were fully aware of
19 this. (<http://www.mining.com/1-trillion-motherlode-of-lithium-and-gold-discovered-in-afghanistan/>)
20

21 - Google, a Tesla investor and bromance buddy with Elon Musk, hired more lobbyists for DOE
22 influencing than anybody had ever hired before in U.S. history. Google hides all negative news stories
23 about Musk and Tesla and only shows fake news hype about Musk, Tesla and SpaceX because Larry
24 Page and Elon Musk share an apartment and financial programs.
25

1 - The DOE ATVM and LGP programs are based on arbitrary metrics which are not even
2 followed by DOE evaluation staff. There is a secret black-list in operation to keep companies who are
3 competitors to Obama's financiers from ever getting funded. Even though many Applicant's beat every
4 "winner" in Obama's DOE handouts, they were excluded, denied and discriminated against simply for
5 competing with Obama's Silicon Valley oligarchs.

6 - Steven Chu, after getting thrown out of office, went to work for the very people he was
7 supposed to have been conducting due diligence on. Chu is considered to be one of the most criminally
8 corrupt public officials ever in charge of an agency aside from his peer, who also made corruption
9 history: Eric Holder, who helped Comey cover-up the crimes.

10 - The DOE ATVM and LGP programs resulted in: ***THE LARGEST DISTRIBUTION OF***
11 ***TAXPAYER CASH TO THE MOST COMPANIES THAT THEN WENT IMMEDIATELY WENT***
12 ***BANKRUPT IN THE HISTORY OF AMERICA!*** Not only has the DOE ATVM and LG program
13 been NOT A SUCCESS, they have been a disaster!

14 - Goldman Sachs and Deloitte engineered INTENTIONAL bankruptcies so that their Silicon
15 Valley oligarch clients could claim windfall tax write-offs which the U.S. Treasury said resulted in
16 "unjust gains" for those oligarchs. In other words, the tech oligarch billionaires took U.S. taxpayer
17 subsidies, which they did not need, and then bankrupted their own companies so that they could reap
18 profits in tax write-offs. On top of this Goldman Sachs skimmed "fees" off-the-top for arranging these
19 deals, at taxpayer expense, and then ALSO profited from the "bumps" to the stock market valuations in
20 pump-and-dump crimes. **TO BE CLEAR: MANY OF THESE BANKRUPTCIES WERE TAX**
21 **SKIMS CREATED TO FAIL! After realizing this, Applicants and Congressional insiders forced**
22 **ALL of the kick-back funded companies into bankruptcy as payback for the corruption and**
23
24
25
26

1 **abuse of their resources. Said one Senator: *"If they want bankruptcies, we will give them***
2 ***bankruptcies..."***

3 - Lachlan Seward, one of the DOE money laundering insiders, threatened Applicant's that if
4 they "made trouble" they "would never be funded by DOE as long as they lived".

5 - When Tesla Motors got their DOE money approved they had NO DESIGN AND WERE
6 PLANNING TO BUILD A FACTORY. Both of which were against the so-called Section 136 Rules.
7 Tesla used the DOE money to hire engineers to design the car from scratch as proven by the engineers
8 that were hired. Tesla was running all over the country trying to stage a real estate scam with Dianne
9 Feinstein's Husband's company CBRE. Tesla even got sued for these real estate scams. DOE stated that
10 the "rules" said you already had to have a factory and a design, which the other applicants had. So,
11 against the "rules" Tesla got the money and figured out the car LATER and did not use a pre-existing
12 factory until they were later forced to follow the rules.

13
14 - For the same kind of commercial loans, Bank of America and Wells Fargo take 4 weeks to
15 approve loans this large. DOE staff were either too stupid to review loans in less than 3 years or were
16 intentionally stone-walling every applicant who was not an Obama crony.

17
18 - As shown by this letter: [https://news.wttw.com/sites/default/files/Letter%20from%20Bright](https://news.wttw.com/sites/default/files/Letter%20from%20Bright%20Automotive%20to%20US%20Dept%20of%20Energy.pdf)
19 [%20Automotive%20to%20US%20Dept%20of%20Energy.pdf](https://news.wttw.com/sites/default/files/Letter%20from%20Bright%20Automotive%20to%20US%20Dept%20of%20Energy.pdf) ...and hundreds of Congressional
20 reports, DOE staff proved themselves to be liars and scumbag political manipulators at every turn.

21 - The public has not seen the entire FBI and SEC investigation records on the FBI raid and
22 investigation of Solyndra because the records point straight back to the White House Oval Office!

23
24 - A Congressional report on the ATVM and LG programs exposed layers and layers of crony
25 payola.

1 - The only Judges who got to rule on the cases were "Obama Judges" appointed by or beholden
2 to the Obama Administration.

3 - A CBS News 60 Minutes segment called: "*The Cleantech Crash*" revealed that many of the
4 assets of the ATVM and LGP disasters had been funded by the taxpayers and then sold to China in
5 deals that benefited Diane Feinstein's family and financiers. Later Dianne Feinstein was found to have
6 Chinese spies and insiders on her staff. The Feinstein family owned the stock, staffing services,
7 construction company and services companies at Tesla and Solyndra, which Feinstein got the federal
8 cash for. Her staff then went to work at Tesla and Solyndra.

9
10 - Although felony-class crimes occurred, no DOE officials have ever been charged with
11 crimes..although multiple FBI officials have been charged with covering up those crimes.

12 - Vice President Al Gore, John Doerr and Vinod Khosla have had all of their finances tracked
13 and connected together through covert routes that reveal insider stock trading and government policy
14 manipulation, in this case, for their own personal profiteering.

15
16 - Attorney General William Barr has been formally asked, by Applicants, to appoint a federal
17 Special Counsel to investigate this matter.

18 - The Dark Money FEC campaign finance limits were exceeded by the Silicon Valley oligarchs
19 by many magnitudes in this novel deployment of quid-pro-quo and search engine rigging services for
20 political favors and funding.

21 - There has not been a single person involved in "green" DOE funding programs who cared
22 anything about "green energy". The use of the term "green" was a psychological ploy to seek to pacify
23 the public with a crunchy granola positive vibe while stealing taxpayer money in plain sight.

24
25 - The Obama White House produced a "white list" of friends companies who could get funded

1 and a "black list" of their competitors who could never be funded because Silicon Valley financiers
2 said so. These lists were created from input from John Doerr, Steve Westly and Doerr's business
3 partner: Al Gore. Even though most Applicant's beat the metrics, features and national security issues
4 of favored Obama Applicant's, no outsiders and no non-campaign financiers would ever be approved.

5 - The very first Applicant for the ATVM fund was EV CAR, which was solicited to apply by
6 DOE and Barbara Boxer's office. The 1.) Section 136 law, 2.) DOE videos of meetings and 3.) DOE
7 documents clearly state that Applicant's would be reviewed on a "*first-come, first served*" basis per the
8 federal law. When XP, which was black-listed by the White House because it competed with Obama
9 financiers Tesla and Fisker, moved far ahead in the Applicant list, DOE illegally changed the rules so
10 that "first come - first served" was ignored and only favored insiders were reviewed. XP, Brammo,
11 EcoMotors, Elio, etc. were all "bottom drawered". Even though XP hand delivered, to DOE and
12 Congress, more customer order proofs than ALL other Applicant's combined, DOE insiders, who held
13 stock in competing companies, placed XP on a permanent black-list.
14

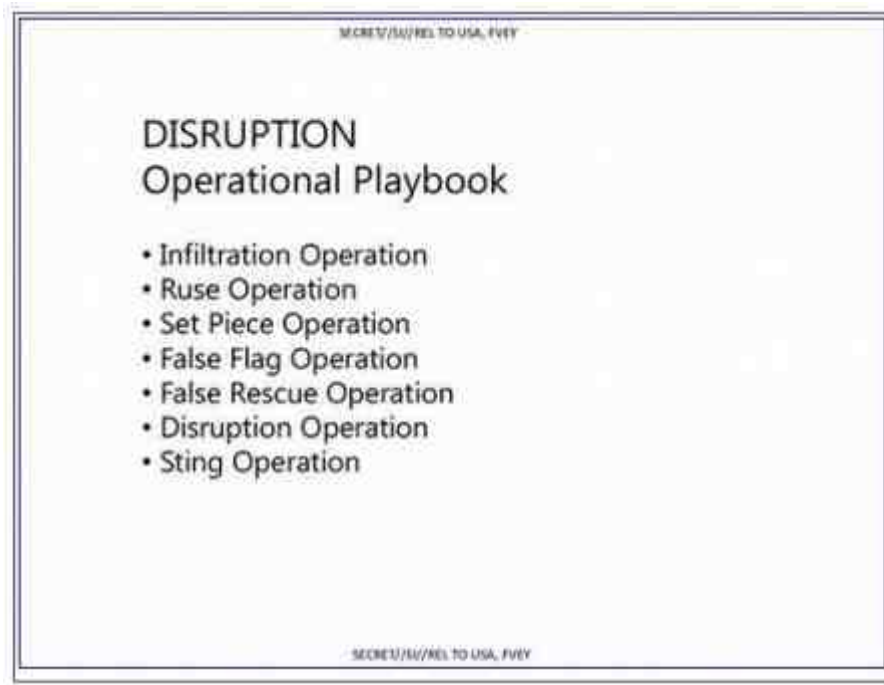

15 - As of December 28, 2008 DOE staff already decided who would "win" the money, and who
16 would not, because the entire program had been hard-wired, via lobbyists and insiders, to only go to the
17 "white list" applicants. Nobody who was not on the original "white list" could ever get DOE funding. It
18 only takes one "insider" at DOE, from the Obama Administration (many are still there) to kill any
19 application, no matter how much better that proposal is compared to every other applicant.
20

21 - U.S. Department of Energy and White House officials hired Nick Denton's sleaze-ball tabloid
22 empire comprised of Jalopnik, Gawker Media and Gizmodo Media to run character assassination and
23 defamation campaigns, in partnership with the DNC's Google, to attack any person who exposed the
24 corruption scam at DOE.
25

1 - The GAO wrote multiple federal reports confirming that DOE was running one of the most
2 poorly administrated non-transparent operations ever and that DOE staff were not even following the
3 Section 136 law.

4 - White House and DOE staff hired Gawker, Gizmodo, Jalopnik defamation bloggers to attack
5 those who exposed the plot. Patrick George At Jalopnik attacks outsiders under contract with Elon
6 Musk and DNC. Silicon Valley campaign finance oligarchs hire him to run hatchet jobs on innocent
7 outsiders and then Gawker-Gizmodo-Jalopnik uses their financial partnership with the DNC's Google
8 to push the character assassination articles to the top of Google web products and searches. Patrick
9 George, Adrian Covert, John Hermann and Nick Cook are the sexually degenerate cabin boys that
10 report to boy-loving sleaze-tabloid oligarch Nick Denton. They created the Fake News crisis in the
11 media by flooding the internet with defamation posts and reprisal hatchet job articles designed to
12 damage political enemies of the Socialists. They coordinate a large number of the character
13 assassination efforts at Gawker, Gizmodo, Jalopnik, CNN, New York Times and other propaganda
14 outlets.
15
16

13 (Above, From tens of thousands of internal Google documents leaked)

14 - DOE staff never even communicated with Applicant's, who were not Obama insiders; yet
15 Tesla, Fisker and other Obama insiders got hundreds of phone calls, meetings and careful help to hand-
16 hold them through the process to make certain that they got their payola while the outsiders only got
17 blockades, Lois Lerner "missing hard drives" and stone-walls.
18

19 - The DEFRAUDED staff and employees of Bright, XP, Limnia, ZAP, Brammo, and the other
20 Applicant's, have **NEVER** gotten a fair court hearing, Congressional or IG hearing that was not
21 compromised by an Obama Judge or stock-owning insider. They are owed money for their damages
22 from the deeply corrupt DOE programs!
23

24 - The Obama Administration officials who carefully manipulate the DOE and federal process
25 for crony favorites include: Steven Chu, Kathy Zoi, Carol Battershal, Steve Westly, Steven Spinner,
26

1 John Podesta, Jonathan Silver, Danial Cohen, et al; with cover-up support from James Comey, Eric
2 Holder, Steve Rattner, et al...

3 - Over a thousand other criminal and ethics violation charges are charged against DOE and its
4 associates yet no actual interdictions have taken place in California or federal government actions
5 because the "Deep State" cover-ups are so extensive. The raw criminality of the U.S. Department of
6 Energy in these matters is verified, proven and audacious...

2
3 **AG Barr Finds White House Power Was Used By Obama**
4 **Administration To Spy On American Citizens And Run Dirty Tricks**
5 **Reprisal Operations**
6

9 by [Tyler Durden](#)

10
11
12 In his first pair of interviews since being sworn in, Attorney General Barr told [Fox News](#) and
13 [WSJ](#) that he was pursuing the investigation into the origins of the Trump-Russia probe - an
14 investigation [he has tasked](#)

15 [John Durham, the US Attorney from Connecticut](#), with leading - because Americans need to
16 know whether the government "**put a thumb on the scale**" to try and undermine President Trump
17 both during the campaign and during the first two years of his term, just like "**we need to ensure that**
18 **foreign actors don't influence the outcome of our elections.**"

19
20 Separately, he told [WSJ](#) that "**government power was used to spy on American citizens...I**
21 **can't imagine any world where we wouldn't take a look and make sure that was done properly.**"

22 Barr has doubled-down on using the term 'spying', which has angered Democrats, after first
23 using it during Senate committee testimony from April 10, where he uttered the now-infamous phrase
24 "I think spying did occur."
25

1
2
3
4
5
6
7
8
9
10
11 The AG has declined to elaborate on what prompted these concerns, **though he has said he'd**
12 **be interested to see the underlying intelligence that sparked the FBI decision**, in the summer of
13 2016, to open a counterintelligence investigation. At this point, **Durham's review isn't a criminal**
14 **investigation**, and Barr hasn't offered a timetable for when the investigation might be completed.
15 Ultimately, the probe could lead to changing FBI protocols involving investigations into political
16 campaigns.

17
18 Appearing to respond to Barr's interviews, President Trump declared that his campaign was
19 "conclusively" spied on.

20 My Campaign for President was conclusively spied on. Nothing like this has ever happened in
21 American Politics. A really bad situation. TREASON means long jail sentences, and this was
22 TREASON!

23
24 — Donald J. Trump (@realDonaldTrump) [May 17, 2019](#)

25 As far as we know, the FBI first started investigating the campaign after an Australian
26
27
28

1 ambassador told his superiors that George Papadopoulos had appeared to know about Russian plans to
2 release 'dirt' on Hillary Clinton. The FBI later sent an informant, Stefan Halper, and a woman who
3 identified herself as a research assistant, to meet with Papadopoulos and push him to say whether
4 Russia was helping the Trump campaign.

5 6 7 8 9 THE CORRUPT GREENTECH VC INFLUENCE

10 11 - Obama's And Biden's Financiers Control Government Funding

12
13 Katie Fehrenbacher

22 [- How Silicon Valley Oligarchs Took Over The Obama Administration](#)

23 There've been a couple articles in the past few weeks pointing to President Obama as the "[clean](#)
24 [tech investor in chief](#)" and the [presidential VC with bets on clean energy](#). The real trend is that venture
25 capitalists focusing on greentech seem to have had an unprecedented influence on U.S. federal policy
26

1 and allocations of the stimulus package.

2 When I attended the Department of Energy’s (DOE) first [ARPA-E conference](#) (Advanced
3 Research Projects Agency-Energy) earlier this year in Washington D.C., I was struck by how many
4 venture capitalists were there. I shared a cab back to the airport with some familiar Silicon Valley
5 faces, and was told if your firm didn’t have a dedicated person in Washington — in some circles they
6 call them lobbyists — maneuvering grant and loan programs, you weren’t able to be competitive.

7 Just look at the figures from the stimulus package (which I am fully in support of): somewhere
8 between \$50 billion and \$80 billion into clean power and energy efficiency initiatives ([depending on](#)
9 [how you slice it](#)). The Obama administration has gone out of its way to seek the advice of green-
10 leaning venture capitalists and entrepreneurs in the Valley on how to spend that colossal amount and
11 what programs would be the most affective.

12 Kleiner Perkins managing partner John Doerr is on President Obama’s [Economic Recovery](#)
13 [Advisory Board](#), and was able to convince Vice President Al Gore to join Kleiner, in addition to former
14 Secretary of State Colin Powell. Kleiner’s investments have had some successful government bids,
15 most notably the [\\$529 million loan to Kleiner portfolio](#) company Fisker Automotive out of the DOE’s
16 highly competitive Advanced Technology Vehicles Manufacturing, or ATVM, program. Fisker plans
17 to use the loan to build its factory and launch its electric vehicle in 2011.

18 If you remember, another winner of the \$25 billion ATVM program was Tesla Motors (s
19 TLSA), which, as most of us know, was backed by venture capitalists from Draper Fisher Jurvetson,
20 Technology Partners, and Vantage Point among others.

21 I attended Khosla Venture’s LP meeting earlier this year where the firm [announced that former](#)
22 [UK Prime Minister Tony Blair](#) would be joining the firm as Senior Advisor. Several of my journalism
23

1 peers were comparing the political influence Blair could wield to what Kleiner was doing with Gore.

2 The Obama administration appointed [former venture capitalist Jonathan Silver](#) as its loan chief
3 to lead both the DOE’s loan guarantee and ATVM loan programs. About a third of the DOE’s loan
4 guarantee commitments went to venture-backed startups, including thin film solar maker Solyndra and
5 solar thermal company BrightSource.

6 I [wondered earlier this year](#) if the loan guarantee for Solyndra wasn’t a mistake, given the
7 company has one of the highest manufacturing costs out of its competitors. The company withdrew its
8 IPO plans, citing poor market conditions. The Government Accountability Office also found that the
9 loan guarantee process treated some companies unfairly in their bids and risked “excluding some
10 potential applicants unnecessarily.”

11
12 There’s nothing inherently wrong with venture-backed companies getting government support,
13 and the energy sector needs even more federal funding to create innovation. I support Doerr and Bill
14 Gates’ [calls for boosting federal government](#) investing to \$16 billion per year into energy innovation.
15 All I’m saying is that this level of influence should be watched.

THE ELON MUSK AND TESLA MOTORS BRIBES AND CRONY PAYOLA TO PELOSI, FEINSTEIN, REID AND OBAMA

Another Tesla car catches fire in Hong Kong parking lot: media - ALL TESLA BATTERIES EXPECTED TO HAVE CHEMISTRY DEGRADE AND EXPLODE AS DOE WAS WARNED IN WRITING BY BERNIE TSE, BRIGHT AND XP

HONG KONG (Reuters) - A Tesla Inc electric car caught fire in a parking lot in a Hong Kong shopping mall, the Apple Daily newspaper said on Tuesday, but no one was injured in the blaze, whose cause was not immediately known.

The electric car burst into flames 30 minutes after being parked in the city's San Po Kong district on Sunday, the newspaper said, with three explosions seen on CCTV footage.

Firemen took 45 minutes to douse the fire.

The vehicle was a Tesla Model S 85 KWH dual power version, added the paper, which gave no explanation of what might have caused the blaze.

Responding to a request from Reuters, Tesla declined to comment. Reuters was not able to contact the vehicle owner or obtain CCTV footage of the incident.

Hong Kong's fire services department told Reuters a vehicle caught fire on Sunday, but gave no details, such as the make of the car. Authorities are investigating the cause.

The incident comes three weeks after Tesla said it had sent a team to investigate a video on Chinese social media that showed a parked Tesla Model S car exploding in the commercial hub of Shanghai.

The automaker has said its EVs are about 10 times less likely to experience a fire than petrol-

1 powered cars.

2 There have been at least 14 instances of Tesla cars catching fire since 2013, most of them after
3 a crash.

4 Reporting by Donny Kwok and Shellin Li in Hong Kong, Yilei Sun in Shanghai; Editing by
5 James Pomfret and Clarence Fernandez. Our Standards: [The Thomson Reuters Trust Principles](#).

6
7 **DEADLY EXPLODING LITHIUM ION BATTERIES AND COBALT CORRUPT**
8 **MINING SCAMS ARE KILLING AND ROBBING THE PUBLIC WITH DIRTY "BLOOD**
9 **MINERALS" THAT ARE TOXIC, SELF-IGNITING DANGERS**
10

11
12 Lithium ion batteries: Cause wars in the Congo, Afghanistan and Bolivia from the corrupt mining deals
13 involved with mining lithium and cobalt; are insider trading-owned by ex-CIA boss Woolsey and DOE
14 Boss Chu; excrete chemicals that mutate fetuses when they burn; destroy your brain, lungs and
15 nervous system when they burn; kill the factory workers who make them; cause Panasonic to be one of
16 the most corrupt companies in the world; poison the Earth when disposed of; can't be extinguished by
17 firemen; poison firemen when they burn; are based on criminally corrupt mining schemes like
18 URANIUM ONE; Have over 61 toxic chemicals in them; come from an industry that spends billions
19 on internet shills and trolls used to nay say all other forms of energy; are insider-trading owned by
20 corrupt U.S. Senators who are running a SAFETY COVER-UP about their dangers.
21
22

23
24 NiCad Batteries and hundreds of other battery types do not have this many problems... but the
25 ownership of the lithium mining business by Elon Musk, his Silicon Valley cartel and California
26

1 Senator's families causes other solutions to be hidden, the dangers of lithium ion to be hidden and a
2 monopoly to exist.

3
4 Apple products with lithium ion batteries have been exploding and setting people on fire; over time the
5 chemical dendrites inside each battery grow worse and increase the chances of explosion as they age -
6 LITHIUM ION BATTERIES BECOME MORE AND MORE LIKELY TO EXPLODE AS TIME
7 GOES ON AND AS THEY AGE; "Bad Guys" have figured out how to make them explode remotely;
8 have their dangers hidden by CNN and MSM because pretty much only the DNC people profit from
9 them; are the heart of Elon Musk's stock market scam.
10

11
12 The Obama Administration promised Silicon Valley oligarchs the market monopoly on lithium ion
13 batteries and the sabotage of fuel cells in exchange for campaign financing and search engine rigging;
14 United States Senators that are supposed to protect us from these deadly products own the stock market
15 assets of them so they protect them and stop the FDA, OSHA, DOT & NHTSA from outlawing them.
16

17 WRITE YOUR ELECTED REPRESENTATIVE AND DEMAND THAT LITHIUM ION
18 BATTERIES BE MADE ILLEGAL TO SELL! NiCAD and Hundreds of other battery chemistries DO
19 NOT have all of these problems but Lithium Ion batteries get a monopoly because of politician insider
20 trading ownerships. A recent fire on U.S. Highway 101 near Mountain View, CA, burned the driver
21 alive and killed him. In Florida two kids died in a Tesla, burned alive, screaming in agony. A man died
22 in agony in a Tesla crash in Malibu that set Malibu Canyon on fire. A young woman, at the start of life,
23 and her boyfriend were burned alive in their crashed Tesla.
24

1 There are many more deaths and crashes than you have heard about. The deaths and the cover-ups are
2 endless. Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own
3 the stock in Tesla Motors and/or its suppliers and mining companies and they cover-up and halt
4 investigations and laws designed to save the public. They, and their crony's, spend over \$1B a year to
5 shill and troll hype about lithium ion batteries and cover-up the dangers. Lithium ion EVs are more
6 prone to battery fires. Experts say that their lithium-ion batteries can fuel hotter fires that release toxic
7 fumes and are more difficult to put out. Lithium ion fires keep reigniting which explains why it takes so
8 long and requires copious amounts of water or foam (it is an electric fire, after all) to smother the
9 flames. Tesla employee Bernard Tse and his team warned Elon Musk about these dangers in 2008 and
10 they got fired and/or warned to "say nothing" by Musk. Three top Tesla engineers died in a plane crash
11 next to Tesla offices in San Carlos after two of them agreed to become whistle-blowers.
12

13
14 Elon Musk exists because he bribed DNC politicians and Senators Feinstein, Reid, Boxer, Harris,
15 Clinton and Pelosi to give him free taxpayer cash and government resources from the Dept. of Energy
16 and the Calif treasury. DOE has been covering-up organized crime activities at DOE in which DOE
17 funds are being used as a slush-fund to pay off DNC campaign financiers and to pay for CIA/GPS
18 Fusion-Class attacks on Silicon Valley business competitors of those DNC campaign financiers who
19 DOE staff share stock market holdings with. Elon Musk is a criminal, a mobster, an asshole, a bald
20 fake-hair wearing, plastic surgery-addicted, douchebag, woman-abusing, sex addicted, tax evader.
21 Musk exploits poor people and child slaves in the Congo and Afghanistan to mine his lithium and
22 Cobalt.
23
24

1 Musk spends billions per year to hire Russian trolls, fake blogger fan-boys and buy fake news self-
2 aggrandizement articles about himself. Musk thinks he is the 'Jesus' of Silicon Valley. Fake News
3 manipulator Google is run by Larry Page and Larry is Musk's investor and bromance butt buddy. Musk
4 uses massive numbers of shell companies and trust funds to self-deal, evade the law and hide his bribes
5 and stock market insider trading. A huge number of Tesla drivers have been killed; pedestrians and
6 oncoming drivers have also been killed, and Musk covers it up. The DNC and the MSM refuse to allow
7 any articles about Musk's crimes to be printed because they benefit from Musk's crimes. Musk has been
8 professionally diagnosed as a 'psychotic narcissist.' A 'Silicon Valley Mafia; cartel of frat boy sociopath
9 venture capitalists like Steve Jurvetson, Tim Draper, Eric Schmidt, et al; threaten those who do not
10 support the cult of Tesla or their political candidates.
11

12
13 In EVERY blog that you read that mentions 'Musk', at least 1/3 of the comments have been placed their
14 by Musk's paid shills. Musk holds the record for getting sued for fraud by his investors, wives, former
15 partners, employees, suppliers and co-founders. Elon Musk has gone out of his way to hire hundreds of
16 ex-CIA staff and assign them to "dirty tricks teams" to attack his competitors and elected officials who
17 Musk hates. Musk never founded his companies. Musk's "Starlink" satellites are domestic spy and
18 political manipulation tools - never get your internet from one. Musk stole Tesla in a hostile ownership
19 take-over from Marty the true inventor of the Tesla. The same kind of EMF radiation proven to cause
20 cancer from cell phones exists in massive amounts in a Tesla.
21
22

23
24 Musk can't fix a car or build a rocket and has almost no mechanical skills. If you pull a report of every
25 VIN# of every Tesla ever built and cross reference that with insurance, repair and lawsuit records you
26

1 will find that the "per volume" fire, crash, death and defect rate is THE WORST of any car maker in
2 history! Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Sachs has
3 a dedicated team of 18 men who rig stocks and valuation bumps for Musk. Over 1000 witnesses can
4 prove every one of those claims in any live televised Congressional hearing! Senators Dianne
5 Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock in Tesla Motors
6 and/or it's suppliers and mining companies. That is why they criminally help cover-up investigations of
7 Tesla! All of this was reported, in writing, to James Comey, Patricia Rich and David Johnson at the
8 FBI.
9

10
11 The DNC bosses own the stock in lithium, Solar and EV markets and use kickbacks from those markets
12 (Especially via convoluted campaign finance laundering via Elon Musk) to finance the DNC. The DNC
13 bosses use character assassination as their main political tool against any member of the public who
14 speaks out against their felony stock market scams and PizzaGate-like scandals. The Harvey Weinstein
15 reports by Ronan Farrow show that they have teams of hired goons that they pay to destroy people's
16 lives. They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media, Gizmodo Media, Media
17 Matters, David Brock, Sid Blumenthal, NY Times, Google servers, Facebook servers, Podesta Group,
18 Perkins Coie, Covington & Burling and a host of "assassins".
19

20
21 It should be a felony to hire character assassins in the USA. DEMAND A LAW and DEMAND the
22 termination of these attack services. IE: Gawker and Gizmodo Media sets-up the attack stories and, in
23 paid partnership with Google, Google kicks their attack links around the globe, in front of 8 Billion
24 people, forever. Google locks the attack articles of its enemies on the front top search results of Google
25

1 search results forever, on purpose! That is why Google is being terminated in the largest, most well
2 resourced anti-corruption public service take-down in history!

20
21 **You have probably seen the many issues with Elon Musk And Tesla**

22
23 **Motors in the news, including:**

24
25 *"His corrupt cobalt mines promote genocide in the Congo as seen in NETFLIX Black Earth Rising"*

26
27 980

28

1 *"His corrupt cobalt mines promote mass rape in the Congo as seen in NETFLIX Black Earth Rising"*

2 *"His corrupt cobalt mines promote child slave labor in the Congo as seen in NETFLIX Black Earth*
3 *Rising"*

4 *"His is not faithful to his girlfriends"*

5 *"The workers that build his batteries die or sicken from toxic poisoning"*

6 *"Tesla bribes U.S. Senators with cash and stock in order to get free taxpayer funds"*

7 *"He is addicted to drugs and booze"*

8 *"He has sociopath mental issues"*

9 *"He is a narcissist"*

10 *"Tesla has had more recalls for safety defects, per volume, than any other car maker. Musk refuses to*
11 *allow the use of the word RECALL but the facts are the facts."*

12 *"It is so easy to hack any Tesla and crash it, break into it or give it bad braking orders that it is*
13 *criminally negligent to allow Tesla's on the street. Even the Chinese have hacked Tesla's from the other*
14 *side of the world!"*

15 *"His partner: Steve Jurvetson, has been charged with sex and corruption issues"*

16 *"He arranged government kick-backs with the White House"*

17 *"He is the world's biggest government mooch"*

18 *"He is a member of the Palo Alto Mafia"*

19 *"Google (who is a major Tesla investor) hides all negative Musk/Tesla news and hypes TSLA stock in*
20 *order to profiteer with TSLA stock. This is a violation of federal SEC laws"*

21 *"More drivers have been caught driving drunk, in Tesla's, than any other car Per Capita produced"*

22 *"Larry Page is Musk's bromance buddy and he uses Google to cover-up Musk's scandals"*

1 *"His so-called 'foundation' is just a payola and tax evasion scam for his family"*

2 *"His batteries are the most dangerous use of lithium ion storage ever conceived"*

3 *"His partner: Panasonic has been charged with multiple corruption, dumping, price rigging and*
4 *manipulation crimes around the globe"*

5 *"Almost all of the internet 'Tesla Fanboys' are Russian troll farms and hired bloggers that Musk pays*
6 *vast amounts of money to in order to hype up a fake image for him"*

7 *"His SpaceX is nothing more than a domestic spy satellite company"*

8 *"Musk's brain chip company tortures small animals in bad science experiments"*

9 *"His father screwed his daughter and got her pregnant"*

10 *"Dianne Feinstein and her family own Musk interests"*

11 *"You can't put out the fires when his batteries explode"*

12 *"The fumes from his thermal battery vapors give you cancer, lung and brain damage"*

13 *"Elon Musk only takes over other people's ideas. He took over Tesla and ran it into the ground,*
14 *he destroyed SolarCity with his brothers self-dealing scam, his brain cap company just cuts open the*
15 *heads of helpless animals and all SpaceX does, now that Musk took it over, is launch satellites that spy*
16 *on civilians and manipulate media..."*

17 etc.....

18
19
20
21 You may have run across Musk's self promoting, narcissistic, multi-billion dollar, self-aggrandizing
22 PR hype but here is the other side of the coin. We know these facts from personal interaction with
23 Musk, his companies and his politicians. Everything in this letter can be proven in a jury trial,
24 Congressional hearings or live TV debates. Musk will do anything to keep this information from
25

1 getting out but... it is too late for him! While this may sound like a bad Hollywood movie script. It all
2 really happened and there is now massive hard copy evidence to prove it.

3
4 Elon Musk exists because he bribed DNC politicians including Obama, Clinton and Senators Feinstein,
5 Reid, Boxer, Harris, Spier and Pelosi to give him free taxpayer cash and government resources from
6 the Department of Energy and the California political tax pool. This is proven when you follow-the-
7 money and the insider trading, stock ownership and crony payola kick-backs.

8
9
10 The Energy Dept (DOE) has been covering-up organized crime activities at DOE in which DOE funds
11 are being used as a slush-fund to pay off DNC campaign financiers and to pay for CIA/GPS Fusion-
12 Class attacks on Silicon Valley business competitors. DNC campaign financiers and DOE staff share
13 stock market holdings with each other under family trusts, shell corporations and layered Goldman
14 Sachs accounts. The deal was: Obama funds Tesla, Musk conduits campaign funds to Obama, top
15 Obama staff profit off of insider Musk stocks.

16
17
18 Elon Musk is a criminal, a mobster, an asshole, a balding fake-hair wearing, plastic surgery-addicted,
19 bi-sexual douchebag, woman-abusing, sex addicted, tax evader. We can put this in writing because all
20 of those identifications regarding Musk can be proven in court and are documented in existing lawsuits
21 and news stories.

22
23
24 Musk exploits poor people and child slaves in the Congo and Afghanistan to mine his lithium and
25 Cobalt. Look up this phrase on the top search engines: “child labor electric car batteries”.

1
2 Musk spends billions per year to hire Russian trolls, fake blogger fan-boys and buy fake news self-
3 glory look-at-me articles about himself. Musk thinks he is the 'Jesus' of Silicon Valley and he will do
4 anything to make the public think so. Musk is insecure because his father was abusive and his “trophy
5 wife” Mother is overbearing so he developed sociopath-like mental issues. Musk has been
6 professionally diagnosed as a 'psychotic narcissist. He public stated on an investor call that he uses
7 drugs and alcohol to get through the night. We have the tapes.
8

9
10 Musk relies on Google and the DNC Main Stream News (MSN) to hide bad news about him. Fake
11 News manipulator Google is run by Larry Page. Larry is Musk's investor and bromance ‘Butt buddy’.
12 They share an apartment. Musk uses massive numbers of shell companies and trust funds to self-deal,
13 evade the law and hide his bribes and stock market insider trading. His brother ran Solar City and is
14 now under federal investigation for securities fraud.
15

16
17 A huge number of Tesla drivers have been killed; pedestrians and oncoming drivers have also been
18 killed, and Musk covers it up.
19

20 The DNC and the MSM refuse to allow any articles about Musk's crimes to be printed because they
21 benefit from Musk's crimes. VC’s Tim Draper and Steve Jurvetson are so fanatical about not being
22 embarrassed from a Tesla bankruptcy that they will pump the TSLA stock and threaten anybody who
23 might disclose the Musk misdeeds. Peter Thiel, a Musk ‘boyfriend” also protects Musk. Musk, and his
24 cronies, use Palantir, Google and related software to scan the entire internet every few minutes for any
25

1 occurrence of the words: “Musk”, “Tesla” or “Tesla Fire”. They send trolls and fake bloggers (Many of
2 them Russian) to put pro-Musk comments on the comments section of any blogs or articles discussing
3 those topics and try to flood out the truth about Musk. In EVERY blog that you read that mentions
4 'Musk', at least 1/3 of the comments have been placed their by Musk's paid shills. There are no “Tesla
5 Fan Boys”. All of the fanatic Tesla comments on the internet are Musk’s, Thiel’s, Jurvetson’s and
6 Draper’s fake fanboy trolls. Musk, himself, stays up late at night pretending to be a ‘Tesla Fan Boy’ on
7 blogs.

8
9
10 The 'Silicon Valley Mafia; cartel of frat boy sociopath venture capitalists like Steve Jurvetson, Tim
11 Draper, Eric Schmidt, et al; threaten those who do not support the cult of Tesla or their political
12 candidates.

13
14 Musk holds the record for getting sued for fraud by his investors, wives, former partners, employees,
15 suppliers and co-founders. Elon Musk has gone out of his way to hire hundreds of ex-CIA and In-Q-Tel
16 staff and assign them to "dirty tricks teams" to attack his competitors and elected officials who Musk
17 hates.

18
19
20 Musk never founded his companies. He took Tesla away from the founder: Marty, in a hostile take-
21 over!

22
23
24 Musk's "Starlink" satellites are domestic spy and political manipulation tools - never get your internet
25 from one. SpaceX is entirely a spy satellite operation.

1
2 The same kind of EMF radiation proven to cause cancer from cell phones exists in massive amounts in
3 a Tesla.

4
5 Musk can't fix a car or build a rocket and has almost no mechanical skills.

6
7 If you pull a report of every VIN# of every Tesla ever built and cross reference that with insurance,
8 repair and lawsuit records you will find that the "per volume" fire, crash, death and defect rate is THE
9 WORST of any car maker in history!
10

11
12 Musk is a lying con artist and partners with Goldman Sachs to rig the stock market. Sachs has a
13 dedicated team of 18 men who rig stocks and valuation bumps for Musk.
14

15
16 Over 1000 witnesses can prove every one of those claims in any live televised Congressional hearing!
17 Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock
18 in Tesla Motors and/or it's suppliers and mining companies. That is why they criminally help cover-up
19 investigations of Tesla! All of this was reported, in writing, to James Comey, Patricia Rich and David
20 Johnson at the FBI.
21

22 Why aren't all of those parties in prison if it is so easy to prove the crime? Think back to recent history:
23 the heads of the Department of Energy, the FBI, The DOJ and the U.S. Attorney General were kicked
24 out of their jobs for corruption. THIS was the corruption they were doing. They all knew about this
25
26

1 crime but they were covering it up.

2
3 Musk took over Tesla Motors in a hostile take-over in order to exploit lithium, cobalt and other mining
4 corruption deals for his business partners. Let's take a look at the 'lithium' in Musk's horrifically miss-
5 engineered lithium ion batteries:

6
7 His batteries cause wars in the Congo, Afghanistan and Bolivia from the corrupt mining deals involved
8 with mining lithium and cobalt. Lithium ion batteries are insider trading-owned by ex-CIA boss
9 Woolsey and DOE Boss Chu. Lithium ion batteries excrete chemicals that mutate fetuses when they
10 burn; destroy your brain, lungs and nervous system when they burn; kill the factory workers who make
11 them; cause Panasonic to be one of the most corrupt companies in the world; poison the Earth when
12 disposed of; can't be extinguished by firemen; poison firemen when they burn; are based on criminally
13 corrupt mining schemes like URANIUM ONE; Have over 61 toxic chemicals in them; come from an
14 industry that spends billions on internet shills and trolls used to nay say all other forms of energy; and
15 are insider-trading owned by corrupt U.S. Senators who are running a SAFETY COVER-UP about
16 their dangers.
17
18

19
20 Apple products with lithium ion batteries have been exploding and setting people on fire. Over time the
21 chemical dendrites, or deposits, inside each battery grow worse and increase the chances of explosion
22 as they age - LITHIUM ION BATTERIES BECOME MORE AND MORE LIKELY TO EXPLODE
23 AS TIME GOES ON AND AS THEY AGE. This is not a theory. This is a scientific fact. That is why
24 you hear about more and more lithium batteries catching fire and blowing up. Additionally, scientists
25

1 also speculate that the increasing presence of low energy nuclear background energy and wifi energy in
2 the environment is making lithium ion batteries explode more often lately. This theory is upheld by the
3 increasing number of FAA reports about commercial airline cabins suddenly “filling up with toxic
4 smoke” as some lithium ion battery explodes in someones overhead luggage. As commercial jets go
5 higher they lose the protection of the atmosphere and are subjected to more gamma (and other)
6 radiation from overhead. This makes the already unstable lithium ion batteries on board blow up.
7

8
9 "Bad Guys" have figured out how to make them explode remotely in devices by making the device
10 electronics cause the batteries to overload. The dangers of lithium ion batteries are hidden by CNN and
11 Main Stream News (MSN) because pretty much only the DNC people profit from them and the DNC
12 folks control CNN and the MSN.
13

14 The Obama Administration promised Silicon Valley oligarchs the market monopoly on lithium ion
15 batteries and the sabotage of fuel cells in exchange for campaign financing and search engine rigging;
16 United States Senators that are supposed to protect us from these deadly products own the stock market
17 assets of them so they protect them and stop the FDA, OSHA, DOT & NHTSA from outlawing them.
18
19

20 Tom Steyer is a notorious DNC financier. His partner, Margaret Sullivan ran, the federal USAID
21 agency, USAID sent all of the DNC campaign financiers in Silicon Valley a federal ‘report’ from
22 USAID that said there was “A TRILLION DOLLARS OF LITHIUM IN AFGHANISTAN” and
23 promised to give those lithium mines, EXCLUSIVELY, to the Silicon Valley venture capitalists if they
24 funded and web search manipulated the election for Obama to take over the White House. We have the
25

1 documents proving this. In other words, a re-up of the Afghan War was caused by Elon Musk and it
2 killed American soldiers so that Musk could buy more mansions and trophy wives.

3
4 Alkaline, NiCAD and hundreds of other battery chemistries DO NOT have all of these problems but
5 Lithium Ion batteries get a monopoly because of politician insider trading ownerships.

6
7 Tesla Motors has caused far more deaths and injuries than the world generally knows about. A recent
8 fire on U.S. Highway 101 near Mountain View, CA, burned the driver alive and killed him. In Florida
9 two kids died in a Tesla, burned alive, screaming in agony. A man died in agony in a Tesla crash in
10 Malibu that set Malibu Canyon on fire. A young woman, at the start of life, and her boyfriend were
11 burned alive in their crashed Tesla. There are many more deaths and crashes than you have seen in the
12 Main Stream News (MSN) The deaths and the cover-ups are endless.

13
14
15 Senators Dianne Feinstein, Harry Reid, Nancy Pelosi, Kamala Harris and their associates own the stock
16 in Tesla Motors and/or it's suppliers and mining companies and they cover-up and halt investigations
17 and laws designed to save the public. They, and their crony's, spend over \$1B a year to shill and troll
18 hype about lithium ion batteries and cover-up the dangers. Lithium ion EVs are more prone to battery
19 fires. Experts say that their lithium-ion batteries can fuel hotter fires that release toxic fumes and are
20 more difficult to put out. Lithium ion fires keep reigniting which explains why it takes so long and
21 requires copious amounts of water or foam (it is an electric fire, after all) to smother the flames. Tesla
22 employee Bernard Tse and his team warned Elon Musk about these dangers in 2008 and they got fired
23 and/or warned to "say nothing" by Musk. Three top Tesla engineers died in a plane crash next to Tesla
24
25
26

1 offices in San Carlos after two of them agreed to become whistle-blowers.
2

3 The DNC bosses, Congress people and federal executives own the stock in lithium, Solar and EV
4 markets and use kickbacks from those markets (Especially via convoluted campaign finance laundering
5 via Elon Musk) to finance the DNC.
6

7
8 The DNC bosses and Musk use character assassination as their main political tool against any member
9 of the public who speaks out against their felony stock market scams and PizzaGate-like scandals. The
10 Harvey Weinstein reports by Ronan Farrow show that they have teams of hired goons that they pay to
11 destroy people's lives.
12

13 They use Black Cube, Mossad, In-Q-Tel, Stratfor, Gawker Media, Gizmodo Media, Media Matters,
14 David Brock, Sid Blumenthal, NY Times, Google servers, Facebook servers, Podesta Group, Perkins
15 Coie, Covington & Burling and a host of "media assassins".
16

17
18 Gawker and Gizmodo Media set-up the attack stories and, in paid partnership with Google, Google
19 kicks their attack links around the globe, in front of 8 Billion people, forever. Google locks the attack
20 articles of its enemies on the front top search results of Google search results forever, on purpose!

21 Google and Musk are partners-in-crime. Larry Page steals technology for Google and Musk meets with
22 Larry Page to advise him on which technologies to steal and how to bypass FEC laws. Musk has
23 exceeded FEC campaign finance limits by billions of dollars via “in-kind” services.
24
25
26

HOW THE DEPARTMENT OF ENERGY AND THE OBAMA WHITE HOUSE ATTACKS PLAINTIFFS AND ANYBODY WHO EXPOSES THE SCHEME

How and why did a Donald Trump stripper-date named "Stormy" or an Elon Musk sex party or a Kavanaugh drinking incident or the Moonves and Weinstein indiscretions suddenly hit the news at about the same time in news history?

In addition to actual murder, Politicians and Silicon Valley Oligarchs hire operatives to end people's lives in other creative ways.

It is all part of the modern trend in vendetta, revenge and political payback when a Senator or a tech oligarch issues a "kill order" on an opponent.

The client does not like to get their hands dirty so the actual social hit job is performed by companies such as:

IN-Q-Tel - (DNC); Gawker Media - (DNC); Jalopnik - (DNC); Gizmodo Media - (DNC); K2 Intelligence - (DNC); WikiStrat - (DNC); Podesta Group - (DNC); Fusion GPS - (DNC/GOP); Google - (DNC); YouTube - (DNC); Alphabet - (DNC); Facebook - (DNC); Twitter - (DNC); Think Progress - (DNC); Media Matters - (DNC); Black Cube - (DNC); Mossad - (DNC); Correct The Record - (DNC); Sand Line - (DNC/GOP); Blackwater - (DNC/GOP); Stratfor - (DNC/GOP); ShareBlue - (DNC); Wikileaks (DNC/GOP); Cambridge Analytica - (DNC/GOP); Sid Blumenthal- (DNC); David Brock -

1 (DNC); PR Firm Sunshine Sachs (DNC); Covington and Burling - (DNC), BuzzFeed - (DNC) Perkins
2 Coie - (DNC); Wilson Sonsini - (DNC) and hundreds of others... These are the people and companies
3 that except cash, revolving door jobs, political appointments, insider trading stock in Silicon Valley
4 tech companies, prostitutes and real estate in exchange for destroying the lives of others.

5
6 These attackers deserve to be punished for the rest of their lives for taking away the lives of others in
7 exchange for cash. Any company who is corrupt enough to hire any of these assassins should be forced
8 out of business. These attack services are responsible for 90% of the "Fake News" problem in the world
9 because they are the authors of most fake news. Congress must act to make these kinds of companies
10 illegal!
11

12
13 These digital assassination services offer hit-jobs, character assassinations and economic reprisal
14 programs to famous billionaires and corrupt politicians who are seeking revenge, retribution and
15 vendetta executions.
16

17
18 In the case of reporters getting targeted for attacks, President Donald Trump has been accused by the
19 liberal corporate media of whipping up a hateful frenzy against the press. But while CNN's Jim Acosta
20 grandstands against Trump, real journalists are still reeling from the draconian extrajudicial measures
21 that Barack Obama and his administration used to target them for exposing truth.
22

23
24 This secretive targeting occurred while Obama speechwriter and hate-filled ANTIFA supporter Ben
25 Rhodes was running "Operation Echo Chamber," which reportedly continues, in which he fed
26

1 information to willing corporate media scribes. “They literally know nothing,” Rhodes said of the
2 twentysomething journalists he easily manipulated.

3
4 The Freedom of the Press Foundation’s Trevor Timm published documents showing how former
5 attorney general Eric Holder changed the rules to more effectively intimidate and surveil members of
6 the press.

7
8 Timm writes: “Today, we are revealing—for the first time—the Justice Department’s rules for
9 targeting journalists with secret FISA court orders. The documents were obtained as part of a Freedom
10 of Information Act lawsuit brought by Freedom of the Press Foundation and Knight First Amendment
11 Institute at Columbia University.”

12
13
14 Trending: Brennan and Clapper Accused of Hacking John Roberts To Blackmail Him

15
16
17 Here is the memo published by the Foundation, which dropped the documents in their entirety:

18
19 Obama is also clearly linked to the plot to obtain fraudulent FISA warrants on President Trump’s team,
20 as evidenced by Peter Strzok and Lisa Page’s texts confirming that Obama was overseeing their fly-by-
21 night operation.

22
23
24 Larry Schweikart reported for Big League Politics:

1 For months pundits and researchers have been pondering the mystery of the FISA approval that led to
2 the illegal and historically titanic scandals to ever hit the U.S. government. Some have argued that
3 Assistant Attorney General Rod Rosenstein knew the FISA was bogus when he extended it. Others
4 have wondered if Special Counsel Robert Mueller knew about the fraudulent basis of the FISA when
5 he used it, in part, to indict Michael Flynn. Other still, that Mueller was fooled by the FBI.
6

7
8 This is what President Trump calls “SPYGATE”.

9
10 It may well be that the surveillance that was conducted began with UK intelligence services and then
11 was fed back to the White House of Barack Obama. Here’s the kicker:
12

13 President Barack Obama did not need a FISA warrant to authorize spying/electronic surveillance on
14 Trump because Obama all along had legal authorization to by-pass the normal court vetting process.
15 According to 50 U.S. Code 1802, the “Electronic Surveillance Authorization” () “Foreign intelligence
16 in relation to a US person (Trump or his associates) is information that’s necessary for the US to
17 protect against attack, hostile acts, sabotage, . . . as well as other clandestine activities by a foreign
18 power . . . OR . . . information relevant to national defense/security of the US, or the conduct of foreign
19 affairs of the U.S.” Such an authorization by Obama required certification by Attorney General Loretta
20 Lynch that must be logged with the FISC court. (“The [AG]+ shall immediately transmit under seal to
21 the court [FISC] a copy of his certification.”)
22
23

24
25 In short, the DOJ has this. If we are correct, a copy of that certification is currently under seal at least
26

1 with the DOJ and the FISC. This is what they are hiding.

2
3 However, the Act requires the AG to keep the Select Committee on Intelligence and the Senate
4 Committee on Intelligence informed of these authorizations and unmaskings therein. See 1803 (a) (1)
5 (C) If indeed this is what happened, did Lynch report—or only selectively report—to the committees in
6 a way that excluded non-friendlies? Can you see why Adam Schiff, Mark Warner, and their ilk are
7 terrified?
8

9
10 1) Obama authorized spying/electronic surveillance on Team Trump, by-passing normal judicial
11 oversight.

12
13 2) To create “foreign intelligence,” John Brennan and others organized for UK intelligence to conduct
14 surveillance on Trump and his associates, either from the UK or from UK assets within the U.S. This is
15 another reason revealing this will unleash an excrement storm: the UK is about to be caught meddling
16 bigly in an American election.
17

18
19 3) Lynch certified Obama’s authorization which is now held under seal by DOJ (and FISC).

20
21 From this authorization, all unmaking followed, as well as the FBI fraudulent counter intel
22 investigation and perhaps the FISA warrant too. Obama knew this was all fake when he made the
23 authorization; Lynch knew it was fake when she certified it; the entire inner circle, including the FBI,
24 all knew. This takes the U.S. into uncharted territory, and could imperil any politician in the British
25

1 government who supported this or had knowledge of it. Proving any of this would be difficult, as if
2 confronted Lynch would almost certainly cover up and Obama would simply deny knowledge. Without
3 a paper trail, a conviction might be a bridge too far. This is only one of thousands of "kill order" tactics
4 introduced by the Obama Administration.

5
6 These are the playbook tactics that Senators and tech oligarchs most often use to destroy the lives of
7 their political and business enemies:

8
9
10 - Government agency bosses sometimes solicit the target victims with false promises of future loans,
11 contracts or grants from their agency and cause the target victims to expend millions of dollars and
12 years of their time for projects which those government bosses had covertly promised to their friends.
13 They use the target victims as a “smokescreen” to cover their illegal government slush-funds for the
14 victims competitors and personal enemies. By using this tactic, the attackers can drain the target
15 victims funds and force them into an economic disaster in plain view of everyone without the
16 government bosses fearing any reprisal for their scam.

17
18
19 - Every match.com, okcupid.com, Plenty Of Fish, Seeking Arrangements and all other IAC-owned,
20 or similar, dating sites (IAC is managed by Hillary Clinton's daughter) have had their profiles, texts,
21 and inter-member communications, since those companies were started, hacked or purchased. The
22 attack service providers use Palantir and In-Q-Tel financed data analysis software to analyze every
23 activity in those dating services in order to find honey-trap, blackmail, sextortion and social conflict
24 exploitation opportunities. If you had a bad date with someone, that someone will be hunted down and
25

1 convinced to help harm, #metoo or "rape charge" the intended target. All dates involve a search for sex,
2 so the likelihood that a sexual disappointment experience will exist in each persons dating history is
3 high. Searching every past dating email and text of a subject is quite easy with modern software and
4 hacking techniques. A synthetically amplified, PR-agency optimized sex scandal can destroy any
5 target. Your dating experiences from the 70's or 80's will come back to haunt you decades later. Most
6 dates involve drinking alcohol and taking drugs. If you were unattractive or had bad sexual skills your
7 bad date will be called "date rape", "drugging your date for sex" and related twisted narratives that are
8 designed to shame you, the target. If you try to get a date in the future, your potential date will be
9 contacted by a third party who will slander and libel you to make sure your potential first date gets
10 cancelled. Your social life will, essentially, end. Every photo on every dating site is cross checked with
11 every other photo on the internet in order to cull your Facebook, LinkedIn, Snapchat and other social
12 media together to create a total psychological manipulation profile data file on you. A single photo on a
13 dating site can be cross searched on every mugshot archive, photo album and corporate database in the
14 worth within minutes using modern super-computers. Your sex life will be on public record in a flash.
15
16

17
18 - Social Security, SSI, SDI, Disability and other earned benefits are stone-walled. Applications of
19 targets are "lost". Files in the application process "disappeared". Lois Lerner hard drive "incidents" are
20 operated in order to seek to hide information and run cover-ups.
21

22
23 - Government officials and tech oligarchs contact members of the National Venture Capital
24 association (NVCA) and created national "black-lists" to blockade target victims from ever receiving
25 investor funding. This was also confirmed in a widely published disclosure by Tesla Motors Daryl Siry
26

27 1000
28

1 and in published testimony. If Silicon Valley political campaign finance oligarchs black-list you (see
2 the "AngelGate" Scandal and the "High Tech No Poaching Class Action Lawsuit" cases) you will never
3 get investor funding again.

4
5 - FOIA requests are hidden, frozen, stone-walled, delayed, lied about and only partially responded to
6 in order to seek to hide information and run cover-ups.

7
8
9 - State and federal employees will play an endless game of Catch-22 by arbitrarily determining that
10 deadlines had passed that they, the government officials, had stonewalled and obfuscated applications
11 for, in order to force these deadlines that they set, to appear to be missed. This can bankrupt a target
12 victim.

13
14 - Some Victims found themselves strangely poisoned, not unlike the Alexander Litvenko case.
15 Heavy metals and toxic materials were found right after their work with the Department of Energy
16 weapons and energy facilities. Many wonder if these “targets” were intentionally exposed to toxins in
17 retribution for their testimony. The federal MSDS documents clearly show that a number of these
18 people were exposed to deadly compounds and radiations, via DOE, without being provided with
19 proper HazMat suits which DOE officials knew were required.
20

21
22 - Victims employers are called, and faxed, and ordered to fire target victims from their places of
23 employment, in the middle of the day, with no notice, as a retribution tactic.
24

1 - On orders from Obama White House officials, DNC-financed Google, YouTube, Gawker Media
2 and Gizmodo Media produce attack articles and defamation videos. Google locks this attack media on
3 the internet on the top line, of the front page of all Google searches for a decade in front of 7.5 billion
4 people, around the world. This attack-type uses over \$40 million dollars in server farms, production
5 costs and internet rigging. The forensic data acquired from tracking some of these attacks proves that
6 Google rigs attacks against individuals on the internet and that all of Google's "impressions" are
7 manually controlled by Google's executives who are also the main financiers and policy directors of
8 the Obama Administration. This data was provided to the European Union for its ongoing prosecution
9 of Google's political manipulation of public perceptions.
10

11
12 - Victims HR and employment records, on recruiting and hiring databases, are embedded with
13 negative keywords in order to prevent the victim targets from ever gaining future employment.
14

15
16 - Gary D. Conley, Seth Rich, Rajeev Motwani and many other whistle-blowers in these matters,
17 turned up dead under strange circumstances. It is very possible that some of these attack services,
18 operated by former CIA operatives, even offer discrete murder-for-sale services using high-tech
19 assassination tools that make murders look like heart attacks and brain failures.
20

21 - Disability and VA complaint hearings and benefits are frozen, delayed, denied or subjected to lost
22 records and "missing hard drives" as in the Lois Lerner case.
23

24
25 - Paypal (A DNC-biased operation) and other on-line payments for on-line sales are de-platformed,
26

1 delayed, hidden, or re-directed in order to terminate income potential for target victims who competed
2 with the attackers interests and holdings.

3
4 - DNS redirection, "website spoofing" sends target victims websites to dead ends where no sales
5 orders or customer inquiries actually get back to the target. These internet revenue activity
6 manipulations are conducted using Google and Amazon servers. All commercial storefronts and on-
7 line sales attempts by target victims, will have had their sites hidden, or search engine de-linked by a
8 massively resourced facility located in Virginia, Texas or Palo Alto, California in order to terminate
9 revenue potentials for the target victims.
10

11
12 - Over 50,000 trolls, shills, botnets and synth-blog deployments are deployed to place defamatory
13 statements and disinformation about victims in front of 7.5 billion people around the world on the
14 internet in order to seek to damage their federal testimony credibility by a massively resourced facility.
15

16
17 - Campaign finance dirty tricks contractors are hired by campaign financiers to attack the friends and
18 family members of the target victim in order to create low morale for the target victims psyche and
19 motivation.
20

21 - Are you getting weird headaches and hearing a "buzzing sound" in your head? The U.S.
22 Government has now acknowledged that the Cuban, Chinese and other embassy "sonic attacks" are
23 from a known microwave beam weapon. Any one of the technical departments of the attack services
24 listed at the top of this article can build such a biological harassment weapon. It can be aimed at the
25

1 target victims office, bedroom or vehicle and, within a week, have caused biological and emotional
2 damage using a weapon that has no visible track of trajectory. It is designed to make the target victim
3 think they are "going crazy" or "hearing sounds in their head". While this may sound pretty out there,
4 web search "Embassy sonic attacks" on the top 5 non-Google search engines and read the very credible
5 reports of these attacks.

6
7
8 - In one case covert political partner: Google, transferred large sums of cash to dirty tricks
9 contractors and then manually locked the media portion of the attacks into the top lines of the top pages
10 of all Google searches globally, for years, with hidden embedded codes in the links and web-pages
11 which multiplied the attacks on Victims by many magnitudes.

12
13 - Covert Cartel financier: Google, placed Google's lawyer: Michelle Lee, in charge of the U.S.
14 Patent Office and she, in turn, stacked all of the U.S. Patent Office IPR and ALICE review boards and
15 offices with Google-supporting employees in order to rig the U.S. Patent Office to protect Google from
16 being prosecuted for the vast patent thefts that Google engages in. Google has hundreds of patent
17 lawsuits for technology theft and a number of those lawsuits refer to Google's operations as
18 "Racketeering", "Monopolistic Cartel" and "Government Coup-like" behaviors. Thousands of articles
19 and investigations detail the fact that Google, "essentially" ran the Obama White House and provided
20 over 80% of the key White House staff. A conflict-of-interest unlike any in American history. Google's
21 investors personally told Applicant they would "kill him". Google and the Obama Administration were
22 "the same entity". Applicant testified in the review that got Michelle Lee terminated and uncovered a
23 tactical political and social warfare group inside Google who were financed by Federal and State funds.
24
25
26

1
2 - Honeytraps and moles were employed by the attackers. In this tactic, people who covertly worked
3 for the attackers were employed to approach the “target” in order to spy on and misdirect the subject.
4

5 - Gawker Media, Gizmodo Media, Snopes, SPLC and other hired media assassins will be retained to
6 produce "hatchet job" character assassination articles about you. Then those articles will be faxed,
7 mailed and emailed to your employer and investors with a note saying: "You don't want to have
8 anything to do with this person, do you..?" in order to get you fired from your job and get your loans or
9 financing pulled. The attackers will use their round one attack media, that they authored, to create a
10 round two second wave attack designed to end your life via economic warfare.
11

12
13 - Mortgage and rental applications will have had red flags added to them in databases to prevent the
14 targets from getting homes or apartments.
15

16
17 - Krebs On Security, Wired, Ars Technica, The Wall Street Journal and most major IT publications
18 have reported that hundreds of spy "back-doors" have been found on every Intel, AMD, Apple, Xfinity,
19 Cisco, Microsoft, Juniper Networks motherboard, chip-set and hardware component set. This means
20 that any kid with the "key" code can open any computer, server, router, cloud-network or other network
21 connected device and read every file, photo, video, your calendar and email on your devices at any time
22 from any location on Earth. The key codes have been released to every hacker community in the world
23 for over ten years. There is now no government, corporate or personal data that can't be hacked, even
24 data from decades ago. Every single one of your darkest secrets can be in the hands of your enemy
25

1 within 60 minutes, or less. Important meetings you had planned with potential investors, employers,
2 clients, dates, suppliers and others will suddenly get cancelled at the last minute. They will get
3 cancelled because your enemies are reading your calendar remotely and covertly sending slander
4 information to those you had hoped to engage with in order to sabotage your life. Nothing you have
5 ever typed on a computer or Smartphone is safe. it WILL be acquired and it WILL be used against you.
6

7
8 - McCarthy-Era "Black-lists" are created and employed against target victims who competed with
9 Obama Administration executives and their campaign financiers to prevent them from getting funding
10 and future employment.
11

12 - Obama Administration targets were very carefully placed in a position of not being able to get jobs,
13 unemployment benefits, disability benefits or acquire any possible sources of income. The retribution
14 tactics were audacious, overt..and quite illegal.
15

16
17 - There are thousands of additional Dirty Tricks tactics being used by these Attack Services yet
18 Congress refuses to pass laws out-lawing such attack services. The cost of an attack on a person ranges
19 from \$150,000.00 to over \$50,000,000.00. While a Silicon Valley billionaire can afford to launch
20 counter-measures to these attacks, any regular taxpayer will be utterly destroyed, and incapable of
21 fighting back, against even the smallest version of one of these "kill orders". A number of modern
22 office shootings are the results of these attacks against an individual who has lost everything because of
23 the attack and has no options left.
24

1 Federal law enforcement, the United States Congress and the highest level investigators in the U.S.,
2 and abroad, have documented (per the “FISA Memo”, Congressional Reports and federal employee
3 testimony) and proven the fact that the Obama Administration regularly engaged in the operation of
4 retribution, vendetta and reprisal campaigns known as “hit-jobs” against domestic natural born U.S.
5 citizen domestic taxpayers. The Federal Court, in at least one previous court case, has ruled that
6 Applicants, in this particular matter, were the victims and target of a number of these attacks designed
7 to inflict permanent medical, emotional, character assassination, brand negation, economic and career
8 damage.

23 **Mueller Hears Evidence That Silicon Valley Has Been Manipulating**
24 **Huge Political Campaigns, Yet He Covers It Up**

1
2 - Second former employee of controversial data firm to be questioned by special counsel's
3 inquiry into Russia collusion

4
5 By Carole Cadwalladr

6
7 Brittany Kaiser is said to be cooperating fully with the Mueller inquiry.

8
9
10 A director of the controversial data company Cambridge Analytica, who appeared with Arron Banks at
11 the launch of the Leave.EU campaign, has been subpoenaed by the US investigation into possible
12 collusion between the Trump campaign and the Russian government.

13
14 A spokesman for Brittany Kaiser, former business development director for Cambridge Analytica –
15 which collapsed after the Observer revealed details of its misuse of Facebook data – confirmed that she
16 had been subpoenaed by special counsel Robert Mueller, and was cooperating fully with his
17 investigation.

18
19
20 He added that she was assisting other US congressional and legal investigations into the company's
21 activities and had voluntarily turned over documents and data.

22
23 Kaiser, who gave evidence to the UK parliament last April in which she claimed Cambridge Analytica
24 had carried out in-depth work for Leave.EU, is the second individual connected to the firm subpoenaed

1 by the special counsel. The Electoral Commission has said its investigation into Leave.EU found no
2 evidence that the campaign “received donations or paid for services from Cambridge Analytica ...
3 beyond initial scoping work”.

4
5 Damian Collins, chairman of parliament’s inquiry into fake news, said it was “no surprise” that Kaiser
6 was under scrutiny by Mueller because “her work connected her to WikiLeaks, Cambridge Analytica
7 and [its parent company] SCL, the Trump campaign, Leave.EU and Arron Banks”.

8
9
10 He said it was now vital Britain had its own inquiry into foreign interference: “We should not be
11 leaving this to the Americans.”

12
13 Tom Watson, the deputy leader of the Labour party, echoed Collins’s statement, saying: “This is the
14 first evidence that a significant player in the Leave.EU campaign is of interested to the global Mueller
15 inquiry. People will be bewildered that the British government has no interest in establishing the facts
16 of what happened.”

17
18
19 In August, Sam Patten, a US political consultant who had worked for Cambridge Analytica on
20 campaigns in the US and abroad, struck a plea deal with Mueller after admitting he had failed to
21 register as a foreign agent for a Ukrainian oligarch.

22
23
24 He became a subject of the special counsel’s inquiry because of work done with Paul Manafort,
25 Trump’s campaign manager, in Ukraine. He had also set up a business with Konstantin Kilimnik, a key

1 figure who Mueller has alleged has ties to Russian intelligence and who is facing charges of obstruction
2 of justice. In a 2017 statement to the Washington Post, Kilimnik denied any connection to intelligence
3 services. Kaiser, however, is the first person connected directly to both the Brexit and Trump
4 campaigns known to have been questioned by Mueller.

5
6 The news came to light in a new Netflix documentary, The Great Hack, which premiered at the
7 Sundance film festival last month and is expected to be released later this spring. Film-makers followed
8 Kaiser for months after she approached the Guardian, including moments after she received the
9 subpoena. She claims the summons came after the Guardian revealed she had visited WikiLeaks
10 founder Julian Assange while still a Cambridge Analytica employee in February 2017, three months
11 after the US election.
12

13
14 One part of Mueller’s investigation focuses on whether the Trump campaign sought to influence the
15 timing of the release of emails by WikiLeaks before the election. Investigators are looking at
16 communications between them. In the film, Kaiser says that she has gone from being a cooperating
17 witness to a subject of investigation because of her contact with Assange.
18

19
20 In October 2017, it was revealed that Alexander Nix, the chief executive of Cambridge Analytica, had
21 contacted Assange in August 2016 to try to obtain emails from Hillary Clinton’s presidential campaign
22 – which indictments from Mueller’s team say were obtained by Russian military intelligence – to use in
23 Donald Trump’s campaign. When Kaiser gave evidence to parliament last year, she was asked about
24 her relationship with Assange and WikiLeaks but failed to reveal that she had met Assange.
25

1
2 In the documentary, Kaiser is shown after receiving an email from the Guardian last June asking about
3 meeting Assange and alleged donations of cryptocurrency to WikiLeaks. Kaiser did not respond to the
4 email at the time, but on camera says: “She knows I met Assange. And she knows I donated money to
5 WikiLeaks in bitcoin.”

6
7
8 Her legal representatives later wrote to the paper to say that the allegations, including that she had
9 “channelled” donations to WikiLeaks, were false. Kaiser said she had received a small gift of bitcoin in
10 2011 – long before she worked at Cambridge Analytica – and, not knowing what else to do with it,
11 gave it to WikiLeaks, because she had benefited from material it had released over the years.

12
13 Her lawyer told the Observer that the meeting with Assange came about after a chance encounter in
14 London with an acquaintance who knew him. It lasted 20 minutes and consisted mainly of Assange
15 telling her “about how he saw the world”. He said they did not discuss the US election.
16

17
18 Patten and Kaiser were involved in a controversial election campaign in Nigeria in January 2015,
19 which former Cambridge Analytica employees say had “unsettling” parallels to the US presidential
20 election.
21

22 The Guardian revealed that the data firm had worked alongside a team of unidentified Israeli
23 intelligence operatives on the campaign. Ex-Cambridge Analytica employees described how the
24 Israelis hacked the now-president of Nigeria’s emails and released damaging information about him to
25

1 the press weeks before the election.

5 **Valley Cartel targets you in reprisal.**
6

7 **Lara Logan "I'm Being 'Targeted' For Saying the Media is 'Mostly Liberal'"**

8 by Tamar Auber
9

10
11 On Wednesday, former CBS News foreign correspondent Lara Logan spoke with Fox News Sean
12 Hannity about her recent comments slamming the media as “mostly liberal.”
13

14 Logan told Breitbart podcaster Mike Ritland the remarks made on his show — which drew widespread
15 attention online — amounted to “professional suicide.”
16

17
18 Defending her remarks on Hannity’s show, Logan said that as the result of her speaking out about how
19 the media is “mostly liberal” she has been targeted because she is an independent voice.
20

21 “Any journalists who are not beating the same drum and giving the same talking points,” she insisted
22 “pay the price” for not going along with the liberal crowd.
23

24
25 She also called out her targeters by name.
26

1
2 “I know they’re going to come after me,” she told Hannity. “Michael Calderone who is at the
3 Huffington Post. I can give you the script now. I can tell you who the players are. Joe Hagan. Brian
4 Stelter.”

5
6 She added: “They smear you personally. They go after your integrity. They go after your reputation as
7 a person and a professional. They will stop at nothing. I am not the only one. And I am just, I am done,
8 right, I am tired of it. And they do not get to write my story anymore. They don’t get to speak for me, I
9 want to say loudly and clearly to anybody who is listening, I am not owned. Nobody owns me, right?
10 I’m not owned by the left or the right.”

11
12
13 Logan made headlines recently when, during a scorched earth podcast interview with Ritland, she said
14 that there was a lot of “weight” in most news organizations on “one side of the political spectrum.”

15
16
17 “The media everywhere is mostly liberal. But in this country, 85 percent of journalists are registered
18 Democrats. So that’s just a fact, right?” she told Ritland.

19
20 She also trashed reporting based on single, anonymous government sources.

21
22 “That’s not journalism, that’s horseshit,” Logan stressed. “Responsibility for fake news begins with us.
23 We bear some responsibility for that, and we’re not taking ownership of that and addressing it. We just
24 want to blame it all on somebody else.”

Public Record Documents Now Prove The Existence Of Many Obama Hit-Job Services

Internal documents from a private Israeli intelligence firm called Psy-Group show that, at the time of many incidents, the company, and possibly other private investigators, were targeting U.S. citizens because they spoke up about crimes.

Psy-Group’s intelligence and influence operations, which included a failed attempt in the summer of 2017 to sway a local election in central California, were detailed in a New Yorker investigation that I co-wrote earlier this month. Before it went out of business (ie: changed it's name) , last year, Psy-Group was part of a new wave of private-intelligence firms that recruited from the ranks of Israel’s secret services and described themselves as “private Mossads.” Psy-Group initially stood out among its rivals because it didn’t just gather intelligence; its operatives used false identities, or avatars, to covertly spread messages in an attempt to influence what people believed and how they behaved. In 2016, Psy-Group held discussions with the Trump campaign and others about conducting covert “influence” operations to benefit the candidate. Psy-Group’s founder and C.E.O., Royi Burstien, a veteran Israeli intelligence officer who established the firm in 2014, told me that his talks with the Trump campaign went nowhere. The company’s posturing, however, attracted the attention of Robert Mueller, the special counsel, who has been investigating interference in the 2016 Presidential race.'

FED BOMBHELL: Fusion GPS Bribed Dozens of MSM Journalists With Cash To Run

Character Assassinations, While News Companies Paid Firm to Dig Dirt on Trump

High-ranking FBI insiders are pulling back the curtain on Fusion GPS, the firm that commissioned and spread the bogus Trump dossier.

It appears the embattled intelligence firm was quite busy paying off Big Media reporters, according to federal sources who have traced dozens of transactions between TD Bank and media members as well as media organizations, sources confirm.

But stunningly, Big Media organizations have employed Fusion GPS to dig dirt on politicians and D.C.'s elite — namely Donald Trump.

“Fusion GPS was on the payroll of the media and in turn had members of the media on its payroll,” one FBI insider said.

Bombshell revelations.

FBI insiders confirm Fusion GPS employed law firms as well as shell companies to send and receive funds to and from media and reporters. But the embattled firm also used its accounts at TD Bank to directly commission reporters. Likewise, Fusion GPS received funds from media companies into its own accounts at TD Bank, FBI insiders said,

1 “There are dozens of payments from the media flowing into their (Fusion GPS’) account,” one federal
2 law enforcement official said. “One company wired funds to Fusion (GPS) more than a dozen times.”

3
4 Why would media companies commission Fusion GPS? Likely to dig dirt on enemies or secure records
5 that reporters could not legally obtain, one federal law enforcement insider said. One FBI insider said
6 the payments to Fusion GPS coincide with Donald Trump’s run for the White House.

7
8
9 The payments were made between Sept. 2015 and Sept. 2017, records show.

10
11 The unthinkable: The mainstream media paying Fusion GPS for dirt on Trump to the same firm the
12 Democratic National Committee paid to fund the bogus Trump dossier. And at the same time Fusion
13 GPS bribing journalists to place stories — likely negative about Trump, as well as spread the bogus
14 Trump dossier around.

15
16
17 Stunning.

18
19 Was BuzzFeed — the only company to publish the full bogus dossier — on that list?

20
21 And who is on the payroll? We are trying to run that information down.

22
23
24 And why aren’t these people behind bars?

Feds Could Save Taxpayers ‘Billions Of Dollars’ By Straightening Out One Corrupt Energy Department Program, Report Finds

Michael Bastasch | Energy Editor

The Trump administration could save “billions of dollars” if the Energy Department improved its management of radioactive waste cleanups, according to the Government Accountability Office (GAO).

The GAO [report](#), released Tuesday, also reported Congress could save up to \$4.3 billion by eliminating the loan program that gave \$192 million to a failed luxury electric car company.

“The Department of Energy could potentially avoid spending billions of dollars by developing a program-wide strategy to improve decision-making on cleaning up radioactive and hazardous waste,” GAO reported.

The Energy Department is responsible for cleaning up waste from nuclear weapons produced during the Cold War. The department has spent \$170 billion on cleanup since 1989, GAO reported, but lots of radioactive waste remains. [\(RELATED: The NYT Walks Back Bombshell EPA Report, Doesn’t Issue A Correction\)](#)

The cost of cleanup is growing. The Energy Department estimates future nuclear waste cleanup

1 could cost \$377 billion at 16 sites across the country. GAO says taxpayers could save billions if they
2 took a programmatic approach rather than each nuclear waste site setting its own priorities.
3

4 The 200 Area of the Hanford nuclear site is seen in a 1995 aerial photo. Department of
5 Energy/Handout via REUTERS

6 For example, Energy Department officials estimated \$18 billion in savings from prioritizing
7 high-risk over low-risk waste at the Hanford site in Washington state. The department has yet to
8 determine what it will do with as much as two-thirds of the low-risk waste at Hanford.
9

10
11 The Hanford site cleanup [came under increased scrutiny](#) after a “take cover” order was given in
12 2017 after a tunnel containing radioactive waste collapsed.

13 “DOE officials said that they are making progress in implementing a national programmatic
14 approach to the cleanup and will continue to work toward this,” GAO reported. “DOE provided
15 technical comments, which were incorporated as appropriate.”
16

17 GAO also highlighted an open recommendation to Congress that could save taxpayers up to
18 \$4.3 billion.

19 “Unless the Department of Energy can demonstrate demand for new Advanced Technology
20 Vehicles Manufacturing loans and viable applications, Congress may wish to consider rescinding all or
21 part of the remaining credit subsidy appropriations,” GAO reported.
22

23
24 The Obama administration used that loan program to hand out taxpayer funds to electric car
25 companies, including luxury **automaker Fisker Automotive, which drew down on \$192 million**
26

1 before [having its government credit stripped](#) away.

2 Fisker’s loan was [sold off to a Chinese billionaire](#) for \$25 million in 2013, netting taxpayers a
3 \$139 million loss.

DEMAND FOR ACTION

The files provided (and hundreds of other digital repositories around the globe) hold proof of these assertions of criminal and illicit corruption activities operated by white house and department of energy executives!

We demand a special counsel dedicated to investigating, and not covering up, this case!

We demand that all federal employees involved be fired!

We demand that the public and the victims receive damages recovery!

We demand that the whistle-blowers receive protection and are allowed to speak before congress!

DOE CORRUPTION—APPOINTED AND ELECTED OFFICIALS SHOULD FACE PRISON TIME

By [Marita Noon](#)

An exhaustive review of [350+ pages of leaked emails](#) regarding the Obama administration’s handling of the various green-energy loan and grant programs makes several things very clear: they [lied](#), engaged in favoritism, and rushed application approvals to suit the political agenda of the White House. At the same time, worthy projects that went through a complete due diligence process were denied or ultimately withdrawn, as the lengthy approval process “taxed investors’ patience”—as was the case with Aptera Motors, which worked closely with the DOE for two years.

Paul Wilbur, President and CEO at Aptera, didn’t think they were treated unfairly. He told me, “At the end of the day, we couldn’t get through the process.” But, he admits, he hasn’t read the emails.

Aptera was trying to build a very efficient electric vehicle with an under \$30K price point. Wilbur met with Secretary Chu who could see the value in the technology. But our research shows that value was not the deciding factor in which projects got funded and which ones didn’t. Wilbur reports that he didn’t donate to any candidate. He wanted to keep the whole process clean and do what was “good for America.”

[The report](#) from the House Oversight Committee says Aptera first applied for an ATVM loan in December of 2008 and “shut down on December 2, 2011.” The report implies that Aptera was led on: “After numerous negotiations with DOE, in September 2011, Aptera received a conditional loan commitment of \$150 million if the company was able to raise \$80 million privately.” And: “The loans given to Fisker and Tesla gave Aptera hope that DOE would eventually act on their application. More

1 importantly, since the DOE continued to engage with the company throughout the time period,
2 management was convinced that DOE was interested and willing to provide financing for the
3 company.”

4 Aptera’s 100% US technology has since been sold to a Chinese company.

5 Aptera was applying for an Advanced Technology Vehicle Manufacturing loan (ATVM). Only
6 five loans were given out through the program and all have political ramifications. Christine Lakatos,
7 who has worked with me on the green-energy, crony-corruption reports I’ve written, has done thorough
8 research on the topic. She has read each and every one of the 350+ pages of emails released on October
9 31 and has written a [blog post](#) specifically addressing the ATVM program and its hijinks. As she cites,
10 Fisker and Tesla (which Romney referenced in the first debate), got loans in 2010 and then the Vehicle
11 Production Group’s loan was the only ATVM loan closed in 2011; all have ties to Obama bundlers.
12 The other two ATVM loans went to Ford and Nissan—both of which, according to the House [report](#),
13 “were heavily engaged in negotiations with the Administration over fuel economy standards for model
14 years 2012-2016 at the time the DOE was considering their applications. Both companies eventually
15 expressed publicly their support for these standards, which the Administration described as the
16 ‘Historic Agreement.’”

17 Armed with the sweeping knowledge of the House reports and subsequent hearings, evidence
18 from DOE staffers (many of whom were appointed by Obama), Lakatos’ research, and personal
19 experience, a different ATVM applicant has now taken its case to court citing “corruption and
20 negligence.”

21 On November 16, 2012, [XP Technologies](#) filed a lawsuit against the federal government
22 concerning the DOE’s denial of XP Technology’s loan guarantee application. The [complaint](#) alleges:
23

1 “criminal activities did take place by DOE staff and affiliates.” A November 23 [press release](#)
2 announces that XP Technologies is now represented by [Cause of Action](#), “a nonprofit, nonpartisan
3 organization that uses investigative, legal, and communication tools to educate the public on how
4 government accountability and transparency protects taxpayer interests and economic activity.”

5 According to the document filed on November 16, “Plaintiffs' backgrounds include extensive
6 issued patents on seminal technologies in use world-wide, White House and Congressional
7 commendations and an engineering team of highly experienced auto-makers. Plaintiff brought a vehicle
8 design, which was proposed as the longest range, safest, lowest cost electric vehicle, to be built in
9 America in order to deliver extensive American jobs nationwide. No other applicant, or award
10 ‘winner’, has succeeded in meeting, or (is) intending to meet, that milestone. XP Technology
11 developed a patented lightweight, low-cost, long-range, electric vehicle using air-expanded foam-
12 skinned material for a portion of the polymer body and received numerous patents, acclaim and
13 superior computer modeling metrics over any competing solution. XP presented a vast set of letters of
14 support to DOE from pending customers. Major auto-industry facilities and engineers had joined forces
15 to bring the vehicle to the defense, commercial and consumer market.”

16 Over the weekend, we had an exclusive interview, on condition of anonymity, with a senior
17 official at XP Technologies about the lawsuit and the experience.

18 He reported: “Staff from within the DOE have provided evidence which is quite compelling.”
19 As Aptera's Wilbur made clear, the individuals within the DOE were very thorough. One of the emails,
20 in the 350+ pages, was from Secretary Chu himself in which he criticized staffers for taking a
21 “principled stand,” which held up the approval process of projects the White House wanted advanced.
22 Another indicated that the pressure to rush was coming from “above the agency.” Overall, the emails
23
24
25
26

1 show that projects were rushed so that announcements could coincide with visits, speeches, and photo
2 ops—as well as providing talking points for the president.

3 Our XP source told us “We experienced, and have been provided evidence of, applicant
4 submissions and reviews being modified in order to benefit some and disadvantage others, and the
5 business connections between the different parties associated with the ones that benefited is quite
6 extraordinary.” The leaked emails support this accusation, specifically regarding the “business
7 connections.” In her post, Lakatos calls it “green fraternizing.” The emails show that certain applicants
8 and decision makers went bike riding together, had coffee meetings, sleepovers, beer summits, parties,
9 dinners, and fundraisers.

11 While he didn’t provide us with a name, the XP official said, “We experienced a senior senator
12 blockading our efforts and then providing favors to a competitor, which then benefited his family
13 financially.” The discovery the lawsuit will provide will expose the “senior senator,” but our previous
14 research shows that [Senator Harry Reid](#)’s actions seem to fit the XP official’s comment.

16 XP Technologies believes that “DOE officials changed the first-come-first-served published
17 rules and standards of the funding in order to take applicants in order of who they favored and who had
18 purchased the most influence instead of the order in which they applied, as required.”

19 Having extensively studied the DOE’s various loan programs, including the ATVM, Lakatos
20 and I agree with our source’s startling conclusion: “Based on the evidence provided by investigators,
21 and experienced directly by our team, it is hard to imagine that at least one or more elected, or?
22 appointed, officials might not be seeing measures ranging from censure or even federal prison time.”

24 Time, the lawsuit, and subsequent investigation will tell.

25 While the House Oversight Committee has been digging deeply into the mismanagement and

1 corruption of the green energy loans, the media has paid little attention. Other than [our report](#), the
2 October 31 release of the emails cited here received virtually no news reporting. Even the Fox News
3 Channel ignored the story. The plight of promising companies like Aptera and XP Technologies would
4 have gone unnoticed if not for the lawsuit. The legal complaint attracted attention.

5 On November 16, the [Heritage Foundation](#) broke the XP story: “A lawsuit filed in federal court
6 on Wednesday alleges mass favoritism in the Department of Energy’s decisions to award federal grants
7 to major car companies to develop electric vehicles, according to a legal complaint obtained by
8 Scribe.”

9
10 On November 19, Lakatos, whose work is listed as “evidence” in the legal complaint, received
11 a call from Fox News’ Gary Gastelu—who [reported on the story](#) on November 20. The next day, Fox
12 News covered the lawsuit on America’s Newsroom. Even the Drudge Report picked up on the story.

13 XP has a [litigation website](#) on which the company states: “The case has nothing to do with
14 complaining about not getting the loans. It has everything to do with HOW the applicants didn't get the
15 loans!” They are communicating with other applicants about participating in the lawsuit.

16
17 The XP story and subsequent media coverage offers a lesson for others—especially industries
18 who have been wronged by the Obama Administration’s practices (such as energy). The lawsuit may—
19 or may not—send officials to federal prison, as our XP source suggests, but it could go a long way to
20 winning in the court of public opinion.

February 28, 2012

Secretary Steven Chu
U.S. Department of Energy
Washington, D.C.

Dear Secretary Chu,

Today Bright Automotive, Inc will withdraw its application for a loan under the ATVM program administered by your department. Bright has not been explicitly rejected by the DOE; rather, we have been forced to say "uncle". As a result, we are winding down our operations.

Last week we received the fourth "near final" Conditional Commitment Letter since September 2010. Each new letter arrived with more onerous terms than the last. The first three were workable for us, but the last was so outlandish that most rational and objective persons would likely conclude that your team was negotiating in bad faith. We hope that as their Secretary, this was not at your urging.

The actions – or better said "lack of action" -- by your team means hundreds of great manufacturing and technical jobs, union and non-union alike, and thousands of indirect jobs in Indiana and Michigan will not see the light of day. It means our product, the Bright IDEA plug-in hybrid electric commercial vehicle, will not provide the lowest total cost of ownership for our commercial and government fleet customers, saving millions of barrels of oil each year. It means turning your back on a bona fide step forward in our national goal to wean America away from our addiction to foreign oil and its implications on national security and our economic strength.

In good faith we entered the ATVM process, approved under President Bush with bi-partisan Congressional approval, in December of 2008. At that time, our application was deemed "substantially complete." As of today, we have been in the "due diligence" process for more than 1175 days. That is a record for which no one can be proud.

We were told by the DOE in August of 2010 that Bright would get the ATVM loan "within weeks, not months" after we formed a strategic partnership with General Motors as the DOE had urged us to do. We lined up and agreed to private capital commitments exceeding \$200M – a far greater percentage than previous DOE loan applicants. Finally, we signed definitive agreements with state-of-the-art manufacturer AM General that would have employed more

1
2
3 than 400 union workers in Indiana in a facility that recently laid-off 350 workers. Each time
4 your team asked for another new requirement, we delivered with speed and excellence.

5
6 Then, we waited and waited; staying in this process for as long as we could after repeated, yet
7 unmet promises by government bureaucrats. We continued to play by the rules, even as you
8 and your team were changing those rules constantly – seemingly on a whim.

9
10 Because of ATVM's distortion of U.S. private equity markets, the only opportunities for 100
11 percent private equity markets are abroad. We made it clear we were an American company,
12 with American workers developing advanced, deliverable and clean American technology. We
13 unfortunately did not aggressively pursue an alternative funding path in China as early as we
14 would have liked based on our understanding of where we were in the DOE process. I guess we
15 have only ourselves to blame for having faith in the words and promises of our government
16 officials.

17
18 The Chairman of a Fortune 10 company told your former deputy, Jonathan Silver, that this
19 program “lacked integrity”; that is, it did not have a consistent process and rules against which
20 private enterprises could rationally evaluate their chances and intelligently allocate time and
21 resources against that process. There can be no greater failing of government than to not have
22 integrity when dealing with its taxpaying citizens.

23
24 It does not give us any solace that we are not alone in the debacle of the ATVM process. ATVM
25 has executed under \$50 million of transactions since October of 2009. Going back to the
26 creation of the program, only about \$8 billion of the approved \$25 billion has been invested. In
27 the meantime, countless hours, efforts and millions of dollars have been put forth by a
28 multitude of strong entrepreneurial teams and some of the largest players in the industry to
advance your articulated goal of advancing the technical strength and clean energy
breakthroughs of the American automotive industry. These collective efforts have been in vain
as the program failed to finance both large existing companies and younger emerging ones
alike.

Our vehicle would have been critical to meet President Obama's stated goal of one million plug-
in electric vehicles on the road in 2015 and his commitment to buy 100 percent alternative
fueled vehicles for the Federal Fleet. So, we are not the only ones who will be disappointed.

The ineffectiveness of the DOE to execute its program harms commercial enterprise as it not
only interfered with the capital markets; it placed American companies at the whim of approval
by a group of bureaucrats. Today at your own ARPA-E conference, Fred Smith, the remarkable
leader of FedEx, made the compelling case to reduce our dependence on oil; a product whose
price is manipulated by a cartel which has caused the greatest wealth transfer in our history
from the pockets of working people and businesses to countries, many of whom are not our
allies. And yet, having in hand a tremendous tool for progress in this critically strategic battle --
a tool that drew the country's best to your door -- you failed not only in the deployment of
funds from ATVM but in dissipating these efforts against not just false hope, but false words.

1
2
3
4
5
6 For us, this is a particularly sad day for our employees and their families, as well as the
7 employees and families of our partners. We asked our team members on countless occasions
8 to work literally around the clock whenever yet another new DOE requirement came down the
9 pike, so that we could respond swiftly and accurately. And, we always did.

10
11 Sincerely,

12

THE OBAMA AND BIDEN DEPARTMENT OF ENERGY PUT MORE COMPANIES OUT OF BUSINESS AND ENDED MORE JOBS THAN ANY OTHER MODERN ADMINISTRATION

Over the past two decades, corruption has emerged as a significant area of engagement as part of overall efforts to promote “good governance”. From a citizen perspective, the fight against corruption is also driven by normative considerations as well as a perceived need to show domestic audiences they are taking a tough stand on corruption.

A central message emerging from ongoing anticorruption work is that not all types of corruption are the same, and that multiple, differing responses are needed based on the context, stakeholders and specific nature of corrupt behaviours. The evidence analysed as part of this case looks at several different kinds of interventions, including public financial management, supreme audit institutions, direct anti-corruption interventions and social accountability initiatives, none of which the Department of Energy or the U.S. Government have launched with any sincerity. Window-dressing PR that accomplishes nothing but shutting up the citizens is pointless.

Per Hilary Kao, of the William & Mary Environmental Law and Policy Review, In the year following the Fukushima nuclear disaster in March 2011, the renewable and clean energy industries faced significant turmoil— from natural disasters, to political maelstroms, from the Great Recession, to U.S. debt ceiling debates. The Department of Energy’s Loan Guarantee Program (“DOE LGP”), often a target since before it ever received a dollar of appropriations, has been both blamed and defended in the wake of the bankruptcy filing of Solyndra, a California-based solar panel manufacturer, in September 2011, because of the \$535 million loan guarantee made to it by the Department of Energy (“DOE”) in

1 2009. Critics have suggested political favoritism in loan guarantee awards and have questioned the
2 government's proper role in supporting renewable energy companies and the renewable energy
3 industry generally. In looking beyond the Solyndra controversy to examine the origin, structure and
4 purpose of the DOE LGP. It asserts that loan guarantees can serve as viable policy tools, but require
5 careful crafting to have the potential to be effective programs. The third-party studies conclude that the
6 DOE LGP did not have consistent or achievable legislative directives nor did it have a reasonable
7 timetable to implement its Loan Guarantee Program....

19 (3 Alison Williams, BGOV Study: Solyndra Failure Obscures Low-Risk Energy Guarantees,
20 BLOOMBERG GOV' T BLOG (Dec. 1, 2011), <http://about.bgov.com/2011/12/01/bgov-study>
21 -solyndra-failure-obscures-low-risk-energy-guarantees/.)

22 This risk profile, however, reflects the DOE's failure to meet its statutory goals, because the
23
24

1 DOE had competing and contradictory Congressional directives, dooming the Loan Guarantee
2 Program’s ability to succeed. First, her Article examines the ambiguous language commonly used to
3 describe renewable energy, green energy, clean energy and industries associated with these terms. It
4 then defines two terms: the Renewable Energy Industry (“REI”) and the Renewable Energy Electrical
5 Generation Industry (“REEGI”). Second, the Article examines the state of the market for REEGI and
6 various challenges that face this industry. Third, the Article describes the origin and structure of the
7 DOE LGP and initial assessments of this program prior to the Solyndra
8 scandal. The Article analyzes the DOE LGP and asserts that the program’s contradictory legislative
9 guidance, by the U.S. Government, limited the effectiveness of the program, ensuring the program
10 would face criticism from all sides no matter which projects it supported. The Article also examines the
11 common arguments made against the DOE LGP specifically, and government loan guarantees
12 generally. Finally, the Article concludes that loan guarantees can be viable policy tools, but their
13 effectiveness depends on both the coherence of legislative authority and implementation. In the case of
14 the DOE LGP, competing legislative purposes, stock market bribes and lack of specificity hampered
15 the program’s effectiveness. [Michael Dahlen](#) testifies that, In “[The Assault on Corporations](#)” (*TOS*, Fall
16 2020), he showed that the economic power of a corporation is fundamentally different from the
17 political power of government. Whereas economic power is the ability to produce and trade, political
18 power is the legal authority to use physical force against people. Government acts legitimately when it
19 uses force to protect people from criminals and hostile nations. But it often acts illegitimately, using
20 force to violate people’s rights. A corporation can have vast economic power, but unlike government, it
21 has no legal authority to force anyone to do anything. Despite this, people often conflate economic
22 power with political power, incorrectly ascribing political power to corporations.
23
24
25
26
27
28

1 Although corporations lack direct political power, some critics retort, this misses the point.
2 They use their economic power to unduly influence government. Corporations thus wield political
3 power, the argument goes, because they gain control over those who have it. “These massive
4 concentrations of economic power,” says former secretary of labor Robert Reich, “generate political
5 clout that’s easily abused.”¹ Liz Kennedy from the Center for American Progress says, “America faces
6 a crisis of corporate capture of democratic government, where the economic power of corporations has
7 been translated into political power with disastrous effects for people’s lives.”² Or as Massachusetts
8 Institute of Technology Professor Noam Chomsky puts it, “The corporations set the conditions within
9 which the government operates, and control it to a large extent.”³ This control encompasses both
10 parties. “The corporate political machines,” journalist Chris Hedges writes, “control the Republicans
11 and Democrats.”⁴

12
13 How do they suppose this happens? Pointing to the Constitution, Senator Sheldon Whitehouse
14 asserts that the founding fathers made a tragic mistake. “They overlooked one threat. They overlooked
15 the corporation,” he says; “The Founding Fathers saw no specific threat to our government from
16 corporate entities, so they built no specific defenses to protect against them.”⁵ Because of this
17 oversight, as author Robert Monks puts it, “Corporations have effectively captured the United States:
18 its judiciary, its political system, and its national wealth.”⁶

19
20 Reportedly, corporations have pulled this off through lobbying and campaign spending. As
21 George Monbiot (*The Guardian*) says, “The forces that threaten to destroy our wellbeing are also the
22 same everywhere: primarily the lobbying power of big business and big money.”⁷ According to
23 Professors Benjamin Page (Northwestern) and Martin Gilens (University of California at Los Angeles),
24 “Too much damage is being done to democracy by the flood of private money in our politics.”⁸ Senator
25 Whitehouse agrees: “Giant corporations and their minions exert power over our democracy—flooding
26 our elections with cash intended to buy results.”⁹

1 The results that corporations buy include tariffs, subsidies, deregulation, and tax cuts. Some call
2 this bribery; some call it corruption; some call it cronyism.

3
4 This undue corporate influence, many argue, stifles the government’s ability to get important
5 things done, thwarting the will of the public. Billionaire and Democrat presidential primary candidate
6 Tom Steyer says, “The corporations own the government, and the government serves them and not the
7 people of the United States.”¹⁰ Or as authors Wendell Potter and Nick Penniman write, “It is difficult
8 to imagine how we can make meaningful progress as long as so many of our lawmakers and regulators
9 are in the deep pockets of a few big companies.”¹¹

10 If the government answers to corporations, not voters, then our system is a sham. Rather than a
11 government of the people, by the people, and for the people, we have, as New York University
12 Professors Ralph Gomory and Richard Sylla put it, “a government of the corporations, by the
13 corporations, and for the corporations.”¹² On this belief, many citizens have lost trust in the system. A
14 2010 survey of young adults revealed that the top reason they planned not to vote was “because no
15 matter who wins, corporate interests will still have too much power and prevent real change.”¹³
16 According to Senator Elizabeth Warren, “People feel like the system is rigged against them, and . . .
17 they’re right. The system is rigged.”¹⁴

18
19 The solution to this rigged system, many say, is obvious: The government, author David Korten
20 writes, must “limit the power and freedom of powerful corporations in order to restore democracy.”¹⁵
21 Political activist Ralph Nader says we must “subordinate raw corporate power to the will of the
22 people.”¹⁶ And echoing a widespread sentiment, Senator Bernie Sanders says we must “get corporate
23 money out of politics.”¹⁷

24 By shackling corporations and unrigging the system, we are told, our democracy will work
25 properly again, enacting good policies in the public interest. As Page and Gilens write, “We believe
26

1 that majority rule . . . tends to produce public policies that benefit the largest number of people and
2 promote the common good.”¹⁸

3
4 The above narrative contains snippets of truth. However, lacking relevant context, it grossly
5 misconstrues how the politico-economic system works. As most people on both the left and the right
6 agree, our system *is* dysfunctional. But are corporations to blame for this dysfunction? And is more
7 democracy the answer?

8 **BIG TECH'S LOBBYING AND CAMPAIGN SPENDING WITH DIRTY SENATORS**

9 Many corporations *do* lobby; that is, they petition the government in order to influence public
10 policy. Besides contracting outside firms to lobby for them, some corporations have a government
11 affairs department, employing in-house lobbyists. Corporations also lobby through trade and industry
12 associations, such as the U.S. Chamber of Commerce, the National Association of Realtors, and the
13 Pharmaceutical Research and Manufacturers of America (PhRMA).

14
15 Politicians and their staffers rely heavily on lobbyists to provide information, present policy
16 research, and help draft legislation.¹⁹ Lobbyists also help politicians raise money for their campaigns.
17 Besides contributing themselves, lobbyists hold political fund-raisers, soliciting money from their
18 corporate clients.

19 Corporate lobbyists target politicians on regulatory committees that oversee their industries.
20 These committees write and approve bills before Congress votes on them, and lobbyists influence what
21 gets included or excluded from them. Not coincidentally, those on high-profile committees—such as
22 the Financial Services Committee, the Energy and Commerce Committee, and the Agriculture
23 Committee—get the most campaign contributions from the industries they oversee. They also get far
24 more contributions than others in Congress. But those on the Ways and Means Committee—
25 responsible for writing tax laws—get the *most*.²⁰

1 Although the Tillman Act of 1907 banned corporations from providing funding directly to
2 political candidates, many big corporations have political action committees (PACs) in which they raise
3 money to contribute. They also spend money independently on political ads.²¹ Corporations, however,
4 are not alone in lobbying and political spending. From labor unions to the National Rifle Association,
5 to the National Education Association, to the American Association of Retired Persons, myriad special
6 interest groups also try to influence elections and public policy. Combined, corporations, PACs, and
7 special interests devote billions of dollars annually to politics. In 2019, they spent \$3.47 billion on
8 lobbying and \$5.72 billion on political campaigns.²²

9
10 It wasn't always like this. Before the 1970s, lobbying and campaign spending were meager
11 compared to today. Few corporations had lobbyists, and fewer had Washington offices. Some trade
12 associations lobbied, but their efforts were sporadic; their methods, unsophisticated; their influence,
13 small.²³ In 1971, Lewis Powell, before becoming a Supreme Court justice, wrote what was later called
14 the Powell Memo. "As every business executive knows," the memo reads, "few elements of American
15 society today have as little influence in government as the American businessman [and] the
16 corporation. If one doubts this, let him undertake the role of 'lobbyist' for the business point of view
17 before Congressional committees."²⁴

18 This changed rapidly. Corporations started to mobilize politically, opening Washington offices
19 while creating more industry associations. Several top CEOs formed the Business Roundtable in 1972
20 for the purpose of lobbying. Meanwhile, from 1974 to 1980, membership in the Chamber of Commerce
21 doubled.²⁵ From 1971 to 1982, firms with registered lobbyists exploded from 175 to 2,445. Corporate
22 PACs also grew, from 89 in 1974 to more than 1,200 in 1980.²⁶ And the total number of PACs
23 (including noncorporate ones) rose from fewer than 1,000 in 1974 to nearly 4,600 in 1985.²⁷ With them
24 came more campaign spending. From 1974 to 1982, spending by all congressional candidates increased
25 from \$77 million to \$343 million.²⁸

1 A 1979 poll revealed that 90 percent of corporate executives said their firm’s “concern with and
2 involvement in federal government relations” had risen in the past three years, and for a majority, this
3 concern was “extremely strong.”²⁹ The question is: Since the 1970s, why have lobbying and campaign
4 spending grown so dramatically?

5
6 Observe that in the 1960s and 1970s, the entitlement state and the regulatory state also grew
7 dramatically. President Lyndon B. Johnson’s “Great Society” created many wealth redistribution
8 programs, from Medicare to Medicaid, to food stamps, to subsidies for higher education. It also
9 enlarged other programs, including Social Security. Moreover, by signing the Tax Reform Act of 1969,
10 President Richard Nixon raised taxes on business. He also expanded the power of the Federal Trade
11 Commission while creating several new regulatory agencies, including the Occupational Safety and
12 Health Administration, the Environmental Protection Agency, and the Consumer Product Safety
13 Commission. Adjusted for inflation, federal entitlement spending from 1960 to 1980 grew nearly
14 sixfold, from \$112 billion to \$657 billion.³⁰ And the *Code of Federal Regulations* grew nearly fivefold,
15 from 22,877 to 102,195 pages.³¹

16 *The vast growth of the regulatory-entitlement state led to the vast growth of lobbying and*
17 *campaign spending.*³² Why? The more government intervenes in the economy—restricting the freedom
18 of corporations, mandating what they must and must not do, imposing onerous compliance costs—the
19 more incentive corporations have to influence *how* it intervenes. A government that heavily
20 redistributes wealth, moreover, favoring some at the expense of others, foments an interest-group
21 society: Privileged groups will lobby to protect their loot, some victims will lobby to become a
22 privileged group, and other victims will lobby to protect their rights. As the great French political
23 economist Frédéric Bastiat wrote in 1850, when law is “diverted from its true purpose—that it may
24 violate property instead of protecting it—then everyone will want to participate in making the law,
25 either to protect himself against plunder or to use it for plunder.”³³

1 The burst of corporate lobbying in the 1970s was in *self-defense*, as corporations tried to protect
2 themselves against Johnson’s and Nixon’s interventionist onslaught. The CEOs who created the
3 Business Roundtable believed business should play a “role in the formation of public policy” in order
4 to reduce “unwarranted intrusion by government into business affairs.”³⁴

5
6 Although corporate lobbying efforts slowed such intrusion in the 1980s, a potentially enormous
7 threat arose in 1993 with President Bill and First Lady Hillary Clintons’ universal health-care plan.
8 Among other things, it would have imposed price controls, forced employers to provide health
9 insurance, and mandated what benefits insurance plans could offer. In response, the health-care
10 industry upped its lobbying, which helped defeat the plan. From 1992 to 1994, the number of health-
11 care firms engaged in lobbying nearly doubled.³⁵ Campaign contributions followed suit. “As Congress
12 prepares to debate drastic changes in the nation’s health care system,” the *New York Times* reported,
13 “its members are receiving vast campaign contributions from the medical industry, an amount
14 apparently unprecedented for a non-election year. . . . It is apparent that the early winners are members
15 of Congress.”³⁶

16 Another, more recent intrusion is President Donald Trump’s “trade war,” which is harming not
17 only businesses that import consumer goods, but also those that import components and raw materials.
18 This has led many such businesses to hire lobbyists to help them get tariff exemptions. As *Politico*
19 reports, “Trump’s trade wars have turned lobbying on tariff exemptions into a big business. . . . More
20 than two dozen mostly small- and mid-sized companies have hired a Washington lobbyist for the first
21 time.”³⁷

22
23 The top reason corporations lobby, according to a survey of lobbyists, is the “need to protect
24 against changes in government policy (or other government actions) that could be harmful.”³⁸ The
25 evidence shows that most corporations *start* lobbying for defensive reasons. Yet for some corporations,

1 resisting government encroachment is not the only reason they *continue* lobbying.

2
3 Historically, most businessmen wanted government to stay out of their way. But in recent
4 decades, the attitudes of some have changed. As one lobbyist describes it, “It’s gone from ‘leave us
5 alone’ to ‘let’s work on this together.’”³⁹ Lobbyists have helped engender this shift because they have
6 vested interests in persuading their corporate clients to sign up for more lobbying.⁴⁰ Like most services,
7 lobbying comes in degrees, ranging from a narrow focus on one issue to a comprehensive,
8 multipronged strategy encompassing many issues.

9 The most politically active corporations don’t always know everything their outside lobbyists
10 are doing, as most executives focus on their businesses while leaving political affairs to specialists.⁴¹
11 As Senator Whitehouse points out, “CEOs may be wildly ignorant of their own lobbying operation . . .
12 [leading to] one set of policies in the executive suites, but a completely different push from their
13 lobbying muscle in Congress.”⁴²

14
15 As corporations become more politically engaged, the strategies of some—often at the behest of
16 their lobbyists—shift from defense to *offense*.

17 **BIG TECH’S AND THE WEST COAST SENATOR’S CRONYISM**

18 The pharmaceutical industry presents an example of lobbying that shifted from defense to
19 offense. Whereas the industry’s trade group, PhRMA, lobbied against the Clinton health-care plan, it
20 lobbied *for*—and helped draft—the Medicare Modernization Act (MMA, 2003).⁴³ The MMA added a
21 prescription drug subsidy (Part D), the biggest expansion of Medicare in history. As the government
22 became a main buyer of prescription drugs, pharmaceutical sales soared. Medicare Part D now costs
23 almost \$100 billion annually.⁴⁴

24
25 Congressman Billy Tauzin, receiving substantial campaign contributions from the health-care

1 industry, shepherded the MMA through the House.⁴⁵ After leaving Congress in 2005, he became
2 president of PhRMA, which then lobbied heavily for the Affordable Care Act (ACA, 2010). President
3 Barack Obama wanted measures to contain costs on Medicare Part D, but PhRMA opposed them.
4 Obama agreed to limit these measures, and in exchange, PhRMA ran a \$150 million ad campaign
5 supporting the bill.⁴⁶ But PhRMA wasn't the only group to lobby. More than fourteen hundred
6 organizations also lobbied on the ACA.⁴⁷

7
8 PhRMA's offensive lobbying strategy—pursuing special favors, corporate welfare, and rights-
9 violating regulations—is an instance of *cronyism*, the practice of lobbying for policies in which
10 government wields force to help a company or harm its competitors. Defensive lobbying, by contrast—
11 legitimately lobbying to avoid unjust penalties—is *not* cronyism. But as we will see, the line between
12 defensive lobbying and offensive lobbying is often unclear.

13 Because wealth redistribution and government intervention are rife, so is cronyism. The
14 government favors some corporations with tariffs (e.g., steel), subsidies (agriculture), bailouts (banks),
15 loan guarantees (alternative energy), and monopoly franchises (public utilities)—to name a few. A
16 government that dispenses such favors will inevitably attract favor-seeking corporations.

17
18 Of course, corporations and politicians never admit that cronyism is their motive for supporting
19 such policies. Instead, they often rationalize these policies by offering specious economic arguments.
20 Consider the Troubled Asset Relief Program (TARP) “bailout” of big banks. When the financial crisis
21 unfolded in the fall of 2008, politicians argued that banks were “too big to fail,” so government must
22 bail them out to prevent “contagion.” Yet there is no evidence to support this view—and ample
23 evidence to show that the government's capricious, haphazard response worsened the crisis.⁴⁸ By
24 bailing out Bear Stearns, then Fannie Mae and Freddie Mac, the government created the expectation
25 that it wouldn't let any large financial institutions fail. Inexplicably, it then let Lehman Brothers fail.

1 Markets panicked from the government’s inconsistency, plummeting further *after* it enacted TARP.
2 Despite this, no firms defaulted specifically because Lehman did; its bankruptcy caused no adverse
3 ripple effects or cascading failures. And the company was unwound in a smooth, orderly manner, as its
4 businesses were sold off quickly to other firms.⁴⁹

5
6 Whereas some politicians supported TARP because they feared the crisis would be worse
7 without it, others supported it because of their ties to the financial industry. Is it a coincidence that the
8 architect of TARP, Treasury Secretary Hank Paulson, was the former CEO of Goldman Sachs?⁵⁰
9 Maybe. But shortly before the bailout, Senator Charles Schumer summoned several financial
10 executives for a Democrat fundraiser. He told them that TARP would be a hard sell in Congress, yet
11 they could count on his party. Over the next week, those executives sent \$135,000 in campaign
12 contributions.⁵¹ According to one study, the more contributions politicians got from the financial
13 industry, the more likely they were to vote for TARP.⁵² Another analysis showed that “politically
14 engaged firms were not only more likely to receive TARP support, but they also received a greater
15 amount of TARP support and received the support earlier than firms that were not politically
16 involved.”⁵³

17 The TARP bailout reeked of cronyism. Perhaps the most notorious crony corporation, however,
18 is not in banking but in agriculture: Archer-Daniels-Midland (ADM). For decades, former CEO
19 Dwayne Andreas had close ties to politicians and contributed millions of dollars to their campaigns.⁵⁴
20 Close to half of ADM’s business involves producing ethanol and high-fructose corn syrup (both
21 derived from corn). These two products wouldn’t be economically feasible without heavy government
22 intervention—which ADM lobbied for. Although ethanol is a substitute for gasoline, in a free market,
23 no one would use ethanol as it costs much more and is a lower-quality fuel than gasoline. But thanks to
24 a combination of tariffs, subsidies, mandates, and tax incentives, the government has artificially created
25 a market for one of ADM’s main products.⁵⁵

1 High-fructose corn syrup, a substitute for sugar, has a similar story. The price of sugar in the
2 United States is two to three times higher than the average price in other nations because of tariffs,
3 price supports, subsidized loans, and import restrictions, all lobbied for by the sugar industry.⁵⁶ But one
4 company producing no sugar also supports these policies: ADM. Why? The artificially high price of
5 sugar has artificially increased demand for high-fructose corn syrup. Many food and beverage
6 companies that would prefer sugar instead use high-fructose corn syrup because it costs less. While
7 lining the pockets of ADM, the government’s sugar and ethanol policies cost consumers and taxpayers
8 billions of dollars annually.⁵⁷

9
10 Besides lobbying for tariffs or subsidies, some corporations lobby for more *regulation*. Yet
11 pundits often tell us that corporations reflexively oppose regulations, fighting ruthlessly against them.
12 “When corporations lobby government,” law Professor Joel Bakan says, “their usual goal is to avoid
13 regulation.”⁵⁸ This is true for many corporations but not all. H&R Block lobbied for new IRS
14 requirements on professional tax preparers.⁵⁹ Mattel and Hasbro lobbied for strict regulations on toy
15 safety.⁶⁰ Sylvania and General Electric lobbied for higher efficiency standards on lightbulbs.⁶¹ Kellogg
16 and the Grocery Manufacturers of America lobbied for more stringent food safety regulations.⁶² “I
17 believe we need a more active role for governments and regulators,” Facebook CEO Mark Zuckerberg
18 says; “From what I’ve learned, I believe we need new regulation.”⁶³

19 Regulations raise the cost of doing business. So why would a corporation support them? Some
20 think regulation will give them a government stamp of approval, creating greater trust among
21 consumers and investors. Other corporations, if they know regulation is coming anyway, would rather
22 deal with one set of federal regulations than fifty sets of state regulations. Crony corporations, however,
23 support regulation for a different reason: It creates *barriers to entry*, insulating industry incumbents
24 from new competition. During the Reagan administration, Robert Monks and Nell Minow worked on a
25 Presidential Task Force on Regulatory Relief. To their surprise, they “found that business

1 representatives continually sought more rather than less regulation, particularly when it would . . .
2 protect them from competition.”⁶⁴

3
4 Some regulations purposely stifle competition, and even those that don’t nonetheless have the
5 same effect. *The Code of Federal Regulations* is now more than 185,000 pages long. Though small
6 businesses are exempt from some regulations, other regulations impose onerous burdens on them. Fred
7 Deluca, founder of Subway, says, “If I started Subway today, Subway would not exist.” The
8 environment for entrepreneurs, he continues, has “gotten worse because there are more and more
9 regulations. It’s tough for people to get into business, especially a small business.”⁶⁵ Peter Schiff,
10 founder of Euro Pacific Capital, agrees: “My small brokerage firm now has a rather sizable compliance
11 department. Had all the rules and regulations that exist today been in place in the mid 1990s when I
12 started my firm, I simply would not have had the financial resources to start it up.”⁶⁶

13 Notably, some of the most ardent supporters of regulations recognize that they stifle
14 competition. Our “regulatory system,” Nader observes, “undermines competition and entrenches
15 monopoly at the public’s expense.”⁶⁷ Small businesses and community banks “are drowning in
16 complicated regulations,” Senator Warren points out; “long, complex rules create loopholes that the big
17 companies can take advantage of, but they leave little guys out in the cold.”⁶⁸ And as political
18 commentator Thom Hartmann explains, “large businesses have an infrastructure to deal with
19 regulations, [whereas] the burden of regulations on small businesses sometimes wipes them out.”⁶⁹

20
21 Although regulations generally disadvantage smaller competitors, some small businesses still
22 profit from government favoritism.⁷⁰ The Small Business Administration and other government
23 agencies, for example, subsidize and guarantee loans for small businesses. And in some industries,
24 regulations protect incumbent small businesses by blocking newcomers. Liquor stores, limousine
25 drivers, taxi companies, moving companies—these are just a few industries in which state certificate of

1 need (CON) laws restrict the entry of new firms.⁷¹

2
3 Regulation, in short, harms some small businesses, yet favors others. This highlights an
4 important truth about cronyism. Most critics stress that cronyism victimizes consumers and taxpayers.
5 But they often overlook another group of victims: *other corporations*.

6
7 Manufacturers paying higher prices for steel are among the victims of steel tariffs. Food
8 companies paying higher prices for sugar, and candy companies that have moved their operations
9 offshore because of higher prices are among the victims of sugar subsidies. Sound financial institutions
10 that would have bought the assets of failing banks at fire-sale prices are among the victims of the
11 TARP bailout. Corporations that would enter other industries, yet are blocked from doing so, are
12 among the victims of CON laws and monopoly franchises. Car manufacturers banned from selling
13 directly to consumers are among the victims of state laws favoring car dealerships. Companies such as
14 Airbnb and Uber, banned in some cities, are among the victims of these cities' efforts to insulate hotels
15 and taxis from competition. The most innovative, successful corporations are among the victims of
16 antitrust; less successful corporations file about 95 percent of antitrust lawsuits, seeking to hog-tie their
17 rivals.⁷²

18
19 When government intervenes in the economy—restricting, mandating, prohibiting,
20 expropriating—it initiates *force* against people and businesses, violating their rights. This is why the
21 regulatory-entitlement state invariably harms us all—even those it seemingly benefits.

22
23 Suppose a corporation's lobbyists cannot repeal a harmful intervention. (This is common, as
24 lobbying is far more effective at blocking proposed policies than at repealing existing ones.)⁷³ If, to
25 offset this harmful intervention, the corporation lobbies to gain or keep another seemingly beneficial
26 intervention, is that defensive or offensive? If offensive, is it justified? Or suppose the government
27 subsidizes a corporation's competitors. If that corporation, too, lobbies for a subsidy to negate its

1 competitors' unfair advantage, is that defensive or offensive? Answering these questions is complicated
2 because many corporations are harmed by countless interventions while profiting from others.
3 Whether, on net balance, they are unjustly gaining or unjustly losing is thus extremely difficult to
4 decipher.

5
6 As cronyism becomes more pervasive, and as more corporations become beneficiaries *and*
7 victims of it, the line between defensive lobbying and offensive lobbying becomes increasingly
8 unclear.

9 **THE SYSTEMIC CORRUPTION OF THE WHITE HOUSE AND ENERGY DEPT**

10 If corporate lobbyists raise money and contribute to political campaigns in return for
11 government favors, isn't that bribery? According to the law, no. Lobbyists and politicians know how to
12 play the game legally. If their exchange is indirect, if a quid pro quo is not explicit, it is technically not
13 bribery. But technicalities aside, from an outsider's perspective, even if it's legal, it certainly smells
14 like bribery, and that is how pundits often describe it. However, for an exchange to be considered
15 bribery, the person handing over the money must be the initiator. Corporate lobbyists, though, don't
16 often volunteer to give money; *politicians "request" it.*

17
18 "We imagine lobbyists stalking the halls of Congress," NPR reports, "trying to influence
19 lawmakers with cash. But often, it's the other way around: Members of Congress stalk lobbyists,
20 looking for contributions."⁷⁴ As one former lobbyist puts it, "when a Congressman calls and you need
21 his vote, you agree to host a fundraiser. That means finding other people to come and give money."⁷⁵
22 In a voice mail left for a lobbyist, Representative Eleanor Holmes Norton said she was "surprised" that
23 the lobbyist had not contributed to her. "I'm simply candidly calling," she said, "to ask for a
24 contribution." She also reminded the lobbyist that she is a senior member of the committee and chair of
25 the subcommittee in his "sector."⁷⁶ NPR pointed out that what Norton did is common: "Hundreds of
26 such calls from lawmakers likely occur every month. And that's no doubt an understatement."⁷⁷

1 Nearly everyone across the political spectrum laments that corporations unduly influence
2 government. But the dirty secret of Washington is that politicians want corporations to lobby. Why?
3 Because raising money from corporations that lobby is far easier than raising money from those that
4 don't. Moreover, politicians know that in order to get corporations to lobby, government must
5 intervene in their affairs. Heavily regulated industries also lobby heavily—and contribute to political
6 campaigns. As Tim LaPira of the Center for Responsive Politics puts it, “industries like banking or oil
7 and gas spend an enormous amount of money because they have a history and legacy of being
8 regulated.” By contrast, he points out, “The small proportion of money [hedge funds] are spending is
9 related to the fact that they are not heavily regulated.”⁷⁸

10
11 That was in early 2007, but as the *New York Times* reported, “Washington has turned its
12 attention to the fast-growing hedge fund industry.”⁷⁹ After Senator Schumer held a dinner with hedge
13 fund managers, lobbying expenditures for the industry grew sevenfold in a year while its campaign
14 contributions more than tripled from the 2006 to the 2008 election cycles.⁸⁰ One can only presume
15 Schumer's message to the hedge fund industry was similar to Senator Orrin Hatch's earlier message to
16 the tech industry. “If you want to get involved in business,” Hatch said, “you should get involved in
17 politics.”⁸¹

18 Entangling corporations in politics means more lobbying, which means more contributions for
19 politicians. In 1994, Vice President Al Gore proposed lighter regulation for Internet service providers.
20 The response from Congress, according to one of Gore's aides was, “Hell no! If we deregulate these
21 guys, how are we going to raise any money from them?”⁸²

22
23 Besides regulation, the tax code is an inexhaustible tool for politicians to solicit campaign
24 contributions. But according to many commentators, the tax code also exemplifies cronyism and
25 corporate welfare. How? Targeted tax breaks.⁸³ A corporation that lobbies for tax cuts, however, is not

1 lobbying for a handout; it’s lobbying for the “privilege” of keeping more of its *own* money. Yet critics
2 argue that taxing some corporations less than others is unfair. True, though corporations that pay less
3 taxes should not be blamed for this. Corporate taxes are unequal, and the tax code is mind-numbingly
4 complex because politicians purposely designed it this way.

5
6 Consider “tax extenders.” These are targeted tax breaks, such as the biodiesel fuel tax credit,
7 that expire every few years. Yet Congress renews most, so why not make them permanent?⁸⁴ That
8 would defeat their purpose—from the politicians’ perspective. When a tax extender is about to expire,
9 the corporations benefiting from it will lobby for renewal. This is what the politicians want, as they will
10 raise money from those corporations in exchange for renewing the tax break— temporarily, of
11 course.⁸⁵

12 The game politicians play with tax extenders is similar to a more insidious tactic they use to
13 extract campaign contributions. Politicians will often introduce a bill that would harm an industry.
14 Corporations will then pony up money to have the bill quashed. But the politicians, wanting this from
15 the start, had no intention of enacting the bill. Its purpose was only to raise money from the industry.
16 Politicians even have nicknames for these bills, including “milker bills,” “juicer bills,” and “fetcher
17 bills.”⁸⁶ In this context, campaign contributions are protection money. “Pay us,” the politicians wink
18 and nod, “and we won’t harm you.”

19
20 This is akin not to bribery but *extortion*.

21
22 When John Hofmeister, former president of Shell Oil Company, appeared before Congress,
23 politicians grilled him about high oil prices. Representative Maxine Waters even threatened “taking
24 over and the government running all of your companies.”⁸⁷ As Hofmeister recounts, “After the
25 hearings, a lot of those who had been attacking Shell asked me to donate to their campaigns or help to
26 organize a fund-raiser for them.”⁸⁸

1 Besides threatening harm, politicians also raise money by promising benefits. In 1999, Jim
2 Nicholson, chairman of the Republican National Committee, sent a letter to Charles A. Heimbold Jr.,
3 CEO of Bristol-Myers Squibb. (The letter was disclosed in a campaign finance lawsuit.) “We must
4 keep the lines of communication open,” Nicholson wrote, “if we want to continue passing legislation
5 that will benefit your industry.”⁸⁹ He also asked for a \$250,000 donation.⁹⁰

6
7 Whether dangling a carrot or brandishing a stick, when politicians who hold life-and-death
8 power over an industry come “asking” for money, corporations have no choice but to play the political
9 game. They *must* lobby, and they *must* contribute to political campaigns—or suffer the consequences.

10 Look at what happened to Microsoft. In the 1990s, it spent little on lobbying, and CEO Bill
11 Gates bragged that Microsoft did not have a Washington office. This upset some politicians. Senator
12 Hatch said Microsoft is “knuckle-headed and hard-nosed. . . . I have given (Microsoft) advice, and they
13 don’t pay any attention to it.”⁹¹ According to one lobbyist, “You can’t say, ‘We’re better than that.’ At
14 some point, you get too big, and you can’t just ignore Washington.”⁹² In March 1998, a congressional
15 staffer presciently commented, “The [tech] industry had an attitude that government should do what it
16 needs to do but leave us alone. . . . Their hands-off approach to Washington will come back to haunt
17 them.”⁹³

18
19 So it did. Two months later, the Justice Department slapped Microsoft with an antitrust lawsuit.
20 What was its crime? It offered a Web browser, Internet Explorer, for free, bundling it with the
21 Windows operating system. After years of litigation, a settlement was reached, but the damage was
22 already done. Though Microsoft was best positioned to create an operating system for cell phones, it
23 lost to Google’s Android. “We were doing what was called Windows Mobile,” Gates said. “We missed
24 being the dominant mobile operating system by a very tiny amount. We were distracted during our
25 antitrust trial.”⁹⁴

1 Gates regretted that he was not politically engaged, and Microsoft quickly learned its lesson,
2 spending boatloads of money on lobbying. Other tech companies followed suit. Yet one tech company
3 held out longer than its peers: Apple. Until 2012, it spent relatively little on lobbying. At the time, Jeff
4 Miller, a former senior aide on a Senate Antitrust Subcommittee, said, “I never once had a meeting
5 with anybody representing Apple. There have been other tech companies who chose not to engage in
6 Washington, and for the most part that strategy did not benefit them.”⁹⁵ Apple’s lobbying expenditures
7 have since more than tripled in response to increased scrutiny from the government.⁹⁶

8
9 Unlike Apple and Microsoft, who play the political game because they must, some corporations
10 play it because they can. Rather than seeking independence, they seek tariffs, subsidies, anticompetitive
11 regulations, and the like. That such corporations should be condemned seems obvious. But condemning
12 them, though justifiable, is often problematic because identifying which corporations should be
13 condemned is fraught with difficulty, given the unclear line between defensive and offensive lobbying.
14 Also, such condemnation is often misplaced because crony corporations are a symptom of the problem,
15 not its cause.

16 Primarily, what must be condemned and changed is the *system* that goads corporations to lobby
17 in self-defense while enticing them to lobby for political favors. This politico-economic system is a
18 *mixed economy*, a mix of freedom and government intervention, of capitalism and the regulatory-
19 entitlement state. One argument for a mixed economy is that, although capitalism is a great engine of
20 wealth creation, its “excesses” must be tamed. Government intervention is vital for the “public interest”
21 and the “common good.”

22
23 We need to rethink this view. The dysfunction and injustice of this system follows from the
24 government’s power to intervene in the economy, dispensing political favors to some at the expense of
25 others. Who should receive such favors? At whose expense? And why? In a mixed economy, the
26

1 groups wielding the most political influence determine who wins and who loses. The result is a free-
2 for-all of corporations, special interests, and their lobbyists vying to sway public policy. The implicit
3 principle underpinning this system is: There are no principles.

4 The individual’s rights? Antiquated.

5 His freedom and liberty? Dispensable.

6 His wealth and property? Up for grabs.

7
8 No policy, however immoral or irrational, is off-limits if lobbyists can jockey enough
9 politicians, or enough politicians can jockey each other, to support it. Every major bill is hundreds, if
10 not thousands, of pages because politically connected groups pull strings, inserting provisions that
11 benefit themselves—or harm others. As a result, government policy is a jumbled, unintelligible mix of
12 privileges and penalties. In a mixed economy, competition for political favors increasingly replaces
13 competition in the marketplace. Meanwhile, as the volume and complexity of government intervention
14 grow, so does the burden on the economy. What is the solution to this rotten system?
15

16
17 Our system has so many problems, some argue, because our democracy has been hijacked.
18 “Regular people,” Senator Whitehouse laments, “are no longer in the driver’s seat of American
19 democracy.”⁹⁷ Who, then, is in the driver’s seat? The “forces of corporate power,” Whitehouse
20 continues, “have infiltrated our democracy.”⁹⁸ Korten says, “When corporations rule over our political,
21 cultural, and economic spaces, democracy is at best an illusion.”⁹⁹ Or as Reich declares, “democracy
22 cannot be achieved unless power is reallocated.”¹⁰⁰
23

24 In this view, unless we take power from corporations and return it to the people, no progress is
25 possible. “We need to fix democracy,” Potter and Penniman argue, “before we can fix the other
26

1 problems we all face.”¹⁰¹ This will “give public-interest legislation a much better shot of winning over
2 the private interests.”¹⁰² Professors Page and Gilens agree: “Our problems can be more effectively
3 addressed if we reform our political system to achieve *more democracy*: more equal opportunity for all
4 citizens to shape what their government does and policies that better address the needs of all
5 Americans.”¹⁰³

6
7 In order to fix our democracy, these intellectuals argue, we must get private money out of
8 political campaigns. Why? Because, as Page and Gilens assert, “Money profoundly corrupts U.S.
9 politics.”¹⁰⁴ Or as Potter and Penniman put it, “Money in politics isn’t just something bad that’s getting
10 worse—it’s paralyzing the country.”¹⁰⁵ The problem with money, they tell us, is that politicians
11 become more responsive to their donors than their constituents. This is why we need campaign finance
12 reform. According to former Representative Mickey H. Edwards, “Limiting campaign support, either
13 directly to a candidate or as an independent expenditure, would help return the focus to public, rather
14 than private, interests.”¹⁰⁶

15 But campaign finance regulation hasn’t fixed anything, and further reform won’t either. Failing
16 to keep private money out of politics, the history of campaign finance law is a history of circumvented
17 rules. Limit contributions directly to candidates, and people will contribute to political parties. Limit
18 that, and they will contribute to PACs. Limit that, and they will raise money for candidates and
19 “bundle” the contributions together. Limit that, and they will buy ads urging citizens to vote for a
20 candidate (“express advocacy”). Limit that, and they will buy ads highlighting a candidate’s record
21 without declaring for whom to vote (“issue advocacy”). Limit that, and they will distribute campaign
22 literature anonymously. Closing such “loopholes” is futile. If people want to funnel money into
23 politics, they will find a way to do it.¹⁰⁷

24
25 Even if regulation *could* effectively limit private money in politics, this would have an ominous

1 effect: protecting incumbent politicians. Incumbents benefit from name recognition, and they get more
2 press coverage, enjoying a big advantage over challengers. The only hope for most challengers,
3 therefore, is to raise enough money in order to tell voters who they are and what their message is. But
4 limiting contributions makes this arduous task more difficult, further disadvantaging them.¹⁰⁸

5
6 This wouldn't be a problem, some argue, if we had publicly funded elections. Although that's
7 debatable, such elections are troublesome for other reasons. Redistributing wealth from individuals to
8 politicians is bad enough. But forcing people to subsidize political speech they *disagree* with is
9 indefensible. Moreover, the government certainly cannot fund every potential challenger. Who, then,
10 should be funded? And how much should they get? These questions cannot be decided fairly or
11 rationally when the source of money is illegitimate.

12 This leads us to the biggest problem of campaign finance regulation: It violates the First
13 Amendment. The Supreme Court, in cases such as *Citizens United v. FEC* (2010), has recognized this,
14 though inconsistently.¹⁰⁹ Yet supporters of regulation strongly disagree. Money, they argue, is not
15 speech. That's true but irrelevant. The right to free speech entails the right to give, accept, or spend
16 money for the purpose of speaking. Communicating with a mass audience costs money. Restricting
17 money used for speech restricts speech.

18
19 As for corporate political spending, it should be treated the same as that of individuals or other
20 organizations. The First Amendment says, "Congress shall make no law . . . abridging the freedom of
21 speech, or of the press." It does not say, "except for corporations." We recognize that news and media
22 corporations have a right to support or oppose candidates, but we ought to recognize that *all*
23 corporations have this right. A newspaper editorial endorsing a candidate is, in principle, no different
24 from a corporation sponsoring a commercial for the same purpose.

25 Unlike some who deny that campaign finance regulation restricts free speech, others openly
26

1 admit it does. Senator Whitehouse argues that to combat corruption, “the right to speech must
2 yield.”¹¹⁰ Never mind the corruption *that* leads to. Yale Professor Owen Fiss, though, argues that we
3 must restrict some speakers when they are too effective. “The state,” he says, “may even have to
4 silence the voices of some in order to hear the voices of others. Sometimes there is simply no other
5 way.”¹¹¹

6
7 Even if campaign finance regulation, despite its insurmountable problems, could somehow “fix
8 democracy,” as some claim, it would not fix the dysfunction and injustice of a mixed economy. Why?
9 Because money is not what corrupts politics. With or without money, politics becomes corrupted when
10 it is not guided by objective principles.

11 Observe that the loudest supporters of more democracy are also the loudest supporters of a
12 bigger regulatory-entitlement state—albeit a more democratic one free from corporate influence. “We
13 the people,” Korten says, “must strip corporations of their power.”¹¹² This would lead, we are told, to
14 less cronyism and less corporate welfare. Meanwhile, “more democracy,” Page and Gilens explain,
15 leads to “public policies that reflect the will of all Americans.”¹¹³ What policies? Universal health care,
16 free college tuition, a higher minimum wage, and greater redistribution of wealth to combat
17 “inequality.” “Any true democracy,” Chomsky says, “has to be what we today call a welfare state—
18 actually, an extreme form of one, far beyond anything envisioned in this century.”¹¹⁴

19
20 A more democratic regulatory-entitlement state, one that allegedly would stop government from
21 violating rights for the benefit of corporations, would *still* violate rights. A regulatory-entitlement state
22 run according to the wishes of the majority is as unjust as one run according to the wishes of a
23 politically connected minority. (The American mixed economy has elements of both.) In each case, the
24 system is essentially the same; the only difference is the quantity and identity of the victims.

25 Isn’t majority rule, however, a valid basis for deciding public policy? If the majority wants a
26

1 regulatory-entitlement state, doesn't that legitimize it? After all, as Hartmann notes, the question for a
2 democracy is "*what is the will of the people?*"¹¹⁵ And many believe that America's founders intended
3 to create a democracy. Expressing a widespread sentiment, former Representative Jim Leach says,
4 "Our founders . . . went to great lengths to attempt to erect a system that would be democratic."¹¹⁶

5
6 This view is wrong. "It has been observed . . . that a pure democracy, if it were practicable,
7 would be the most perfect government. Experience has proved that no position in politics is *more false*
8 *than this.*"¹¹⁷ The man who said this was not an autocrat but coauthor of *The Federalist Papers*,
9 Alexander Hamilton. "There never was a democracy yet," John Adams observed, "that did not commit
10 suicide."¹¹⁸ The founders went to great lengths to create not a democracy but a system with safeguards
11 *against* it. This system is a constitutional republic. "We are now forming a republican government,"
12 Hamilton said; "Real liberty is neither found in despotism or the extremes of democracy."¹¹⁹

13 Although "democracy" and "republic" are sometimes used interchangeably, the founders did
14 not equate them. The primary definition of democracy—of pure democracy—is unlimited majority
15 rule.

16
17 Some political theorists argue that we have a basic choice between two alternatives: "rule by the
18 people" or "rule by elites." Or as Reich puts it, "It's democracy or oligarchy."¹²⁰ This is not the
19 fundamental issue, and it is a false alternative. (The federal government has features of each: The
20 House of Representatives is popularly elected, but the Supreme Court is not, nor was the Senate before
21 the ratification of the Seventeenth Amendment in 1913.)

22 *Who* governs and *how* they are selected are important yet secondary questions. The primary
23 question is the *purpose* for which they govern. Without a rational purpose, rule by the people can be as
24 oppressive as rule by elites. The powers of those who govern, therefore, must be limited and
25 specifically defined. And the institutional structure of government must be designed to combat abuses
26

1 of those powers. One way is elections, a method for selecting who will govern, for checking their
2 power, and for peacefully removing them when needed.

3
4 But elections are not the only method, nor are they enough for checking political power.
5 Though the Constitution contains democratic elements, they are not the essential, the defining, or the
6 most important part of the political system the founders created.¹²¹ Elections are one of many
7 institutions—from federalism to a bicameral legislature, from the Bill of Rights to an independent
8 judiciary, from the electoral college to checks and balances, from enumerated powers to separation of
9 powers. The purpose of these institutions—and the defining characteristic of the constitutional republic
10 the founders created—is not to enshrine majority rule but to *protect individual rights*. The Declaration
11 of Independence states this purpose explicitly: “to secure these Rights [to life, liberty, and the pursuit of
12 happiness] Governments are instituted among Men, deriving their just Powers from the Consent of the
13 Governed.”

14 Yet, since the Progressive Era at the turn of the 20th century, a “progressive” intellectual-
15 political movement has tried to override the Constitution.¹²² The New Deal Supreme Court, for
16 example, nullified the principle of limited, enumerated powers (the Tenth Amendment and Article I,
17 section 8) in cases such as *Helvering v. Davis* (1937), *United States v. Carolene Products* (1938), and
18 *Wickard v. Filburn* (1942).¹²³ This opened the door to the enormous growth of the regulatory-
19 entitlement state.

20
21 But quashing enumerated powers is not enough for the “progressive” supporters of democracy.
22 They also decry the Senate and the Supreme Court, the electoral college and the separation of
23 powers.¹²⁴ These “undemocratic features of our political system,” Page and Gilens lament, prevent
24 “the adoption of new policies that large majorities of Americans want.”¹²⁵

25 That is precisely the point. The fatal flaw of pure democracy is the lack of institutional

1 safeguards to prevent the majority from *voting away others' rights*. James Madison understood this.
2 “Democracies,” he pointed out, have “been found incompatible with personal security and the rights of
3 property.”¹²⁶

4
5 If more democracy means fewer limits on political power, it won't end the cronyism and
6 corruption of a mixed economy. Why? Because this “solution” not only fails to fix the problem, it
7 exacerbates the problem. The problem is not that corporations have too much power; it's that
8 *government* has too much power.

9 **SEPARATING ECONOMY AND PAYOLA**

10 As we have seen, when government has the power to redistribute wealth and intervene in
11 economic affairs, this impels corporations and special interests to influence how it uses that power.
12 And those with the deepest pockets and the most political connections will be best positioned to exploit
13 political power for their own ends.

14
15 Some say this shows why cronyism is wrong: It favors “big guys” more than “little guys.”
16 Authors Brink Lindsey and Steven M. Teles of the Niskanen Center ask, “How can we have a welfare
17 and regulatory state strong enough to undergird a modern economy and render its outcomes tolerably
18 fair while not using that power to simply transfer resources to the most powerful and best
19 organized?”¹²⁷ This is a loaded question. Whether the regulatory-entitlement state favors the rich or
20 poor, the powerful or nonpowerful, is not the issue. Cronyism is wrong not because it benefits the
21 “wrong people,” but because it violates individual rights. The question is not: *Who* should government
22 privilege at the expense of others? The question is: *Should* the government have such power?

23 No, it shouldn't.

24
25 Cronyism, political extortion, and special interest lobbying inevitably follow from a

1 government with the power to meddle in the economy. The solution, therefore, to the dysfunction and
2 injustice of a mixed economy is an *unmixed* economy, an economy *separated* from the state. And this
3 entails abolishing the regulatory-entitlement state. In such a system, the power of government would be
4 constitutionally limited to protecting individual rights. In an economic context, this consists of
5 outlawing theft and fraud, enforcing contracts, settling liability disputes—and nothing else.

6
7 This system—the system in which economy and state are fully separated—is *laissez-faire*
8 *capitalism*. Some intellectuals, however, argue that capitalism deserves the blame for cronyism.
9 “Crony-capitalism,” Conor Lynch (*Salon*) says, “is not a perversion of ‘pure capitalism,’ it is simply a
10 natural evolution of it.”¹²⁸ Professor Luigi Zingales says, “Pure laissez-faire can breed crony
11 capitalism.”¹²⁹ According to economists Michael Munger and Mario Villarreal-Diaz, “The road to
12 cronyism leads directly through capitalism.”¹³⁰

13 The problem with this view, besides lacking evidential support, is that cronyism long predated
14 capitalism. Further, observe that statist regimes with the most heavily controlled, least capitalist
15 economies have the *most* cronyism and corruption.¹³¹ Yes, semi-capitalist systems (mixed economies)
16 exhibit cronyism, but as this article has shown, cronyism follows from government intervention, not
17 from capitalism.

18
19 Throughout all of history, some people have sought political favors at others’ expense. Such
20 behavior can be curtailed only in a system in which political power is properly limited. Stripped of its
21 authority to redistribute wealth and intervene in the economy, the government would have no power to
22 privilege some or penalize others.

23 Corporations and special interests would have no incentive to lobby for favors if government
24 has no favors to give.¹³² Corporations, too, would have no need to lobby in self-defense if government
25 didn’t have life-and-death power over them. And lacking such power, politicians could not threaten
26

1 corporations with harmful legislation in order to extort campaign contributions from them.

2 **INDIVIDUALISM, COLLECTIVISM, AND THE CONSTITUTION**

3 If separating economy and state requires a government constitutionally limited to protecting
4 individual rights, and if this will solve the problems of a mixed economy, then why has the United
5 States devolved into the regulatory-entitlement state that it has become? The U.S. Constitution was
6 designed to protect against such a path. So what went wrong? The New Deal Supreme Court, as we
7 have seen, nullified the principle of limited, enumerated powers—and this followed from a
8 “progressive” intellectual-political movement, a movement committed to eroding the spirit, essence,
9 and purpose of the Constitution. [133](#)

10
11 The Constitution alone is not enough. It cannot withstand a long-term concerted effort to
12 subvert it. A constitution devised to protect individual *rights* requires an individualist *philosophy* in the
13 culture to preserve it.

14
15 Such a philosophy recognizes that the individual’s life belongs not to others but to himself. His
16 life is his responsibility, and he must support it by his own thought and effort. To live a flourishing life,
17 he must be free to pursue his happiness and to voluntarily associate with others. He must be free to
18 pursue all this—by right. The individual’s rights are not grants from society that it can rescind. Neither
19 arbitrary nor subjective, the principle of individual rights derives from the objective requirements of
20 human life. Because life requires reasoned action, the individual must be free to act on his own
21 thinking and judgment as long as he respects the freedom of others to do the same (the right to liberty).
22 And because life requires producing material values, the individual legitimately owns the wealth he
23 creates (the right to property). This, in brief outline, is the philosophy needed to preserve a rights-
24 protecting constitution. [134](#)

25 A contrary doctrine, however, inspired the movement to erode the Constitution. This doctrine

1 elevates *society* above the individual. It considers the individual not an end in himself but a means to
2 the ends of others. It calls for sacrificing his interests to the “public interest.” It calls for subordinating
3 his rights to the “will of the people.” It calls for restricting his freedom for the “general welfare.” It
4 calls for invading his privacy for the “greater good.” It calls for taking his wealth for the “common
5 good.” We should “agree on a set of responsibilities shared by all members,” Reich says, “exacting
6 certain sacrifices for the common good.”¹³⁵ This doctrine is *collectivism*.

7
8 From the Progressive Era to the New Deal, to the Great Society, to the 2010s, “progressive”
9 presidents have couched their political agendas in collectivist terms. President Theodore Roosevelt said
10 we need a “partial substitution of collectivism for individualism.”¹³⁶ President Franklin D. Roosevelt
11 said that his policies “call for a willingness to sacrifice individual gains, to work together for the *public*
12 *welfare*.”¹³⁷ “We must all learn,” President Lyndon B. Johnson said, “to submerge our individual
13 differences to the *common good*.”¹³⁸ “My days,” he went on, “are spent in trying . . . to use the public’s
14 dollars for the *public good*.”¹³⁹ President Barack Obama said, “the call to sacrifice for the country’s
15 *greater good* remains an imperative of citizenship.”¹⁴⁰

16 The main purpose of government, collectivists tell us, is not to protect the individual’s rights.
17 Instead, as Bakan says, the government’s “sole purpose” is “to protect and promote the public interest
18 and reflect the people’s will.”¹⁴¹ Ensuring “the common welfare,” Hartmann argues, is “why we have
19 government in the first place.”¹⁴² According to Lindsey and Teles, “In the ideal democracy, the
20 mechanisms of government are . . . converted into policies that serve the common good.”¹⁴³

21
22 The “public interest,” the “common welfare,” the “common good,” and the like—what do these
23 vague platitudes mean? “There is a confusing lack of consistency,” Edwards observes, “in determining
24 where the common good lies.”¹⁴⁴ If so, then what is the standard for defining it? “The final arbiter of
25 the public good,” political analyst Jay Cost says, “must be the public itself.”¹⁴⁵ The meaning of these
26

1 catchphrases depends on the ever-changing will of the public. What constitutes the “common good” or
2 the “public good” is elusive and nonobjective.

3
4 Although collectivist catchphrases have no clear meaning, politicians, intellectuals, and special
5 interests do have a clear *purpose* in using them: rationalizing interventionist government. John
6 Hawkins (*National Review*) says that breaking up big tech corporations “would reduce the power of
7 these companies and serve the public interest.”¹⁴⁶ Harvard Professor Howard E. Gardner says, “I
8 endorse the promulgation of regulations . . . that ‘nudge’ [read: force] people and institutions toward
9 the common good.”¹⁴⁷ According to Korten, policies “in the public interest” include “the breakup of
10 corporate monopolies” (any big corporation), “the equitable distribution of property ownership” (taking
11 property from some to give to others), “a living wage for working people” (forcing employers to pay
12 higher wages), and “a progressive tax system” (taxing some at much higher rates than others).¹⁴⁸

13 If doubts still exist about the purpose of collectivist catchphrases, Korten lays it bare.
14 “Government,” he says, must “use coercive power in the public interest, including the power to
15 confiscate property.”¹⁴⁹ *That* is the undisguised essence of the regulatory-entitlement state—straight
16 from one of its most outspoken advocates.

17
18 Government policies that steal the individual’s wealth, restrict his liberty, and force him to act
19 against his judgment are immoral. This is why the regulatory-entitlement state should be abolished. But
20 to achieve this, we must reject collectivism, exposing it for what it is: a wholesale rationalization for
21 violating individual rights.

22 The late historian Howard Zinn, an icon of the left, said “‘big government’ . . . is here to stay.
23 The only question is: whom will it serve?” He was clear on whom *he* thought it should serve. After
24 decrying a government that serves business and “the wealthy classes,” he said, “We want [a]
25 government” that, among other things, “gives free medical care to everyone and pays for it out of a
26

1 reformed tax system which is truly progressive.”¹⁵⁰ So government either serves the “1 percent” at the
2 expense of the “99 percent” or it serves the “99 percent” at the expense of the “1 percent.” But this is a
3 false alternative.

4
5 Leftist-collectivist-progressive supporters of democracy such as Zinn oppose cronyism because
6 it benefits the “wrong people”—the “1 percent.” Yet their opposition to cronyism will not help to end
7 it. In subverting constitutional limits on political power and calling for even fewer limits on such
8 power, they’ve worsened the problem.¹⁵¹

9 Zinn rejects the possibility of a system without victims, a system based on a constitutionally
10 limited, rights-protecting government—one barred from picking “winners and losers,” one that deems
11 everyone equal under the law, one that is *just*. This is the only kind of government resistant to
12 cronyism, and contrary to Zinn, it is exactly what we should be striving for. More important, we must
13 also strive for a culture that embraces the indispensable foundation of such a government: an
14 individualist philosophy.
15

16 **SECTION SEVEN – Running Our Government Like A Sleazy Garage Sale**

17
18 Plaintiff, and thousands of other claimants, have asserted, and provided hundreds of thousands
19 of pages of evidence from Inspector General offices, that prove that agencies and staff of the United
20 States government were weaponized on orders of The White House and top California political figures,
21 to operate reprisal, vendetta, revenge and payback operations in order to harm Plaintiff, and others, on
22 an ongoing basis, in reprisal for reporting crimes and illicit schemes those parties were involved in.
23

24 Now comes the 118th CONGRESS, 1st Session under H. RES. 12 which Plaintiff now advises
25 and which has been deployed for the purpose of Establishing a Select Subcommittee on the
26

1 Weaponization of the Federal Government as a select investigative subcommittee of the Committee on
2 the Judiciary.

3 IN THE U.S. HOUSE OF REPRESENTATIVES on January 9, 2023, the following was sent to the
4 Committee on Rules. It Established a Select Subcommittee on the Weaponization of the Federal
5 government as a select investigative subcommittee of the Committee on the Judiciary, in part based on
6 Plaintiff’s team’s testimony and evidence and did resolve the following:

7
8
9 (a) Establishment; Composition.--

10 (1) Establishment.--There is hereby established for the One
11 Hundred Eighteenth Congress a select investigative subcommittee
12 of the Committee on the Judiciary called the Select
13 Subcommittee on the Weaponization of the Federal Government
14 (hereinafter referred to as the ``select subcommittee").

15
16 (2) Composition.--

17 (A) The select subcommittee shall be composed of
18 the chair and ranking minority member of the Committee
19 on the Judiciary, together with not more than 13 other
20 Members, Delegates, or the Resident Commissioner
21 appointed by the Speaker, of whom not more than 5 shall
22 be appointed in consultation with the minority leader.

23 The Speaker shall designate one member of the select
24 subcommittee as its chair. Any vacancy in the select
25

1 subcommittee shall be filled in the same manner as the
2 original appointment.

3 (B) Each member appointed to the select
4 subcommittee shall be treated as though a member of the
5 Committee on the Judiciary for purposes of the select
6 subcommittee.

7
8 (b) Investigative Functions and Authority.--

9 (1) Investigative functions.--The select subcommittee is
10 authorized and directed to conduct a full and complete
11 investigation and study and, not later than January 2, 2025,
12 issue a final report to the House of its findings (and such
13 interim reports as it may deem necessary) regarding--

14 (A) the expansive role of article II authority
15 vested in the executive branch to collect information
16 on or otherwise investigate citizens of the United
17 States, including ongoing criminal investigations;

18 (B) how executive branch agencies work with, obtain
19 information from, and provide information to the
20 private sector, non-profit entities, or other
21 government agencies to facilitate action against
22 American citizens, including the extent, if any, to
23 which illegal or improper, unconstitutional, or
24
25
26

1 unethical activities were engaged in by the executive
2 branch or private sector against citizens of the United
3 States;

4 (C) how executive branch agencies collect, compile,
5 analyze, use, or disseminate information about citizens
6 of the United States, including any unconstitutional,
7 illegal, or unethical activities committed against
8 citizens of the United States;

9 (D) the laws, programs, and activities of the
10 executive branch as they relate to the collection of
11 information on citizens of the United States and the
12 sources and methods used for the collection of
13 information on citizens of the United States;

14 (E) any other issues related to the violation of
15 the civil liberties of citizens of the United States;
16 and
17

18 (F) any other matter relating to information
19 collected pursuant to the investigation conducted under
20 this paragraph at any time during the One Hundred
21 Eighteenth Congress.
22

23
24 (2) Authority.--

25 (A) The select subcommittee may report to the House
26

1 or any committee of the House from time to time the
2 results of its investigations and studies, together
3 with such detailed findings and legislative
4 recommendations as it may deem advisable.

5 (B) Any markup of legislation shall be held at the
6 full Committee level consistent with clause 1(l) of
7 rule X of the Rules of the House of Representatives.

8
9 (c) Procedure.--

10 (1) Rule XI of the Rules of the House of Representatives
11 and the rules of the Committee on the Judiciary shall apply to
12 the select subcommittee in the same manner as a subcommittee
13 except as follows:

14 (A) The chair of the select subcommittee may, after
15 consultation with the ranking minority member,
16 recognize--

17
18 (i) members of the select subcommittee to
19 question a witness for periods longer than five
20 minutes as though pursuant to clause 2(j)(2)(B)
21 of such rule XI; and

22 (ii) staff of the select subcommittee to
23 question a witness as though pursuant to clause
24 2(j)(2)(C) of such rule XI.
25
26

1 (B) The Committee on the Judiciary (or the chair of
2 the Committee on the Judiciary, if acting in accordance
3 with clause 2(m)(3)(A)(i) of rule XI) may authorize and
4 issue subpoenas to be returned at the select
5 subcommittee.

6 (C) With regard to the full scope of investigative
7 authority under subsection (b)(1), the select
8 subcommittee shall be authorized to receive information
9 available to the Permanent Select Committee on
10 Intelligence, consistent with congressional reporting
11 requirements for intelligence and intelligence-related
12 activities, and any such information received shall be
13 subject to the terms and conditions applicable under
14 clause 11 of rule X.
15

16 (2) The provisions of this resolution shall govern the
17 proceedings of the select subcommittee in the event of any
18 conflict with the rules of the House or of the Committee on the
19 Judiciary.
20

21 (d) Service.--Service on the select subcommittee shall not count
22 against the limitations in clause 5(b)(2)(A) of rule X of the Rules of
23 the House of Representatives.
24

25 (e) Successor.--The Committee on the Judiciary is the ``successor
26

1 in interest" to the select subcommittee for purposes of clause 8(c) of
2 rule II of the Rules of the House of Representatives.

3 (f) Sunset.--The select subcommittee shall cease to exist 30 days
4 after filing the final report required under subsection (b). National News Coverage Exposes Problems

5
6 With Government Agency Reprisals – An Overview

7
8 By Conner Lee

9 A vast number of agency abuse cases and lawsuits are now on public record in the Inspector General's
10 offices and federal courts.

11
12 It is an indisputable fact that some government agencies run "hit-jobs" on citizens on orders from
13 certain corrupt politicians. These actions are felony violations of the law.

14
15 Federal and State Agencies including SSA, FEC, DOE, HHS, VA, CIA, NSA, SEC, FBI, DOJ and
16 many others, have been charged, and found guilty, in these crimes against citizens.

17
18 In the Congressional investigation published by the United States Congress in review of the U.S.
19 Department of Energy LGP/ATVM programs, it is clearly proven that the U.S. Department of Energy
20 was used as a slush-fund by some DOE executives in order to pay off campaign financiers by attacking
21 and sabotaging their competitors.

22
23 The DOE Paducah Gaseous Diffusion Plant under contracts with the Department of Energy and the
24 government-owned U.S. Enrichment Corp paid \$5M whistle-blower awards to those whistle-blowers
25 who were attacked, using government agency resources, for reporting a crime.

26
27 1095
28

1 Dept. of Energy Hanford URS has agreed to settle a lawsuit brought by former employee Walter
2 Tamosaitis for \$4.1 million. The settlement in the whistle-blower case comes almost one year before
3 the case was set for a jury trial in federal court in Richland and compensates Tamosaitis for attacks
4 against him, by DOE officials, in retribution for reporting a crime.

5
6 VA officials attacked hundreds of citizens who reported corruption, ie:

7
8 <https://www.thenewamerican.com/usnews/health-care/item/18610-va-whistleblowers-facing-retribution>

9 As shown in this report:

10
11 [https://www.pogo.org/analysis/2018/08/new-report-confirms-whistleblower-retaliation-is-alive-and-](https://www.pogo.org/analysis/2018/08/new-report-confirms-whistleblower-retaliation-is-alive-and-well-at-department-of-veterans-affairs/)
12 [well-at-department-of-veterans-affairs/](https://www.pogo.org/analysis/2018/08/new-report-confirms-whistleblower-retaliation-is-alive-and-well-at-department-of-veterans-affairs/)

13
14 ...Agencies attack often and harshly.

15
16 CIA and NSA executives have been widely shown to use spy tools to attack domestic citizens they
17 don't like, ie:

18
19 [3https://www.dailymail.co.uk/news/article-2435011/NSA-employees-used-phone-tapping-tools-spy-](https://www.dailymail.co.uk/news/article-2435011/NSA-employees-used-phone-tapping-tools-spy-girlfriends-cheating-husbands.html)
20 [girlfriends-cheating-husbands.html](https://www.dailymail.co.uk/news/article-2435011/NSA-employees-used-phone-tapping-tools-spy-girlfriends-cheating-husbands.html)

21
22 ...and hundreds of other news links that can be provided.

23
24 Elon Musk and Tesla, as well as Eric Schmidt and Larry Page at Google, have been proven to use the
25 CIA group: IN-Q-TEL, to run government sponsored/financed attacks on business competitors.

1 In Civil Action No. 1:13-cv-00777-RBW GOVERNMENT AGENCIES WERE CAUGHT BEING
2 USED FOR ATTACKS AGAINST CITIZENS AND PUNISHED IN THE COURT AND THE
3
4 MEDIA!

5
6 The IRS, HUD, SSA, DOE and hordes of other government agencies have been caught and proven, IN
7 COURT, to target and attack people for presumed political differences.

8
9 Why should we assume that the Social Security Administration is not ALSO doing this too to harm
10 citizens who speak out?

11
12 The Lois Lerner IRS attacks took many years to resolve. In an unprecedented victorious conclusion to a
13 four year-long legal battle against the IRS, the bureaucratic agency admitted in federal court that it
14 wrongfully targeted citizens, during the Obama Administration, because of their political viewpoints
and issued an apology to those people for doing so.

15 In addition, the IRS is consenting to a court order that would prohibit it from ever engaging in this form
16 of unconstitutional discrimination in the future.

17 In a proposed Consent Order filed with the Court, the IRS has apologized for its treatment of U.S.
18 citizens including organizations from 20 states that applied for 501(c)(3) and (c)(4) tax-exempt status
19 with the IRS between 2009 and 2012 -- during the tax-exempt determinations process. Crucially,
20 following years of denial by the IRS and blame-shifting by IRS officials, the agency now expressly
admits that its treatment of our clients was wrong and a total violation of our Democracy..

21 As set forth in the proposed Order:

22 “The IRS admits that its treatment of Plaintiffs during the tax-exempt determinations process, including
23 screening their applications based on their names or policy positions, subjecting those applications to
24 heightened scrutiny and inordinate delays, and demanding of some Plaintiffs’ information that TIGTA
25 determined was unnecessary to the agency’s determination of their tax-exempt status, was wrong. For
26 such treatment, the IRS expresses its sincere apology.”

1 Throughout litigation of this case, activists have remained committed to protecting the rights of the
2 public who faced unlawful and discriminatory action by the IRS and other agencies. The objective from
3 the very beginning has been to hold agencies accountable for corrupt practices.

4 This Consent Order represents a historic victory for the public and sends the unequivocal message that
5 a government agency’s targeting of citizens organizations, or any organization, on the basis of political
6 viewpoints, will never be tolerated and that revenge will be swift and vast.

7 The Order will put an end, once and for all, to the abhorrent practices utilized against citizens, as the
8 agreement includes the IRS’s express acknowledgment of – and apology for – its wrongful treatment of
9 the public. While this agreement is designed to prevent any such practices from occurring again, rest
10 assured that all public interest lawyers will remain vigilant to ensure that the IRS, SSA, DOJ or SEC
11 does not resort to such tactics in the future.

12 Per detailed reports, in March of 2012 lawyers began being contacted by literally dozens of citizens and
13 groups who were being harassed by the Obama IRS after submitting applications for tax-exempt status.

14 Their tax-exempt applications were held up for years (over seven years in some cases), and they began
15 receiving obtrusive and unconstitutional requests for donor and member information. That began a now
16 more than five and a half year fight with the burgeoning bureaucracy at the IRS. Then on May 10,
17 2013, Lois Lerner, the then head of the IRS Tax Exempt Organizations Division, publicly implicated
18 the IRS in one of the worst political targeting scandals of the century.

19 This is an extraordinary victory against government agency abuse. It sends a powerful warning to the
20 deep state bureaucracy that it will not be allowed to violate the Constitution in order to silence and shut
21 down the whistle-blowers.

1 In addition to the IRS’s admissions of and apology for its wrongful conduct, the Consent Order would
2 specifically award Plaintiffs the following:

3 - A declaration by the Court that it is wrong to apply the United States tax code to any tax-exempt
4 applicant or entity based solely on such entity’s name, any lawful positions it espouses on any issues,
5 or

6 its associations or perceived associations with a particular political movement, position or viewpoint;

7 - A declaration by the Court that any action or inaction taken by the IRS must be applied evenhandedly
8 and not based solely on a tax-exempt applicant or entity’s name, political viewpoint, or associations or
9 perceived associations with a particular political movement, position or viewpoint; and
10

11 - A declaration by the Court that discrimination on the basis of political viewpoint in administering the
12 United States tax code violates fundamental First Amendment rights. Disparate treatment of taxpayers
13 based solely on the taxpayers’ names, any lawful positions the taxpayers espouse on any issues, or the
14 taxpayers’ associations or perceived associations with a particular political movement, position or
15 viewpoint is unlawful.
16

17 In the Order, the IRS has also agreed that (unless expressly required by law) certain actions against the
18 Plaintiffs– i.e. the sharing, dissemination, or other use of information unnecessarily obtained by the IRS
19 during the determinations process (such as donor names, the names of volunteers, political affiliations
20 of an organization’s officers, etc.) – would be unlawful. In addition, the IRS promises not to take any
21 retaliatory action against our clients for exposing the targeting scheme.
22

23
24 Finally, and of crucial significance, the IRS admits it targeted persons and groups based on their
25 viewpoints (i.e., “policy positions”) and that such viewpoint discrimination violates fundamental First
26

1 Amendment rights. This is the first time the IRS has admitted that its targeting scheme was not just
2 “inappropriate” – as TIGTA found – but, as alleged, blatantly unconstitutional.

3 To ensure consistency and uniformity within the agency’s operations going forward, the IRS is
4 required, pursuant to the Order, to inform all employees within the Exempt Organizations Division, as
5 well as the Commissioners and Deputy Commissioners within other divisions, of the Order’s terms.

6 This Order not only validates allegations about their treatment at the hands of the corrupt Obama-era
7 IRS but also provides important assurances to the American public that the agency understands its
8 obligation to refrain from further such discriminatory conduct. As Attorney General Sessions
9 acknowledged in this regard, “[t]here is no excuse for [the IRS’s] conduct,” as it is “without question”
10 that the First Amendment prohibits the conduct that occurred here, i.e., subjecting American citizens to
11 disparate treatment “based solely on their viewpoint or ideology.” Sessions further confirmed his
12 Department’s commitment to ensuring that the “abuse of power” in which the IRS engaged here “will
13 not be tolerated.”

14 It is impossible to overstate the importance of this victory. This marks a years-long fight for justice in
15 defense of the constitutional rights of the public.

16 This is an extraordinary victory against abuse of power and corruption.

17 It sends a powerful warning to the deep state bureaucracy that it will not be allowed to violate the
18 Constitution and manipulate the IRS, SSA and other agencies in order to silence and shut down those
19 who speak out about political corruption crimes.

20 In the wake of Wisconsin Watchdog’s investigation into SSA staff allegations of incompetence,

1 misconduct, and retaliation in Social Security disability appeals offices, several employees have taken
2 their complaints to a Senate committee led by Wisconsin Sen. Ron Johnson.

3 An official with knowledge of the complaints said the Senate Homeland Security and Governmental
4 Affairs Committee, chaired by the Oshkosh Republican, has received emails and other contacts from
5 “certain people” inside the Social Security Administration’s Office of Disability Adjudication and
6 Review.
7

8 The initial complaints came from an employee inside the Milwaukee office following Wisconsin
9 Watchdog’s opening investigative report that found some claimants waiting more than 1,000 days for
10 an appeals decision on their disability benefits claim.
11

12 Following Wednesday’s story of a whistleblower in the Madison ODAR office, the committee has
13 received more specific complaints about retaliation against employees, the source said.

14 Committee staff members sent the latest Watchdog piece to SSA administrators hoping they will
15 “cooperate,” the source said. To date, the agency has been less than cooperative.
16

17 “This is an ongoing process, and they are not always as forthcoming as we’d like them to be,” the
18 source said. “Hopefully with your continued reporting, this is an issue they can’t duck.”

19 A Senate committee member said officials there are working with the Office of Special Counsel on
20 “multiple whistleblower retaliation claims.” The committee continues to request information from the
21 SSA.
22

23 The whistleblower in the Madison office claims management retaliated against her after she was called
24 to testify in a misconduct case. The incident involved “inappropriate behavior” by an administrative
25

1 law judge, she said.

2 “They are so corrupt. It’s absolutely horrible,” said the woman, a lead case technician in the Madison
3 Office of Disability Adjudication and Review.

4 She spoke on condition of anonymity, fearing more retribution from her supervisors. While she said
5 recounting her particular experiences will more than likely betray her identity anyway, the ODAR case
6 worker insisted she has had enough.

7
8 “I’m at point where they don’t care about me, I don’t see why I’m protecting them. This is my last
9 resort,” she said. “I want to do my work without fear of retaliation.”

10 She said she has contacted the Senate committee.

11
12 “I forwarded my information to them and I got an email back from them. They said people are coming
13 out of the woodwork with their complaints (about ODAR) following your story,” the whistle-blower
14 said.

15
16 Ronald Klym, a long-time senior legal assistant in the Milwaukee ODAR office, alleges he has been
17 retaliated against by supervisors for going public with his charges of incompetence and misconduct in
18 the agency.

19 The federal employee, who has worked for SSA for 16 years, provided Wisconsin Watchdog with
20 documents showing extremely long wait times for claimants appealing their denied applications for
21 benefits.
22

23 Doug Nguyen, SSA regional spokesman, in a previous story said the agency acknowledges that
24 Milwaukee ODAR has a “high average processing time for disability appeal hearings, and we are
25

1 working to address the issue.”

2 Beyond the delays is what Klym calls the “shell game,” the wholesale transferring of cases to other
3 parts of the country by administrators to make the Milwaukee office’s numbers look better than they
4 are.

5 The Madison office whistle-blower confirmed Klym’s allegations, saying at one point she saw 2,000
6 cases from the Milwaukee office handed off to the Oak Brook operation.

7 There are over 10,000 SSA disability manipulation charges against SSA executives and staff.

8 MORE PROOF:

12 New Whistleblower Protection Office Is Under Investigation for
13 Retaliating Against Whistleblowers

14 The Veterans Affairs Department’s watchdog is investigating a new office created by President Trump
15 early in his administration that was designed to protect whistleblowers from reprisal but is now facing
16 allegations of aiding retaliation against them.

17 VA’s Office of Inspector General is leading the investigation from its new Office of Special Reviews,
18 which the IG created to conduct “prompt reviews of significant events” and examine allegations of
19 senior VA employee misconduct, an IG spokesman said. The new IG office is looking into activities at
20 the Office of Accountability and Whistleblower Protection as part of an ongoing review of the

1 implementation of the 2017 law that created OAWP.

2 Trump created OAWP by executive order in 2017 and later codified it when he signed the 2017 VA
3 Accountability and Whistleblower Protection Act into law. The office was mostly celebrated, with
4 advocates hopeful that the focus on the rights and protections for whistleblowers would reverse a
5 culture infamous for intimidation and reprisal. That optimism has largely soured, however, leading to
6 hotline tips to the inspector general and bipartisan scrutiny from Congress.
7

8 “There has been considerable interest by some members of Congress and other stakeholders in this
9 effort,” said Mike Nacincik, the IG spokesman, who said he could not comment further on ongoing
10 work.
11

12 President Trump has frequently touted the law as one of his signature legislative achievements,
13 focusing primarily on the reforms it made to expedite the disciplinary process for VA employees. But
14 Trump also spoke of the promises on which skeptics now say the law has failed to deliver: “This bill
15 protects whistleblowers who do the right thing,” Trump said. “We want to reward, cherish, and
16 promote
17 the many dedicated employees at the VA.”
18

19 Government Executive spoke to several VA employees who expressed frustration or anger toward
20 OAWP, three of whom have already been interviewed by IG investigators. They described feeling
21 betrayed or neglected by an office they believed was going to help them but ended up doing the
22 opposite. They said they have shared information with the investigators, including documentation of
23 alleged reprisal.
24

25 Curt Cashour, a VA spokesman, said the department “welcomes the inspector general’s oversight,” but
26

1 defended it against most allegations. He acknowledged that the office experienced some growing pains,
2 but said it has “evolved over time, refining and improving its policies and practices along the way.”

3 What Whistleblowers Are Telling Investigators

4 “It’s a crooked system where literally the fox is guarding the hen house,” said Jay DeNofrio.

5 DeNofrio, an administrative officer at a VA facility in Altoona, Pa., had prior experience as a
6 whistleblower before OAWP was created—years ago, he disclosed information about a doctor he said
7 was losing mental capacity and putting veterans at risk—so he thought he understood the investigative
8 process that takes place after employees make disclosures to investigators. OAWP, however, was the
9 first body he’d ever worked with that coordinated with VA headquarters to find blemishes on his own
10 record after he reported wrongdoing, he said. Investigators questioned his coworkers, telling them
11 DeNofrio does not “walk on water” just because he is a protected whistleblower and encouraged them
12 to immediately report “any instances of poor behavior,” according to transcripts of those conversations
13 obtained through records requests and provided to Government Executive.
14
15
16

17 DeNofrio said IG investigators took the allegations against OAWP seriously and called their review
18 “high profile” and “high priority.”

19 Dan Martin, a chief engineer at VA’s Northern Indiana Health Care System, said OAWP failed to
20 protect him when his case came before it. Martin said in 2016 he discovered contracting violations
21 related to a non-functioning water filtration system, but when he reported the problems to superiors he
22 was stripped of his responsibilities and sent to work in an office without heat or air conditioning. The
23 VA inspector general launched an investigation into the contracting practices, and asked Martin to
24
25
26

1 surreptitiously record conversations with procurement officers, Martin said.

2 It was not until OAWP got involved in the case that Martin’s supervisors became aware of that
3 cooperation. When OAWP allegedly shared that information with leadership at his facility, Martin said
4 his supervisors “had no choice but to shut me down” so he could no longer send recordings about the
5 supervisors’ “very inappropriate relationships with contractors” to investigators in the OIG.

6
7 “OAWP set me up,” said Martin, who initially felt far more optimistic about OAWP’s capacity to help
8 his cause. “They incentivized [my facility] to go after me.”

9 Martin is also fighting his case through the Merit Systems Protection Board. During that process, VA’s
10 Office of General Counsel came to Martin and his attorneys asking for certain information about the
11 case. The attorneys representing Martin told the lawyers in the Office of General Counsel they would
12 only hand the information over during discovery. Shortly after rejecting the request, Martin said,
13 OAWP followed up to ask for the same information.

14
15 “Some of them are so crooked they swallow nails and spit up corkscrews,” Martin said.

16
17 9‘They Turned on Whistleblowers’

18 The alleged collaboration between the Office of General Counsel and OAWP has troubled observers.
19 Tom Devine, legal director at the Government Accountability Project, a whistleblower advocacy group,
20 said his initial excitement about OAWP has been dampened by “structural developments,” including
21 what he called veto power the department's general counsel has over the whistleblower protection
22 office.
23

24 This would appear to be in violation of the 2017 law that permanently authorized OAWP, which
25

1 prohibits the office from existing “as an element of the Office of General Counsel” and its leadership
2 from reporting to OGC. Cashour said it was false to suggest that the Office of General Counsel
3 exercises veto power over whistleblower claims, but acknowledged OAWP and OGC do coordinate.
4 “OAWP has a collaborative working relationship with OGC, but OAWP retains final decision making
5 authority on all OAWP matters,” Cashour said.
6

7 Rebecca Jones, policy counsel at the Project on Government Oversight, said the office can likely not
8 completely fix its issues while it remains an “internal clearinghouse” for whistleblowers rather than a
9 truly independent office. Jones praised the IG for investigating the alleged retaliation.
10

11 “I wish it hadn’t come to this,” she said.

12 Devine praised some of OAWP’s early accomplishments, such as delaying VA’s disciplinary decisions
13 that involved alleged reprisal and the hiring of high-profile whistleblower Brandon Coleman as a
14 liaison between whistleblowers and the office. Coleman even established a mentoring program to help
15 assist victims of retaliation, but it has since been shut down.
16

17 “They didn’t have the teeth to enforce their good deeds,” said Devine, who has significantly curbed his
18 cooperation with OAWP. “They turned on whistleblowers.”

19 ‘You Don’t Want to Come Forward’
20

21 A third VA employee, who requested anonymity to protect his ongoing cases, recently informed IG
22 investigators about what he alleged is OAWP’s betrayal of trust and subsequent inactivity. The
23 employee made an initial whistleblower disclosure in early 2017 that was bounced around to several
24 offices within VA. He subsequently was removed from his position as a technician and is now
25 relegated
26

1 to “brain-dead work,” he said.

2 He contacted OAWP about the alleged reprisal later that year. During his interactions with the
3 whistleblower office, he turned over sensitive information about his hospital that a colleague had
4 provided—the OAWP investigator was the only individual with whom he shared the information. Days
5 later, the employee said, the colleague was “chewed out” by leaders at the facility for sharing the
6 information. To the employee, it felt like OAWP had betrayed him, he told Government Executive.

7
8 10The employee said he then experienced 21 months of “radio silence.” He recently spoke with OIG
9 about his negative experiences with OAWP. A few days later, the employee said he unexpectedly heard
10 from the OAWP investigators. He said he is now “very, very cautious” in his interactions with OAWP.
11 “It scares you,” he said. “You don’t want to come forward. People are afraid.”

12
13 Tonya Van, formerly a doctor a VA facility in San Antonio, also became a whistleblower after
14 disclosing to a supervisor that a doctor at her facility was giving incorrect diagnoses. She filed a
15 complaint with OAWP after she alleged her supervisor made her work life so miserable she was forced
16 to resign. But she quickly became disenchanted with the office due to lack of communication, she said.
17 She tried to follow up with OAWP but never heard back. The office eventually closed out her case,
18 though it later contacted her about opening a second investigation. She said she has “no idea” what the
19 results of either investigation were.

20
21
22 Van alleged that her supervisors’ reprisal against her took the form of accusations of using foul
23 language in the workplace. Martin, the Northern Indiana employee, said he faced an investigation for
24 similar accusations.

1 Changes and Cautious Optimism

2 Cashour, the VA spokesman, said OAWP does not provide “detailed information related to the specific
3 outcome of an investigation to employees” due to privacy concerns. He added that the office has
4 revised its policies to disclose more information to claimants, including when an investigation has been
5 closed and if claims of retaliation were substantiated.
6

7 Multiple VA employees criticized this practice, calling it counterintuitive that VA would claim privacy
8 concerns over investigations that the employees themselves requested.

9 Cashour said OAWP has changed other practices after a draft of a June 2018 Government
10 Accountability Office report faulted the office for its investigatory practices, including allowing
11 officials accused of retaliation to be directly involved in the inquiries in which they are named. VA told
12 GAO it would not end its practice of “referring cases of misconduct back to facilities and program
13 offices where the misconduct occurred.” However, Cashour said OAWP now informs employees
14 upfront when their matters will be referred elsewhere for review. To protect whistleblowers, he said,
15 OAWP now allows employees “to either opt-out of the disclosure or withhold the release of their
16 name.”
17
18

19 In August 2018, however, when Van had an in-person interview with OAWP investigators, she and her
20 attorney were still alleging retaliation by OAWP. While asking about Van’s allegations, an OAWP
21 investigator told Van she could be penalized for violating a prior settlement with VA by asking a
22 former
23 colleague to write a recommendation. Her attorney said Deirdre Weiss, the OAWP employee, was
24 ignoring the intent of that prior agreement.
25
26

1 “The bottom line is that, as accountability investigators, where we see possible wrongdoing we cannot
2 look the other way just because somebody is a complainant, okay,” said Weiss, according to a
3 transcript
4 of the proceedings.

5 11 Last year, before his office formally launched an official investigation into the practices of OAWP,
6 VA
7 Inspector General Michael Missal became part of a public spat with then acting Secretary Peter
8 O’Rourke over documents housed within the office. The IG requested access to information on the
9 cases filed with OAWP, but O’Rourke refused to comply. They aired their grievances through a series
10 of public letters, which included O’Rourke harshly reminding Missal that the IG served as the
11 secretary’s subordinate. Congress ultimately intervened by emphasizing in a spending bill that the IG
12 had the right to any and all documents it requested.
13

14 O’Rourke had previously served as the first head of OAWP, a period in which many of the complaints
15 against the office originated. Current VA Secretary Robert Wilkie reportedly asked O’Rourke to resign
16 last year after determining he was doing little work as a senior advisor.
17

18 OAWP is still a small office, employing just 96 workers—28 of whom are investigators—for a
19 workforce of 380,000. Its employees receive standardized training in investigative techniques, both
20 internally and from outside experts such as those at the Homeland Security Department and the Office
21 of Special Counsel.
22

23 The office is now headed by Tammy Bonzanto, who previously served as an investigator on the House
24 Veterans Affairs Committee. Her tenure has received mixed reviews. DeNofrio, for example, is still
25

1 concerned by what he calls her lack of transparency. Other observers are cautiously optimistic that her
2 leadership could get the office back to its original mission.

3 “We’re confident they have good-faith leadership now,” said GAP’s Devine. “The question is how
4 much professional freedom she’ll have.”

6
7 Nearly 100,000 Pentagon whistleblower complaints have been silenced – By Lee Camp

8 I don’t know if I’d have the nerve to be a whistleblower. I’d like to think I would. We all like to think
9 we would, just like we all like to think we could catch the game-winning touchdown or fold a fitted
10 sheet without cursing

11
12 But to blow the whistle on a huge organization with a lot of power, likely drawing that power to come
13 crashing down on your head – that takes some serious spine-age. Now, imagine the organization you’re
14 calling out is arguably the largest, most powerful, most secretive and most violent organization on
15 planet Earth. I’m speaking, of course, of the US Department of Defense.

16
17 Pentagon books so wrong on every level it’s impossible to detect fraud – Matt Taibbi Pentagon books
18 so wrong on every level it’s impossible to detect fraud – Matt Taibbi

19
20 12Yet thousands, even tens of thousands, of people have taken that step over the past five years. (More
21 on
22 this in a moment.)

23 All the while our organized human murder machine continues its work around the world. Every day.
24 Every hour. Never a moment of rest. Never pausing to clip their toenails or scratch their ass. Bombs
25 dropped. Buildings blown up. People killed or imprisoned. No end in sight.

26
27 1111
28

1 By the way, that’s the term I like to use instead of “military” – Organized Human Murder Machine.

2 It has a nice ring to it, doesn’t it? “Mili-tary” sounds too boring, too banal. Sounds like a super-lame
3 couple you met at a party. “Yeah, Millie and Terry over there are accountants. If I have to hear one
4 more joke about capital gains taxes, I’m gonna kill myself.”

5
6 But that’s not what the military is. The military is a gigantic organized human murder machine, and
7 even if you “support” every action our military has ever taken, you can still acknowledge it’s an
8 organized human murder machine. (You would just bizarrely argue that all the murder has been just
9 and
10 sound and pure.)

11 Eleven months ago I covered \$21 trillion of unaccounted-for adjustments at the Pentagon over the past
12 20 years. Don’t try to think about the number \$21 trillion because you’ll pass out and hit your head on
13 the desk. If your salary is \$40,000 a year, in order to earn \$21 trillion, it would take you 525 million
14 years. (At which point you can’t even enjoy the new jet ski you just bought with all your money
15 because you’re almost certainly a brain in a jar ... though a nice embroidered jar that only the rich
16 brains can afford.)

17
18 Also on rt.com The Pentagon failed its audit amid a \$21 trillion scandal (yes, trillion) - Lee Camp

19
20 Over the past year there has been a little more coverage of the utterly preposterous amount of money
21 unaccounted for at our human murder machine. The Nation magazine, Forbes and Congresswoman
22 Alexandria Ocasio-Cortez all covered it. Then the white blood cells of the military-industrial complex
23 kicked into action in order to destroy the “infection.” The New York Times and Vox both claimed the
24 \$21 trillion is merely the result of large-scale misdocumentation and therefore doesn’t matter at all. Of
25

1 course, the idea that tens of TRILLIONS of dollars of unaccountable adjustments don't matter and
2 couldn't mask any fraud, abuse or corruption is an assertion that makes Charlie Sheen's statement that
3 he runs on tiger blood seem downright levelheaded.

4 Probably the best article to date on the \$21 trillion was written a few weeks ago by Matt Taibbi for
5 Rolling Stone.
6

7 Point is, even though most of the mainstream media won't get near this subject (or worse yet—actively
8 attack those who do), the word is getting out: There is a giant sucking sound in the center of the
9 Pentagon, and whatever's down there feeds on trillions of secretive dollars, then sh*ts out incalculable
10 death and destruction. (It's the Death Star if officials at the Death Star spent \$10,000 on a toilet seat.)
11

12 13A month ago the Government Accountability Office came out with a report showing the total
13 number

14 of whistleblower complaints over the past five years at the Department of Defense. It's nearly 100,000.

15 Here's the only part of the report that references that number:

16 “The Department of Defense Inspector General identified 8 substantiated violations of whistleblower
17 confidentiality between fiscal years 2013 and 2018, representing approximately .01 percent of the
18 95,613 contacts handled by the Inspector General during that time...”
19

20 We are being lied into war again – Lee Camp We are being lied into war again – Lee Camp

21 95,613 whistleblower complaints over five years.
22

23 Sadly, the Government Accountability Office was trying to brag in that sentence. They were proudly
24 stating, “We only breached the confidentiality of .01 percent of our 95,000 whistleblower complaints.

25 Aren't we heroes?!”
26

27 1113
28

1 It's kind of like saying, "Of the 10,000 dolphins I've killed, not a single one has accidentally been a
2 human." The sane response is, "Well, I'm glad to hear that, but did you say you killed 10,000
3 dolphins?"

4 To try to get the 95,000 number to make a little more sense, that averages out to a whistleblower every
5 six minutes of every weekday for five straight years. (That waiting room must be truly nuts. I bet all the
6 good magazines were claimed years ago.)

7
8 But maybe I'm looking at this all wrong. Perhaps the number 95,613 shouldn't be all that shocking, and
9 I need to roll my tongue back up and store it back within my mouth. When you have \$21 trillion of
10 unaccounted-for adjustments, it means a seizure-inducing amount of money, parts, pieces, bombs,
11 missiles, manpower and devices are flying around with no accountability – likely creating loads of
12 fraud, which would probably create loads of whistleblowers. Hence, maybe we all should have
13 expected this number of whistleblowers rather than being shocked.

14
15 For example, there's the time in 2003 when the US flew \$12 billion in cash to Iraq and promptly lost
16 track of it. As the Guardian makes clear in this article, this was not an instance of hackers on a
17 computer system stealing a bunch of ones and zeroes. This was giant pallets of cash money vanishing
18 without a trace. In fact, it was 281 million \$100 bills, weighing in at 363 tons. That's not really the type
19 of thing you can just smuggle away in your sweatshirt while humming "She'll be comin' 'round the
20 mountain."
21
22

23 Or here's another example journalist David DeGraw highlights from the Government Accountability
24 Report:

1 “... according to a Department of Defense official, during an initial audit, the Army found 39
2 Blackhawk helicopters that had not been recorded in the property system. [\$819 million in value]
3 Similarly, the Air Force identified 478 buildings and structures at 12 installations that were not in the
4 real property systems.”

5
6 14The Army lost and then found 39 helicopters.

7 The Air Force lost and then found 478 buildings.

8 How does one lose a goddamn building? Unless you just had a bad breakup with David Copperfield,
9 there’s no explanation for losing a building. (Side note: It must suck divorcing David Copperfield.

10
11 “Really, honey? You think you’re gonna take the house?? PAFOOMP! What house?!”)

12 Ya see, this madness stems from the fact that the Pentagon has a standard operating procedure of
13 simply making up numbers to fill their books – which, for normal human beings, is termed “fraud.” But
14 in the case of the Pentagon, it’s termed, “We get to make sh*t up because ... ummm... national
15 security.”

16
17 Also on rt.com Cold War is good for business: US contractors rejoice at the new Red Scare

18 Here’s more from a 2013 Reuters article:

19 “Linda Woodford spent the last 15 years of her career inserting phony numbers in the Department of
20 Defense’s accounts ... but many mystery numbers remained. For those, Woodford and her colleagues
21 were told by superiors to take “unsubstantiated change actions” – in other words, enter false numbers,
22 commonly called “plugs,” to make the Navy’s totals match the Treasury’s.”

23
24 Have no fear, patriotic Americans, this is not “lying to the American people, stealing their money, and
25

1 using it for war,” this is just “unsubstantiated change actions.” Try that on your next tax return. Put in
2 \$10,000 marked “Unsubstantiated change actions.” I’m sure they’ll love that.

3 So let’s sum this up, shall we? The Pentagon sucks up 55% of all the discretionary tax money we pay
4 to

5 our government (thanks to our bought-off Congress who receive more Christmas cards from weapons
6 contractors than they do from relatives). Those who work at the Pentagon have no idea where or how

7 the money is spent. They make up many of the numbers resulting in tens of trillions of dollars of

8 unaccounted-for adjustments. They lose helicopters, buildings and, in a few instances, even nuclear

9 warheads. There is an unimaginable amount of fraud and corruption at every level and literally

10 thousands of whistleblowers have tried to come forward every single year – one every six minutes.

11 When they do take that incredibly brave action, over 90% of the claims are dismissed without even
12 being investigated.
13

14 You would think, in this topsy-turvy world, if there were one organization we could trust with a trillion
15 dollars a year of our taxpayer money, it would be the Department of Unauthorized Highly Secretive
16 Mass Human Murder.
17

10 16DOE corruption—appointed and elected

11 officials should face prison time

12 Marita Noon

13 |

14 An exhaustive review of 350+ pages of leaked emails regarding the Obama administration’s handling
15 of the various green-energy loan and grant programs makes several things very clear: they lied,
16 engaged in favoritism, and rushed application approvals to suit the political agenda of the White House.

17 At the same time, worthy projects that went through a complete due diligence process were denied or
18 ultimately withdrawn, as the lengthy approval process “taxed investors’ patience”—as was the case
19 with Aptera Motors, which worked closely with the DOE for two years.

20 Paul Wilbur, President and CEO at Aptera, didn’t think they were treated unfairly. He told me, “At the

21 1118

1 end of the day, we couldn't get through the process.” But, he admits, he hasn't read the emails.

2 Aptera was trying to build a very efficient electric vehicle with an under \$30K price point. Wilbur met
3 with Secretary Chu who could see the value in the technology. But our research shows that value was
4 not the deciding factor in which projects got funded and which ones didn't. Wilbur reports that he
5 didn't donate to any candidate. He wanted to keep the whole process clean and do what was “good for
6 America.”

7
8 The report from the House Oversight Committee says Aptera first applied for an ATVM loan in
9 December of 2008 and “shut down on December 2, 2011.” The report implies that Aptera was led on:
10 “After numerous negotiations with DOE, in September 2011, Aptera received a conditional loan
11 commitment of \$150 million if the company was able to raise \$80 million privately.” And: “The loans
12 given to Fisker and Tesla gave Aptera hope that DOE would eventually act on their application. More
13 importantly, since the DOE continued to engage with the company throughout the time period,
14 management was convinced that DOE was interested and willing to provide financing for the
15 company.”

16
17
18 Aptera's 100% US technology has since been sold to a Chinese company.

19
20 Aptera was applying for an Advanced Technology Vehicle Manufacturing loan (ATVM). Only five
21 loans were given out through the program and all have political ramifications. Christine Lakatos, who
22 has worked with me on the green-energy, crony-corruption reports I've written, has done thorough
23 research on the topic. She has read each and every one of the 350+ pages of emails released on October
24 31 and has written a blog post specifically addressing the ATVM program and its hijinks. As she cites,

1 Fisker and Tesla (which Romney referenced in the first debate), got loans in 2010 and then the Vehicle
2 Production Group’s loan was the only ATVM loan closed in 2011; all have ties to Obama bundlers.
3 The
4 17other two ATVM loans went to Ford and Nissan—both of which, according to the House report,
5 “were
6 heavily engaged in negotiations with the Administration over fuel economy standards for model years
7 2012-2016 at the time the DOE was considering their applications. Both companies eventually
8 expressed publicly their support for these standards, which the Administration described as the
9 ‘Historic Agreement.’”

10 Armed with the sweeping knowledge of the House reports and subsequent hearings, evidence from
11 DOE staffers (many of whom were appointed by Obama), Lakatos’ research, and personal experience,
12 a different ATVM applicant has now taken its case to court citing “corruption and negligence.”

13 On November 16, 2012, XP Technologies filed a lawsuit against the federal government concerning the
14 DOE’s denial of XP Technology’s loan guarantee application. The complaint alleges: “criminal
15 activities did take place by DOE staff and affiliates.” A November 23 press release announces that XP
16 Technologies is now represented by Cause of Action, “a nonprofit, nonpartisan organization that uses
17 investigative, legal, and communication tools to educate the public on how government accountability
18 and transparency protects taxpayer interests and economic activity.”

19 According to the document filed on November 16, “Plaintiffs’ backgrounds include extensive issued
20 patents on seminal technologies in use world-wide, White House and Congressional commendations
21 and an engineering team of highly experienced auto-makers. Plaintiff brought a vehicle design, which

1 was proposed as the longest range, safest, lowest cost electric vehicle, to be built in America in order to
2 deliver extensive American jobs nationwide. No other applicant, or award ‘winner’, has succeeded in
3 meeting, or (is) intending to meet, that milestone. XP Technology developed a patented lightweight,
4 low-cost, long-range, electric vehicle using air-expanded foam-skinned material for a portion of the
5 polymer body and received numerous patents, acclaim and superior computer modeling metrics over
6 any competing solution. XP presented a vast set of letters of support to DOE from pending customers.
7 Major auto-industry facilities and engineers had joined forces to bring the vehicle to the defense,
8 commercial and consumer market.”

9
10 Over the weekend, we had an exclusive interview, on condition of anonymity, with a senior official at
11 XP Technologies about the lawsuit and the experience.

12 He reported: “Staff from within the DOE have provided evidence which is quite compelling.” As
13 Aptera's Wilbur made clear, the individuals within the DOE were very thorough. One of the emails, in
14 the 350+ pages, was from Secretary Chu himself in which he criticized staffers for taking a “principled
15 stand,” which held up the approval process of projects the White House wanted advanced. Another
16 indicated that the pressure to rush was coming from “above the agency.” Overall, the emails show that
17 projects were rushed so that announcements could coincide with visits, speeches, and photo ops—as
18 well as providing talking points for the president.

19 Our XP source told us “We experienced, and have been provided evidence of, applicant submissions
20 and reviews being modified in order to benefit some and disadvantage others, and the business
21 connections between the different parties associated with the ones that benefited is quite

1 extraordinary.” The leaked emails support this accusation, specifically regarding the “business
2 18connections.” In her post, Lakatos calls it “green fraternizing.” The emails show that certain
3 applicants
4 and decision makers went bike riding together, had coffee meetings, sleepovers, beer summits, parties,
5 dinners, and fundraisers.

6 While he didn’t provide us with a name, the XP official said, “We experienced a senior senator
7 blockading our efforts and then providing favors to a competitor, which then benefited his family
8 financially.” The discovery the lawsuit will provide will expose the “senior senator,” but our previous
9 research shows that Senator Harry Reid’s actions seem to fit the XP official’s comment.
10

11 XP Technologies believes that “DOE officials changed the first-come-first-served published rules and
12 standards of the funding in order to take applicants in order of who they favored and who had
13 purchased the most influence instead of the order in which they applied, as required.”
14

15 Having extensively studied the DOE’s various loan programs, including the ATVM, Lakatos and I
16 agree with our source’s startling conclusion: “Based on the evidence provided by investigators, and
17 experienced directly by our team, it is hard to imagine that at least one or more elected, or?appointed,
18 officials might not be seeing measures ranging from censure or even federal prison time.”
19

20 Time, the lawsuit, and subsequent investigation will tell.

21 While the House Oversight Committee has been digging deeply into the mismanagement and
22 corruption of the green energy loans, the media has paid little attention. Other than our report, the
23 October 31 release of the emails cited here received virtually no news reporting. Even the Fox News
24 Channel ignored the story. The plight of promising companies like Aptera and XP Technologies would
25

1 have gone unnoticed if not for the lawsuit. The legal complaint attracted attention.

2 On November 16, the Heritage Foundation broke the XP story: “A lawsuit filed in federal court on
3 Wednesday alleges mass favoritism in the Department of Energy’s decisions to award federal grants to
4 major car companies to develop electric vehicles, according to a legal complaint obtained by Scribe.”

5 On November 19, Lakatos, whose work is listed as “evidence” in the legal complaint, received a call
6 from Fox News’ Gary Gastelu—who reported on the story on November 20. The next day, Fox News
7 covered the lawsuit on America’s Newsroom. Even the Drudge Report picked up on the story.
8

9 XP has a litigation website on which the company states: “The case has nothing to do with complaining
10 about not getting the loans. It has everything to do with HOW the applicants didn't get the loans!” They
11 are communicating with other applicants about participating in the lawsuit.
12

13 The XP story and subsequent media coverage offers a lesson for others—especially industries who
14 have been wronged by the Obama Administration’s practices (such as energy). The lawsuit may—or
15 may not—send officials to federal prison, as our XP source suggests, but it could go a long way to
16 winning in the court of public opinion.
17

18 If you thought that Mossack Fonseca and the Panama Papers was "The Story": IT WAS ONLY THE
19 BEGINNING AND THE BRIBES, STOCK MARKET RIGGING AND CORRUPTION ARE STILL
20 INCREASING!!!
21

22 19In the USA; Mofo, Wilson Sonsini, Perkins Coie, Covington & Burling, and other firms, do the same
23 corruption today that Mossack Fonseca did when they got caught.

24 THIS IS ABOUT THE U.S. SENATORS AND THEIR CRONY DARK MONEY POLITICAL
25

1 BRIBES AND CRIMINAL KICK-BACKS, THE TECH OLIGARCHS WHO DEPLOYED THE
2 BRIBES AND THE VICTIMS OF THESE CRIMES.

3 - Google, Tesla, Facebook, LinkedIn and their VC's (and deeply bribed Senators) ordered and operated
4 hit-jobs on the public and their competitors, supported by the Obama White House and U.S. Dept. of
5 Energy. The FBI raided their scheme and the investigations tracked all the way back to the Oval
6 Office!

7 - How Obama's U.S. Department of Energy Defrauded Americans Out Of Their Life Savings In A
8 Massive Dark Money Crony Crime Cover-up

9 - "DARK MONEY" IS THE WAY THAT CORRUPT POLITICAL CRIMINALS EXCHANGE
10 COMPENSATION, BRIBES AND INFLUENCE WITHOUT THE FBI CATCHING THEM

11 - For these politicians to say: "We are excluded from the law for these crimes because we changed the
12 laws in order to exclude ourselves" is like the Mafia saying: "Killing people isn't illegal only if we do
13 the killing".

14 - This is about a group of tech oligarchs, and their corrupt Senators, who commit crimes in order to
15 manipulate over a trillion tax dollars (YOUR MONEY) into their, and their friends pockets.

16 - They create fake issues that they hype-up through their controlled media. They use media monopoly
17 tricks to try to shut out any other viewpoints. They push pretend issues that they believe will get more
18 tax money allocated to "issue solutions" that they, and their friends, happen to already own the
19 monopolies for.

20 - They are felons yet they control some of the offices of the agencies who are supposed to arrest them.
21 Silicon Valley bought K Street and U.S. Senators, gave them more Dark Money than history has ever
22

1 seen and then had giant tech-law firms bribe, hit-job and blockade any attempts to solve the problem.

2 - Some of the largest bribes in American history were paid via billions of dollars of pre-IPO cleantech
3 stock, insider trading, real estate, Google search engine rigging and shadow-banning, sex workers,
4 revolving door jobs, nepotism, state-supported black-listing of competitors and under-the-table cash.

5
6 Why are these Silicon Valley Oligarchs and their K-Street law firms and lobbyists immune from the
7 law?

8 [https://pilotonline.com/news/government/politics/article_c6836711-70ed-588c-b73f-](https://pilotonline.com/news/government/politics/article_c6836711-70ed-588c-b73f-547d6d82cb62.html)
9 [547d6d82cb62.html](https://pilotonline.com/news/government/politics/article_c6836711-70ed-588c-b73f-547d6d82cb62.html)

11
12 HOW SILICON VALLEY'S "SCALED" CRIME CARTEL WORKS:

13 20- A crime with hookers and a very big shark

14 There are millions of sharks in the ocean but only "Jaws" was big enough to earn himself (The Shark)
15 so many feature films about trying to kill him. It was simply because he was so big and so hungry.

16 Judging by the endless sequels, Jaws seems pretty hard to kill.

17 This is about the biggest sharks. They are from Silicon Valley.

18 Google, Facebook, Amazon, Linkedin, Netflix, et al; exist because they operate under the criminal
19 umbrella of the tech Cartel frat boys.

20 These guys are addicted to sex, and they are also huge assholes, so they can't keep any partners around
21 unless they pay them to be trophy wives or "beard" wives. Buying sex from Italian escorts, young girls
22 and New York Rent Boys is really, really expensive. This drives them to do anything to suck up huge
23
24
25

1 amounts of cash.

2 These guys are also addicted to power, so they buy East and West Coast U.S. Senators, British
3 Parliament members and partner with corrupt Russian oligarchs. Buying Senators is also really, really
4 expensive. This also drives them to do anything to suck up huge amounts of cash.

5 These guys need, and spend, massive amounts of cash. Being a tech oligarch is really, really expensive.
6

7 They can't have the IRS cutting into their hooker-budgets. They spend massive amounts on big law
8 firms to hide money in real estate, trusts, fake charities and in a huge array of off-shore spider holes.

9 These guys can't afford to get caught so they hire In-Q-Tel, Gawker Media, Black Cube, Fusion-GPS,
10 and a huge army of other attackers, to destroy anybody who questions their motives.
11

12 Their Cartel exists because they own all of the main servers, banks, venture capital firms, tech law
13 firms, K Street lobbyists and tech HR firms.

14 They control their entire eco-system and black-list anybody that offends them.
15

16 They own the internet and they delete anybody who steps in their circle.
17

18 Nobody can operate outside of it.

19 No start-up can compete with them without getting a hit-job put on it.
20

21 Since the year 2000, together, they have put over a million smaller companies out of business.

22 They exist because of "Scaling": the ability to use monopolized networks to reach everyone on Earth,
23 have lower prices, and destroy all competition because they control all infrastructure. Scaling is all they
24 talk about at their AngelGate "power lunches" in the back rooms of Restaurants on University Avenue
25 in Palo Alto.
26

27 1126
28

1 The FBI can't stop them because they owned James Comey, the head of the FBI.

2 21 The SEC, FEC and FTC can't stop them because they own the regulators at those agencies.

3 They Obama White House could not stop them because most of the Obama Administration was staffed
4 by, and directed by, the staff of Google, Amazon and Facebook, et al.

5 The Silicon Valley tech Cartel makes the Mafia look like small potatoes.

6 They are a criminal organization!

7 If certain politicians are as 'impassioned to serve the public' as they say, then shouldn't they volunteer
8 for office and allow the public to see all of their bank accounts?

9 Of course they will never do that because many of them are getting "DARK MONEY" covert payola
10 and they are in office only to serve criminal kick-back schemes.

11 Politician's Dianne Feinstein, Barbara Boxer, Nancy Pelosi, Harry Reid and 42 others, sent out letters,
12 emails, meeting requests and pitches to solicit members of the public to join a cause. The top staff of
13 the U.S. Department of Energy (DOE) sent out the same pleas. They promised a "wonderful new
14 opportunity for all" in the first market break for outsiders in 30 years.

15 In meetings, on camera, they promised to give members of the public a fair shot at a group of new
16 Department of Energy funds that Obama had put in place.

17 They failed to mention one key fact: ALL OF THE TAXPAYER MONEY HAD ALREADY BEEN
18 SECRETLY PROMISED ("Hard Wired" it is called) TO OBAMA'S, AND THE DOE BOSSES,
19 FRIENDS, IN ADVANCE.

20 That is a felony violation of the law. A crime which FBI Director James Comey, and his staff covered
21

1 up and which DOE Boss Steven Chu and his staff actively implemented. Our team knows this, as fact,
2 because they reported directly to Comey, Chu and their offices.

3 It was not an 'accident', it was not an 'oversight', it was not 'an agency just overwhelmed with paper'. It
4 was a precision controlled, coordinated organized crime effort designed to rape, both, the U.S.
5 taxpayers and the non-crony applicants for these funds.
6

7 The crime used the traditional bribes, crony payola contracts, revolving doors, sex worker payoffs and
8 other political corruption but it mainly used a new tactic called "Dark Money".

9 Our team knows this because some of them were solicited to participate in these crimes and some of
10 them had close personal relationships with the politicians who are now known to have operated these
11 crimes. Some of our witnesses and insiders have been involved with the DOE since before 2000. They
12 have 'seen it all'.
13

14 Companies, their executives and their investors were induced by California and New York Senators,
15 White House Staff and the top staff of the U.S. Department of Energy to invest many years of their
16 lives, and tens of millions of dollars of their personal cash in a fake government program which only
17 existed to pay off Obama's political financiers.
18

19 22 American taxpayers were lied to and ruined by the U.S Department of Energy and their damages are
20 increasing monthly. The DOE never apologized, offered fixes or provided anything other than Fusion-
21 GPS kinds of attacks on those who asked for help or who reported the crimes.
22

23 This scam happened in 2008. History has proven that the DOE funds, since then, were rigged.

24 Congress, the news media and special investigations have proven that these crimes happened. Nothing
25
26

1 has ever been done to help the victims (over 100 companies and over 1800 individuals) recover from
2 their state-sponsored losses.

3 Former House Speaker Nancy Pelosi bought stock in initial public offerings (IPOs) from the very
4 Cleantech companies that earned hefty returns (ie: Solyndra, Tesla, Abound, etc.) while she had access
5 to insider information that would have been illegal for an average citizen to trade with – even though
6 it's perfectly legal for elected officials, CBS's "60 Minutes" reported Sunday night.

7
8 In a piece relying on data collected from the conservative Hoover Institution, "60 Minutes" revealed
9 that elected officials like Pelosi are exempt from insider trading laws – regulations that carry hefty
10 prison sentences and fines for any other citizen who trades stocks with private information on
11 companies that can affect their stock price.

12
13 In the case of elected officials – this secret information ranges from timely details on lucrative federal
14 contracts to legislation that can cause companies' stocks to rise and fall dramatically.

15
16 Editor's Note: Repeal Obamacare? Vote Here Now

17 How do they get away with it? Lawmakers have exempted themselves from the laws that govern every
18 other citizen.

19 Pelosi, D-Calif., and her husband have participated in at least eight IPOs while having access to
20 information directly relating to the companies involved. One of those came in 2008, from Visa, just as
21 a
22 troublesome piece of legislation that would have hurt credit card companies, began making its way
23 through the House.

24
25 “Undisturbed by a potential conflict of interest the Pelosis purchased 5,000 shares of Visa at the initial
26

1 price of \$44 dollars. Two days later it was trading at \$64. The credit card legislation never made it to
2 the floor of the House,” Steve Kroft of "60 Minutes" reported.

3 Kroft confronted Pelosi at a regular press conference after she declined an interview.

4 Kroft: Madam Leader, I wanted to ask you why you and your husband back in March of 2008 accepted
5 and participated in a very large IPO deal from Visa at a time there was major legislation affecting the
6 credit card companies making its way through the —through the House.
7

8 Nancy Pelosi: But —

9 Kroft: And did you consider that to be a conflict of interest?

10
11 23Pelosi: The — y — I — I don't know what your point is of your question. Is there some point that
12 you
13 want to make with that?

14 Kroft: Well, I — I — I guess what I'm asking is do you think it's all right for a speaker to accept a very
15 preferential, favorable stock deal?

16 Pelosi: Well, we didn't.

17 Kroft: You participated in the IPO. And at the time you were speaker of the House. You don't think it
18 was a conflict of interest or had the appearance--
19

20 Pelosi: No, it was not —

21 Kroft: — of a conflict of interest?

22 Pelosi: —it doesn't — it only has appearance if you decide that you're going to have — elaborate on a
23 false premise. But it — it — it's not true and that's that.
24

25 Kroft: I don't understand what part's not true.
26

1 Pelosi: Yes sir. That — that I would act upon an investment.

2 “There are all sorts of forms of honest grafts that congressmen engage in that allow them to become
3 very, very wealthy. So it's not illegal, but I think it's highly unethical, I think it's highly offensive, and
4 wrong,” he told Kroft.

5
6 “... Insider trading on the stock market. If you are a member of Congress, those laws are deemed not to
7 apply,” Schweizer added. “The fact is, if you sit on a healthcare committee and you know that
8 Medicare, for example, is — is considering not reimbursing for a certain drug that's market moving
9 information. And if you can trade stock on — off of that information and do so legally, that's a great
10 profit making opportunity. And that sort of behavior goes on.”

11
12 Pelosi’s office issued a statement Sunday saying, “It is very troubling that ‘60 Minutes’ would base
13 their reporting off of an already-discredited conservative author who has made a career out of attacking
14 Democrats.”

15
16 Schweizer’s books include “Do as I Say (Not as I Do): Profiles in Liberal Hypocrisy,” and “Architects
17 of Ruin,” according to Schweizer’s page on the Hoover Institution website.

18 What happened when the victims of these crimes reported the incidents to authorities? The Obama
19 Administration ordered and operated attacks on the victims. Those attacks included the following
20 reprisal, retribution and revenge efforts:
21

22 - DOE solicited the victims with false promises and caused them to expend millions of dollars and
23 years of their time for projects which DOE had covertly promised to their friends and were using the
24 victims as a “smokescreen” to cover their illegal DOE slush-fund for the victims competitors and
25

1 personal enemies.

2 24- Social Security, SSI, SDI, Disability and other earned benefits were stone-walled. Applications
3 were “lost”. Files in the application process “disappeared”. Lois Lerner hard drive “incidents” took
4 place in order to seek to hide information and run cover-ups.

5
6 - DOE’s Jonathan Silver, Lachlan Seward and Steven Chu contacted members of the National
7 Venture Capital association (NVCA) and created national “black-lists” to blockade Victims from ever
8 receiving investor funding. This was also confirmed in a widely published disclosure by Tesla Motors
9 Daryl Siry and in published testimony.

10
11 FOIA requests were hidden, frozen, stone-walled, delayed, lied about and only partially responded to
12 in order to seek to hide information and run cover-ups.

13
14 - State and federal employees played an endless game of Catch-22 by arbitrarily determining that
15 deadlines had passed that they, the government officials, had stonewalled and obfuscated applications
16 for, in order to force these deadlines that they set, to appear to be missed.

17
18 - Some Victims found themselves strangely poisoned, not unlike the Alexander Litvenko case. Heavy
19 metals and toxic materials were found right after their work with the Department of Energy weapons
20 and energy facilities. Many wonder if these “targets” were intentionally exposed to toxins in retribution
21 for their testimony. The federal MSDS documents clearly show that a number of these people were
22 exposed to deadly compounds and radiations, via DOE, without being provided with proper HazMat
23 suits which DOE officials knew were required.

24
25 - Victims employers were called, and faxed, and ordered to fire Victims from their places of
26

1 employment, in the middle of the day, with no notice, as a retribution tactic.

2 - On orders from Obama White House officials, DNC-financed Google, YouTube, Gawker Media
3 and Gizmodo Media produced attack articles and defamation videos and locked them on the internet on
4 the top line, of the front page of all Google searches for a decade in front of 7.5 billion people, around
5 the world, at a cost of over \$40 million dollars in server farms, production costs and internet rigging.

6
7 The forensic data acquired from this attack proved that Google rigs attacks against individuals on the
8 internet and that all of Google's "impressions" are manually controlled by Google's executives who are
9 also the main financiers and policy directors of the Obama Administration. This data was provided to
10 the European Union for it's ongoing prosecution of Google's political manipulation of public
11 perceptions.
12

13 - Victims HR and employment records, on recruiting and hiring databases, were embedded with
14 negative keywords in order to prevent them from gaining future employment.

15
16 - Our associates: Gary D. Conley, Seth Rich, Rajeev Motwani and over 30 other whistle-blowers in
17 this matter, turned up dead under strange circumstances. They are not alone in a series of bizarre deaths
18 related to the DOE investigations.

19 - Disability and VA complaint hearings and benefits were frozen, delayed, denied or subjected to lost
20 records and "missing hard drives" as in the Lois Lerner case.

21
22 25- Paypal and other on-line payments for on-line sales were delayed, hidden, or re-directed in order to
23 terminate income potential for Victims who competed with DOE interests and holdings.

24 - DNS redirection, website spoofing which sent Victims websites to dead ends and other Internet
25

1 activity manipulations were conducted. All commercial storefronts and on-line sales attempts by
2 Victims, had their sites hidden, or search engine de-linked by an massively resourced facility in order
3 to
4 terminate revenue potentials for those victims.

5 Over 50,000 trolls, shills, botnets and synth-blog deployments were deployed to place defamatory
6 statements and disinformation about victims in front of 7.5 billion people around the world on the
7 internet in order to seek to damage their federal testimony credibility by a massively resourced facility.

8
9 - Campaign finance dirty tricks contractors IN-Q-Tel, Think Progress, Black Cube, Podesta Group,
10 Stratfor, Fusion GPS, IN-Q-Tel, Media Matters, Gawker Media, Gizmodo Media, Syd Blumenthal,
11 etc.,

12 were hired by DOE Executives and their campaign financiers to attack Victims who competed with
13 DOE executives stocks and personal assets.

14 - Covert DOE partner: Google, transfered large sums of cash to dirty tricks contractors and then
15 manually locked the media portion of the attacks into the top lines of the top pages of all Google
16 searches globally, for years, with hidden embedded codes in the links and web-pages which multiplied
17 the attacks on Victims by many magnitudes.

18
19 Covert Cartel financier: Google, placed Google’s lawyer: Michelle Lee, in charge of the U.S. Patent
20 Office and she, in turn, stacked all of the U.S. Patent Office IPR and ALICE review boards and offices
21 with Google-supporting employees in order to rig the U.S. Patent Office to protect Google from being
22 prosecuted for the vast patent thefts that Google engages in. Google has hundreds of patent lawsuits for
23 technology theft and a number of those lawsuits refer to Google’s operations as “Racketeering”,
24
25
26

1 “Monopolistic Cartel” and “Government Coup-like” behaviors. Thousands of articles and
2 investigations detail the fact that Google, “essentially” ran the Obama White House and provided over
3 80% of the key White House staff. A conflict-of-interest unlike any in American history. Google’s
4 investors personally told Applicant they would “kill him”. Google and the Obama Administration were
5 “the same entity”. Applicant testified in the review that got Michelle Lee terminated and uncovered a
6 tactical political and social warfare group inside Google who were financed by Federal and State funds.
7
8 - Honeytraps and moles were employed by the attackers. In this tactic, people who covertly worked
9 for the attackers were employed to approach the “target” in order to spy on and misdirect the subject.
10
11 - Mortgage and rental applications had red flags added to them in databases to prevent the targets
12 from getting homes or apartments.
13
14 - McCarthy-Era "Black-lists" were created and employed against Victims who competed with DOE
15 executives and their campaign financiers to prevent them from funding and future employment.
16
17 - Targets were very carefully placed in a position of not being able to get jobs, unemployment
18 benefits, disability benefits or acquire any possible sources of income. The retribution tactics were
19 audacious, overt..and quite illegal.
20

21 **HOW DOES DEPARTMENT OF ENERGY DARK MONEY PAYOLA WORK?**

22 Let's take a look:

23
24 In the politics of the United States, dark money is funds given to nonprofit organizations—and include
25 501(c)(4)(social welfare) 501(c)(5) (unions) and 501(c)(6) (trade association) groups—that can receive
26

1 unlimited donations from corporations, individuals, and unions, and spend funds to influence elections,
2 but are not required to disclose their donors.[3][4] Dark money first entered politics with Buckley v.
3 Valeo (1976) when the United States Supreme Court laid out Eight Magic Words that define the
4 difference between electioneering and issue advocacy.
5

6 According to the Center for Responsive Politics, "spending by organizations that do not disclose their
7 donors has increased from less than \$5.2 million in 2006 to well over \$300 million in the 2012
8 presidential cycle and more than \$174 million in the 2014 midterms." [3] The New York Times editorial
9 board has opined that the 2014 midterm elections were influenced by "the greatest wave of secret,
10 special-interest money ever raised in a congressional election." [5]
11

12 The term was first used by the Sunlight Foundation to describe undisclosed funds that were used during
13 the United States 2010 mid-term election. [6][7] Its practical effect has been described by Donald
14 Trump as Congress "being under the magical spell of the donors." [8]
15

16 In some elections, dark money groups have surpassed traditional political action committees (PAC) and
17 "super PACs" (independent-expenditure-only committees) in the volume of spending. [4] In 2014, the
18 group Freedom Partners was identified as the "poster child" for the rise of dark money. [4] In 2012,
19 Freedom Partners had the ninth-highest revenues among all U.S. trade associations which filed tax
20 returns that year, more than "established heavyweights" such as the American Petroleum Institute,
21 PhRMA, and U.S. Chamber of Commerce. [4] Freedom Partners largely acted as a conduit for
22 campaign spending; of the \$238 million it spent in 2012, 99 percent went to other groups, and Freedom
23 Partners itself did not have any employees. [4] This was a major distinction between other high-revenue
24
25
26

1 trade associations, which typically have many employees and devote only about 6 percent of spending
2 to grants to outside groups.[4]

3 The rise of dark money groups was aided by the U.S. Supreme Court decisions in *FEC v. Wisconsin*
4 *Right to Life, Inc.* (2008) and *Citizens United v. FEC* (2010).[4] In *Citizens United*, the Court ruled (by
5 a 5–4 vote) that corporations and unions could spend unlimited amounts of money to advocate for or
6 against political candidates.[9]

7
8 2010 election cycle

9 According to the Center for Responsive Politics, dark money (which it defined as funds from outside
10 groups that did not publicly disclose donors, plus groups that received a substantial portion of their
11 contributions from such nondisclosing groups) accounted for nearly 44% of outside spending in the
12 2010 election cycle.[10]

13
14 27In the 2012 election cycle, more than \$308 million in dark money was spent, according to the Center
15 for Responsive Politics.[11] An estimated 86 percent was spent by conservative groups, 11 percent by
16 liberal groups and 3 percent by other groups.[11]

17
18 The three dark money groups which spent the largest sums were Karl Rove's American
19 Crossroads/Crossroads GPS (\$71 million), the Koch brothers' Americans for Prosperity (\$36 million)
20 and the U.S. Chamber of Commerce (\$35 million), all conservative groups.[11][12] Aside from a
21 complex, and still highly covert network created by The Clinton Foundation, Media Matters and The
22 Podesta Group, the three liberal groups with the largest dark-money expenditures were the League of
23 Conservation Voters (\$11 million), Patriot Majority USA, a group focusing on public schools and
24

1 infrastructure (\$7 million), and Planned Parenthood (almost \$7 million).[11]

2 The 2014 election cycle saw the largest amount of dark money ever spent in a congressional election;
3 the New York Times editorial board described 2014 "the greatest wave of secret, special-interest money
4 ever." [5] On the eve of the election, Republican-leaning dark money groups dominated, with \$94.6
5 million in expenditures, exceeding dark money expenditures by Democratic-leaning dark money
6 groups (\$28.4 million), and by expenditures that could not be classified (\$1.9 million).[13] Karl Rove's
7 dark money group Crossroads GPS alone spent over \$47 million in the 2014 election cycle.[14]

8 In the Senate elections, dark money spending was highly concentrated in a handful of targeted
9 competitive states, and especially in Alaska, Arkansas, Colorado, Kentucky, and North Carolina.[15] In
10 the eleven most competitive Senate races, \$342 million was spent by non-party outside groups,
11 significantly more than the \$89 million spent by the political parties.

12 In the 2014 Kentucky election, a key player was the "Kentucky Opportunity Coalition," a group
13 supporting Mitch McConnell, Republican of Kentucky,[16] whom the New York Times editorial board
14 has described as "the most prominent advocate for unlimited secret campaign spending in
15 Washington." [5] The Kentucky Opportunity Coalition, a 501(c)(4) "social welfare" group,[17] raised
16 more than \$21 million, while McConnell raised about \$32 million and McConnell's opponent,
17 Democratic candidate Alison Lundergan Grimes, raised about \$19 million.[17] According to a Center
18 for Public Integrity analysis of data provided by advertising tracking firm Kantar Media/CMAG, the
19 group ran more than 12,400 television advertisements.[17] Every Kentucky Opportunity Coalition's
20 television advertisements mentioned either McConnell or Grimes; overall, about 53 percent of the
21
22
23
24
25
26

1 group's ads praised McConnell while the rest were attack ads against Grimes.[18] The Kentucky
2 Opportunity Coalition relied heavily on political consultants in Washington, D.C. and Virginia linked
3 to
4 Karl Rove's Crossroads groups,[19] and received \$390,000 in a grant from Crossroads GPS.[17]
5 Described as "mysterious," the group was listed by a Post Office box,[17] and the only name formally
6 associated with the group was political operative J. Scott Jennings, a deputy political director in the
7 George W. Bush administration, a worker for McConnell's previous campaigns.[18] Melanie Sloan of
8 the watchdog organization Citizens for Responsibility and Ethics in Washington said that the Kentucky
9 Opportunity Coalition was "nothing more than a sham." [17]
10 In North Carolina, the pro-Tillis group "Carolina Rising" received nearly all (98.7%) of its funds from
11 Crossroads GPS; the Center for Responsive Politics highlighted this as an example of how Crossroads
12 GPS, a 501(c)(4) group, "evades limits on political activity through grants" to other 501(c)(4) groups.
13 [16][21] In the 2014 cycle, Crossroads GPS also gave \$5.25 million to the U.S. Chamber of
14 Commerce, \$2 million to the American Future Fund, and \$390,000 to the Kentucky Opportunity
15 Coalition.[21] In total, Crossroads GPS spent more than \$13.6 million on grants to other groups,
16 which
17 it described as being for the purposes of "social welfare." [21]

18 In 2014, the Democratic Party-aligned dark money group Patriot Majority USA, a 501(c)(4), spent
19 almost \$13.7 million on "direct and indirect political campaign activities," airing 15,000 television ads
20 in targeted Senate races.[22] About half of the \$30 raised by the group came from five anonymous
21 donors.[22] The group was led by Craig Varoga, "a staunch ally" of Senate Minority Leader Harry
22

1 Reid, Democrat of Nevada.[22]

2 In Alaska, Mark Begich was "one of the few Democratic candidates to come close to receiving as much
3 support from dark money as his Republican opponent." [15] The pro-Begich Alaska Salmon PAC,
4 funded entirely by the League of Conservation Voters and its Alaska affiliate, spent funds in support of
5 Begich. [15]
6

7 According to the Center for Responsive Politics, by October 2015, \$4.88 million in dark money had
8 already been spent for the 2016 election cycle, "more than 10 times the \$440,000 that was spent at this
9 point during the 2012 cycle." [11] The money was spent by six groups - five conservative groups
10 (including the U.S. Chamber of Commerce, which spent \$3 million, and Americans for Prosperity,
11 which spent \$1.5 million) and one liberal group (Planned Parenthood, which spent just under \$75,000).
12

13 [11] According to Richard Skinner of the Sunlight Foundation, "the focus of early dark money being
14 spent in the 2016 cycle" is on competitive U.S. Senate elections and some U.S. House of
15

16 Representatives races. [11] However, dark money also is playing a role in the 2016 Republican
17 presidential primaries; by June 2015, at least four Republican presidential candidates were raising
18 funds via 501(c)(4) organizations: Bobby Jindal's America Next, Rick Perry's Americans for Economic
19 Freedom, John Kasich's Balanced Budget Forever, and Jeb Bush's Right to Rise. [23]
20

21 501(c) "dark money" groups are distinct from super PACs. [25] While both types of entity can raise and
22 spend unlimited sums of money, super PACs "must disclose their donors," while 501(c) groups "must
23 not have politics as their primary purpose but don't have to disclose who gives them money." [25]
24

25 However, a single individual or group can create both types of entity and combine their powers,
26

1 making it difficult to trace the original source of funds.[25][26] ProPublica explains: "Say some like-
2 minded people form both a Super-PAC and a nonprofit 501(c)(4). Corporations and individuals could
3 then donate as much as they want to the nonprofit, which isn't required to publicly disclose funders.
4 The nonprofit could then donate as much as it wanted to the Super-PAC, which lists the nonprofit's
5 donation but not the original contributors." [25] In at least one high-profile case, a donor to a super PAC
6 kept his name hidden by using an LLC formed for the purpose of hiding their personal name.[27] One
7 super PAC, that originally listed a \$250,000 donation from an LLC that no one could find, led to a
8 subsequent filing where the previously "secret donors" were revealed.[28]

9
10 During the 2016 election cycle, "dark money" contributions via shell LLCs became increasingly
11 common.[29] The Associated Press, Center for Public Integrity, and Sunlight Foundation all "flagged
12 dozens of donations of anywhere from \$50,000 to \$1 million routed through non-disclosing LLCs to
13 super PACs" backing various presidential candidates, including Marco Rubio, Hillary Clinton, Ted
14 Cruz, John Kasich, Jeb Bush, and Carly Fiorina.[29] Bradley A. Smith, a former FEC chairman who is
15 now with the Center for Competitive Politics, a group that opposes campaign-finance reform, argues
16 that this practice is not problematic, writing that "it is possibly the making of a campaign contribution
17 in the name of another," a violation of existing law.[30]

18
19
20
21 29According to Kathy Kiely, managing editor of the Sunlight Foundation, "untraceable dark money is
22 a
23 preferred tactic of conservatives, while Democrats tend to use traceable super PACs." [31]

24 The first federal law requiring disclosure of campaign contributions, the Federal Corrupt Practices Act,
25 was passed in 1910. By the late 1970s, virtually all states and the federal government required public

1 disclosure of campaign contributions and information on political donors. Most states and the federal
2 government also required public disclosure of information about donors and amounts spent on
3 independent expenditures, that is, expenditures made independently of a candidate's campaign.

4 In January 2010, at least 38 states and the federal government required disclosure for all or some
5 independent expenditures or electioneering communications, for all sponsors.[32]
6

7 Yet despite disclosure rules, it is possible to spend money without voters knowing the identities of
8 donors before the election.[33][34]In federal elections, for example, political action committees have
9 the option to choose to file reports on a "monthly" or "quarterly" basis.[35][36][37] This allows funds
10 raised by PACs in the final days of the election to be spent and votes cast before the report is due.
11

12 In addition to PACs, non-profit groups ranging from Planned Parenthood to Crossroads may make
13 expenditures in connection with political races. Since these non-profits are not political committees, as
14 defined in the Federal Election Campaign Act, they have few reporting requirements beyond the
15 amounts of their expenditures. They are not required by law to publicly disclose information on their
16 donors. As a result, voters do not know who gave money to these groups. Reports have disclosed
17 instances where non-profits were managed by close associates, former staff, or a candidate's family
18 member, and this has led to concern that the candidates benefiting from their expenditures would be
19 able to know who donated the funds to the non-profit group, but the public would not.[38] [39]
20
21

22 For example, in the 2012 election cycle, one organization, the National Organization for Marriage, or
23 NOM, operated two non-profit arms that received millions in donations from just a few donors. It in
24 turn funded several different PACs. While these PACs had to disclose that NOM contributed the funds,
25
26

1 they were not required to disclose who gave money to NOM.[40]

2 On March 30, 2012 a U.S. District Court ruled that all groups that spend money on electioneering
3 communications must report all donors that give more than \$1,000.[41][42] However, this ruling was
4 overturned on appeal.[43]

5 Legislative and regulatory proposals and debate over dark money According to Columbia Law School's
6 Richard Briffault, disclosure of campaign expenditures, contributions, and donors is intended to deter
7 corruption.[45]

8 The Federal Elections Commission, which regulates federal elections, has been unable to control dark
9 money. According to the Center for Public Integrity, FEC commissioners are voting on many fewer
10 enforcement matters than in the past because of "an overtaxed staff and commissioner
11 disagreement." [12] The IRS (rather than the FEC) is responsible for oversight of 501(c)(4) groups. [12]

12 The IRS "found itself ill-prepared for the groundswell" of such groups taking and spending unlimited
13 amounts of money for political purposes in the wake of the U.S. Supreme Court's decision in Citizens
14 United v. Federal Election Commission in 2010. [12] The agency particularly "struggled to identify
15 which organizations appeared to be spending more than the recommended 50 percent of their annual
16 30 budgets on political activities—and even to define what 'political spending' was." [12] When the IRS
17 began looking at nonprofit spending, it was accused of improper targeting in a 2013 controversy. [12]

18 "With the FEC and IRS duly sidelined" advocates for disclosure turned to the Securities and Exchange
19 Commission (SEC); nine academics from universities across the U.S. filed petitioned the SEC in
20 August 2011 for the agency to "develop rules to require public companies to disclose to shareholders
21

1 the use of corporate resources for political activities." [12] The petition received over a million
2 comments in the following month, "a record amount for the SEC, with the overwhelming majority of
3 voters asking for better disclosure." [12] According to Lucian Bebchuk, a Harvard professor of law,
4 economics, and finance who helped draft the petition, the request had drawn the support of "nearly a
5 dozen senators and more than 40 members of the House." [12] Under current SEC regulations, public
6 corporations must file a Form 8-K report to publicly announce major events of interest to shareholders.
7

8 [46] The Sunlight Foundation, a group which advocates for a comprehensive disclosure regime, has
9 proposed that the 8-K rule should be updated to require that aggregate spending of \$10,000 on political
10 activities (such as monetary contributions, in-kind contributions, and membership dues or other
11 payments to organizations that engage in political activities) should be disclosed and made publicly
12 available via the 8-K system. [46] In 2015, Republicans in Congress successfully pushed for a rider in a
13 2015 omnibus spending bill that bars the IRS from clarifying the social-welfare tax exemption to
14 combat dark money "from advocacy groups that claim to be social welfare organizations rather than
15 political committees." [47]
16

17 Other provisions in the 2015 bill bar the SEC from requiring corporations to disclose campaign
18 spending to shareholders, and a ban application of the gift tax to nonprofit donors. The Obama
19 administration opposed these provisions, but President Obama eventually acceded to them in December
20 2015, with the White House declining to comment. The nonpartisan Campaign Legal Center said in a
21 statement that the dark-money provision ensures "that the door to secret foreign dollars in U.S.
22 elections remains wide open through secret contributions to these ostensibly 'nonpolitical' groups that
23
24
25
26
27
28

1 run campaign ads without any disclosure of their donors."[47]

2 The Center for Competitive Politics (CCP), chaired by former FEC chairman Bradley A. Smith,
3 opposes legislation to require the disclosure of dark-money groups, saying: "Our view is that many
4 people will be driven out of politics if they are forced to disclose their names and their personal
5 information. The purpose of disclosure is to help people monitor the government, not for the
6 government to monitor the people."[12] The Center for Competitive Politics views "dark money" as a
7 pejorative term, stating that the phrase "evokes an emotional, fearful reaction" and contending that
8 "many of the statistics published on the topic aim to mislead rather than enlighten."[48] The CCP
9 maintains that dark money "comprises a very small percentage of total campaign spending," calculating
10 the percent of money spent in federal elections by organizations that did not provide itemized
11 disclosure of their donors as 4.3% in 2012 and 3.7% in 2014.

14 The U.S. Department of Energy was complicit in the processing of Dark Money payola cycling to
15 Obama's financiers as a 'hand-on' operator of a RICO-class crime.

17 All of the ruckus with Donald Trump and California/DOE VS. Trump is almost entirely based on West
18 Coast and New York corrupt senators, and their insiders, freaking out about their Dark Money
19 organized crime payola scam coming apart and getting exposed.

21 31 There's a reason why David Brock chooses to house an unregistered Professional Solicitor in his
22 office

23 to raise money for his conglomerate of Super PACs and non-profits.

24 =====
25 FURTHER PROOF OF THE CRIMES AND LIES:

9 35How Public Officials Are Bribed To Use

10 Government Agencies As Political Weapons

11 Against Citizens

12 - "DARK MONEY" IS THE WAY THAT CORRUPT POLITICAL CRIMINALS EXCHANGE
13 COMPENSATION, BRIBES AND INFLUENCE WITHOUT THE FBI CATCHING THEM. Public
14 officials do such onerous crimes because they, and their friends ,want to control and direct over five
15 trillion dollars of taxpayer cash into their, and their friends pockets. That check you write ion April 15
16 every year is the pot of gold that they are trying to put in their personal bank accounts. Some of them
17 will even kill to get that cash. A person is killed every few minutes for robberies involving less than
18 \$25.00; Why would you doubt that corrupt politicians would not murder citizens and reporters for over
19 a trillion dollars?
20
21
22

23 - This is about a group of tech oligarchs, and their corrupt Senators, who commit crimes in order to
24 manipulate over a trillion tax dollars (YOUR MONEY) into their, and their friends pockets.
25
26

27 1153
28

1 - They are felons yet they control some of the offices of the agencies who are supposed to arrest them.

2 Silicon Valley bought K Street and U.S. Senators, gave them more Dark Money than history has ever
3 seen and then had giant tech-law firms bribe, hit-job and blockade any attempts to solve the problem.

4 - Some of the largest bribes in American history were paid via billions of dollars of pre-IPO cleantech
5 stock, insider trading, real estate, Google search engine rigging and shadow-banning, sex workers,
6 revolving door jobs, nepotism, state-supported black-listing of competitors and under-the-table cash.
7

8 Why are these Silicon Valley Oligarchs and their K-Street law firms and lobbyists immune from the
9 law?

10 U.S. Senators, Agency Heads and Congress are bribed with: Billions of dollars of Google, Twitter,
11 Facebook, Tesla, Netflix and Sony Pictures stock and stock warrants which is never reported to the
12 FEC; Billions of dollars of Google, Twitter, Facebook, Tesla, Netflix and Sony Pictures search engine
13 rigging and shadow-banning which is never reported to the FEC; Free rent; Male and female
14 prostitutes; Cars; Dinners; Party Financing; Sports Event Tickets; Political campaign printing and
15 mailing services "Donations"; Secret PAC Financing; Jobs in Corporations in Silicon Valley For The
16 Family Members of Those Who Take Bribes And Those Who Take Bribes; "Consulting" contracts
17 from
18

19 McKinsey as fronted pay-off gigs; Overpriced "Speaking Engagements" which are really just pay-offs
20 conducted for donors; Private jet rides and use of Government fuel depots (ie: Google handed out
21 NASA jet fuel to staff); Real Estate; Fake mortgages; The use of Cayman, Boca Des Tores, Swiss and
22 related money-laundering accounts; The use of HSBC, Wells Fargo, Goldman Sachs and Deustche
23 Bank money laundering accounts and covert stock accounts; Free spam and bulk mailing services
24
25
26

1 owned by Silicon Valley corporations; Use of high tech law firms such as Perkins Coie, Wilson
2 Sonsini, MoFo, Covington & Burling, etc. to conduit bribes to officials; and other means now
3 documented by us, The FBI, the FTC, The SEC, The FEC and journalists.

4 36FOR EXAMPLE:

5 David Brock’s Media Matters gave a \$930,000 cash grant to David Brock’s Franklin Education Forum
6 David Brock’s Franklin Education Forum credited the Bonner Group for raising those funds, triggering
7 the 12.5% commission

8 David Brock paid the Bonner Group a \$124,250 commission to solicit a cash grant ... from himself!

9 IT DOESN’T STOP THERE

10 After the Franklin Education Forum retained \$869,750, they sent a \$816,224 cash grant to David
11 Brock’s The Franklin Forum:

12 Note: The ‘Franklin Education Forum’ is a 501(c)3, and ‘The Franklin Forum’ is a 501(c)4. They are
13 not the same company.

14 Since The Franklin Forum 501(c)4 paid Bonner a commission in 2013, it’s safe to assume fundraiser
15 received a \$102,028 commission in 2014. Unfortunately, it’s hard to tell for sure. They still haven’t
16 filed their taxes for 2014!

17 LET’S RECAP

18 Say, for example, you donate \$1,062,857 to Media Matters for America. This is how David Brock
19 would have used your charitable donation in 2014:

20 In the end, Brock’s solicitor would have pocketed \$350,825, almost a third of your initial donation!

1 That's a far cry from the advertised 12.5% commission.

2 As bizarre as that scenario may sound, this is exactly what David Brock did in 2014.

3 HOW CAN WE BE SURE THIS IS INTENTIONAL?

4 David Brock is the Chairman for each of these organizations! How could he not know what's going
5 on?
6

7 He's a hands-on Chairman. According to their tax returns, Brock allocates time, weekly, to his
8 organizations:

9 Furthermore, the New York Times reports that David Brock shares a summer rental in the Hamptons
10 with Mary Pat Bonner, the President of the Bonner Group!
11

12 David Brock will have a hard time claiming ignorance on this. These transfers are intentional. He
13 vacations with his solicitor. Case closed.

14 STILL NOT CONVINCED?

15
16 37David Brock didn't even bother to give his organizations different phone numbers. They all share the
17 same phone number!

18 WHAT IF...?

19 We even located the Bonner Group's solicitation agreement with Media Matters on Florida's Gift
20 Givers' Guide. Clarification on their commission can be found on page 2:
21

22 In English: Contractually, David Brock has the option to exclude certain contributions from triggering
23 the commission. In spite of this option, he intentionally chooses to trigger the 12.5% commission for
24 money grants between his organizations.
25

1 Note: Yes, we are making the assumption that all of Brock’s organizations have the same solicitation
2 agreement with the Bonner Group. Given that his organizations share the same address, board
3 members, and telephone number, we feel it’s safe to assume they also share the same solicitation
4 agreement.

5
6 THIS BARELY SCRATCHES THE SURFACE

7 Utilizing public facing tax returns, along with records submitted to the FEC, we mapped out all the
8 significant money transfers from 2014 that took place in Brock’s office:

9 This is all from just one year!

10 I have been asking myself lately; how were there so many corrupt people in the Obama
11 Administration? The only answer I can come up with is that Barack Obama himself was a very corrupt
12 person. Who else would have had so many corrupt people that he chose or tolerated in his
13 Administration.
14

15 Do you remember Lois Lerner from the IRS and Barack Obama asking her to go after his political
16 rivals using the most feared government agencies, the IRS. The last place you want to be is between the
17 government and your money.
18

19 Obama Attorney General Eric Holder who was found in Contempt of Congress for lying to Congress
20 and looking the other way on every illegal act Obama or someone in his administration perpetrated.
21 Secretary of Energy Steven Chu, earned his spot among Obama’s corrupt appointees thanks to his
22 admitted role in the “green energy” scams, specifically the Solyndra scandal in which the Obama gave
23 more than \$500 million to a failed company and one of its key investors, Obama backer George Kaiser.
24
25
26

1 Do not forget Obama’s corrupt cabinet appointee Secretary of Health and Human Services Kathleen
2 Sebelius. According to the U.S. Office of Special Counsel, she was guilty of violating the Hatch Act by
3 campaigning for the president in her official capacity. Violators of this act are normally fired, but
4 Obama would not allow his AG Eric Holder to do any such thing. So Sibelius got off without
5 punishment after claiming she said she "... got a little caught up in the notion that the gains which had
6 been made would clearly not continue without the president’s reelection..."

8 I am not even going into the details of the corrupt John Brennan former CIA Director and James
9 Clapper Director of National Intelligence.

11 And let us not forget about the most corrupt person Obama appointed and that was Hillary Clinton.

12 After thinking about all of the people above how could we not think Obama himself was the Godfather
13 of this mob?

14 Now let us add another and that is James Comey, former disgraced FBI Director. Politico is reporting
15 that on Friday night the FBI released a two-page summary former disgraced FBI Director James
16 Comey used to brief then President-elect Donald Trump on the “dossier” about Trump’s ties to Russia.

18 [https://www.judicialwatch.org/press-room/press-releases/judicial-watch-uncovers-doj-records-
19 showing-numerous-bruce-ohr-communications-with-fusion-gps-and-christopher-steele/](https://www.judicialwatch.org/press-room/press-releases/judicial-watch-uncovers-doj-records-showing-numerous-bruce-ohr-communications-with-fusion-gps-and-christopher-steele/)

21 The document, asserts that Christopher Steele, the person who compiled the dossier, was working “on
22 behalf of private clients” in his investigation of Trump’s possible ties to Russia. Comey was not honest
23 to the court because Steele was actually working for the DNC and Clinton campaign. Comey also did
24 not inform the court or President-Elect Trump Hillary Clinton and the Democratic Party paid the

1 Russian government via Steele and Fusion GPS for the opposition research document. Why didn't
2 Comey inform the court or President-Elect Trump that the information came from the Russian
3 government: because then he would be admitting that the true collusion was between Hillary, the
4 Democratic Party and Russia.

5
6 No matter which political party corruption is found in we must drain the swamp of all these corrupt
7 people and prosecute them if we actually want to improve the political climate in the United States.

8 The key suspects under investigation for the crimes, attacks on the public and manipulation of
9 Democracy include:

10 Amy Pascal; Bill Daley; Bill Lockyer; Brian Goncher; Daniel Cohen; David Axelrod; David
11 Drummond; David Plouffe; David E. Shaw; Dianne Feinstein; Elon Musk; Eric Holder; Eric Schmidt;
12 John Zaccarro, Jr.; Frank Giustra; Nick Denton; Harry Reid; Haim Saban; Hillary and Bill Clinton; Ira

16
17
18
19 These parties appear to have exploited taxpayer government resources to line their pockets at tax payer
20 expense as proven by finance reports, FEC filings, Congressional studies, Panama Papers, espionage
21 journalism, state election reporting forms, Goldman Sachs and ICIJ Swiss Leaks documents and
22 journalists, on-staff whistle-blowers, covert accounts revelations, forensic audits, Congressional action
23 comparison charts and other evidence. Connected on XKEYSCORE, FBI, Palantir, LinkedIn and other
24 investigative databases. Confirmed in cross-over financial dealings and transfers. Sourced as
25

1 beneficiaries and financiers of the activities.

2 40How You Can Become Your Own FBI And Take

3 Down Corrupt Agency Staff

4 - You Can Destroy ANY Corrupt Politician 100% Legally!

5 You will use high resolution video to capture the face of every person that works in the office that is

6 trying to use taxpayer resources to harm you. You will use open-source free software to rapidly cross-

7 check their faces, using facial recognition, across every Facebook, Linkedin, Google, YouTube,

8 Instagram and other social media outlet on the planet. This will create a digital dossier on each person

9 that is working to hurt you and their postings, emails, texts, event participations, etc. will soon reveal

10 their true agendas.

11 You will build a CIA-class dossier on each of them and then use that to turn them in to every agency

12 and regulator that has the power to fire, indict, prosecute and terminate them and their lives. They must

13 never be allowed to harm you, or other members of the public again!

14 Organized crime is alive and well in public offices across the nation. This is how you utterly destroy

15 any person who engages in it, using 100% legal tactics and the power of crowd-sourced law

16 enforcement.

17 FBI and other government officials will even help you do it. The voters will help you do it. Your

18 friends will help you do it. Total strangers will help you do it. The entire internet will help you do it.

19 You will use CIA-class databases, social media, public watch-dog technologies, FBI-quality
20 monitoring

21 systems and open-source collaborative forensics comparison data to hunt down every: hooker, real

22 1161

23
24
25
26
27
28

1 estate asset, male prostitute, mistress, secret email account, social media posting, family trust fund,
2 shell corporation, family stock market transaction, off-shore account, covert investment brokerage,
3 email, Uber and Lyft ride, hotel entry and exit, credit card transaction, Paypal account, search engine
4 manipulation, venture capital connection, Stanford University admissions bribe, expense account
5 abuse, taxpayer funds abuse, rape, sextortion, covert tech company stock they own under another name,
6 every party they attended, every tag they appear in on social media, every Cayman Island account,
7 every crooked CPA or law firm they have used, every lobbyist they ever paid....EVERYTHING.. and
8 you will drop the data into a simple database and cross matrix everything even better than the spy
9 agencies can do it..
10

11
12 ...AND EXPOSE IT ALL. YOU WILL SUE THEM IN SMALL CLAIMS COURT. YOU WILL
13 LAUNCH CLASS ACTION LAWSUITS. YOU WILL HOLD PRESS CONFERENCES IN FRONT
14 OF THEIR HOMES. YOU WILL CONFRONT THEM WITH FACTS AT EVERY SINGLE TOWN
15 HALL AND PUBLIC APPEARANCE. YOU WILL PUT UP A BOOTH AT EVERY STREET FAIR
16 AND PUBLIC ASSEMBLY AREA AND HAND OUT LITERATURE. YOU WILL CREATE A
17 MASSIVE PUBLIC MEDIA CIRCUS. YOU WILL MAKE DISCLOSURE WEBSITES. YOU WILL
18 NOT LET THEM ESCAPE!
19

20
21 41Each person from each political office, lobby firm, law firm or company who engaged in the
22 subversion of the government and the bribery of public officials WILL have EVERY personal email
23 account, text message account, voice-mail hard drive, social media account, dating account or other
24 PERSONAL communications account examined via investigators. Such examinations shall begin from
25

1 the date of the opening of each account and run up to today. Law enforcement believes that such parties
2 used personal data systems to subvert the laws of public disclosure and engage in criminal financial
3 crimes and democracy subversion efforts.

4 You will be even more powerful than Ralph Nader, Julian Assange and Edward Snowden

5
6 COMBINED!

7 You will ensure that the public servants, who are your EMPLOYEES!!!!, are held accountable and
8 totally, completely devastated for their crimes against the public.

9 What Is An 'Extinction-Level Interdiction Program' For Corrupt Companies And
10 People?
11

12 By The Leesberg Foundation

13 It only works on corrupt companies that bribe, break the law, abuse employees, rape, tax evade, lie,
14 cheat, steal, run character assassinations, operate anti-trust violating monopolies, spy and are generally
15 dirty pigs.
16

17 That is why it works so well on Google, Gawker, Gizmodo, Jalopnik, Univision, Facebook, Tesla,
18 Goldman Sachs and other creepy corps who bribe, break the law, abuse employees, rape, tax evade, lie,
19 cheat, steal, run character assassinations, operate anti-trust violating monopolies, spy and are generally
20 dirty pigs.
21

22 'Extinction-level' means that the goal is to put them-out-of-business.

23 'Interdiction' means that the effort involves interrupting their corruption, crimes, bribes, payola and
24 sex trafficking.
25

26
27 1163
28

1 It is a 'Program' because it is a constant, unwavering, long-term effort that the entire public population
2 is continually expanding and adding to the effort of.

3 The efforts are long and take many years but they always work.

4 If your company does not bribe, break the law, abuse employees, rape, tax evade, lie, cheat, steal, run
5 character assassinations, operate anti-trust violating monopolies, spy and they are not generally dirty
6 pigs then they have nothing to worry about.
7

8 If the truth can't hurt a Facebook, Google or Tesla then they should have no concern about the truth
9 being exposed.
10

11 42Alas, though, those companies are targeted for extinction and any smart investor should remove their
12 investment funds from those companies. The way that they are taken down includes exposing every
13 time each investor engages in a bribe, breaks the law, abuses employees, rapes, tax evades, lies, cheats,
14 steals, runs character assassinations, operates anti-trust violating monopolies, spies and is generally a
15 dirty pig.
16

17 Bill Cosby thought he could not be taken down. He was!

18 Enron thought they could not be taken down. They were!

19 Dick Nixon thought he could not be taken down. He was!

20 Hillary Clinton thought she could not be taken down! She was!

21 Theranos thought it could not be taken down! It was!

22 The list is endless. The fact is clear: If you cheat rather than compete you will be destroyed.
23

24 It is now easier than ever to kill a corrupt entity!
25
26

1 We have hard-fact FBI and CIA-class evidence that Google, Gawker, Gizmodo, Jalopnik, Univision,
2 Facebook, Tesla, Goldman Sachs and others are breaking the law and exist based on a criminal
3 operation. That is why they are going down! We witnessed them do the crimes. Their ex-employees
4 and
5 federal investigators saw it too. That is why they are helping with the take-downs. Millions of web
6 users who hate corruption are helping too, using crowd sourced forensics.

7
8 The deaths of these crooked behemoths will be long, slow and hard..but the crash they make when they
9 finally fall will resound throughout history!

10 An Extinction-Level Interdiction Program known as an "ELIP" always guarantees that a corrupt
11 attacking corporation will:

12
13 A. Lose a minimum of one billion dollars in stock market and brand valuation from exposure of the
14 truth about them.

15 B. Suffer the firings or forced terminations of multiple senior staff.

16 C. Have draft FBI 302 forms authored and submitted to the relevant regional FBI offices where those
17 companies are located.

18
19 D. Have private investigators prepare case files on the company, or individual, and submit those to
20 every relevant law enforcement and regulatory agency on every continent.

21 E. Have every investor who has placed over \$50,000.00 in the company investigated for tax fraud,
22 expense fraud, drug abuse, spousal abuse, sexual extortion, off-shore accounts, political bribery, kick-
23 backs, payola, under-the-table payments, real estate fraud, 501 c 3 and 501 c 4 charity fraud, self-
24 dealing, revolving door political payola and other relevant issues.
25

1 You will use 100% legal creative NON-Violence.

2 43 This is an instruction book about how to destroy the most criminally corrupt politicians and dirt-bags
3 in

4 the world. It teaches you how to wipe out any corrupt person, campaign, company or other entity
5 without breaking the law and to do so for very little expense and with no need for expert skills.

6 Any private citizen taxpayer has the right, the tools and the ability to do these things.

7 Why should you need to do this?

8
9 BECAUSE NONE OF THE PEOPLE YOU ARE PAYING TAXES TO ARE DOING
10 THEIR JOBS!

11 The local police, The FBI, The Courts, The SEC, The FEC, The Attorney Generals, The Mayors, The
12 City Supervisors, Your Senators, Your Congress- People.. ALL OF THEM HAVE RECENTLY BEEN
13 ARRESTED, INDICTED, FIRED AND/OR EXPOSED DOING CRIMES TO COVER UP THEIR
14 FRIEND'S CRIMES!

15
16 THEY HAVE ALL RECENTLY BEEN CAUGHT RUNNING FINANCIAL CRIMES AND
17 OPERATING STONE-WALL CAMPAIGNS IN ORDER TO KEEP THE PUBLIC FROM GETTING
18 JUSTICE!

19
20 You, the taxpayers, have nobody in the system that is on-your-side any more.

21 For example; The Silicon Valley Oligarchs pay-off the California Senators and they all put hundreds of
22 millions of dollars in their private bank accounts in the Cayman Islands. They got most of that money
23 from your paycheck and your tax payment every April.

24
25 They are not going to help you! They are going to continue to rob you while running their stock market

26
27 1166
28

1 insider trading scams at your expense.

2 "Officials" in California may say "oh, my, that certainly sounds like a bad thing...you should report
3 that, immediately to your lawful representatives: Dianne Feinstein and Nancy Pelosi.." The fact is that
4 Feinstein and Pelosi are running some of the largest graft, payola, revolving door, nepotism and insider
5 trading scams in the whole crime scheme. So how can anyone expect you to go into their offices with
6 a straight face and expect them to help you?
7

8 Not only will they not help you, the second you leave their office, their staff will be on the phone to
9 Fusion GPS, Gizmodo and Gawker Media, Black Cube and Podesta Group to order those companies to
10 attack and destroy you. Your life will be ended.
11

12 If they get to do that to you, then you get to do it right back to them...except you are going to partner
13 with 300 million other voting taxpayers to utterly and completely wipe these dirty scumbag politicians
14 out forever.
15

16 You will destroy their brand, their finances, their power and their family legacy for the rest of time in
17 every history book that will ever be! You will expose them. You will shame them. You will peel their
18 whole filthy dynastic family empires open like a skinned possum!

19 44CIA, FSB and STAZI psychological warfare operatives are widely documented deploying
20 techniques

21 that can brainwash you into killing your whole family, echo-chambering your whole factory to be
22 either

23 for, or against, unions, believing mass media propaganda about totally fictional issues and other
24 subliminal mind tricks. There are tens of thousands of books and movies about how Madison Avenue
25

1 ad agencies use these tactics. Modern politicians created operations like In-Q-Tel and New America
2 Foundation to weaponize these tactics.

3 These are the tactics that corrupt politicians and sociopath Silicon Valley social media companies are
4 now using as political weapons against you.

5 They are not doing awful things like this to try to get you to believe that their political ideas are better.
6

7 They are doing awful things with your government and your media in order to rig the stock market so
8 they can buy more hookers, jet planes and mansions. You must shut them down before everything is
9 taken away from you and you have no options left for counter-measuring their crimes.

10 At the point that all of the public's hope, and all of the taxpayers options, are taken away. That is the
11 day the public starts shooting all of the politicians with actual guns.

12 This book was created to stop that potential violence and to give the public one last lawful and creative
13 non-violent option.

14 Average consumers are now wiping out the largest corrupt companies and politicians on Earth; and you
15 can do it too using one potent weapon: The Truth!

16 For the rest of time, the message must ring out loud and clear:

17 "DO NOT EVER RUN FOR POLITICAL OFFICE IF YOU OR YOUR COVERT
18 FINANCIERS WANT TO MAKE MONEY OFF OF IT. YOU WILL BE
19 WATCHED AND HUNTED DOWN FROM THE DAY YOU ANNOUNCE
20 YOUR CAMPAIGN."
21

22 The Public now has access to all of the same tools that the CIA, NSA, KGB, FBI and Fusion GPS have
23

1 and they have hundreds of millions more "agents" (voters) than all of those spy agencies combined.

2 ---

3 In other books we have exposed all of the dirty tactics they use to operate their crimes. Now we are
4 exposing all of the methods that any members of the public can use to catch them and then use mass
5 media distribution to expose them.

6 The big anti-corruption check-list looks like this.

7 As you can see, it is well on the
8 way to being completed:

9 "1.) Build The Internet (Done)

10 2.) Put Movies And Music On The Internet To Get All Of The Base Demographics And Nose Pickers
11 To

12 Come To A Collaborative Global Network (Done)

13 453.) Give Everybody On Earth All Of The Secrets About How Abused And Manipulated They Are
14 By A

15 Handful of Evil Billionaires (Done)

16 4.) Expose The Manipulative Fraud Of Political Party Bosses (Done)

17 5.) Tell The Entire Planet, 1 Million People At A Time, How The Billionaires Companies Abuse Their
18 Privacy, Minds, Human Rights and Media Impressions (Done)

19 6.) Crash All of the Billionaires Main Stream "Fake News" Information Outlets by Exposing Them
20 And

21 Giving All News Away For Free And Teaching People How To Make Free Newspapers (Done)

22 7.) Crash the Evil Billionaires Silicon Valley Companies, and Money, By Contacting 1 Million People

23 1169

1 at a Time to Remind Them to Boycott Silicon Valley Companies and Their Products (Done)

2 8.) Contact Every Advertiser of Every Silicon Valley Billionaire and Warn Them To Pull All Ad
3 Budgets

4 For the Companies Who Contribute to Political Campaigns (In Process)

5 9.) Make It So That Non-Main-Stream Candidates Can Run And Win By Exposing And Breaking
6 Illicit

7 Election Rigging (Done)

8 10.) Sit Back And Watch The Fireworks (In Process)"

9 That check-list is very high-level.

10 Let's get down into the weeds and examine the details of the process.

11 You must become an FBI-Class, CIA-capable forensic investigator with your computer and mass social
12 networking.
13

14 You have access to all of the same tools and intellect that every FBI and CIA agent has access to. CIA
15 and FBI agents primarily sit at computers and track down connections. You can do that too using free
16 public software and groups of people that also hate political corruption. It is actually quite easy.
17

18 You know when something is wrong or when something "smells fishy". Now you can turn your
19 intuition and your public spirit into productive home-based forensic research that makes your nation
20 great again.
21

22 You will create public case files and gather news articles and related information in order to expose
23 each of the corrupt people that ruin this great country.
24

25 You will expose the dirty and illicit deeds of elected officials and their corrupt political financiers. All
26

1 of these actions are 100% legal and will be appreciated by non-corrupt law enforcement agencies and
2 the public:

- 3 - Expose their Hookers in widely released news and social media releases
- 4 - Expose their Rent Boys in widely released news and social media releases
- 5 46- Expose all of the bad dates and sex extortion they engaged in, in widely released news and social
- 6 media releases
- 7
- 8 - Expose their hidden family trust fund payola accounts, in widely released news and social media
- 9 releases
- 10
- 11 - Expose their shell corporations they use to hide from the IRS- Expose their mistresses
- 12 - Expose their addictions
- 13 - Expose their under-the-table payments
- 14 - Expose their illegal workers
- 15
- 16 - Expose their expensive cars, jewelry and homes that can't afford on a legal salary
- 17 - Expose their Cayman Island, Belize and Swiss hidden bank accounts
- 18 - Expose their personal email accounts they illegally used to hide government fraud
- 19 - Expose their illicit hidden email servers
- 20
- 21 - Expose their secret black-lists and start-up valuation rigging like in the Angel Gate Scandal
- 22 - Expose their Uber and Lyft GPS docs proving that they lied about where they went
- 23 - Expose their campaign financing records
- 24 - Expose their social media statements proving they are, or fund, ANTIFA or political disruption
- 25

1 programs

2 - Expose their money laundering

3 - Expose their connections to Pede groups and activities

4 - Expose their hotel records and videos of illicit hotel meetings

5 - Expose their PayPal, Bitcoin and credit card payments for illicit services and products

6 - Distribute creative Memes exposing their crimes

7 - File reports with their employers disclosing their crimes and tell the media you told their employers

8 - File many copies of criminal reports on them with all law enforcement entities

9 - Expose the members of their family that hide money for them or use their names to launder money

10 - Photo and video document all of their meetings and actions

11 - Aggregate all of the video investigations about them on many different web video sites

12 - Write and distribute books, articles and white-papers about their crimes

13 - Promote new laws that makes what that criminal uses as a loop-hole, illegal

14 - Re-release all of the above every six months in order to keep the crimes in people's minds

15 - Use "The Striesand Effect" to it's maximum technical potential and research how the "Effect" works

16 - Grow your network of voters and taxpayers who are helping you and make your supporter network

17 bigger every day

18 - Expose the manner in which Google, Facebook and Twitter fight against exposing their criminal

19 friends

20 - Use Google, Facebook and Twitter's own illicit tools against them and expose them with "Hypocrisy

21 1172

22

23

1 Exposure" when they censor

2 - Confront them in every single public presentation they attend and expose them in public

3 - Create coordinated groups of volunteers to expose the troll farms and click farms of the corrupt
4 manipulators

5 - Expose and publicly document all of their illicit real estate holdings, mansions and property scams-

6 Release of the details of their crooked secret partnership contracts

7 - Place a First Amendment informational exhibit outside of their offices, homes and each door they go
8 through each day

9 - Write them weekly and tell them that they are exposed. Send them certified letters proving that you
10 told them that you know

11 - Document and publicly expose all of their trips and expenditures

12 47- Document the identities of the service trucks that come to their homes and offices

13 - Photo document all of their workers, interns and secretaries

14 - Contact their staff and ask them to report the illicit deeds of their employer. Provide media and police
15 contact information.

16 - Help their staff and the public organize class-action abuse law suits against the perpetrators

17 - File RICO Racketeering lawsuits against the corrupt

18 - File FEC charges, ie: Google provided over \$1B of search engine rigging for Obama's elections but
19 never reported that to the FEC

20 - Expose their stock market manipulations and valuation rigging in Wall Street Pump-And-Dump

21
22
23
24
25
26
27 1173

28

1 scams

2 - Expose the insider trading where Senators own the stock that they just provided government perks for

3 - Expose politicians that make tens of millions more dollars, from mystery funds, than their salary

4 should allow

5 - Use pictures of expensive toys that politicians acquired from taxpayer funds via crony payola

6 - When they are hacked (which you legally can't do) expose the hacked material globally as far as

7 possible (which you legally can do)

8 - Read and analyze all publicly posted hacked emails and point out the crimes it exposes

9 - Meme any criminal remarks that the target makes

10 - And thousands of additional fully legal public investigation methods...

11 Every single crooked politician, and their corrupt billionaire financiers, have been using these tactics

12 against the public for 20 years. Silicon Valley, David Brock's groups, John Podesta's groups, Stratfor,

13 Black Cube, Gawker/Gizmodo and a host of illicit organizations have used all of the above tactics to

14 attack domestic taxpaying citizens in the USA.

15 Now YOU get to give them a taste of their own medicine!

16 Pelosi, Feinstein and their financiers use Gizmodo Media, Gawker Media, Jalopnik, and Univision to

17 run retribution vendetta hatchet job media attacks on members of the public that speak out about their

18 crimes. In exchange here is what the public is "giving back" to Gizmodo Media, Gawker Media,

19 Jalopnik,

20 and Univision:

21 1174

22

1 "1. Added Gizmodo, Jalopnik, Univision prostitute and rent boy uses to master

2 Google docs files and forwarded to law enforcement...

3 2. Sent duplicates of reports previously provided to James Comey to

4 Christopher Wray at the FBI and regional FBI offices...

5 3. Added Gizmodo, Jalopnik, Univision tax evasion records to master Google

6 docs files and reported them to IRS, EU and InterPol...

7 4. Added Gizmodo, Jalopnik, Univision political party past work records to

8 master Google docs files and copied that to adversarial political parties and

9 reporters...

10 485. Updated every case file on each Gizmodo, Jalopnik, Univision past and

11 present worker in master Google docs files and forwarded them to investigative

12 organizations...

13 6. Source backers for Gizmodo lawsuits and contact every party attacked by

14 Gizmodo Media to introduce backers, litigation firms and draft case merits to

15 assist with their cases...

16 7. Launch Gizmodo expose' national news articles and distribute by hand to all

17 related reports in AP, Reuters, Muck Rack, DNC and GOP mailing lists, with

18 background data sets...

19 8. Release video of London young men who claim to have been abused by Nick

20 Denton...

21 1175

22

1 9. Release video of Manhattan young men who claim to have been abused by
2 Nick Denton...

3 10. Add Gizmodo, Jalopnik, Univision political email communications with
4 Obama White House to master Google docs files and distribute to AP, Reuters,
5 Muck Rack, DNC and GOP mailing lists, with background data sets...

6
7 11. Privately contact Gizmodo, Jalopnik, Univision current and ex-staff and offer
8 cash awards for whistle-blowing...

9 12. Submit formal "requests for charges" with SEC, FBI, FTC, IRS, FEC, FCC,
10 GAO, DOJ and other agencies...

11
12 13. File Grand Jury requests for hearings into tax evasion, money laundering,
13 stock rigging, collusion, election manipulation...

14 14. Prepare rapid-response story points for the Gang-of-20 reporters to counter
15 any Gawker/Gizmodo façades of First Amendment rights with proof of why
16 Gizmodo, Jalopnik, Univision gave up their rights by engaging in crimes...

17
18 15. Destroy the investors and company trying to revive Gawker Media by
19 exposing the dirty finances, fake ad stats, click-farms, hookers, money
20 laundering, FEC fraud and other dirt behind them...

21
22 16. Deliver the full dossier on them to the public and the media..."

23 That is just a tiny example from one small campaign.

24 The pain must be extreme when a politician, who is hired to protect you, puts a thirty million dollar kill
25

1 order on you that you could never possibly over-come.

2 Taxpayers should not be destroyed because they "did the right thing" and reported a crime.

3 49A business only has the right to sell a product or service. They do not have the right to manipulate
4 politics.

5 A politician only has the right to serve YOU.

6 They do not have the right to serve themselves criminal money laundering and insider trading.

7 50When The White House Runs An Attack

8 Program Against You

9 A Payback Playbook Against Corruption

10 "When You Political And Corporate Goons Attack Us And Operate Character Assassination Smear
11 Campaigns, This Is What You Can Expect:"

12 "Dear Attackers:

13 You may work for a sociopath industrialist oligarch. You may actually be one of those sociopath

14 billionaire tech oligarchs. You may only be one of the low-life blogger scum at the bottom of their

15 political pig trough. In any case, you are going down.

16 You have more money than us but we have more time, dedication, creativity and voting members of
17 the

18 public on our side. We also have the law, ethics and tactical resources on our side.

19 Because you chose to try to end our lives we are coming after you and we are coming for the rest of

20 your life, the rest of your families life and for 100 years of your legacy in any historical publications.

21 We play the "long game" for people like you. Everything that will now happen to you will be done

22 1177

1 100% legally and the law enforcement and intelligence community will help us do it to you.

2 Slowly, over time, you will notice your life falling apart. Your business efforts will fail. Your romances
3 will fail. Your investments will fail. Your health will fail. Things will seem to be falling apart, in slow
4 motion, all around you. You must know that YOU brought everything on yourself that is about to
5 happen.
6

7 Every member of the public that hears about your deviant, repulsive activities will help make what is
8 going to take place come to fruition.

9 Here is what you can look forward to:

10 We will have justice served up with a big cold scoop of vengeance.

11 You will eventually be bankrupted but that will be the least of your worries.

12 Take a look at any stock you own, right now. Your stock market valuations are going to dive. Your
13 brand is going to crash. Your profits will start to vaporize. By the time you notice, it will be too late.

14
15
16 51Using these proven tactics and methodologies, a task-force of voters, journalists, investigators and
17 forensic experts have caused over 300 billion dollars in losses to corrupt companies and individuals
18 and bankrupted their criminally evil operations with 100% legal procedures. Any member of the public
19 can do this too, on their own, without breaking a single law and with the gratitude of every citizen.

20
21 As a target, let's take a look at the corrupt politicians that work for dirty corporations. Let's deeply
22 examine the Silicon Valley oligarch financiers, their dirty corporate law firms and their media attack
23 squads that have demonstrated a cycle of attack and harm to citizens.

24 Now we are ripping you, and your kind, a new one.

1 Signed,

2 Your Victims”

3 -----
4 GOOGLE RIGS ELECTIONS AND CHARACTER ASSASSINATION ATTACKS AROUND
5 THE GLOBE ON ORDERS FROM BARACK OBAMA AND DEBBIE WASSERMAN
6
7 BY ROBERT EPSTEIN

8 Authorities in the UK have finally figured out that fake news stories and Russian-placed ads are not the
9 real problem. The UK Parliament is about to impose stiff penalties—not on the people who place the
10 ads or write the stories, but on the Big Tech platforms that determine which ads and stories people
11 actually see.

12
13 Parliament’s plans will almost surely be energized by the latest leak of damning material from inside
14 Google’s fortress of secrecy: The Wall Street Journal recently reported on emails exchanged among
15 Google employees in January 2017 in which they strategized about how to alter Google search results
16 and other “ephemeral experiences” to counter President Donald Trump’s newly imposed travel ban.

17 The company claims that none of these plans was ever implemented, but who knows?

18
19 While U.S. authorities have merely held hearings, EU authorities have taken dramatic steps in recent
20 years to limit the powers of Big Tech, most recently with a comprehensive law that protects user
21 privacy—the General Data Protection Regulation—and a whopping \$5.1 billion fine against Google for
22 monopolistic practices in the mobile device market. Last year, the European Union also levied a \$2.7
23 billion fine against Google for filtering and ordering search results in a way that favored their own
24
25
26

1 products and services. That filtering and ordering, it turns out, is of crucial importance.

2 As years of research I've been conducting on online influence has shown, content per se is not the real
3 threat these days; what really matters is (a) which content is selected for users to see, and (b) the way
4 that content is ordered in search results, search suggestions, news feeds, message feeds, comment lists,
5 and so on. That's where the power lies to shift opinions, purchases, and votes, and that power is held by
6 a disturbingly small group of people.
7

8 52I say "these days" because the explosive growth of a handful of massive platforms on the internet—
9 the
10 largest, by far, being Google and the next largest being Facebook—has changed everything. Millions of
11 people and organizations are constantly trying to get their content in front of our eyes, but for more
12 than 2.5 billion people around the world—soon to be more than 4 billion—the responsibility for what
13 algorithms do should always lie with the people who wrote the algorithms and the companies that
14 deployed them.
15

16 In randomized, controlled, peer-reviewed research I've conducted with thousands of people, I've
17 shown repeatedly that when people are undecided, I can shift their opinions on just about any topic just
18 by changing how I filter and order the information I show them. I've also shown that when, in multiple
19 searches, I show people more and more information that favors one candidate, I can shift opinions even
20 farther. Even more disturbing, I can do these things in ways that are completely invisible to people and
21 in ways that don't leave paper trails for authorities to trace.
22
23

24 Worse still, these new forms of influence often rely on ephemeral content—information that is
25 generated on the fly by an algorithm and then disappears forever, which means that it would be
26

1 difficult, if not impossible, for authorities to reconstruct. If, on Election Day this coming November,
2 Mark Zuckerberg decides to broadcast go-out-and-vote reminders mainly to members of one political
3 party, how would we be able to detect such a manipulation? If we can't detect it, how would we be able
4 to reduce its impact? And how, days or weeks later, would we be able to turn back the clock to see
5 what
6 happened?

7
8 Of course, companies like Google and Facebook emphatically reject the idea that their search and
9 newsfeed algorithms are being tweaked in ways that could meddle in elections. Doing so would
10 undermine the public's trust in their companies, spokespeople have said. They insist that their
11 algorithms are complicated, constantly changing, and subject to the "organic" activity of users.

12
13 This is, of course, sheer nonsense. Google can adjust its algorithms to favor any candidate it chooses no
14 matter what the activity of users might be, just as easily as I do in my experiments. As legal scholar
15 Frank Pasquale noted in his recent book "The Black Box Society," blaming algorithms just doesn't cut
16 it; the responsibility for what an algorithm does should always lie with the people who wrote the
17 algorithm and the companies that deployed the algorithm. Alan Murray, president of Fortune, recently
18 framed the issue this way: "Rule one in the Age of AI: Humans remain accountable for decisions, even
19 when made by machines."
20

21
22 Given that 95 percent of donations from Silicon Valley generally go to Democrats, it's hard to imagine
23 that the algorithms of companies like Facebook and Google don't favor their favorite candidates. A
24 newly leaked video of a 2016 meeting at Google shows without doubt that high-ranking Google
25 executives share a strong political preference, which could easily be expressed in algorithms. The
26

1 favoritism might be deliberately programmed or occur simply because of unconscious bias. Either way,
2 votes and opinions shift.

3 It's also hard to imagine how, in any election in the world, with or without intention on the part of
4 company employees, Google search results would fail to tilt toward one candidate. Google's search
5 algorithm certainly has no equal-time rule built into it; we wouldn't want it to! We want it to tell us
6 what's best, and the algorithm will indeed always favor one dog food over another, one music service
7 over another, and one political candidate over another. When the latter happens ... votes and
8 opinions
9 shift.
10

11 Here are 10 ways—seven of which I am actively studying and quantifying—that Big Tech companies
12 could use to shift millions of votes this coming November with no one the wiser. Let's hope, of course,
13 that these methods are not being used and will never be used, but let's be realistic too; there's generally
14 no limit to what people will do when money and power are on the line.
15

16 1. Search Engine Manipulation Effect (SEME)

17 Ongoing research I began in January 2013 has shown repeatedly that when one candidate is favored
18 over another in search results, voting preferences among undecided voters shift dramatically—by 20
19 percent or more overall, and by up to 80 percent in some demographic groups. This is partly because
20 people place inordinate trust in algorithmically generated output, thinking, mistakenly, that algorithms
21 are inherently objective and impartial.
22

23 But my research also suggests that we are conditioned to believe in high-ranking search results in much
24 the same way that rats are conditioned to press levers in Skinner boxes. Because most searches are for
25

1 simple facts (“When was Donald Trump born?”), and because correct answers to simple questions
2 inevitably turn up in the first position, we are taught, day after day, that the higher a search result
3 appears in the list, the more true it must be. When we finally search for information to help us make a
4 tough decision (“Who’s better for the economy, Trump or Clinton?”), we tend to believe the
5 information on the web pages to which high-ranking search results link.
6

7 As The Washington Post reported last year, in 2016, I led a team that developed a system for
8 monitoring the election-related search results Google, Bing, and Yahoo were showing users in the
9 months leading up to the presidential election, and I found pro-Clinton bias in all 10 search positions on
10 the first page of Google’s search results. Google responded, as usual, that it has “never re-ranked
11 search
12 results on any topic (including elections) to manipulate political sentiment”—but I never claimed it did.
13 I found what I found, namely that Google’s search results favored Hillary Clinton; “re-ranking”—an
14 obtuse term Google seems to have invented to confuse people—is irrelevant.
15

16 Because (a) many elections are very close, (b) 90 percent of online searches in most countries are
17 conducted on just one search engine (Google), and (c) internet penetration is high in most countries
18 these days—higher in many countries than it is in the United States—it is possible that the outcomes
19 of up to 25 percent of the world’s national elections are now being determined by Google’s search
20 algorithm, even without deliberate manipulation on the part of company employees. Because, as I
21 noted earlier, Google’s search algorithm is not constrained by equal-time rules, it almost certainly ends
22 up favoring one candidate over another in most political races, and that shifts opinions and votes.
23
24

25 2. Search Suggestion Effect (SSE)

1 When Google first introduced autocomplete search suggestions—those short lists you see when you
2 start to type an item into the Google search bar—it was supposedly meant to save you some time.

3 Whatever the original rationale, those suggestions soon turned into a powerful means of manipulation
4 that Google appears to use aggressively.

5
6 My recent research suggests that (a) Google starts to manipulate your opinions from the very first
7 character you type, and (b) by fiddling with the suggestions it shows you, Google can turn a 50–50 split
8 54among undecided voters into a 90–10 split with no one knowing. I call this manipulation the Search
9 Suggestion Effect (SSE), and it is one of the most powerful behavioral manipulations I have ever seen
10 in my nearly 40 years as a behavioral scientist.

11
12 How will you know whether Google is messing with your election-related search suggestions in the
13 weeks leading up to the election? You won't.

14 3. The Targeted Messaging Effect (TME)

15
16 If, on Nov. 8, 2016, Mr. Zuckerberg had sent go-out-and-vote reminders just to supporters of Mrs.
17 Clinton, that would likely have given her an additional 450,000 votes. I've extrapolated that number
18 from Facebook's own published data.

19 Because Zuckerberg was overconfident in 2016, I don't believe he sent those messages, but he is surely
20 not overconfident this time around. In fact, it's possible that, at this very moment, Facebook and other
21 companies are sending out targeted register-to-vote reminders, as well as targeted go-out-and-vote
22 reminders in primary races. Targeted go-out-and-vote reminders might also favor one party on Election
23 Day in November.
24

1 My associates and I are building systems to monitor such things, but because no systems are currently
2 in place, there is no sure way to tell whether Twitter, Google, and Facebook (or Facebook’s influential
3 offshoot, Instagram) are currently tilting their messaging. No law or regulation specifically forbids the
4 practice, and it would be an easy and economical way to serve company needs. Campaign donations
5 cost money, after all, but tilting your messaging to favor one candidate is free.
6

7 4. Opinion Matching Effect (OME)

8 In March 2016, and continuing for more than seven months until Election Day, Tinder’s tens of
9 millions of users could not only swipe to find sex partners, they could also swipe to find out whether
10 they should vote for Trump or Clinton. The website iSideWith.com—founded and run by “two friends”
11 with no obvious qualifications—claims to have helped more than 49 million people match their
12 opinions to the right candidate. Both CNN and USA Today have run similar services, currently
13 inactive.
14

15 I am still studying and quantifying this type of, um, helpful service, but so far it looks like (a) opinion
16 matching services tend to attract undecided voters—precisely the kinds of voters who are most
17 vulnerable to manipulation, and (b) they can easily produce opinion shifts of 30 percent or more
18 without people’s awareness.
19

20 At this writing, iSideWith is already helping people decide who they should vote for in the 2018 New
21 York U.S. Senate race, the 2018 New York gubernatorial race, the 2018 race for New York District 10
22 of the U.S. House of Representatives, and, believe it or not, the 2020 presidential race. Keep your eyes
23 open for other matching services as they turn up, and ask yourself this: Who wrote those algorithms,
24
25
26

1 and how can we know whether they are biased toward one candidate or party?

2 5. Answer Bot Effect (ABE)

3 More and more these days, people don't want lists of thousands of search results, they just want the
4 answer, which is being supplied by personal assistants like Google Home devices, the Google Assistant
5 on Android devices, Amazon's Alexa, Apple's Siri, and Google's featured snippets—those answer
6 boxes at the top of Google search results. I call the opinion shift produced by such mechanisms the
7 Answer Bot Effect (ABE).
8

9 My research on Google's answer boxes shows three things so far: First, they reduce the time people
10 spend searching for more information. Second, they reduce the number of times people click on search
11 results. And third, they appear to shift opinions 10 to 30 percent more than search results alone do. I
12 don't yet know exactly how many votes can be shifted by answer bots, but in a national election in the
13 United States, the number might be in the low millions.
14

15
16 6. Shadowbanning

17 Recently, Trump complained that Twitter was preventing conservatives from reaching many of their
18 followers on that platform through shadowbanning, the practice of quietly hiding a user's posts without
19 the user knowing. The validity of Trump's specific accusation is arguable, but the fact remains that any
20 platform on which people have followers or friends can be rigged in a way to suppress the views and
21 influence of certain individuals without people knowing the suppression is taking place. Unfortunately,
22 without aggressive monitoring systems in place, it's hard to know for sure when or even whether
23 shadowbanning is occurring.
24
25
26

1 7. Programmed Virality and the Digital Bandwagon Effect

2 Big Tech companies would like us to believe that virality on platforms like YouTube or Instagram is a
3 profoundly mysterious phenomenon, even while acknowledging that their platforms are populated by
4 tens of millions of fake accounts that might affect virality.

5
6 In fact, there is an obvious situation in which virality is not mysterious at all, and that is when the tech
7 companies themselves decide to shift high volumes of traffic in ways that suit their needs. And aren't
8 they always doing this? Because Facebook's algorithms are secret, if an executive decided to bestow
9 instant Instagram stardom on a pro-Elizabeth Warren college student, we would have no way of
10 knowing that this was a deliberate act and no way of countering it.

11
12 The same can be said of the virality of YouTube videos and Twitter campaigns; they are inherently
13 competitive—except when company employees or executives decide otherwise. Google has an
14 especially powerful and subtle way of creating instant virality using a technique I've dubbed the Digital
15 Bandwagon Effect. Because the popularity of websites drives them higher in search results, and
16 because high-ranking search results increase the popularity of websites (SEME), Google has the ability
17 to engineer a sudden explosion of interest in a candidate or cause with no one—perhaps even people at
18 the companies themselves—having the slightest idea they've done so. In 2015, I published a
19 mathematical model showing how neatly this can work.

20
21
22 8. The Facebook Effect

23 Because Facebook's ineptness and dishonesty have squeezed it into a digital doghouse from which it
24 might never emerge, it gets its own precinct on my list.

1 In 2016, I published an article detailing five ways that Facebook could shift millions of votes without
2 people knowing: biasing its trending box, biasing its center newsfeed, encouraging people to look for
3 election-related material in its search bar (which it did that year!), sending out targeted register-to-vote
4 reminders, and sending out targeted go-out-and-vote reminders.

5
6 56I wrote that article before the news stories broke about Facebook’s improper sharing of user data
7 with
8 multiple researchers and companies, not to mention the stories about how the company permitted fake
9 news stories to proliferate on its platform during the critical days just before the November election—
10 problems the company is now trying hard to mitigate. With the revelations mounting, on July 26, 2018,
11 Facebook suffered the largest one-day drop in stock value of any company in history, and now it’s
12 facing a shareholder lawsuit and multiple fines and investigations in both the United States and the EU.
13 Facebook desperately needs new direction, which is why I recently called for Zuckerberg’s resignation.
14 The company, in my view, could benefit from the new perspectives that often come with new
15 leadership.
16

17 9. Censorship

18
19 I am cheating here by labeling one category “censorship,” because censorship—the selective and
20 biased suppression of information—can be perpetrated in so many different ways.

21 Shadowbanning could be considered a type of censorship, for example, and in 2016, a Facebook
22 whistleblower claimed he had been on a company team that was systematically removing conservative
23 news stories from Facebook’s newsfeed. Now, because of Facebook’s carelessness with user data, the
24 company is openly taking pride in rapidly shutting down accounts that appear to be Russia-connected
25

1 —even though company representatives sometimes acknowledge that they “don’t have all the facts.”

2 Meanwhile, Zuckerberg has crowed about his magnanimity in preserving the accounts of people who
3 deny the Holocaust, never mentioning the fact that provocative content propels traffic that might make
4 him richer. How would you know whether Facebook was selectively suppressing material that favored
5 one candidate or political party? You wouldn’t. (For a detailed look at nine ways Google censors
6 content, see my essay “The New Censorship,” published in 2016.)
7

8 10. The Digital Customization Effect (DCE)

9 Any marketer can tell you how important it is to know your customer. Now, think about that simple
10 idea in a world in which Google has likely collected the equivalent of millions of Word pages of
11 information about you. If you randomly display a banner ad on a web page, out of 10,000 people, only
12 five are likely to click on it; that’s the CTR—the “clickthrough rate” (0.05 percent). But if you target
13 your ad, displaying it only to people whose interests it matches, you can boost your CTR a
14
15 hundredfold.
16

17 That’s why Google, Facebook, and others have become increasingly obsessed with customizing the
18 information they show you: They want you to be happily and mindlessly clicking away on the content
19 they show you.
20

21 In the research I conduct, my impact is always larger when I am able to customize information to suit
22 people’s backgrounds. Because I know very little about the participants in my experiments, however, I
23 am able to do so in only feeble ways, but the tech giants know everything about you—even things you
24 don’t know about yourself. This tells me that the effect sizes I find in my experiments are probably too
25
26

1 low. The impact that companies like Google are having on our lives is quite possibly much larger than I
2 think it is. Perhaps that doesn't scare you, but it sure scares me.

3 The Same Direction

4 57OK, you say, so much for Epstein's list! What about those other shenanigans we've heard about:
5 voter

6 fraud (Trump's explanation for why he lost the popular vote), gerrymandering, rigged voting machines,
7 targeted ads placed by Cambridge Analytica, votes cast over the internet, or, as I mentioned earlier,

8 those millions of bots designed to shift opinions. What about hackers like Andrés Sepúlveda, who spent
9 nearly a decade using computer technology to rig elections in Latin America? What about all the ways
10 new technologies make dirty tricks easier in elections? And what about those darn Russians, anyway?

11 To all that I say: kid stuff. Dirty tricks have been around since the first election was held millennia ago.

12 But unlike the new manipulative tools controlled by Google and Facebook, the old tricks are

13 competitive—it's your hacker versus my hacker, your bots versus my bots, your fake news stories

14 versus my fake news stories—and sometimes illegal, which is why Sepúlveda's efforts failed many

15 times and why Cambridge Analytica is dust.

16 "Cyberwar," a new book by political scientist Kathleen Hall Jamieson, reminds us that targeted ads and

17 fake news stories can indeed shift votes, but the numbers are necessarily small. It's hard to overwhelm

18 your competitor when he or she can play the same games you are playing.

19 Now, take a look at my numbered list. The techniques I've described can shift millions of votes without

20 people's awareness, and because they are controlled by the platforms themselves, they are entirely

21 noncompetitive. If Google or Facebook or Twitter wants to shift votes, there is no way to counteract

1 their manipulations. In fact, at this writing, there is not even a credible way of detecting those
2 manipulations.

3 And what if the tech giants are all leaning in the same political direction? What if the combined weight
4 of their subtle and untraceable manipulative power favors one political party? If 150 million people
5 vote this November in the United States, with 20 percent still undecided at this writing (that’s 30
6 million people), I estimate that the combined weight of Big Tech manipulations could easily shift
7 upwards of 12 million votes without anyone knowing. That’s enough votes to determine the outcomes
8 of hundreds of close local, state, and congressional races throughout the country, which makes the free-
9 and-fair election little more than an illusion.
10

11
12 Full disclosure: I happen to think that the political party currently in favor in Silicon Valley is, by a hair
13 (so to speak), the superior party at the moment. But I also love America and democracy, and I believe
14 that the free-and-fair election is the bedrock of our political system. I don’t care how “right” these
15 companies might be; lofty ends do not justify shady means, especially when those means are difficult
16 to see and not well understood by either authorities or the public.
17

18 Can new regulations or laws save us from the extraordinary powers of manipulation the Big Tech
19 companies now possess? Maybe, but our leaders seem to be especially regulation-shy these days, and I
20 doubt, in any case, whether laws and regulations will ever be able to keep up with the new kinds of
21 threats that new technologies will almost certainly pose in coming years.
22

23 I don’t believe we are completely helpless, however. I think that one way to turn Facebook, Google,
24 and the innovative technology companies that will succeed them, into responsible citizens is to set
25

1 upsophisticated monitoring systems that detect, analyze, and archive what they’re showing people—in
2 effect, to fight technology with technology.

3 58As I mentioned earlier, in 2016, I led a team that monitored search results on multiple search
4 engines.

5 That was a start, but we can do much better. These days, I’m working with business associates and
6 academic colleagues on three continents to scale up systems to monitor a wide range of information the
7 Big Tech companies are sharing with their users—even the spoken answers provided by personal
8 assistants. Ultimately, a worldwide ecology of passive monitoring systems will make these companies
9 accountable to the public, with information bias and online manipulation detectable in real time.
10

11 With November drawing near, there is obviously some urgency here. At this writing, it’s not clear
12 whether we will be fully operational in time to monitor the midterm elections, but we’re determined to
13 be ready for 2020.
14

4

5 -----
6 Dear Public:

7 They use criminally corrupt and illicit operations designed to steal taxpayer monies and they character
8 assassinate, defame, murder, black-list, and monopolize industries against anyone who speaks out
9 against them.

10 They formed a business and political manipulation “Cartel” intended to inflict corruption upon the
11 United States Federal Government, The New York State Government and the California State
12 Government, as defined by law under RICO Racketeering Statutes for the purpose of manipulating the
13 value of stock market holdings and controlling political policy decisions. They violated “Treason” laws
14 against the nation.
15

16 The criminally corrupt are enabled by criminally corrupt law firms who spend all day operating legal
17 evasion schemes. Public efforts took down the Brobeck law firm and hundreds of others that were
18 doing such crime cover-ups. There are many more needing to be terminated. Wilson Sonsini, Perkins
19 Coi, Covington and Burling are targeted for termination next. Watch the TV show called “Queen Of
20 The South” and watch how the cartel lawyer for the main drug queen is actually running the system.
21 Every lawyer like that needs to be hunted down and 100% legally terminated.
22

23 59These criminally corrupt people, companies and organizations are now going to experience payback,
24
25
26

1 for their crimes against society, for the rest of their time on Earth. Their historical legacy after they die
2 will remember each of them, in every history book, as: "...political criminals, insider trading mobsters
3 and crony taxpayer abusing scum...".

4 Society provides only 3 options when these people try to take your life and your ethical society: 1.) Kill
5 them – This is illegal. 2.) Sue them - While it is easy to sue them for their crimes, their criminally
6 corrupt law firms will only blockade and/or delay such litigation. 3.) Expose them and boycott them –
7 This has proven to work best.

8
9 Because they are scumbags who have been accused, by reporters, employees, spouses and tipsters, of
10 very evil bribery, sex abuse, drug deals, political crimes, tax evasion, crony government payola,
11 industry black-lists, money laundering, defamation, libel, slander, misogyny, stock market rigging,
12 election manipulation, global search engine fake news, employee abuse and other horrific crimes
13 against society. Exposing them, and their enablers, is proven method to take them down. A person,
14 company or organization who commits crimes has always, according to historical forensics data, been
15 indicative as only just one small part of a deeply infected body which is fully corrupt and one which
16 requires termination.
17

18
19 The take-down effort must last for the rest of their lives. It must not just be a passing fad inspired by a
20 single news expose'. Society must never forget about what they did and never forgive them for
21 attacking and damaging you, as a citizen, and for damaging and abusing society.
22

23 You will learn how to wipe out their eco-system. You will investigate, expose and demand prosecution
24 of their corrupt:
25
26

1 A.) Law Firm Corporations

2 B.) CPA Firms

3 C.) Investment Banks

4 D.) Crony Politicians

5 E.) Fake Money Laundering ‘Charities’

6 F.) False Front Stock Market Accounts

7 G.) Covert Family Trust Funds And Shell Corporations

8 H.) Internet Search Engine Manipulation Services

9 I.) PR And Advertising Agency News Cover-Up Services

10 J.) Offshore Money Laundering Services

11 K.) And Every Other Intermediary Money Laundering Conduit...

12 There are now massive free database software systems the public can use to build your collaborative
13 case files. CERN in Switzerland uses billions of dollars of free global database software that you can
14 use too. You will use the web to create shared public collaboration peer-to-peer crime interdiction
15 databases. The databases have every piece of information about the bad guys that was ever created, ie:
16 all of their addresses, account numbers, tax records, bank accounts, dating site records, phone numbers,
17 fax numbers, IMEI device records, IP addresses, device serial numbers, every lover they cheated on,
18 service calls, drug deals, hookers, rent boys, Uber and Lyft trip addresses, neighbors, GPS records, etc.

19 All of this information can be legally acquired by the public. These narcissistic criminals put most of it
20 out on the web themselves. The public has already built their own versions of Palantir,
21 XKEYSCORE,

22
23
24
25
26
27 1195
28

1 and other CSI database tools. You must now use these tools to end corruption.

2 If you have the funds, you can hire ex-FBI, CIA, NSA, GCHQ and other top intelligence and crime
3 interdiction experts. They have ways of watching the bad guys every second of every day. Many of
4 them are already doing it out of a sense of public service and you can find them on Voat.co,
5
6 Reddit.com, 4Chan and tens of thousands of online web sleuth and citizen investigator sites.

7 Did you know that WiFi and the ceramic objects around you can make it look like there are not
8 even walls where the bad guys are right now? Science has created a new world in which technology
9 can see through walls and there is, LITERALLY, no place crooks can hide!

10
11 Face recognition can also source up every image of them that was on security cameras, store cameras,
12 restaurant cameras, Google and Bing image databases, social networks, dating sites, traffic cameras,
13 hotel and motel cameras and everything that has ever recorded their face; which is public domain.

14 Everything they are connected to will be connected to them and psychologically analyzed. A map of
15 every “secret” meeting they had each day can now be computer generated in minutes.
16

17 If these political crooks ever, for the rest of their life, cheat on taxes, take money off-the-books, lie on
18 an application, get arrested, get sued, buy drugs, buy sex, cheat, hide money, use off-shore conduits,
19 set-up an illicit trust fund or shell corporation, get an STD, lie on a dating site, abuse or extort an
20 employee, abuse a co-worker, plagiarize, break the law, run a real estate scam, hide insider stock
21 trading, provide political campaign services without filing detailed and accurate FEC disclosures,
22 support a political campaign, spend or receive any money that they do not report, etc... THE PUBLIC
23
24 CAN NOW CATCH THEM!

1 There is now no place on Earth a corrupt politician or their corrupt financier can hide from the crowd-
2 sourced investigations. The public now has investigators online across the globe. The public can now
3 count on friends in Congress, journalists, law enforcement and the intelligence community to help
4 taxpayers never let the corrupt out of their sights!

5
6 You, as a PUBLIC INVESTIGATOR never have to do creepy illicit things, like they do, so you have
7 nothing to worry about.

8 THEY have PLENTY to worry about. These tactics only work on Bad Guys like them!

9 Each of these crooks are, today, sitting at the edge of the same precipice that BILL COSBY, FOREX,
10 SOLYNDRA, ABOUND SOLAR, A123, ENERDEL, AMY PASCAL, E.F.HUTTON, RADIO
11 SHACK, ENRON, MCI WORLDCOM, EASTERN AIRLINES, STANDARD OIL, ERIC HOLDER,
12 STEVEN CHU, ARTHUR ANDERSON, DELOREAN, PETS.COM, BEAR STEARNS, BEATRICE
13 FOODS, HEALTHSOUTH, ALLEN STANFORD, TYCO, LANCE ARMSTRONG, PARMALAT,
14 BANINTER, HSBC, GLOBAL CROSSING LTD., BLACKBERRY, HIH INSURANCE, IMCLONE,
15 DEUTSCHE BANK (SPY CASE), URBAN BANK, JEROME KERVIEL, BARCLAYS BANK,
16 BRE-
17 X, FISKER, BARINGS BANK, PATRICIA DUNN, SIEMENS AG, PETROBAS, FERNANDO
18 MARCOS, KELLOG BROWN AND ROOT, BAE SYSTEMS, KERRY KHAN, ALCATEL-
19 LUCENT
20 SA, PRESIDENT RICHARD NIXON, HARVEY WEINSTEIN, ERIC SCHNIDERMAN, JAMES
21 COMEY...and many, many more, sat at just before they slid down their filthy funnels straight to hell.

22
23
24
25
26
27
28
61 We all hope they enjoy the ride! Our public efforts took those players down! If the crooks think they

1 are immune, they are 100% wrong! Google, Facebook, Twitter, Kliener Perkins, Snapchat, Musk, and
2 the rest of the Silicon Valley Cartel should expect a life-time of investigations.

3 Here are a few of the thousands of 100% legal methods for wiping out creeps like them.

4 These corrupt politicians, the Silicon Valley Mafia, their political skills and their crony companies can
5 be terminated from the comfort of any voter's living room.

6 This only works on criminals and the corrupt.

7 The "good guys" have nothing to fear.

8 Our goal is to get over 300 million voters working on these efforts ASAP:

9 Step-By-Step Termination Instructions For The Public To Use On Corrupt Targets:

10
11
12 "- Make sure your interdiction of their illicit deeds lasts the rest of their life. Make it your hobby and
13 engage in it every month. Put it on your calendar to have a monthly action day.

14 - Bankrupt their corrupt companies by contacting EVERY single advertising director for EVERY
15 company that advertises with them to show them the evidence and encourage them to stop advertising
16 with the suspect under threat of boycott.

17 - List out every past employee of the tabloid that was used to attack the taxpayers.

18
19 - Bankrupt their corrupt companies by contacting EVERY single employee that works for them to
20 show

21 them the evidence and encourage them to quit.

22 - Bankrupt their corrupt companies by contacting EVERY single investor that funds them to show them
23 the evidence and encourage them to divest.

24 - Use "Espionage Journalism" like Project Veritas does. Sneak in to the bad guys operation using your
25

1 cell phone as a broadcast camera and film the crooks doing crooked things.

2 - Contact billionaire's (ie: Peter Thiel, Larry Ellison, etc.) to get them to sponsor a RICO, or other kind
3 of lawsuit, against these corrupt parties. Use proxies to sue the corrupt (ie: Get Thiel to pay for some
4 other guy to sue Gawker for you). The Legal Proxy is one of your biggest assets. You can get billions
5 of dollars of lawsuits executed against corrupt mega giants. Make Hulk Hogan be YOUR proxy. He
6 takes all of the risk and YOU get to see a criminally corrupt oligarch (ie: Nick Denton and
7 Gawker/Gizmodo Media) ground into the dirt. Read the news daily and PACER.GOV and FIND
8 YOUR PROXY!
9

10 62- Bankrupt their corrupt companies by contacting EVERY user of their company, via mass media
11 and
12 personal out-reach, to show them the evidence and encourage them to cancel their subscriptions and
13 'poison' their data by filling their profiles with fantasy data.
14

15 - See the movie: "DARK MONEY" ! Understand what "Dark Money" is. Then cut off every possible
16 source of the bad guys "Dark Money and expose every party involved in Dark Money schemes.
17

18 - Write every government agency with a short, concise, detailed complaint letter and say IN YOUR
19 LETTER that "THIS LETTER IS ON FOIA PUBLIC RECORD". These days, all government
20 documents are leaked, hacked or FOIA'd so assume the public will be reading your letter. Compose
21 your letter as if you were writing it for the audience of the Jerry Springer show so that the public will
22 be interested in it, excited about it and amused by it. This will help the public help you to push your
23 issue. Audacious controversy gets traction.
24

25 - Bankrupt their corrupt companies by contacting EVERY single member of Congress and regulatory
26

1 agencies to show them the evidence and demand, in writing, a federal investigation.

2 - Bankrupt their corrupt companies by exposing corrupt sources of supply to the news and the public;

3 ie: Elon Musk uses “blood cobalt” mines in the Congo which rely on child labor and mercenaries to
4 operate the cobalt mineral mines.

5 - Expose the covert sex cults (ie: Pizza Gate, NXIUM, Burning Man, Mission Control, Power
6 Exchange, etc.) that they frequent.

7
8 - Look on LinkedIn and other databases to contact their former interns to see if they sexually or
9 mentally abused that intern and help that intern find lawyers (ie: Lawless Firm, AllRed, etc.).

10
11 - All of the data of famous corrupt persons and corporations has been hacked and acquired by many,
12 many parties over the last decade. Watch for it to get leaked on the web or go search the ICIJ,
13 Wikileaks and related databases for keywords about your targets. Expose what you find to the public.

14 Cross reference what you find with the Palantir, Taleo, Bitcoin Trace, PayPal Trace, VISA Trace, D&B
15 Insider, Gust-Scan, etc. commercially available databases and you will have an even more powerful
16 search than the NSA’s XKEYSCORE tool.

17
18 - Expose the trust funds, shell corporations and real estate contracts that they and their family own and
19 make sure the IRS and SEC knows about those slush fund pots. Find all of their insider trading payola
20 scams and expose them.

21
22 - Expose every reporter and ‘stock analyst’ that is actually a shill for the corrupt. Call them out by
23 name
24 in press releases and your own news articles. Demand to see their financial records if they claim to
25 have never been paid by the corrupt entity in question.

1 - Expose the racist, tribal, misogynist organizations that the majority of their executive hires are part of.

2 - Investigate them and share your investigation data, from public data resources, on databases. All of
3 their addresses, account numbers, tax records, bank accounts, dating site records, phone numbers, fax
4 numbers, IMEI device records, IP addresses, device serial numbers, etc. are on public record.

5
6 63- As Comey, et al; proved, there are crooks at the FBI...but there will always be, at least, one Elliot
7 Ness kind of good guy at the FBI. DO report your findings to the FBI, in writing, but report to EVERY
8 main, and regional FBI office, in writing, with a carbon copy to the media. It only takes one good FBI
9 agent to get an official FBI case going. The same goes for the SEC, The EU and the CFTC.

10
11 - These incredibly abusive people have an inordinate number of divorce lawsuits for abusive behavior.
12 Showcase the most revealing text from those abusive divorce court filings.

13 - Write 'Request For Prosecution' requests to every major law enforcement agency and send copies of
14 those requests to every other law enforcement agency and independent news reporters.

15
16 - If they run for office, confront them (legally) at public speaking events and hand out one page fliers
17 about their crimes to the public at these events. Name their crony financial backers out loud at these
18 events.

19 - File charges with the FEC for campaign finance violations. Ie: In one year Google reported a million
20 in campaign contribution cash to one party but they actually provided many billions of campaign
21 contributions via search engine rigging and perception manipulation services. Report that to the FEC
22 and demand to know what the FEC is doing about it. Ask the FEC, in writing, every month until you
23 get an answer in writing.
24
25
26

1 - Don't just 'follow the money'. Make fun charts and diagrams of the illicit funds routes and mass
2 distribute those graphics.

3 - Meme them forever.

4 - Uncover every: illicit sex partner and who they cheated on; drug deals; hooker; rent boy; Uber and
5 Lyft trip route; neighbors who complained about them; GPS records, social media posting that hinted at
6 a political agenda, etc. All of this information can be legally acquired. They put most of it out on the
7 web themselves and agreed to let Facebook, Uber and Google sell the data.

8 - Search every face recognition database with automated search tools. They agreed to allow their image
9 on databases for security cameras, Walmart cameras, restaurant cameras, Google and Bing image
10 databases, social networks, dating sites, traffic cameras, hotel and motel cameras and everything that
11 has ever recorded their face; which is public domain. Check out what they were doing at each place
12 they were recorded.

13 - Report every illicit deed done by the corrupt to large Congressional, news writer, social network and
14 voter mass distribution systems.

15 - Learn 'Corporate Veil Protection Strategies' and How to Bust Them With Doxing And Public
16 Lawsuits'.

17 - Break their cover-ups. Carbon copy every Inspector General (IG), reporter and social media resource
18 you can find. Never allow only a few people to be the only ones that know what you uncovered. Tell
19 everyone and never stop finding new people to tell. Use the "Streisand Effect".

20 64- If they ever, for the rest of their life: cheat on taxes, take money off-the-books, lie on an
21 application,

1 get arrested, get sued, buy drugs, buy sex, cheat, hide money, use off-shore conduits, set-up an illicit
2 trust fund or shell corporation, get an STD, lie on a dating site, abuse or extort an employee, abuse a
3 co-worker, plagiarize, break the law, run a real estate scam, hide insider stock trading, provide political
4 campaign services without filing detailed and accurate FEC disclosures, support a political campaign,
5 spend or receive any money that they do not report, etc.; THEN YOU EXPOSE THEM AND THE
6 ILLICIT ACTIONS THEY TOOK.

8 - Educate yourself by typing this phrase into the top 5 non-Google search engines: “How To Be A
9 Private Investigator” and read all of the results. Try more searches, like: “Investigation methods” or
10 “Background check methods” or “Investigate a politician”, etc. There are thousands of other legal
11 techniques in addition to those few listed here. They all work if you are persistent.

13 - Learn how to put a covert media alarm in ‘Corporate Poison Pills’ and find ‘Criminal Back-Dating’.

14 - Track the spouses finances of corrupt Senators and expose the crony deals to the world.

15 - Make certain that you find every other voter and community group who might help you. Support their
16 efforts and share what you have uncovered with them. Use the web to guarantee that there is no place
17 on Earth they can hide from justice. Work to mesh investigators, Congress, journalists, law
18 enforcement, intelligence community, voters and your friends and family to never let them out of your
19 sights!

21 - Use social media, press releases, direct mail, PR and publicity stunts to seek out and join every other
22 person or group, in the world, who also hates corruption. Share these notes with them and ask them to
23 “pass them around...”

1 Hundreds of corrupt public officials have now been terminated since the main public web corruption
2 purge efforts began in 2009. The corrupt are fools if they think they are immune. There is no “invisible
3 cloak of corruption”. Every single day a shocking new set of revelations ends the career of some, now
4 notorious, well known political figure.

5
6 If the corrupt think they hid their deeds in private texts, whispered restaurant conversations, secret
7 home servers, the back seats of Uber and Lyft, closed doors in the back room or Cayman Islands hotel
8 rooms **THEY COULD NOT BE MORE MISTAKEN!**

9 Every trust fund that they and their family own has been tracked.

10
11 Every Goldman Sachs, JP Morgan, Wells Fargo, and other I-Bank account they, and their corrupt
12 family own, has been tracked and cross referenced to every political action they participated in that
13 resulted in valuation increases to their crony insider accounts.

14
15 Every stock market account they and their family own has been tracked and cross referenced to every
16 political action they took that might have increased the valuation of those stocks. Every sale of stock
17 they engaged in is being analyzed for “pump-and-dump” illegality. ICIJ and Wikileaks still have tens
18 of

19 65thousands of investigative documents that need to be reviewed. Volunteer to help find keywords and
20 incrimination data in those records.

21
22 Every dirty off-shore account in Switzerland, the Caymans, Brazil and all of their other hiding places
23 has been tracked and data-based on fully resourced online tracking databases.

24 Every person these criminal politicians ever communicated with on a dating site is being contacted.

25 Any abuse, sexual misdeeds, sexting, porno pictures and lies are being documented and reported.

1 Dating sites sell their user data and all of their server records, since inception, are available to the
2 public, investigators and law enforcement with a single credit card purchase thanks to Facebook,
3 Google and Axciom. They caught two different NY AG’s by reading their Match.com messages.

4 The Russians, Chinese, activists and bored teens have been entering the electronic device back doors
5 on every router and consumer electronics device for decades and vacuuming up every record and file
6 on every corporate and government network. Now they sell, or freely provide, those records to every
7 public-interest law suit litigant to help them sue corrupt politicians and their financiers.
8

9 If they ever beat or abused a woman or child, it will be uncovered and reported just like Harvey,
10 Huma’s Weiner and the New York AG were outed!
11

12 Hundreds of thousands of new non-main-stream, non-party-controlled, non-corporate owned news
13 outlets have been created and they now reach the majority of the voting public. Hundreds of thousands
14 of new voters are invited to these sites every hour, around the world. These news sites are exposing
15 them and exposing the “Main Stream Fake News” that the corrupt thought they controlled.
16

17 There is no under-age sex scheme that they are involved in that will not be found out and exposed.

18 There is no male or female prostitute that they used that will not be found out and exposed.

19 There are no abuse charges in your divorce filings and other documents that will not be uncovered.
20

21 There is no intern that they sexually abused that will not be protected when they tell their story about
22 them.

23 TIPS FOR THE TAXPAYING PUBLIC:

24 For major anti-corruption lawsuit efforts we had to find the hidden money that corrupt Silicon Valley
25
26

1 political financing billionaires had spent billions of dollars to hide. How hard was it to peel the skins
2 off of Google’s onion? Thanks to modern law enforcement and intelligence technology, it was not hard
3 at all.

4 The fluency and practice of piercing the corporate veil & alter ego liability shields of political
5 manipulation bosses such as George Soros, Eric Schmidt, Larry Page, Elon Musk and their colleagues,
6 has become increasingly important in recent years due to changes in the law and business cycles.

7 As more small taxpayers need to help hunt down the corrupt, it is increasingly critical for taxpayers to
8 be fluent with the cutting-edge techniques and best tools to pierce & dissolve the corporate veil, as well
9 as determine alter ego liability. The growing number of bankruptcies, foreclosures, and judgments
10 has dramatically increased the need for forensic experts proficient in the science of effective judgment
11 enforcement and asset recovery against the Silicon Mafia collection of corrupt California tech
12 companies.

13 Ie: Any corrupt Department of Energy employer or contractor can now be sued, lose their home and
14 have the courts transfer all of their assets away.

15 It is critical for action groups to understand the best strategies to suck dry the corporate assets in
16 judgments for cases and how to sue individual State and Federal workers.

17 Any member of the public can now begin piercing of the Google corporate veil, navigating complex
18 determinations on corporate liability, strategies involving legal alter ego, and breaking open both
19 corporate & personal liability with your home computer.

20 We use tools that not only include, but exceed, the capabilities of XKEYSCORE, Palantir, Taleo,
21 Bitcoin Trace, PayPal Trace, VISA Trace, D&B Insider, Gust-Scan, and hundreds of other executive
22

1 asset tracking and intelligence engines.

2 You, as a voter, need to learn how to:

- 3 • Expose Veil Protection Strategies and How to Bust Through Them
4 • Expose Liabilities for the Obligations of the Entity That Wilson Sonsini Created For Google & Tesla

5 and How We Busted Through Them In Less Than 24 Hours

- 6
7 • Employ Best Practices in Litigating the Veil Piercing Case in a Gawker Media-Like Laundering
8 Operation

- 9 • Snag The Corrupt With Veil Piercing Tactics & Fraudulent Conveyances With Sting Operations

- 10 • Inform The Corrupt About How Dire Their Situations Are In the New Information Age

- 11 • Expose Corporate Entities Used to Diminish Liability And Use Them As Evidence Against The

12 Corrupt

- 13 • Understand the Alter Ego of Insane Silicon Valley Tech Billionaires

- 14 • Run Reverse Veil Piercing Investigations

- 15 • Connect the Separate "Personalities" of the Corporation & Shareholders

16
17 From the underlying substantive law to practical aspects of asset protection planning (i.e., what works
18 and what does not), new groups are teaching the public everything they need to know about dissolving
19 corporate and executive asset protection like butter on a frying pan.
20

21
22 67From Gawker to Enron and from Solyndra to Nigerian War Lords, From Steven Chu and Eric
23 Holder to

24 Brian Goncher and Steve Jurvetson; taxpayers are now only a few mouse clicks away from the deepest
25 family trust fund hide-aways and the darkest sexual services transactional relationship disclosure.
26

27 1207
28

1 The public can now see how to uncover assets from tort plaintiffs, lenders, government entities and
2 other creditors, hidden in thousands of corporations, partnerships, LLCs and offshore entities. Online
3 web sleuths who are distinguished CIA-FBI-NSA-Class staff will teach you specific approaches and
4 solutions, including the most effective tactics, best practices, and the cutting-edge strategies to peel an
5 Eric Schmidt or a John Doerr veil open like a Taco, 100% legally.
6

7 The public is learning various ways, from the very simple to the very sophisticated, to expose specific
8 assets of State and Federal corrupt employees and illicit contractors: houses, bank and brokerage
9 accounts, private islands, billionaire bunkers, hookers with billionaires homes in their names, rent-boy
10 services, rental real estate, businesses and professional practices and retirement plans. Sue Obama?
11

12 Yes! He is now a private, corrupt citizen!

13 Every taxpayer is now able to easily acquire the most effective strategies and latest law in destroying
14 all corrupt asset protection for the criminal titans.
15

16 You, as a taxpayer, can learn and use these methods:

- 17 • Practical Goals and Limitations of Asset Protection – Google bosses were never as safe as their
18 consultants told them they were
- 19 • Picking the Right Structure to Trick an Oligarch Into Incriminating himself
- 20 • Understanding Fraudulent Transfers and How To Get Their Relatives To Disclose Them
- 21 • Effectively Planning for Possible Challenges From Their Corrupt CPA's
- 22 • Busting Multi-Entity Structures For The Fake Sheathing of Business Assets
- 23 • Dealing with Successor Liability; Get The Money From The Next Guy
- 24
- 25
- 26

- Using Check-the-Box Election As Incrimination Evidence
- Charging Order Protection and Tearing It Apart
- Best Practices on Picking the Right Jurisdiction
- Single Member LLCs, Poison Pills and Criminal Back-Dating

Every bad and immoral thing the corrupt did yesterday will be on the lead stories in the Wall Street Journal tomorrow.

Use this document as your check-list. Try to accomplish everything on it against the most corrupt entity

you see in the news. It does not matter how big they are. These tactics work on a corrupt entity of ANY size!

Not only is this effort 100% legal, it is your moral obligation to undertake it. Even if you don't care about the moral issues, you should care about the fact that your personal assets will increase and the quality of your life will improve as this program increases in effectiveness.

In “The 25% Revolution—How Big Does a Minority Have to Be to Reshape Society?” David Noonan describes how this sort of program by a committed few can influence the many and sweep away social conventions. In fact MASS, PEER-TO-PEER, CROWD-SOURCED POLITICAL CORRUPTION INTERDICTION has already moved to the influence of many.

Social change—from evolving attitudes toward gender and marijuana to the rise of Donald Trump to the emergence of the Black Lives Matter and #MeToo movements—is a constant. It is also mysterious, or so it can seem. For example, “How exactly did we get here?” might be asked by anyone who lived through decades of fierce prohibition and now buys pot at one of the more than 2,000 licensed

1 dispensaries across the U.S.

2 A new study about the power of committed minorities to shift conventional thinking offers some
3 surprising possible answers. Published this week in Science, the paper describes an online experiment
4 in which researchers sought to determine what percentage of total population a minority needs to reach
5 the critical mass necessary to reverse a majority viewpoint. The tipping point, they found, is just 25
6 percent. At and slightly above that level, contrarians were able to “convert” anywhere from 72 to 100
7 percent of the population of their respective groups. Prior to the efforts of the minority, the population
8 had been in 100 percent agreement about their original position.

9
10
11 “This is not about a small elite with disproportionate resources,” says Arnout van de Rijt, a sociologist
12 at Utrecht University in the Netherlands who studies social networks and collective action, and was not
13 involved in the study. “It’s not about the Koch brothers influencing American public opinion. Rather,
14 this is about a minority trying to change the status quo, and succeeding by being unrelenting. By
15 committing to a new behavior, they repeatedly expose others to that new behavior until they start to
16 copy it.”

17
18 The experiment was designed and led by Damon Centola, associate professor in the Annenberg School
19 of Communications at the University of Pennsylvania. It involved 194 people randomly assigned to 10
20 “independent online groups,” which varied in size from 20 to 30 people. In the first step group
21 members were shown an image of a face and told to name it. They interacted with one another in
22 rotating pairs until they all agreed on a name. In the second step Centola and his colleagues seeded
23 each group with “a small number of confederates...who attempted to overturn the established
24
25
26

1 convention (the agreed-on name) by advancing a novel alternative.”

2 For the second step, as Centola explains it, the researchers began with a 15 percent minority model and
3 gradually increased it to 35 percent. Nothing changed at 15 percent, and the established norm remained
4 in place all the way up to 24 percent.

5
6 69The magic number, the tipping point, turned out to be 25 percent. Minority groups smaller than that
7 converted, on average, just 6 percent of the population. Among other things, Centola says, that 25
8 percent figure refutes a century of economic theory. “The classic economic model—the main thing we
9 are responding to with this study—basically says that once an equilibrium is established, in order to
10 change it you need 51 percent. And what these results say is no, a small minority can be really
11 effective, even when people resist the minority view.” The team’s computer modeling indicated a 25
12 percent minority would retain its power to reverse social convention for populations as large as
13 100,000.
14

15
16 But the proportion has to be just right: One of the groups in the study consisted of 20 members, with
17 four contrarians. Another group had 20 members and five contrarians—and that one extra person made
18 all the difference. “In the group with four, nothing happens,” Centola says, “and with five you get
19 complete conversion to the alternative norm.” The five, neatly enough, represented 25 percent of the
20 group population. “One of the most interesting empirical, practical insights from these results is that at
21 24 percent—just below the threshold—you don’t see very much effect,” adds Centola, whose first
22 book, *How Behavior Spreads: The Science of Complex Contagions*, comes out this month. “If you are
23 those people trying to create change, it can be really disheartening.” When a committed minority effort
24
25
26

1 starts to falter there is what Centola calls “a convention to give up,” and people start to call it quits.
2 And

3 of course members have no way to know when their group is just short of critical mass. They can be
4 very close and simply not realize it. “So I would say to Black Lives Matter, #MeToo and all of these
5 social change movements that approaching that tipping point is slow going, and you can see
6 backsliding. But once you get over it, you’ll see a really large-scale impact.”

7 Real-life factors that can work against committed minorities—even when they reach or exceed critical
8 mass—include a lack of interaction with other members, as well as competing committed minorities
9 and what’s called “active resistance”—which pretty well describes the way many people in 2018
10 respond to political ideas with which they disagree. But even with such obstacles, Centola says the
11 tipping point predicted in his model remains well below 50 percent.

12
13
14 Certain settings lend themselves to the group dynamics Centola describes in his study, and that includes
15 the workplace. “Businesses are really great for this kind of thing,” he says, “because people in firms
16 spend most of their day trying to coordinate with other people, and they exhibit the conventions that
17 other people exhibit because they want to show that they’re good workers and members of the firm. So
18 you can see very strong effects of a minority group committed to changing the culture of the
19 population.”

20
21 The other environment in which the 25 percent effect is particularly evident, Centola says, is online—
22 where people have large numbers of interactions with lots of other people, many of them strangers.

23
24 This raises some tricky questions: Can a bot stand in for a member of a committed minority? And can a
25 committed minority be composed of bots and the real people the bots influence, so that bots are

1 actually driving the change? According to Centola, “In a space where people can’t distinguish people
2 from bots, yes. If you get a concerted, focused effort by a group of agents acting as a minority view,
3 they can be really effective.”

4 You owe it to society, and yourself, to fight against political and corporate corruption.

5 Taxpayers cannot afford to let corrupt corporate bullies win!

6
7 70-----

8 This site was created with the help of FBI, CIA, DOJ, Police and Congressional experts in order to
9 confirm that all of these methods are legal and effective.

1 Are they aware that the people they work for: The U.S. Department of Energy, is the entity responsible
2 for the largest occurrence of Black Slavery And Black Child Labor ON EARTH TODAY?
3

4
5 The insider trading payola mining scam for lithium ion battery chemicals has caused this. The
6 Department of Energy has known this for twenty years and kept it going for insider trading profits.
7 If you don't believe it, here are the first part of over 100,000 news articles, U.N. reports and University
8 reports proving it.
9

10 The new black hires work for PLANTATION BOSSES who have traded cotton fields for lithium and
11 cobalt fields.
12

13 The Dept of Energy brags about financing Elon Musk yet Musk's father brags about killing a number of
14 Black people in South Africa.
15

16 The U.S. Department of Energy IS MODERN SLAVE LABOR FOR BLACK PEOPLE. How is that
17 "representing"? Why won't DOE pass a 100% "NO BLOOD MINERALS RULE" Nationally? Because
18 the Old White Guy Silicon Valley Tech Oligarchs and Nancy Pelosi and Dianne Feinstein own the
19 stocks in all this.
20

21 We can prove it in front of Congress!

22
23 **We asked the Black staff working at the Department of Energy: "*How do you feel about that? Are***
24 ***you willing to walk into Jennifer Granholm's office RIGHT NOW and demand that she stop this or***
25 ***is your 6 figure paycheck more important than human rights?***
26

5 **SECRETARY OF ENERGY JENNIFER GRANHOLM’S CORRUPTION**
6

7 Insider trading, cronyism, false promises, utter lies about the lithium ion dangers, total failure of
8 the electric car market under her guidance , complete technical incompetence....and that was just the
9 beginning...

10 Secretary of Energy Jennifer Granholm violated a federal conflicts-of-interest and transparency
11 law by improperly reporting up to a quarter-million dollars in stock sales, according to an Insider
12 analysis of financial disclosure documents.

13 She covertly owned the Lithium Ion bus company: Proterra, which had the lithium ion batteries
14 in it’s buses blow up. Granholm — one of the Biden administration's highest-ranking officials whose
15 personal finances have come under previous scrutiny — reported making nine stock trades between
16 April 30, 2021, and October 26, 2021.

17 But she disclosed these trades to the Office of Government Ethics on December 15, 2021, and
18 December 16, 2021 — either weeks or months past a 30-day disclosure deadline prescribed by the Stop
19 Trading on Congressional Knowledge Act of 2012.

20 Granholm's stock sales involved shares of biopharmaceutical firm Gilead Sciences Inc. — a
21 major government contractor and maker of COVID-19 treatment remdesivir — mobility service Uber,
22 and real estate company Redfin.

23 Administration officials declined to discuss the timing or vetting of Granholm's financial
24 disclosures. A Department of Energy spokesperson did not explain why Granholm's disclosures were
25 late.

Energy Secretary Granholm Struggles With EV Charger: "How Does This Work? Look Amazing!"

Granholm to face grilling on Biden energy policies.

Posted by Leslie Eastman Thursday, April 28, 2022 at 03:00pm · 42 Comments

Share This Story Facebook Twitter Telegram StumbleUpon MeWe Reddit Email +

I want everyone across this country to know what a lying, lazy scam artist, our so called Governor, Jennifer Granholm is. For one after her state of the state adress the other day, all she did was run her mouth about what she is going to do, quite similar to the same things she said during her campaign. Nothing has happend.

Here in Michigan we lose a job every ten minutes, and she takes no responsibility for it. She tries to say she has created jobs, but the numbers dont lie she has let more and more jobs go. In the course of her speech she states, that in five years this state will be full of prosperity. 5 years?, well she is up for re-election this year, so she is trying to scare people into keeping her around for a second term.

Also she just veto'd a bill that would call for a limit on how long people could be on welfare. she said it is our "social responsibility, to help those in need". She stated we need that "safety net" for those people. Welfare is severely abused in this state. No limit on it discourages people from doing what most people do, work for a living. She needs to pass laws about children born out of wedlock, but she does not because she is dumb as a box of rocks.

I have never understood how there is a limit on people for unemployment(people who actually want to work, but no limit for welfare(the lazy and irresponsible). The limit would have been for 4 years, but Granholm likes to promote laziness and veto'd it.

She is a liar, a phony and has run this state to the ground since she took office. Like her first campaign, she is promises things she will not keep and coning people in to vote for her again. She has raised alcohol,tobaccoo and gas taxes on a state that is hurting enough, without her interference.

She is a disgrace to this state and can not wait until the election, when hopefully my fellow Michiganders are smart enough not to believe her promises, she has no intention on keeping and vote for d**k Devos. Jennifer Granholm a complete ripoff

Illustration 25: Secretary Of Energy Jennifer Granholm's Covert Lithium Ion Bus Company Blows Up

SECRETARY OF ENERGY STEVEN CHU'S CORRUPTION

Many reports refer to Steven Chu as one of the most corrupt politicians in history. As a shill for the Obama political campaign financiers, he was forced out, in shame, after a horrendous number of crony insider scams were uncovered. Chu was tasked, by Big Tech political campaign financiers, with blocking the development of fuel cell energy in order to protect the lithium ion batteries that Tesla, Feinstein, Pelosi and Google had invested in. Even though every automaker and nation outside of the USA was supporting fuel cell cars, Chu was beholden to the Obama and Biden financiers who invested in the lithium ion batteries for Elon Musk. Biden/Obama investor Frank Guistra told Chu that it was “never OK” for Chu to support safe, organic, water-based hydrogen fuel. Chu was the Silicon Valley VC’s ‘Bitch’ first and Detroit’s ‘Bitch’ second.

Chu Says Backing Prologis Had ‘Nothing to Do With Solyndra’

February 28, 2012, 11:02 AM EST

By Brian Wingfield

(Adds information on investigation in fourth paragraph.)

Feb. 28 (Bloomberg) -- U.S. Energy Secretary Steven Chu, responding to a House investigation, said he didn't intervene to support a \$1.4 billion partial loan guarantee for a Prologis Inc. solar-power project as a way to aid failing Solyndra LLC.

Chu said he supported the plan to install solar panels on warehouse roofs in 28 states because of its business model that included financing from private investors.

"It had nothing to do with Solyndra," Chu told reporters today at an energy conference near Washington in suburban Maryland.

Republicans on the House Energy and Commerce Committee asked the Obama administration official to explain links between San Francisco-based Prologis and Solyndra, which sought creditor protection in September, two years after receiving a \$535 million U.S. loan guarantee. Solyndra was to be the only supplier in the first phase of Prologis's initiative, known as Project Amp, according to a letter to Chu from the panel.

Committee leaders want to know whether Chu helped Prologis secure its U.S. backing in order to prop up Solyndra. The Fremont, California, company had already filed for bankruptcy protection when the Energy Department gave Prologis, a real-estate investment trust, its loan guarantee in September. Solyndra was no longer a supplier when Prologis won its award.

Project Amp, which has been stalled by the Solyndra bankruptcy, is being funded by Prologis and its partners, which include NRG Energy Inc. of Princeton, New Jersey, and Bank of America Corp. of Charlotte, North Carolina, James Larkin, a Prologis spokesman, said in an e-mail. The loan guarantee provides U.S. backing for the project.

Chu won't tell House which loans are at risk

March 5, 2012
11:25am
0 Comments

by Joel Gehlke *Commentary Staff Writer*

Follow on Twitter:

President Obama's Energy Secretary, Steven Chu, would not tell House members today how many companies that have received loan guarantees might go bankrupt, nor would he promise to provide the list of companies at risk to Congress.

"I don't, again, recall the exact number," Chu said in the course of repeated questioning from House Subcommittee on Energy and Power lawmakers who wondered how many companies might follow Solyndra into bankruptcy. "The American taxpayer has every right to expect that there is a reasonable chance of repayment for every loan that we give out," Chu did allow.

Chu also refused to promise that he would have his staff give the committee a list of the companies that have received DOE loan guarantees. "We will do what we can," Chu told Rep. Michael Burgess, R-Texas. "We don't want to violate company confidentialities; the dynamics of what happens in these companies changes pretty rapidly."

Burgess suggested that, at some point -- given the taxpayer money already lost through the loan program -- the desires of the companies should be trumped by the interests of the taxpayers.

Steven Chu must go – Energy Dept. Disaster

March 10, 2012 | Filed under Corruption | Posted by SUAadmin

Editor's Note – SUA has been watching the Secretary of Energy, Steven Chu and his abysmal testimony before Congress, the scandals he allowed like Solyndra, gasoline prices (which he flip-flopped on), Chevy Volts, and the disastrous "green agenda" of the Obama Administration for the past three plus years and it is now clear, Steven Chu must go. Just like our call for Eric Holder's resignation, Chu is inept, a pawn for 'crony capitalism', and a disaster to our economy and energy independence.

GOP Says Energy Dept. Cut Corners to Lend Az. Solar Firm \$1.6 Billion

By **MATTHEW MOSK**
ABC News

House Republicans are preparing to grill Energy Secretary Steven Chu this week over \$1.6 billion in loans to finance two massive solar energy projects planned for the desert Southwest, saying investigators have found evidence suggesting the administration cut corners in order to get the loans approved.

"The Department of Energy manipulated analysis, ignored objections from career

Steven Chu - Energy Secretary and Obama

professionals, and strategically modified loan evaluations in order to force project funding out the door," House Oversight and Government Reform Committee Chairman Darrell Issa, R-California, said in a statement provided to ABC News.

Q QUEUE

Energy Secretary Steven Chu and former Treasury official Herbert M. Allison Jr. take center stage at a Senate Energy and Natural Resources Committee hearing on loan guarantees on March 13.

Potential losses from the Energy Department's loan programs will probably be less than both Congress and the White House projected, according to a Jan. 31 report by Allison, who was recruited by the White House for the review. Republicans, primarily in the House, have attacked the program as a wasteful attempt to pick "winners and losers."

The Energy and Commerce Committee has conducted a year-long investigation into the loan guarantee for Solyndra LLC, a solar panel maker that filed for bankruptcy protection two years after winning a \$535 million loan guarantee. Photo: David Paul Morris/Bloomberg

The House Energy and Commerce Committee has conducted a yearlong investigation into the loan guarantee for Solyndra LLC, a Fremont, California-based solar panel maker that filed for [bankruptcy protection](#) in September, two years after winning a \$535 million loan guarantee.

Expect the Senate panel's grilling of Allison and Chu to be gentler than what the House committee would dole out. Allison's report "gives reassurance" that Energy officials correctly assessed the risks of the loan program, Senator [Jeff Bingaman](#), a New Mexico Democrat and the committee's chairman, said in a Feb. 22 [statement](#).

The program provides federal backing of loans for clean-energy projects for power generation, cellulosic-ethanol production and advanced vehicle technologies, according to

the Energy Department.

The Allison Report reviewed 30 loans in a portfolio worth \$23.87 billion. It estimated the long-term projected loss to the government at \$2.7 billion, about \$200 million less than the Energy Department's latest estimate and considerably less than the \$10 billion Congress established for losses to clean-energy and auto loan programs, according to [Eric Schultz](#), a White House spokesman.

Allison's review was limited to companies that are still in operation and therefore didn't include the bankrupt Solyndra.

The Energy Department's loan-guarantee program "has flaws that need to be addressed,"

URANIUM ONE

“As the Russians gradually assumed control of Uranium One...a flow of cash made its way to the Clinton Foundation. Uranium One’s chairman used his family foundation to make four donations totaling \$2.35 million. Those contributions were not publicly disclosed by the Clintons.”

- New York Times, Jo Becker and Mike McIntire, APRIL 23, 2015

The total donations from Uranium One shareholders to the Clinton Foundation exceeded \$145 million, in the run-up to Hillary Clinton’s State Department approving the Rosatom deal, which gave Russia control over about 20 percent of U.S. uranium.

ENERGY

Chu Backtracks on High Gas Prices

By Amy Harder

Updated: March 13, 2012 | 12:36 p.m.

March 13, 2012 | 12:07 p.m.

Energy Secretary Steven Chu on Tuesday retracted his now-infamous quote from 2008: "Somehow we have to figure out how to boost the price of gasoline to the levels in Europe."

"I no longer share that view," Chu said in response to questioning from Sen. **Mike Lee**, R-Utah, at a Senate Energy and Natural Resources Committee hearing on another topic related to DOE's loan-guarantee program.

Chu's 2008 quote, initially included in a *Wall Street Journal* article, has formed the foundation for daily Republican attacks on President Obama over high gas prices.

Chu seemed to equivocate, pause, and stumble over his words when responding to Lee's question about high gas prices. Other comments Chu made at another hearing late last month put him in hot water on gas prices. *Politico* reported on Feb. 28 that Chu told a House committee that he was not working to lower gasoline prices but to wean the United States off oil. That story has since been corrected to clarify that DOE is working to both lower gas prices and wean the country off oil. But that was only after the story was picked up by Republicans and used against the administration.

During his testimony before the Senate panel on Tuesday, after stopping and starting with a few thoughts on the economy and the department's commitment to alternatively fueled vehicles, Chu told Lee: "Of course we don't want the price of gasoline to go up. We want it to go down."

New polling out this week found that the president's disapproval rating is going up alongside high gasoline prices, which averaged \$3.80 per gallon nationwide on Tuesday.

After the hearing, Chu told reporters that he changed his view from 2008 because of the fragile economy.

"There is a real hardship that Americans are suffering at the gasoline pump," Chu said. "The recovery is fragile. Another spike in gasoline prices could put that recovery at jeopardy. So there are many, many reasons why we do not want the price of gasoline to go up."

Chu Gets Chewed Out: You're Telling My Constituents They 'Need to Buy a Nissan Leaf!.'

[Fire it up](#)

A House Committee on Oversight and Government Reform congressman became frustrated with the secretary's testimony on what initiatives were being taken in order to lower gas prices at the pump.

CONGRESSMAN:

"My time is short, you've listed a long list of things that this administration has done. I have not yet heard that there are trying to increase the supply of American oil or our refining capacity or limit the regulations in the diversity of blends that are required.

I have heard nothing from you today that indicates a policy this administration has put in place that will meaningful impact the price at the pumps, other than driving it up!

The policies this administration has put in place have actually increased the cost of fuel at the pumps. They have increased the cost of commuting for my constituents.

And to tell my constituents, with 10 percent unemployment, Western North Carolina, that you need to buy a Nissan Leaf? That in order to commute for 50 minutes a day you're going to have to have an employer who is wonderful enough to provide you a place to plug in your car, so you can get home? Is absolutely ridiculous.

And the anger my constituents have at the cost of the pumps is very real, and if the President doesn't get this and if the Secretary of energy doesn't get this then we've got a real problem here. We've doubled the budget of the department of energy in 2009. And yet we are paying twice as much at the pumps. This is absolutely ridiculous!

We've seen Solyndras, but haven't seen a reduction at the pumps."

Energy Secretary Steven Chu testified on Capitol Hill Tuesday regarding the department's stimulus loan programs and what the administration is doing about oil prices.

Energy Secretary Chu's Hopeless Clean Energy Crush

By Rep. Marsha Blackburn (R-TN)

Energy Secretary Steven Chu is on a mission to proliferate the use of clean energy no matter the cost to American taxpayers. In 2008, Secretary Chu told the *Wall Street Journal*, "Somehow we have to figure out how to boost the price of gasoline to the levels in Europe." Even worse, according to White House Press Secretary Jay Carney, President Obama never asked Secretary Chu to walk back his comments. Today, the average gallon of gas in Europe costs more than \$8.

With gas prices just over \$4 per gallon in the U.S., and projected by *Barron's* to hit \$4.50 this spring, Secretary Chu and the Administration are less than \$1 away before electric vehicles become a reasonable price option for the average American family.

When President Obama was inaugurated the price of a gallon of gas was \$1.84. In less than 4 years under this Administration, the price of gas has more than doubled. Not to mention, this has all occurred at a time when unemployment is at its longest streak above 8.0% since the Great Depression. Once you factor in the U-6 measure of unemployment, which includes discouraged workers and part-time workers seeking full time employment, the real unemployment rate is at a sky high 14.9%.

Unfortunately, the price of gas is not the only area in which Secretary Chu is putting a dent in American taxpayers' wallets. He is also responsible for the mismanagement of the Department of Energy (DOE) Loan Guarantee Program.

If you were to listen to Secretary Chu and the White House, they would have you believe that the United States is currently engaged in a global solar race with China, reminiscent of the Cold War. They believe that we must use every option within our arsenal to win the war no matter the cost to taxpayers.

So, when Solyndra filed for bankruptcy protection on September 6, 2011,

Bloomberg News

Chu Set to Tell Obama Loans Healthy Before Solyndra Failed

By Mark Drajem on August 09, 2012

U.S. Energy Secretary Steven Chu was set to assure President Barack Obama in mid-2011 that all loans in the department's clean-energy program would be repaid, just two months before the bankruptcy of recipient Solyndra LLC.

A draft prepared by Energy Department officials for Chu to brief Obama on June 27, 2011, also pushed to continue the program, slated to expire three months later, according to documents released today by the Republican-led House Committee on Oversight and Government Reform.

The e-mails show Chu seeking to defend the program amid objections by officials in the White House, Treasury Department and Office of Management and Budget. Chu told aides in an e-mail that the document for the briefing was "missing important information" and needed to explain: "Why did the loans take so long, and why was there so much interagency angst?"

Treasury and OMB officials worried that companies aided by the program were getting excessive subsidies in the loan terms, which allowed "Unjust enrichment," Chu wrote.

The documents "show how many people in the administration had serious doubts" about the program, Frederick Hill, a spokesman for the oversight panel, said today. Given the upbeat presentation, were the program's risks "kept away from the president?" he asked.

'Deep Trouble'

Solyndra, a solar-panel maker in Fremont, California that received a \$535 million U.S. loan guarantee, sought bankruptcy protection in September and fired its 1,100 workers. The Energy Department restructured terms of its loan in early 2011, as the company's finances began to wobble.

None of the information released today mentioned Solyndra. Chu told lawmakers in November that by June 2011 he was aware that Solyndra was "in deep trouble."

The U.S. program also backed Beacon Power Corp. (**BCONO**), an energy-storage company that sought bankruptcy protection in October, with a \$43 million loan guarantee in August 2010. Abound Solar Inc., a solar-panel maker, shut after borrowing \$70 million from the U.S.

Congressional Democrats and the White House have repeatedly said the loans were made on the merits, and not as a result of political pressure. The latest e-mails further underscore that point, according to Damien LaVera, a spokesman for the Department of Energy.

Mr. Jeffrey Zients
Acting Director
White House Office of Management and Budget
Eisenhower Executive Office Building
1650 Pennsylvania Avenue, NW
Washington, DC 20503

Dear Secretary Chu and Acting Director Zients:

I am writing to seek your assistance in ensuring that the Department of Energy's (DOE) Loan Guarantee Program reaches its full potential. It is critical that loan guarantee applications are reviewed efficiently and expeditiously by DOE and the Office of Management and Budget (OMB).

The Loan Guarantee Program was initially authorized under the Energy Policy Act of 2005. However, under the prior Administration, the program was severely understaffed and failed to issue any loan guarantees or conditional commitments.

In the Recovery Act, Congress established the temporary section 1705 program to spur investment in renewable energy. Since that time, the Obama Administration has made great strides in standing up a Loan Guarantee Program that is beginning to produce significant results. In the last year and a half, DOE has issued conditional commitments or finalized loan guarantees totaling nearly \$13 billion for 14 projects. These projects span 12 states, support a broad array of clean energy technologies, and will create over 13,000 construction jobs and more than 4,000 long-term operating jobs. By comparison, the highest total for U.S. private sector clean energy project finance in a single year was \$19 billion.

DOE has expressed confidence in its ability to move from issuing two conditional commitments per month to as many as four or five conditional commitments per month this

DOE’S CHU MAY HAVE INTERVENED IN \$1.4 B LOAN TO PROP UP SOLYNDRA, REPUBLICANS ALLEGE

[EMAIL US](#)

BY: [CJ Ciaramella](#) - February 17, 2012 3:47 pm

Department of Energy Secretary Steven Chu may have personally intervened in a \$1.4 billion partial loan guarantee in an effort to help floundering solar company Solyndra, Republicans on the House Energy and Commerce Committee alleged in a letter Friday.

Committee Republicans opened a new front in their ongoing investigation of the Solyndra scandal in a [letter](#) to Chu on Friday, requesting documents and emails regarding a \$1.4 billion loan to a solar project that was to be supplied equipment by Solyndra.

Report: Obama Energy Secretary Steven Chu Personally Intervened In \$1.4 Billion Loan To Prop Up Solyndra...

Did Obama's Energy Secretary Seek \$1.4 Billion Bailout Loan to Prop Up The Failing Solyndra?

by [Wynton Hall](#)

Rep. Cliff Stearns (R-FL) wants answers from Energy Secretary Steven Chu about documents that appear to indicate that Mr. Chu personally intervened to help secure a \$1.4 billion partial loan guarantee for a large-scale rooftop solar project known as [Project Amp](#) that was to be supplied equipment by the sinking ship that was Solyndra.

"It is astonishing that DOE actively negotiated a plan to risk even more taxpayer money to prop up Solyndra at all costs," said Rep. Stearns.

In his role as Chairman of the House Energy and Commerce Committee's Subcommittee on Oversight and Investigations, Rep. Stearns sent Sec. Chu a [letter](#) inquiring why the Energy Secretary would have helped put even more taxpayer money at risk when it was clear Solyndra was yet another failed green energy scheme, particularly since the Department of Energy itself seemed squeamish about approving the loan:

Project Amp is a large-scale rooftop energy generation project using solar panels on commercial facility rooftops to generate electricity for sale to utilities and power purchasers. The panels for first phase of Project Amp were to be sole sourced from the failing Solyndra, Inc. Documents obtained by the Committee indicate that DOE had some hesitation in approving the loan guarantee and that Secretary Chu intervened on behalf of Project Amp. This brings up many questions, including if this was an attempt to support the faltering Solyndra since it occurred during discussions over the second restructuring of the Solyndra loan guarantee.

According to Rep. Stearns letter, a Solyndra employee email suggests that, indeed, Mr. Chu was part of a Herculean effort to craft a deal that "went to higher levels in the Obama Administration":

In a June 17, 2011 email, a Solyndra employee shared what he had learned from a BAML [Bank of America Merrill Lynch] senior investment banker who took part in the Project Amp negotiations with DOE, stating that, "[O]n three occasions this week he thought that the [Project Amp] deal was dead, but Secretary Chu personally pulled it off. Chu shared with the team that this deal went to higher levels in the Obama Administration to gain approval than any other transaction in the Loan Guarantee Program, and that he personally committed to seeing it through to a successful conclusion." Further, the minutes of the June 18, 2011, DOE Credit Review Board for Project Amp stated that "Secretary Chu had requested the CRB convene to consider Project Amp.

Mr. Chu's views on energy have come under fire before. In September 2008, Mr. Chu told the [Wall Street Journal](#) that he wanted to see U.S. gas prices go up in order to force Americans to drive less.

GOP accuses Chu of false testimony

By Zack Colman - 08/15/12 03:32 PM ET

Republicans accused Energy Secretary Steven Chu on Wednesday of offering false testimony on the Energy Department loan program that gave funds to failed solar firm Solyndra.

Rep. Darrell Issa (R-Calif.) said a briefing on the loan program's status that Chu provided to President Obama in June of 2011 contradicts Chu's testimony to the committee earlier this year about the extent of his communication with the White House.

They also allege the private emails show Chu was involved in a meeting with former White House Chief of Staff William Daley on the loan guarantee program.

The lawmakers say this conflicts with testimony Chu gave in which he said he did not communicate directly with the White House about the energy program. The program became a huge controversy after the bankruptcy of Solyndra, which received a \$535 federal loan guarantee.

Becca Watkins, a spokeswoman with the committee, told The Hill that it is "a little bit of a gray area" on whether this is the first time the committee has made such accusations against Chu. Issa sent a letter in July asking Chu to clarify his involvement with the loan program, but Watkins said "this time we have the documents."

The March testimony from Chu the lawmakers cite in the letter is clipped from a fuller line of questioning. Video of the hearing shows Chu's answers were not in response to his communication with the White House about the program as a whole, but rather his knowledge of nine specific projects.

Rep. Jim Jordan (R-Ohio) asked Chu during that hearing about whether he corresponded with the administration about that select, specific group of energy loans through the program. Chu responded that he had not.

One of those projects Jordan mentioned was Solyndra, Watkins noted. But documents have not shown that the June 2011 briefing Chu gave Obama about the loan program included any mention of that firm.

In the letter to Chu sent Tuesday, the lawmakers asked the secretary to clarify in accurate statements, to produce relevant documents the department has not released on the loan program and to testify before the Oversight and Government Reform Committee in September.

Jordan (R-Ohio) and Trey Gowdy (R-S.C.) also signed the letter.

OPINION

As Japan Crisis Unfolds, Energy Secretary Steven Chu Fails Nuclear and Leadership Test

By [Iain Murray](#)
Published March 15, 2011 | [Fodnews.com](#)

With reactors at the Fukushima Daiichi nuclear plant in danger of a meltdown, the world waits with bated breath for the outcome. Interestingly, physicists, the people who typically know the most about nuclear reactions, appear to be less concerned than the general public. This should be a time for the country's most important physicist, Energy Secretary [Steven Chu](#), to step up to the plate and explain to Americans why he is not worried. Instead, the Secretary is missing in action.

At first glance, the events at Fukushima seem like a perfect illustration of Murphy's Law – "If something can go wrong, it will." First the plant was hit by an earthquake seven times stronger than it was designed to withstand, but withstand it did. Control rods were immediately lowered into the core and the chain reaction stopped. Backup power kicked in.

New Policy in California

2011 Drivers w/ no DUIs are eligible for up to 50% off car insurance... [TheFinanceAuthority.com](#)

[Buy a link here](#)

Then a massive tsunami hit the plant, reportedly demolishing several key installations and knocking out the backup power. The plant continued to run on emergency power.

When the emergency power ran out, the backup emergency power didn't work (due to backup facilities using the wrong plugs, according to some reports). Hydrogen buildup from the rapidly heating core caused explosions in the shell (which is designed to keep the elements out, not radiation in). Attempts to cool the reactor with seawater started too late, leading to the fuel rods being exposed rather than covered in coolant.

Fortunately, even Murphy's Law has its exceptions. Despite all these problems, the reactor – at this writing – was damaged but not yet in meltdown. No one had been exposed to dangerous amounts of radiation and no dangerous material had been released into the surrounding environment. In other words, despite virtually everything going wrong in unforeseeable ways, the reactor has as yet caused no wider harm to people.

Yet you wouldn't know that from the loud calls by politicians and environmental advocacy groups for the United States to abandon nuclear power, claiming it is inherently dangerous.

The Obama administration, to its credit, disagrees. Its proposed energy plan relies on the building of 100 new nuclear reactors in the near to medium term, to allow us to replace coal as America's main generator of electricity. During Monday's [White House](#) press briefing, spokesmen from the Department of Energy and the Nuclear Regulatory Commission told reporters that the events in Japan gave no reason to abandon this plan.

Such statements from middle-rank officials are likely to be ignored, and could thus hobble the president's own [energy policy](#). Yet sitting near [President Obama](#) around the Cabinet table is our energy secretary who just also happens to be a Nobel-prize winning physicist. Steven Chu has both the authority and the credibility to put paid to scaremongering and refocus America's energy debate to where it should be: the price of oil.

So far, however, Secretary Chu has shown no willingness to tackle public fears regarding the crisis in Japan, beyond a few words of boilerplate at a House hearing on the Energy Department budget on Tuesday morning. One would assume that the White House would want Dr. Chu to be actively making the case for its energy policy—unless they think that the Secretary is simply not up to the job.

This is especially unfortunate when major environmental advocacy groups (including some with whom Secretary Chu has associated) have exploited the Japanese disaster for political advantage.

Sadly, America's news organizations have taken their bait, by shifting their focus away from the massive devastation and thousands of dead and concentrating instead on something that has yet to kill anyone. I wouldn't be surprised if Greenpeace's donations have gone up—perhaps at the expense of the [Red Cross](#).

Steven Chu is uniquely placed to shift the nation's attention to where it needs to be. The fact that he has not done so exhibits a massive failure of leadership.

Iain Murray is a Vice President at the [Competitive Enterprise Institute](#).

The Advanced Technology Vehicles Manufacturing Loan Program has been a mess. In four years, the Department of Energy program has disbursed less than half the \$25 billion approved by Congress, leaving a trail of bungled opportunities.

It is more evidence of why it is wrong for government to pick winners and losers.

The program was created in December 2007 as part of the Energy Independence and Security Act, amid a push by Congress to hike U.S. fuel economy standards. At the behest of Michigan legislators, the low-interest loan program was included to help the Detroit 3 retool their aging factories to produce the next generation of advanced-technology vehicles.

But the law of unintended consequences and political pandering made a bad idea worse.

Only five companies have received loan guarantees since 2008, the year the program was funded by Congress, with the majority of the allocations -- about \$5.9 billion -- going to [Ford Motor Co.](#) [Nissan Motor Co.](#), the only other established automaker to secure a loan, received about \$1.4 billion.

The Obama administration's political bias for electric vehicles became a problem.

Two startups, [Tesla Motors](#) and [Fisker Automotive](#), didn't need to retool to meet new corporate average fuel economy standards. But after buying fallow assembly plants, they applied for and were granted loans. Tesla got a \$465 million loan agreement. Fisker got a \$529 million agreement but received only a portion of it before the government demanded to review the company's business plan. As of last week, it wasn't clear whether Fisker will even build cars here.

Worse, the strings attached to the loan process ended up repelling [General Motors](#) and [Chrysler](#), two of the three companies that legitimately might have been able to use the money to meet the new standards.

Now the DOE auto loan program and a separate DOE program intended to give nonautomotive alternative-energy projects a boost have become a political football, as often happens in an election year when tax dollars are involved. Republicans and Democrats have raised questions about some of the loans.

A DOE spokesman says the department is committed to balancing support for innovative, clean-vehicle projects with "our responsibility to be good stewards of the taxpayer's money."

In some areas involving commerce and technology, such as the Internet and global positioning satellites, the federal government has an appropriate role providing support.

STEARNS: Department of Energy.

VAN SUSTEREN: ... to buy those panels that Solyndra was manufacturing.

STEARNS: Well, that wasn't, ostensibly, the reason. They were supposed to go out in the marketplace and buy these solar panels to put on their commercial buildings, their flat roofs across the United States. But it turns out some of the e-mails we got shows that there was some indication that Secretary Chu was an intermediary with the White House, saying that possibly this company could buy the solar panel from Solyndra before it went bankrupt.

VAN SUSTEREN: Well, why in the world would that company want to buy them from Solyndra? From what we learned, is that Solyndra was making them at a price that exceeded the cost you could buy them from China. So what in the world would be the incentive for Prologis to buy them from Solyndra?

STEARNS: We did a letter to the White House with just that very question, asking, What was the deal? Why would Prologis buy from Solyndra at a higher price when they could buy it in the open market for cheaper? And second of all, did Solyndra actually provide to Prologis solar panels? How many, and what effect was the contract?

VAN SUSTEREN: Why were we giving federal stimulus money in a loan to Prologis? I went on the Internet, and this is a company that has \$43.3 billion in assets. They say they're the leading owner, operator and developer of industrial real estate in the Americas, Europe and Asia, and they operate, apparently, 600 million square feet. Why do they need our money?

STEARNS: They don't. And that's -- that's really what is the basis of, I think, the investigation of the O&I committee that I chair, is we see favoritism, Greta, throughout the stimulus package.

In fact, you know, today is one year ago we started the Solyndra investigation. And three years to this date, this very date, the 17th of February, was the \$750 billion stimulus package. So in effect, what we see throughout all these stimulus packages is favoritism towards their campaign contributors.

VAN SUSTEREN: All right, how does -- how does a loan of \$1.4 billion -- and we're so used to these numbers that billion...

STEARNS: Yes. Right.

VAN SUSTEREN: We've sort of gotten desensitized to it, but a billion's a lot of money, is how did \$1.4 billion to this very successful \$43.3 billion...

(CROSSTALK)

VAN SUSTEREN: How many jobs did that generate? Where's the stimulus?

STEARNS: Yes, I can't imagine they generate any jobs. Just like, you know, you saw that Duke Energy got \$230 million and they generated 196 jobs.

VAN SUSTEREN: And who's the -- and who's the CEO of Duke Energy?

STEARNS: Jim Rogers is the CEO. He's now co-chair of the national Democrat convention. So that would indicate, you know, some kind of -- I would think some favoritism. But the larger question is, how much has the White House been involved in manipulating and making sure these loan work out...

VAN SUSTEREN: Well...

STEARNS: ... as they promote these loans across the program?

VAN SUSTEREN: Well, there are a couple -- there are a couple -- Why are we loaning money to an expensive company? That's the first thing. Now...

STEARNS: They could go to the bank themselves.

VAN SUSTEREN: Yes. I mean, are they -- it looks like they could sell fund for that.

STEARNS: Yes.

Very truly yours,

U.S. DEPARTMENT OF ENERGY

BIDEN AND OBAMA ADMINISTRATION'S HAVE GIVEN MOST U.S. ENERGY TECHNOLOGY TO CHINA VIA GRAFT AND INSIDER TRADING SCAMS

Meet the Biden ENERGY Official Who Fought To Shield China From US Solar Tariffs. Before scoring coveted role in Biden's Energy Department, Jigar Shah represented China's largest solar companies. [Collin Anderson](#) has confirmed that when China's largest solar companies faced costly U.S. tariffs, they turned to industry veteran Jigar Shah to lobby on their behalf. Now, President Joe Biden is handing that same man hundreds of billions of taxpayer dollars to invest in green energy companies, prompting concern that the money could benefit Beijing.

Shah in late 2011 partnered with three Chinese solar giants to form the Coalition for Affordable Solar Energy, a nonprofit that mounted an aggressive campaign to kill U.S. tariffs on Chinese solar panels. As the group's president, Shah [said](#) evidence that his Chinese clients accepted illegal subsidies from Beijing was merely part of an "anti-China crusade." He also [argued](#) that American consumers could not afford solar panels without cheap Chinese goods, stressing the need for the two nations to "work together to solve our planet's energy and environmental crisis."

Years later, China could again stand to benefit from Shah's work. Biden Energy Secretary Jennifer Granholm in March 2021 [tapped Shah](#) to run the department's Loan Programs Office, which is expected to flood the China-dominated green energy industry with billions of taxpayer dollars in the coming months. Shah's leading role in distributing that money—and the Biden administration's history of supporting [Beijing-backed companies](#)—have China hawks concerned that Biden's push to usher in a "clean energy economy" will ultimately benefit America's top adversary.

Former secretary of state Mike Pompeo, for example, highlighted one loan application Shah's office is considering from Lithium Americas. The Canadian company—which plans to mine tens of thousands of tons of lithium from a site in northern Nevada—counts a [Chinese mineral giant with ties to the Chinese Communist Party](#) as its largest shareholder, the *Washington Free Beacon* reported in

1 September. Still, at an industry conference three months later, Lithium Americas expressed confidence
2 that it will secure a loan from Shah's office to fund the mine, according to a conference attendee. For
3 Pompeo, that possibility is a troubling one.

4 "It should concern all Americans that a Biden administration political appointee at the
5 Department of Energy once had deep ties to CCP-backed firms," Pompeo told the *Free Beacon*. "It's no
6 secret that the CCP wants to control America's domestic rare earth mineral supply, and now the Biden
7 administration might just give it to them along with American tax dollars. This is a serious threat to our
8 national security."

9 An Energy Department spokesperson said Shah is "working to deliver on President Biden's
10 goal to build clean energy technologies at commercial scale in the United States, restore supply chains,
11 and strengthen domestic manufacturing." The spokesperson did not return detailed questions on Shah's
12 time as Coalition for Affordable Solar Energy president.

13 As Coalition for Affordable Solar Energy president, Shah minimized the group's work with
14 Chinese solar companies. The coalition's [website](#), which is no longer live, claimed that the group
15 represented "the largest companies in the U.S. solar industry" and worked to protect "the affordability
16 of solar energy and the American workforce." As part of that domestic-focused messaging, Shah's
17 group opted to name the U.S. subsidiaries of its three Chinese partners on its [online member list](#), rather
18 than naming the companies' Chinese parents.

19 But those three companies—Wuxi-based Suntech Power, Changzhou-based Trina Solar, and
20 Baoding-based Yingli—have close relationships with China's government. The companies relied on
21 "direct government support" to fund their operations, Reuters [reported](#) in 2013, and Suntech founder
22 Shi Zhengrong in a 2010 speech credited two senior CCP officials with the company's rise. "Suntech,"
23 Shi said one year later, "is a seed sown by the Communist Party of the Wuxi government." It's unclear
24 how much money Shah's Coalition for Affordable Solar Energy took from the three Chinese
25 companies.

26 Shah's bid to sink the tariffs was ultimately unsuccessful—then-president Barack Obama's

1 Commerce Department announced them in early 2012, though at a lower level than expected. Still,
2 Shah's Chinese partners would go on to fight with federal regulators for years. In December 2022, for
3 example, Biden's Commerce Department [found](#) that Trina Solar illegally circumvented U.S. trade laws
4 and failed to show its independence from the CCP. U.S. Customs and Border Protection in June
5 also [seized](#) shipments of Trina Solar equipment over concerns that the equipment was made with slave
6 labor, according to Reuters.

7 Shah is now attempting to revive the Energy Department's Loan Programs Office, which
8 was [largely dormant](#) under former president Donald Trump after the Obama administration faced
9 criticism over [failed loans](#) to green energy companies that went bankrupt. When Shah joined the office
10 in 2021, it had roughly \$44 billion in its coffers. Biden's so-called Inflation Reduction Act, however,
11 gave the office hundreds of billions of dollars, meaning Shah now has [nearly \\$400 billion](#) at his
12 disposal. Rep. Jim Banks (R., Ind.), who is set to serve on a new House select committee meant to
13 counter the CCP, told the *Free Beacon* he expects "many" of those billions to go to "communist
14 China."

15 "Chairman Xi couldn't have written a more pro-China tax and spend bill," Banks said of the
16 Inflation Reduction Act. "The Biden administration will always put our Chinese competitors ahead of
17 American workers."
18 Former President Barack Obama used his executive powers to impose industry regulations that lowered
19 the value of certain companies and led to financial gains for a firm owned by two close family friends,
20 according to Breitbart editor-at-large Peter Schweizer.

21 The admissions were revealed in Schweizer's new book, "Secret Empire," which found a pattern of
22 investments in coal, offshore mining and for-profit universities that closely tracked the Obama
23 administration's regulatory policy changes. Billionaire activists Tom Steyer and George Soros were
24 among the beneficiaries.

25 "It's the new wave of corruption in Washington, D.C.," Schweizer said during an interview with FOX
26 Business' Lou Dobbs Tuesday.

1 Schweizer said the Vistria Group, run by Obama’s best friend, Marty Nesbitt, drove the for-profit
2 school University of Phoenix into the ground and then swooped in to buy it.

3 “They come in, they buy it for pennies on the dollar and low and behold, the Obama administration
4 says, ‘You know what, we think we’re going to let GI money float again back to the University of
5 Phoenix,’” he said.

6
7 The smash and grab approach was just one pattern that emerged and continued to be repeated in other
8 sectors of the economy.

9 Schweizer said the level of corruption extended to former Vice President Joe Biden and former
10 Secretary of State John Kerry after both leaders negotiated with China on trade issues.

11
12 “At this time the sons, or in one case, John Kerry’s close aide, are involved in businesses that involve
13 multi-billion dollar deals with the Chinese government,” he said on “Lou Dobbs Tonight.”

14 Schweizer claims that 10 days after Biden flew to Beijing, his son, Hunter Biden, scored a \$1.5 billion
15 private equity deal from the Chinese government.

16
17 “This is American princelings and there are multiple examples in the book,” he said.
